NEW YORK, THURSDAY, JANUARY 4, 1912

No. 3292

Survey of the World

Senator La Follette on the War Path

The La Follette campaign for the Presidential nomination was formally inaugurated when the Wisconsin Senator delivered two speeches in Ohio, December 27. In one speech he declared the right of women to vote. At Youngstown he chose for his theme "Self Government and the Trusts." In Cleveland he spoke on "The Courts and Labor Combinations." On December 30, at Cincinnati, Mr. La Follette attacked the judicial construction which brings labor combinations under the restriction of the Sherman anti-trust law. This construction, he said, was contrary to the intention of the law as the people understood and desired it. This was a repetition of the points made at Cleveland. Mr. La Follette also attacked, in his other speeches, the "banking monopoly," the greatest menace to competition today, being "in the control of credit and the concentration of money." Senator La Follette favors a reduction or repeal of the tariff "wherever it fosters unfair competition." At North Baltimore he attacked the Supreme Court decisions in the Oil and Tobacco cases, and declared that the ruling as to "reasonable restraint of trade" was usurpation. The Senator has visited or will visit towns in Michigan, Indiana and Illinois, this week, and will return to Washington January 8. The Wisconsin man's Washington bureau is planning for a campaign in the country west of the Mississippi. Having entered upon his canvass, Mr. La Follette will not turn back, his friends say; whatever strength the movement for Colonel Roosevelt's nomination may show.—The "Progressive Republicans" of Ohio,

meeting at Columbus, January 1, adopted a declaration of principles, but voted against committing themselves to Senator La Follette, 52 to 32. They then proceeded to vote, 81 to 11, in favor of a resolution naming Senator La Follette as

"the living embodiment of the principles of the progressive movement and the logical candidate to carry them to successful fruition." Gifford Pinchot, Chief Forester during the Presidency of Colonel Roosevelt, and former Secretary of the Interior Garfield led in the debate against giving any candidate formal indorsement. The La Follette spokesmen were Senators Works (Colorado) and Clapp (Minnesota). Governor Osborn, of Michigan, issued a statement, January 2, proposing that both Mr. Taft and Senator La Follette should withdraw as Presidential candidates, in favor of Theodore Roosevelt or ex-Senator Albert J. Beveridge. "As between Taft and La Follette, I am for Taft." He adds:

"The Senator La Follette style of campaign tends to arouse the passions of the people and make for a condition of public intolerance which is always worse than personal or individual intolerance, because it has so much more might as a force. In Senator La Follette's speeches and writings—and in this connection let me say that I have taken and enjoyed *La Follette's Weekly*, and I am a subscriber to it now—I do not think he distinguishes between honest men in big business and dishonest men.

"We have got to have big business in this country if we are to compete in the manufactures and transactions of the world. But big business should not be permitted to oppress the people.

"Senator La Follette did great work in ridding Wisconsin of corrupt railroad domination, but he has never said anything against brewery domination in that State. . . . The Senator has taken up those things which might

be termed popular and that contained least danger to himself."

—Colonel Roosevelt was asked, on Tuesday, whether he had taken steps to have his name removed from the Nebraska primary ballots. "I have taken no steps one way or the other," was his reply. "When I have any statement to make, I will make it publicly."

National Affairs Washington learns that the Russian Nationalists have introduced in the Duma bills providing that American Jews without exception be excluded from Russian territory, and that the tariff on American goods be increased 100 per cent. The former bill classes American Jews with Jesuits and foreign gypsies. The latter bill is said to have for its object the exclusion of American agricultural machinery. The bills are introduced at a time when feeling runs high against this country in view of the action taken by President Taft and the Congress on the abrogation of the 1832 treaty.—On December 29 the State Department sent to the German Ambassador at Washington its first formal reply to the German request for the free entry of wood pulp, such as is now enjoyed by Canada. It is the German intention to continue its discrimination against American exports, as compared with those of Japan and Sweden, with whom lower rates have been fixed, as long as the wood pulp matter remains unsettled. The repeal of the Canadian free pulp act, passed in the anticipation of establishing general reciprocity with the Dominion, would be one way of adjusting the difficulty with Germany. But the State Department has not made known its stand in this case.—The Senate pension committee, instead of trying to amend the Sherwood pension bill, which it figures would add 66 per cent. to the present cost of pensions, or about \$60,000,000 annually, will report an entirely new bill, offering it as an amendment to the McCumber law of 1907.

Various Items Representative Underwood, of Alabama, has issued a note of warning to the Democratic majority in the House to check the rapacity of members insistent for rivers and harbors appropria-

tions and appropriations for Government buildings in their districts. Until the fate of the Sherwood pension bill is decided, Mr. Underwood considers it unwise to go ahead with naval appropriations and other supply bills. He points out the probability of an \$18,000,000 deficit at the end of this fiscal year, a deficit which the members threaten to enlarge, and he thinks it "the first duty of the House to give an economical administration."—"Guilty, with a recommendation for mercy," was the verdict returned, December 22, in the case of Louis Kuehnle, Republican boss of Atlantic City, by a May's Landing (N. J.) jury. Kuehnle was indicted for awarding a contract as Water Commissioner to F. S. Lockwood, alleged dummy for the United Paving Company, in which the boss is a shareholder. The defendant will appeal. His trial was conducted before Justice Kalisch, Governor Wilson's first appointee to the Supreme Court of New Jersey. On January 1 Mayor Bacharach, of Atlantic City (put into office by Kuehnle's influence), refused to reappoint the boss one of the water commissioners, of whom he has served as president for sixteen years.—Three Massachusetts cities voted for liquor licenses at the elections of December 19, as they did a year ago: North Adams, Lowell and Lawrence. Lawrence cast a large vote, it being the first election under a new charter by which party names are eliminated from the ballot in municipal contests. The same was true of Lowell, where, however, partisanship seems to have expressed itself in the election of Democratic candidates not so designated.—Letters signed "Night Riders" were received last week by the agent of the Illinois Central Railroad at Marion, Ky., ordering him to see that no more cars were sidetracked for the removal of tobacco purchased by independent tobacco buyers. The life of the agent is threatened and also the life of one of the independent tobacco men.—On December 27 Max Blanck and Isaac Harris, of New York, were acquitted of the charge of manslaughter brought against them after the fire of March 25, 1911, when 146 of their employees lost their lives. Evidence tended to show that the doors of the Triangle Waist Company, the

Blanck-Harris concern, were kept locked, and that this had doomed their employees to death by incineration or injuries received in jumping to the sidewalk. All the jurors could not feel sure that the proprietors were responsible for the locking of the doors, and, after disagreement for a time, acquitted them. There are six more indictments against Blanck & Harris, which may be brought to trial. The men were hooted as they hurried from the court, under police guard.—Nine indictments for complicity in the McNamara dynamiting conspiracy were returned in Los Angeles, December 30. Among those indicted are E. A. Clancy, of San Francisco, formerly a member of the International Association of Iron Workers; Olaf A. Tveitmoe, secretary-treasurer of the California Building Trades Council, editor of *Organized Labor*, and a member of the Executive Board of the National Brotherhood of Cement Workers (Tveitmoe was one of the labor leaders who offered a reward of \$7,500 for the apprehension of the destroyers of the Los Angeles Times building); A. Johannsen, organizer of the California Building Trades Council, and formerly notorious as an anarchist at Chicago; and I. E. Munsey, business agent of the Iron Workers' Union in Salt Lake. Three of the men were immediately arraigned and held in \$5,000 bail. "It's a frame up," said the defendants at first, but Clancy broke down later and made a partial confession. "The [Los Angeles] grand jury has not finished its investigation by any means," says United States District Attorney McCormick. Evidence to be presented to the Federal grand jury at Indianapolis this month will, it is expected, involve some forty individuals. No arrests are looked for till the local investigation is completed.—Employees of nine large steam laundries in New York City went on strike January 2. The operatives involved number 15,000. The workers demand "reasonable hours, reasonable pay, and sanitary conditions."—For some months an investigation of the work of Dr. Alvah H. Doty, Health Officer of the Port of New York during many years, has been in progress. Evidences of loose business management were produced, but it has

been the general opinion that the investigation was partisan in its motives, and that Dr. Doty would be removed at the conclusion. Last week Governor Dix communicated to the press a scathing letter, addressed to the health officer, and calling for his resignation. Dr. Doty replies that he would gladly resign:

"but the course which has been taken makes it impossible. . . . I have been fortunate enough to win the unanimous commendation of the great physicians and the sanitary and quarantine experts of this and other countries. To offer my resignation . . . would unpleasantly reflect upon these physicians . . . and would be an injury to the cause of progressive and scientific quarantine."

—America lost its chance to win the lawn tennis championship of the world on January 2. The Davis cup remains in the hands of the Australians. The play was at Christchurch, New Zealand.

West Indies and Central America When the revolutionist Morales was captured in Santo Domingo, one of his associates, General Torribio, escaped. This man is organizing a new expedition in Hayti, but the Government of Santo Domingo does not fear him. A schooner bringing 400 rifles to him from New York or Boston landed them, by mistake, on the Haytian coast, and it is said that the Government of Santo Domingo now has them. Morales is soon to be tried, and it is predicted that he will be sentenced to death.—The veteran soldiers of Cuba's revolutionary armies rejoice over the resignation of Señor Barraque, Secretary of Justice, from the Cabinet. General Nunez, president of the veterans' association, directed his attention to an obnoxious judge, a Spaniard who had opposed the revolution, demanding his removal. The secretary published a contemptuous reply, threatening to prosecute the veterans. Whereupon General Nunez and General Loynaz del Castillo responded sharply. Then both the secretary and the judge resigned. It is a question whether the secretary resigned in order that he might fight a duel with Nunez, or was dismissed because President Gomez feared the veterans.—The German Foreign Office authorizes a denial of the report, published in Paris, that

Germany was contemplating the establishment of a coaling station in Hayti. —From New Orleans comes a story that a plot to circulate large quantities of counterfeit money in Central America has been discovered there; that \$10,000,000 of this money was sent to Nicaragua some time ago; that a second shipment of \$10,000,000 was captured at Corinto, and that Government officers are implicated. —Dispatches from Washington, published in Mexico, say that seven machine guns were recently shipped from New Orleans to be used in Nicaragua in a revolutionary movement against General Mena, the present head of the Government. —President Taft has modified an order, issued a few months ago, which provided that persons desiring to practice medicine in the Canal Zone must be licensed by the Board of Health, and which, it was held, excluded Christian Science healers. The addition says that the order shall not be construed "to prohibit the practice of the religious tenets of any Church in the ministration of the sick and suffering by mental or spiritual means without the use of any drug or material remedy, whether gratuitously or for compensation, provided that such sanitary laws, orders, rules or regulations as now or hereafter may be in force in the Canal Zone are complied with." This is satisfactory to the Christian Scientists. —Several hundred Moros who had taken a fortified position on the top of Mt. Dajo, in the Philippine island of Jolo, intending to resist an order requiring them to give up their arms, surrendered for lack of food, after twenty had been killed while attempting to make their way thru the surrounding guard of soldiers and scouts. It is thought that all the Moros will now submit.

A Better Prospect in Mexico

General Bernardo Reyes, who surrendered to the Federal troops at Linares, was taken to the capital and placed in the military prison. He is to be tried before a military court. The judges (his peers in rank) are Generals Mier, Vega and Villar. It was said at first that he might be condemned to death. Then it was remembered that

Madero's platform called for abolition of the death penalty, and there was a prediction that his punishment would be imprisonment for ten years. The latest reports say that he may be sentenced to no more than three years in jail, or even may suffer only exile in Europe. The Madero Government is greatly pleased because he could get no following, and believes his failure will effectually discourage all other rebels. His surrender caused a sense of relief at Washington. The collapse of the Reyist movement enables the Government to withdraw troops from the north and to use them in a vigorous attack upon Zapata's bandit army in the south. Zapatists killed thirteen rurales, and the wives of several of them, on the 26th, not far from the capital. Three days later they were defeated by the troops. Six thousand soldiers are now to be used against them. In all parts of the country small parties of bandits are at work. Magonists in the north say they have lost nothing by the surrender of Reyes. But there are indications that Madero will not be disturbed by any formidable uprising. He has pacified the Yaqui Indians by ousting squatters from their lands and providing for allotment in severalty.

Unrest in South America

After the death, on the 22d ult., of Emilio Estrada, President of Ecuador, it was decided that his successor should be elected on January 28. A majority of the Liberals desired the nomination of ex-President Plaza. But the Radicals in one province at once sought to give the office to General Flavio Alfaro, nephew of the late President Alfaro and formerly Minister of War. On the 29th, the troops in Guayaquil proclaimed the presidency of their commander, Gen. Pedro Montero, after riots in which about 100 persons were killed. Montero formed a provisional government, but it is said that he merely awaits the arrival of Alfaro, who sailed on the 31st from Panama, where he had been in exile. —All the newspapers at Paraguay's capital have been suppressed for several months, and very little news about the revolution comes to the outside world. It is known that the capital was

surrounded by revolutionists several days ago. They have three warships in the river. Brazil and Argentina have placed warships near the capital and have forbidden the revolutionists to bombard it. One of the rebel ships sailed from Antwerp October 12, carrying 6,000 rifles. The crew returned to Belgium last week.—Argentina's controversy with Italy concerning the sanitary inspection of immigrants is ended. Her inspection orders have been changed, and it is expected that Italy's decree, prohibiting emigration to Argentina, will be annulled.—E. C. Benedict, a New York banker, has filed a protest at Washington against the revocation, by the Brazilian Government, of his license to operate a wireless telegraph between Para and Manaus, 880 miles. It is said that the Government desires to set up a wireless plant of its own in place of his.—Peru's Government has chartered ships to take away from Tarapaca 3,000 Peruvians, who say they have been badly treated there by the Chilian authorities.

Lancashire Cotton Strike The question of the closed shop has taken an acute form in the cotton mills of Lancashire owing to the refusal of three operatives to join the union. One of these, Margaret Bury, was employed in the York Mill and the others, Joel Riley and his wife, Sarah, in the Helene Mill at Accrington. All three had been members of the union, but dropped out on account of dissatisfaction with the management of the union, and neither persuasions nor threats could move them. The mill managers refused to dismiss them, and so 400 operatives at the York and 2,500 at the Helene Mill struck. The Rileys were besieged in their home by angry crowds day and night until they escaped from town. A lockout of 160,000 weavers followed the strike and an equal number of spinners were put on half time because it was useless to turn out yarn when the looms were idle. It looks as tho both parties had determined on a fight to the finish. The operatives have a strike fund of \$1,250,000 and can draw on the Federation of Trades Unions for \$125,000 a week for three

weeks. The reserve fund of the manufacturers' association is estimated at \$10,000,000. The loss of wages amounts to over a million dollars a week. The weavers declare that they will hold out for an advance of 5 per cent. in wages as well as a closed shop.—The referendum in the railroad unions on whether they would accept the proposed settlement of the Royal Commission, which did not involve a recognition of the unions, resulted in an overwhelming vote in favor of another strike. The colliers' union vote this month on the question of a strike, but without waiting for this 200 colliers at Treorchy, Wales, have gone out on account of the employment of non-union miners.—Chancellor of the Exchequer Lloyd-George made a rousing speech before a church meeting in Wales on the duty of Christians to abolish poverty, in which he said:

"You cannot deal with a problem of this magnitude by mere spasmodic appeals to the charity of the benevolent. You might as well try to run the army and navy by voluntary subscriptions. It is the community alone that can command the resources to drain this morass of wretchedness, so as to convert it into a verdant and fertile plain.

"I don't agree with the view that the Church is concerned solely with spiritual things. Those who take that view reflect on the career of the Master. They repudiate the precepts and doctrines of the greatest disciples, whose first act, on founding a church, was to establish a fund for the care of the poor and the first poor law guardians ever established.

"And remember the trouble which befell the man who did not fill in his forms properly and who did not give a correct account of his property to the Chancellor of the Exchequer.

"What does poverty mean? It means men have enough to purchase the barest necessities of life for themselves and children. One-fourth of the population of this country, even in times of prosperity, are living under conditions of poverty thus defined.

"The national income is \$5,000,000,000. That is revealed income. That means \$1,000 a year for every family. Yet one-third of that income is received and spent by 250,000 people, one two hundredth part of the population, or, in families, one-fortieth of the population is receiving and spending one-third of the income of the country.

"The great lesson of Christianity is this: You cannot redeem those who are below except by the sacrifice of those who are above. The task is a great and colossal one. It is a task our Master came here for to lift the needy from the mire and the poor from the dung-hill, and it is the Christian churches alone that can accomplish it."

Disestablishment in Wales

The disestablishment of the Anglican Church in Wales is sure to come during the present Parliament, and for the most potent reason, but the Church of England still beats against the stone wall of justice, sure to be battered. There was held the other day a Representative Church Council, and a day was given to disestablishment in Wales and Monmouthshire. The Bishop of London presented a resolution protesting against disestablishing and disendowing the Church, deprecating "as an unjust and wrongful act such dismembership of the National Church and such confiscation for secular uses of property given to and urgently needed for directly religious purposes." This might have gone thru with little debate, but Bishop Gore, of Oxford, offered an amendment changing the language which "protested against the proposal to disestablish and disendow," so that it should read "protest against the proposal so thoroly to disendow," etc. He accepted the plain principle that when the great majority of the people do not belong to a Church and do not want it to have special privileges the people should rule. He only wanted that the Church when disestablished should retain its endowments. That could easily be settled, for no one wants to rob the Church of what has been given to it by individuals since the Reformation. When the bishop declared that a religious establishment to be justified must represent a clear majority of the people he was met by cries of "No, no," and when he added that if such was their view they had better keep it to themselves they laughed at him, and when put to vote only four men voted for the amendment and only two against the resolution.

The Persian Situation

The dismissal of Morgan Shuster from the post of Treasurer-General was followed by the occupation of Tabriz, in North Persia, by the Russians, and it is expected that the British will soon occupy Shiraz, in South Persia. The Fidiyas, as the members of the Constitutional Progressive party are called, took up arms in defense of their country, but their resistance was

futile and served only to exasperate the invaders and give them an excuse for strengthening their hold on the territory seized. At Tabriz there was sharp fighting for nine days, beginning on the night of December 20, when a Russian patrol encountered a band of Fidiyas in the street and two of the Persians were shot. The Persians in the citadel fired upon the Russian camp with mountain artillery and the Russians retaliated with shrapnel. One of the shells cut thru the flagstaff on the American consulate, but did no further damage to the building. During the following days the Fidiyas besieged the Russians in their camp near the city and in the Russian consulate until relieved by 800 men, who made a forced march from Julfa, 80 mi'es away, in forty-eight hours. The Russians then shelled the town and captured the citadel. The total losses were only two or three hundred and it appears that the charges of cruelty and indiscriminate slaughter which have been freely alleged on both sides are either altogether false or grossly exaggerated. The end is not yet, however, for the Russian Government has announced its intention of inflicting exemplary punishment upon the Constitutionalists in order to prevent future disturbances. Wholesale arrests will be made for trial by court-martial. The Russian troops at Tabriz now number 4,000 sharpshooters, with four squadrons of Cossacks and a battery of artillery. About the same number are stationed at Kasvin. Shua-ed-Dowleh, who led the recent revolt to restore the ex-Shah, is assisting the Russians to put down the Constitutionalists, and is expected to be made Governor-General of the Province of Azerbaijan by the Russian Government.—A party of Indian sowars escorting the British consul, W. A. Smart, from Bushire to Shiraz, was attacked on the route by 800 Kashgai tribesmen, and the consul was wounded and two of the Indians were killed. The native resentment is almost as strong against the British in the south as against the Russians in the north. The situation in Persia, in which the United States has at least some concern, and which involves the destiny of one of the greatest of the historic nations of the Old World, has some light

thrown upon it in the recently published biography of one of our oldest and most distinguished missionaries, the late J. P. Cochrane, M. D. He lived many years in Persia, and by his profession as a physician, as well as by his remarkable personal gifts, he had access to people of every class, from the Shah in Teheran, to the Kurds in the Armenian mountains, and was the trusted adviser and friend of all. England's attitude may be seen in the following account of the conduct of the British consul:

"We found him encamped in a shady place, waiting for the arrival of the Government officials. He became very impatient at their tardiness, and sent one man after another to report that he was waiting their arrival, and would stay there all night if they did not come. Finally the agent of the foreign office came, but the Consul told him he had insulted him in keeping him waiting so long, that he should have come out at least twelve miles. The Persian said the Consul had no cause or complaint, he had come with some ten military officers, five noblemen and two led horses and a detachment of fifty cavalry. These were all near but had not been presented. His reply, not being worded carefully, provoked the Consul and he stormed away, John Bull getting away with him. He called for his horses and said he was going back to Tabriz. The Khan mounted and started after him as well as some others. I also accompanied but did not say anything while he was in that state. The Khan provoked him more and more by telling him in the Oriental style of hospitality, 'I won't let you go. You shall go on to Urumia with me,' and caught hold of the bridle. He only added fuel to the fire and I got the Khar to leave him and fall behind. We rode on toward Tabriz. I soon ventured to remark that the Governor, who I knew, had given orders to have him received with every mark of respect and to do him every possible honor, and that I hoped that any mistake on the part of his agent, would not be considered disrespectful on the part of the Governor. He said, 'I am going back!' I then bethought myself to send back word to the Khan asking if he would come after him on foot. So he dismounted and began walking after us. I told the Consul that the Khan was on foot, following. He slowed up, and after the Khan had again asked pardon, catching hold of the Consul's feet, the latter turned about. So we rode back to the city's gates."

The Chinese Rebellion

Premier Yuan Shi-kai, after consultation with the Manchu princes, has telegraphed to Tang Shao-yi at Shanghai his assent to the proposal to leave the

DR. SUN YAT SEN

Inaugurated by the revolutionists at Nanking, January 1, 1912, as first President of the Chinese Republic.

question of the form of government to a national convention. This concession, however, did not bring about an agreement, because there is still a wide difference of opinion as to the character of the convention and the time and place of meeting. The revolutionists wished to have the matter decided at once by the delegates from the eighteen provinces now gathered at Shanghai. Yuan Shi-kai objected to this project on the ground that these delegates are not really representative of the provinces and not in any sense empowered to decide between a republic and a monarchy. He held that the convention ought to be postponed for some months until properly instructed representatives can be assembled at Peking. The revolutionists fear that such a delay will give him an opportunity for strengthening the imperial

authority by securing a loan and reorganizing the army. Premier Yuan stated the case before a conference of the imperial clan held in the palace on the forenoon of December 28, and frankly declared that in order even to hold that part of China north of the Yang-tse for five months he must have \$10,000,000. A distressing scene ensued. The Empress Dowager wept and fainted. Some of the Manchu princes urged resistance to the bitter end. Others advised concession. None of them, however, came forward with an offer to contribute sufficient funds from their private fortunes to save the dynasty, as they might easily have done, so the only possible outcome of the conference was the publication of an edict by the Dowager Empress agreeing to a constitutional convention. Yuan has thus succeeded in throwing the responsibility for the decision upon the Manchu princes, since they refused to accept his proffered resignation. He has agreed to the stipulation of the revolutionists that the armistice be extended till the national convention meets, that no effort be made to secure a foreign loan in the meantime, and that the imperial troops be withdrawn 37 miles from their present positions. The convention will be composed of three delegates from each of the eighteen provinces of China proper and from Mongolia and Tibet. —A convention of revolutionists from seventeen of the eighteen provinces, meeting at Nanking on December 29, elected Dr. Sun Yat-sen President of the Chinese Republic by a vote of 16 to 1, the latter being cast for General Huang Hsin, instigator of the revolution at Wu-chang. Huang has been made Minister of War in the provisional cabinet, and General Li Yuan-hung, now in command at Wu-chang, is Vice-President. The Foreign Minister is Wu Ting-fang, former Ambassador to the United States, and the remaining positions are filled by Yale graduates, Chen Chin-tao as Minister of Finance, and Wong Chun-hui as Minister of Justice. Dr. Sun was inaugurated at Nanking, the historic southern capital, on the first day of the new year, possibly in order to make convenient the change to the Christian calendar desired by the revolutionists. Whether the provisional government so

organized will ever exercise any real authority remains to be seen.

Russian Designs on Mongolia

That the overthrow of the Manchu dynasty would result in, at least, the partial dismemberment of the Chinese empire has become more evident by the reported ultimatum delivered by Russia to China in regard to Mongolia and Turkestan. It appears that the Mongolian princes met at Urga and elected the Kutuktu Great Khan of Mongolia and he assumed that office on December 28. The princes declared their intention of throwing off all allegiance to China in case a republic was established. The Kutuktu, the spiritual head of the Mongolian Lamaists, is regarded by them as the living incarnation of Buddha, subordinate, however, to the Dalai Lama of Tibet. The Amban, the representative of the Chinese power at Urga, was expelled a month ago. The Russian Government pointed out, in a diplomatic note delivered at Peking, that the chaotic condition of affairs in Mongolia was injurious to Russian commercial interests in that region and requested the Chinese Government to resume immediately its control over Mongolia. The Chinese Foreign Office replied that under the circumstances it was unable to do so at the present moment, but would order commissioners to proceed to Urga via the Trans-Siberian railroad and endeavor to bring the Mongol authorities back to their allegiance. It is assumed that this diplomatic protest by Russia is preliminary to the occupation of the country with the intent of ultimate annexation. The Russian Government, as soon as it found its plans in Manchuria checked by Japan, turned its attention to Mongolia and proposed to run a branch of the Trans-Siberian railroad from Lake Baikal to Peking, thus cutting off three or four days of the eastward journey from the Atlantic to the Pacific. Last summer Russian troops seized Kuldja and the Ili valley in Chinese Turkestan and forced China to extend the privileges of Russian traders in Mongolia and to permit the establishment of Russian garrisons in the chief towns of Mongolia for the protection of the consulates.

The General Arbitration Treaties

BY HERBERT W. BOWEN

[The author of this article was for many years Consul General of the United States at Barcelona, and was subsequently United States Minister to Persia and Venezuela. He represented Venezuela at the Hague Court in 1903.—EDITOR.]

UNUSUAL interest has been taken by our people and all other civilized peoples in our two general arbitration treaties, the one with Great Britain and the other with France, which were prepared under the direction of President Taft, and which were signed August 3, 1911. They differ from our former treaties, first, in that they are general rather than specific; second, in that they do not contain a provision excluding from arbitration all differences that affect the vital interests, the independence, or the honor of the contracting states or that concern the interests of third parties; and, third, in that they provide for the appointment of a joint high commission to inquire into controversies and to report upon them before they are submitted to arbitration.

The articles of each treaty are seven in number, and are substantially identical in each, and are preceded each by a preliminary statement, or preamble, containing the solemn and unqualified declaration that both nations are "resolved that no future difference shall be a cause of hostilities between them or interrupt their good relations," and that their object in concluding the treaty with each other is "to provide means for the peaceful solution of all questions of difference which it shall be found impossible in future to settle by diplomacy."

The nobility of purpose express in that declaration entitles it to rank with the majestic preamble of the Constitution of the United States.

Of the seven articles the last two relate to the agreement that these treaties shall supersede our arbitration treaties of 1908 with Great Britain and France and to the exchange of ratifications and the twelve months' written notice that must be given in case either party desires to terminate the treaty. The other five articles contain the new plan of arbitration.

Article I provides that "all differences hereafter arising between the high contracting parties, which it has not been possible to adjust by diplomacy, relating to international matters in which the high contracting parties are concerned by virtue of a claim of right made by one against the other under treaty or otherwise, and which are justiciable in their nature by reason of being susceptible of decision by the application of the principles of law or equity, shall be submitted to the Permanent Court of Arbitration established at The Hague by the Convention of October 18, 1907, or to some other arbitral tribunal as may be decided in each case by special agreement, which special agreement shall provide for the organization of such tribunal if necessary, define the scope of the powers of the arbitrators, the question or questions at issue, and settle the terms of reference and the procedure thereunder."

The intention of the parties as thus express is evidently to have all their differences which cannot be settled by diplomacy submitted to an arbitral tribunal. The clearness of that intention is not obscured by the restriction that the differences must relate, as they should, to international matters, nor that the parties must be concerned in them "by virtue of a claim of right made by one against the other under treaty or otherwise," for nothing could be less exclusive than "a claim of right" and nothing more unrestricted than the word "otherwise." All that the complaining party, therefore, would have to maintain would be "a claim of right" with the restriction that it be "justiciable" in its nature "by reason of being susceptible of decision by the application of the principles of law or equity." That restriction is one of common sense and decency, for a "claim of right" that has neither law nor equity on its side should not, of course, be referred for arbitration. It is possible to

imagine, however, that some claims of right might be doubtful, or might seem justiciable to the complaining party in accordance with the terms of the treaty, but could be proved by the other party not to be so. That possibility doubtless suggested to the high contracting parties the wisdom of providing for the appointment of a joint high commission, and naturally the more the plan was considered the more it was developed and perfected. Articles II, III, IV and V present the perfected plan, and it is admirable in all its details.

Article II provides that "the high contracting parties further agree to institute, as occasion arises, a joint high commission of inquiry to which, upon the request of either party, shall be referred for impartial and conscientious investigation any controversy between the parties within the scope of Article I, before such controversy has been submitted to arbitration, and also any other controversy hereafter arising between them, even if they are not agreed that it falls within the scope of Article I; provided, however, that such reference may be postponed until the expiration of one year after the date of the request therefor, in order to afford an opportunity "for diplomatic discussion and adjustment of the questions in controversy, if either party desires such postponement."

The difference between this article and Article I is, briefly, that Article I provides for the direct submission of differences to arbitral tribunals, while Article II practically provides a mediator, who, if either party desires it, can investigate the controversy impartially and conscientiously after a suitable opportunity has been given to the other party to settle it by diplomacy.

Article III authorizes the commission to "examine and report upon the particular questions or matters referred to it," and to make such "recommendations" as may be proper. These reports are not to be considered decisions or awards. Furthermore, the commission is very wisely empowered to decide whether or not a difference is subject to arbitration. Under Article I, in case the parties differ on that point, "and if all or all but one of the members of the commission agree and report that such difference is with-

in the scope of Article I, it shall be referred to arbitration."

Articles IV and V confer on the commission such powers as it is necessary for it to possess in the performance of its duties, and provide for agents and counsel, hearings and salaries. After the commission has made its report and recommendation what is expected to happen the treaties do not state; but the inference is that its conclusions will receive due attention and careful consideration. When no compromise or settlement is effected, and it is decided to proceed to arbitration, the special agreement, which is mentioned in Article I, and which defines the questions at issue, must be prepared, and "in each case shall be made on the part of the United States by the President by and with the advice and consent of the Senate," and on the part of Great Britain and France in accordance with their respective laws, but Great Britain reserves "the right before concluding a special agreement in any matter affecting the interests of a self-governing dominion of the British Empire to obtain the concurrence therein of the Government of that dominion"; and "such agreement shall be binding when confirmed by an exchange of notes."

The treaties are exceptionally concise and clear, and it seems to be generally hoped that they will be promptly ratified. The few who object to them are persons who are unwilling to submit to arbitration questions of honor; who fear for the integrity of the Monroe Doctrine; or who are apprehensive that our Senate or Supreme Court may be deprived thereby of some of its constitutional rights or dignity; but they are greatly outnumbered by those who hold that questions of honor between nations should be questions of law; that the Monroe Doctrine will always be as much respected as it is entitled to be; and that our Senate and Supreme Court can join in promoting the cause of international justice without losing either any of their constitutional rights or their dignity.

These treaties represent the culminating efforts of centuries to establish and preserve friendly relations among nations. They are the cry of civilization against the horrors of war. They voice the prayer of the peoples for peace.

The International Grand Jury

BY WILLIAM I. HULL

[Professor Hull, of Swarthmore College, is one of the leading authorities in the United States on the history and philosophy of the Peace Movement. He is the author of the best brief volume on the "Two Hague Conferences," published in English, and is the secretary of the efficient Pennsylvania Arbitration and Peace Society. Now that the question of the Joint High Commission in the proposed arbitration treaties with France and England involves the whole objection to them, we are glad to present this scholarly article showing the real significance of the Joint High Commission in international law. The following article is the substance of an address delivered before the recent session of the American Society for the Judicial Settlement of International Disputes.—EDITOR.]

ONE of the notable achievements of the First Hague Conference was the prominence given by it to international commissions of inquiry as one of the best means for the pacific settlement of international disputes. The proposal to establish these gave rise to one of the longest and most ardent debates of the conference, the result of which was to impress them deeply upon the international consciousness.

A large majority of the delegates shared the conviction that governments should investigate *before* they fight, and the belief that, if they investigate before they fight, in all probability they will *not* fight at all. They believed also that the truth, the whole truth, and nothing but the truth relating to international disputes should be impartially ascertained and made public; and that during such investigation popular passions would have time to cool, and a peaceful settlement of the difficulty be made more easy.

On the other hand, a minority of the delegates argued that the establishment by the conference of international commissions of inquiry would be too long a step in the direction of obligatory arbitration; that a report by such commission, if it were adverse to the interests of a large Power, would cause the large Power to refuse to arbitrate the dispute; that such commissions would be a strong link in the chain which was being forged for the binding together of the nations in a union which would infringe upon the sovereignty of the smaller Powers; and that at the bottom of every request by one state for an international commission of inquiry there is a kind of doubt as to the impartiality of the investigation made by the national authorities of the

other state, while the acceptance of a proposal to name such a commission implies a willingness to subject the action of its own authorities to a kind of international control.

So persistently were these arguments urged (they were *fears*, rather than arguments, as Baron d'Estournelles declared, and therefore could not be answered), so determined were the delegates of three Balkan governments (Roumania, Servia and Greece) to defeat the adoption of international commissions of inquiry in any form, that the conference was finally obliged, instead of *establishing* them and conferring upon them a wide scope of activity, merely to declare that it would be *useful* for the signatory Powers to establish them "in so far as circumstances permit," and in questions "involving neither the honor nor the vital interests of the Powers concerned."

This apparent failure of the conference to make what seemed to be so short and so reasonable a step toward international justice was one of the reasons why it was made the laughing-stock of a reckless press and the contempt of thoughtless people. But seldom indeed has there been so striking an illustration of the importance of declaring the truth, however tritely, of holding up "a standard to which the wise and the honest may repair." Endorsed thus feebly by the conference, but made practicable by the adoption of a few simple rules of procedure, and imprest upon the attention of thinking men, international commissions of inquiry have found an assured place in international relations; and, resorted to by Great Britain and Russia in the case of the fishermen of the Dogger Bank,

one of them allayed the passions of the British people at a grave period of the Russo-Japanese War and probably prevented that war from becoming fatefully enlarged in its scope and results.

At the Second Hague Conference the attempt was renewed to *establish* international commissions of inquiry, to make it incumbent upon Powers not party to an international dispute to suggest a resort to them by the disputant Powers, and to add to their duty of impartial investigation and report the further duty of fixing the responsibility for the occurrence which gave rise to the dispute. These propositions again stirred up determined opposition, which was this time almost unanimous, and all that was accomplished by the Second Conference in regard to the commissions, besides an improvement in their mode of procedure, was the adoption of a declaration that their establishment by the Powers, under the former restrictions, would be *desirable* as well as *useful*.

Here the history of international commissions of inquiry ended, in apparent ignominy. But in this year of grace the President of our Republic has, under God, taken up this stone which the builders rejected and has made it the headstone of the corner. Truly, we may exclaim with the Psalmist: "This is the Lord's doing; it is marvelous in our eyes."

When the proposed treaties of arbitration, and the Senate's objections to them, are carefully examined, it is seen that the heart of the treaties and the core of the opposition to them lies, not so much in the apparently universal scope of the arbitration proposed, as in the proposed method of determining the arbitrability of questions in dispute. This method is the appointment of an international commission of inquiry, or, rather, the transformation of the familiar international commission of inquiry into an international grand jury.

With the rapidly growing belief in the efficacy of arbitration for the settlement of international disputes, there has been a rapidly growing desire to have *all* international disputes submitted to this peaceful mode of settlement; but the supreme difficulty, the crux of the entire movement, is to *get the parties into*

court. This desire and difficulty are reflected by the treaties and the Senate alike. The contracting governments declare that they are "resolved that no future difference shall be a cause of hostilities between them or interrupt their good relations and friendship"; and the Senate's committee asserts that it "is as earnestly and heartily in favor of peace and of the promotion of universal peace by arbitration as any body of men, official or unofficial, anywhere in the world, or as any one concerned in the negotiation of arbitration treaties." The treaties propose the arbitration of all "justiciable" questions, and the Senate responds with a hearty Amen. So emphatic is this response that the wayfaring man naturally asks, Then where is the hitch? And the suspicious man is inclined to regard the Senate's response as emphatic rather than sincere, and to apply to it the words of Ambassador Choate at the Second Hague Conference, when he characterized Baron Marschall von Bieberstein, of Germany, the great opponent of the American proposal for a world treaty of obligatory arbitration, as being "on the one hand, an ardent admirer of obligatory arbitration in the abstract, on the other, when this idea is to be put into practice, he becomes its most formidable opponent. It is for him," Mr. Choate continues, "an image which he adores in the sky, but which loses all its charm on touching the ground; he regards it in his dreams as a celestial vision, but when it approaches him he turns toward the wall and will not look at it!"

But this doubt, as far as the Senate is concerned, is not well founded; for, altho the Senate's dream of universal arbitration is somewhat troubled by such nightmares as attacks upon the Monroe Doctrine, the influx of undesirable immigrants, and aggressions upon the territorial integrity of the States and the nation, the real lion in its path is the great question: *How* shall the justiciability of international disputes be determined? Or as the report of its committee states it: "The most vital question in every proposed arbitration is whether the difference is arbitrable."

To answer this fundamental question, the treaties propose to institute a Joint

High Commission of Inquiry, charged with the duty, first, of impartially and conscientiously investigating and reporting upon any controversy referred to it, for the purpose of facilitating the solution of disputes by elucidating the facts; and, second, of determining the justiciability or non-justiciability of cases in which the parties disagree as to whether or not they are subject to arbitration.

The name of *Joint High*, instead of the Hague Conference's name of *International*, Commission of Inquiry is given to the new agent, but the first duty assigned to it is that proposed at The Hague; while, thru the second duty assigned to it, it has been transformed from a high *commission* and raised to the dignity of a *grand jury*. Thus has been proposed the immensely important step of adapting to the administration of international justice that great agency which has served the Anglo-Saxon people for more than seven centuries as one of the chief bulwarks of individual liberty and as one of the most efficient tools in the enforcement of national law and order.

History repeats itself in a most instructive and most encouraging way. Looking back to the days of the Norman and Angevin kings, when the first faint heart-throbs of trial by jury were beginning to make themselves felt within the body politic of England, and the virus of trial by battle was being expelled by it from the current of national justice, we see gradually emerging above the baronial turbulence and social injustice of the times the jury of inquest and presentment, which became the mother of grand and petit jury alike. Originating as a body of impartial witnesses, summoned by royal writ and sworn before the king's officers to declare all the facts in a given case, it was used by William the Conqueror for inquiring into the laws of Good King Edward and for securing the information upon which Domesday Book was based. Henry II used it in connection with the Assize of Arms and the Saladin Tithe, and substituted it for the wager of battle, in civil cases, for determining title and possession. It was Henry II, also, who, in his great struggle with the barons and the Church, lifted it above its rôle of inquiry and re-

port and invested it with the power of indictment in criminal cases (Constitutions of Clarendon, 1164, Sixth Chapter, and Assize of Clarendon, 1166, First Section); Magna Charta (Thirty-ninth Section) made it the cornerstone of English jurisprudence; the American Colonies and States incorporated it in their temples of justice; and the United States Constitution (the Fifth Amendment) made it a foundation stone of the new republic. Sustained by both common and statute law, and by the affections of a self-governing and law-loving people, it has achieved among the English-speaking peoples on both sides of the Atlantic a long and glorious record of beneficent activity; and now the President of our republic has proposed to those same peoples its establishment within the international temple of peace and justice at The Hague, and invited all other nations to share with us its benefits.

The national grand juries of today include within their functions, first, *inquisition* of office, or the investigation of matters committed to their inquiry, upon evidence laid before them; second, *indictment*, or accusation of crime or misdemeanor; and, third, *presentment*, properly so called, or inquiry into an accusation of crime or misdemeanor, upon the jury's own motion and from its own knowledge and observation.

It has not yet been proposed to invest the international grand jury with the function of *presentment* proper; but with the growing sense of the solidarity of nations we may yet hope to see a properly constructed grand jury of the nations taking cognizance of and presenting such patent crimes as the annexation of one's neighbor's outlying territories. But this is for the future. For the present it has been proposed in the Hague Conference, as has been seen, that the international commission of inquiry shall be vested with the duty of *inquisition of office*; and now our President has proposed that it shall be vested with the great and distinctive duty of *indictment*. It is still difficult for us to think into our old familiar terms of national jurisprudence their international significance. But it is clear that Article III of President Taft's treaty, which empowers the Joint High Commission to test by the

principles of law or equity the justiciable character of international differences, is tantamount to the prime object of *indictment*, namely, the getting of a case before a court, the bringing of two disputants before the bar of justice.

The Senate objects to this summary process because it is opposed to the Senate's constitutional duty of itself sharing in the decision as to justiciability, and in the appointment of the Joint High Commission.

Now, there can be no objection to the Senate's participation in the appointment of the American members of the Joint High Commission, at least in the usual manner of ratification. It has always been an essential feature of the national grand jury that it shall be of a *representative* character. Chosen at first from the hundred, it was regarded as representative enough to present, inquire and indict, but not to act as a trial jury, that is, to give fair and adequate expression to the voice of the county as to the guilt or innocence of the accused. Accordingly, it was enlarged by including representatives of "the four vills" and the jury of another hundred, also, at times, by coroners, knights and others of representative character. The principle of representative government as a whole was cherished and preserved chiefly in the jury, and Parliament itself arose in the form of a great, national, representative jury. It is entirely fitting, therefore, that the international grand jury, at least in the initial stages of its growth, shall be representative in the large sense of the nations concerned, and that the Senate shall share with the Executive the responsibility of its appointment. Indeed, since the national grand juries are summoned by courts of sufficient criminal jurisdiction, the Supreme Court of the United States may well claim its share in the appointment of the international grand jury—especially since the jury is to perform an essentially judicial function.

But the Senate's claim to a share in this judicial function of the international grand jury cannot be thus readily granted. It does not appear to be well founded on constitutional interpretation, and it is certainly most repugnant to the

ideals of justice and fair play cherished by the Old World members of the family of nations. At the Second Hague Conference, for example, the Austrian and other delegations persistently and almost tauntingly inquired of our American delegation how the United States Government could possibly enter into any world treaty of genuine obligatory arbitration if the United States Senate must exercise the right of approving, not only the general treaty itself, but also a special treaty determining the object, scope, etc., of the arbitration of every individual dispute. Although Great Britain and France have agreed that the Senate shall ratify the compromise (that is, the agreement for the arbitration of each specific dispute), as well as the general treaty, it cannot be expected that all other nations will be thus complacent, or that they or any other nations would make a general treaty submitting all justiciable cases to arbitration, and at the same time assigning to the United States Senate the right of deciding on the justiciability of each case as it arose. Evidently, if such be the constitutional limitation of our Government in international affairs, it, like the power of the national Government over the State in such international matters as the treatment of resident aliens, is greatly in need of revision. In some way, by constitutional interpretation or constitutional amendment, the United States Government must have the shackles stricken from its limbs, so that it may fulfil unhampered its duties toward the other members of the family of nations.

But in regard to the Joint High Commission's duty of determining the justiciability of specific disputes, it does *not* appear that the Senate is vested by the Constitution with any right or duty. This is clearly either an administrative or a judicial measure. If it is an administrative measure, it must be performed, not by the Senate, but by a commission acting under the Executive, even as tariff boards pass upon the dutiability of imports under a treaty of reciprocity. If it is a judicial function, it must *a fortiori* be performed, not by the Senate, but by a commission vested with judicial powers, in the appointment of which the

Senate may concur, but in the performance of whose judicial duties neither the Senate nor the Executive may interfere. It is not to be tolerated, under the rules of fair play, that a government may act as the judge or the petit jury in its own case; and it is no more to be tolerated that a government shall act as its own grand jury, and insist on the control of inquest, indictment or presentment of only such cases as may suit its pleasure or convenience.

Of course, the *ideal* international grand jury would be one, not only composed of "good and lawful men," whose interest in any particular case does not transcend that common interest which every good member of society feels in the enforcement of law and justice, and who would therefore pass upon it with faithful impartiality, but it would be one also fairly representative, not of the governments interested in the particular case at issue, but of the family of nations as a whole. The Senate's committee has criticised the proposed treaties on the ground that they "are not in the direction of an advance, but of a retreat from The Hague provisions, because they revive the idea of confining membership in the commission, if insisted upon by either party, to nationals instead of to wholly disinterested outsiders." While this criticism is entirely just from the point of view of the ideal, it does not come with peculiar propriety from a branch of the legislative department of the Government which demands for itself the right of withholding from arbitral adjudication cases in which it is vitally interested, especially since, immediately after this criticism of the treaties, it strenuously objects to vesting in an outside commission the power to decide on the justiciability of disputes. From the point of view of the practical, we cannot expect to create immediately an ideal international grand jury; and it should be remembered that national grand juries grew slowly in representative character and in scope of jurisdiction, being summoned at first only to inquire for the body of the county, *pro corpore comitatus*, while down until 1548 (2 and 3 Edw. VI, c. 24) it was the rule that, when a man was wounded in one

county and died in another, the offender was at common law indictable in neither county, because a complete act of felony had been committed in neither. It is evident from past history and present human nature alike that too rapid progress cannot be hoped for in the development of the newly born grand jury of the nations; it is evident also, from the Senate's vigorous opposition to the alleged radical character of the President's proposal, that this proposal marks a decided step toward the ideal.

The ideal international grand jury, also, would act for each member of the family of nations, large or small, just as surely and potently as it would for any of the others. The Senate committee's warning that "if we enter into these treaties with Great Britain and France we must make like treaties on precisely the same terms with any other friendly Power which calls upon us to do so," is a reflection of the ideal and of the Senate's attitude toward it; while the President's frank acceptance of the alternative, his refusal to be terrified by the fear of the subjunctive, and his loyalty to justice, regardless of the side on which the weight of her scales may turn, is a splendid object lesson to the nations, and another great step toward the ideal which declared that, just as public wrongs are considered in every civilized nation to be committed, not primarily against the individual, but against the commonwealth, so international wrongs must be considered as committed, not primarily against the individual nation, but against the family of nations, to whom international rights and duties pre-eminently pertain. In practice, again, it should be remembered! that for generations after the introduction of indictment by means of the national grand jury, the accused, if sufficiently powerful, would refuse "to put himself on the county," that is, to submit to jury trial, and that from 1275 A. D. to 1772 A. D. it was held necessary to punish such refusal by imprisonment and by the *peine forte et dure*. We cannot anticipate that the "great Powers," led on as at present by the will-o'-the-wisp of territorial aggrandizement, will submit immediately to be haled into court and compelled to make retribut-

tion for their high crimes and misdemeanors.

But we may be profoundly thankful that our President has thus lifted from the dust the standard of international justice; and we may be assured that, as the nations rally one by one to that standard, an international public opinion will be created, so enlightened, so just and so invincible, that no international delinquent, however great or obstinate, will refuse to bow to that sovereign power of our time, and to the indictment of the ideal international grand jury which will represent it!

Standing face to face today with the great "present crisis" in the development of international justice, holding within our grasp the immeasurable power for good possessed by the international grand jury which President Taft is offering to our own and other nations, we may well recall and ponder Lowell's heartfelt cry in another great crisis of our country's and the world's history:

"Once to every man and nation comes the moment to decide,
In the strife of Truth with Falsehood, for the good or evil side;

Hast thou chosen, O my people, on whose party thou shalt stand,
Ere the Doom from its worn sandals shakes the dust against our land?

Careless seems the great avenger; history's pages but record
One death-grapple in the darkness 'twixt old systems and the Word;
Truth forever on the scaffold, Wrong forever on the throne,—
Yet that scaffold sways the future, and, behind the dim unknown,
Standeth God within the shadow, keeping watch above his own.

New occasions teach new duties; Time makes ancient good uncouth;
They must upward still and onward who would keep abreast of Truth;
Lo, before us gleam her camp-fires, we ourselves must Pilgrims be,
Launch our Mayflower, and steer boldly thru the desperate winter sea,
Nor attempt the Future's portal with the Past's blood-rusted Key."

SWARTHMORE, PA.

Persia to Europe

BY EDNA DEAN PROCTOR

You scorn us? You dream we are ready to yield
Our realm at the threat of your armies afield?
You, race of wild rovers or forests your home
When *we* towered resplendent ere Athens or Rome?—
Our grandeurs of old we can never forget,
And the Mede and the Persian abide with us yet.

From the gulfs of the south to Tehrân and Tabriz
We are rousing from sleep and submission and ease;
Is it just to assail us, yet hardly awake,
When we need all our valor and vigor to break
The bonds that have kept us in weakness and wrong?—
Away with your dirges and cheer us with song!

For by our Avesta, that gospel of God
Leading upward the soul to His crystal abode;
By thy columns, Persepolis, crowning the plain
Where age after age saw thy glorious reign;
By the snow of Elburz; by the Sun in the sky;
By Ormuzd and Allah—our rule shall not die!

New Year's in the Streets of Tokyo

BY YEI T. OZAKI

[Madame Ozaki is the accomplished wife of the Mayor of Tokyo, considered perhaps the greatest orator in Japan. Many Americans will remember their visit to the United States a few years ago. Madame Ozaki has written much about things Japanese and is considered an authority on the home life of the Japanese people.—EDITOR.]

Kado matsu wa
Meido no Tabi no
Ichiri Zuka
Medetaku no ari
Medetaku no nashi.

Song by Ikkyu.

At every door
The pine trees stand;
One mile post more
To the spirit land:
As there's gladness
So there's sadness.

WHO shall describe the streets of the capital on New Year's morn? It is a never-to-be-forgotten sight, especially if the sun shines brightly over all. Generally speaking, Tokyo is a city which lacks distinction. Brownish-gray rows of one-storied, low-roofed, wide-eaved houses, broken once and again by a two-storied house or an ugly foreign-built post office, form the quiet, irregular, unpretentious streets. At the New Year a metamorphosis takes place. On all sides the chrysalis of the city bursts into a butterfly of color and bright ornamentation. From every gateway flutter the wings of two flags of the Rising Sun, a scarlet ball on a white background. The decorations of the season turn the streets into vistas of waving bamboo saplings, pine branches, straw fringes and lappets* of white paper.

The superiority in artistic effect and impressiveness of uniformity of design and color in decoration over irregularity and spasmodic attempts is seen in these beautiful lines of green and lines of white and lines of flags with their crimson suns, which are so essentially Japanese and so deliciously harmonious to the eye.

There is the *Kado-Matsu* (pine of the doorway), a decoration which consists of bamboo and branches of pine trees planted on each side of the door or gateway. Sometimes the bamboo takes the form of

three large stems sliced obliquely to a point with pine branches bunched together at their base; at other times it is a bamboo sapling waving in the wintry wind over its shorter companions, the pines. The pine, being a sturdy evergreen, unaffected alike by the heat of summer and the severest storms of winter, is an emblem of endurance and constancy to purpose in the face of misfortune, and the bamboo, with its straight, regular joints, is a symbol of virtue from *Setsu*, which means "a joint" and also "virtue."

The custom of planting pine branches dates from about 900 years ago, but the bamboo decorations were added much later. The plum blossom is seldom added outside the house, but the favorite combination in the home and in art is the *Sho-Chiku-Bai*, "the pine, the bamboo and the plum blossom," the latter symbolizing womanly sweetness and grace, so that the trio represent the ideal of manly strength and feminine charm. Across the gateway is stretched the ubiquitous straw rope and fringe. The straw rope and the mirror cakes above mentioned have a religious reference and go back to time immemorial of the Japanese cosmogony and its beautiful sun myth. It is written in the ancient annals that in the dawn of time Amaterasu, the Sun Goddess, withdrew into a cave in anger at the pranks of the impetuous Moon God, who broke into the room where she and her maidens were weaving. In consequence the world was plunged into utter darkness. In desperate resolution the gods and goddesses assembled before the cave and started all the known arts and industries to help them in their purpose of luring the Light back to them. They forged the first mirror of metal, and, having placed it before the mouth of the cave, they indulged in

a wild revel, in which the Goddess of Mirth, Uzume, amused them all by her sportive dancing. The sounds of the revelry reached the Sun Goddess in her cave, and, her curiosity fully aroused, she pushed back the rock so that she might peep out and see what was the cause of this unwonted noise. As she did so she caught sight of her own reflection in the mirror. Innocent wonder at the lovely vision drew her out still further. The gods, who had been waiting for this moment, now rushed forward and rolled the rock back against the mouth of the cave and drew the straw rope across the entrance. The mirror cakes and the straw rope have ever since played a large part in Japanese life. It will be remembered that the mirror is the symbol and focus of the Shinto faith, the primeval cult of Japan, and dates its origin from this myth. The straw rope seen today is said to be in memory of that stretched across the entrance of the cave, Amano-Iwato, after the Sun Goddess emerged from her self-immurement. The dark interior of the cave was considered to be unclean and inauspicious, and the rope fenced it off from the clean and smiling world outside. This rope is used in Shinto temples to mark off the clean interior from the common outer world, and is used in dwelling houses on festive occasions as a boundary over which nothing unclean or unlucky is to find entrance, the advent of evil spirits, being thereby, it is supposed, prevented. The straw rope, therefore, must have had the prehistoric significance of a *taboo*. The palm leaf with its fronds downward is used in the same way in Siam and Burmah to this day. Not only over the gateway, but over all the principal parts of the dwelling, do we find the *Shime-nawa* (straw-rope), and tradition tells us now that wherever it hangs the balmy, fragrant winds of spring blow. Over the doorway it is sometimes twisted into an artistic knot and tassel-like ends, and this forms the background to a curious emblematical device. A red lobster set in the midst of fern fronds, some leaves of the ever-green *Yuzuriha*, and a bitter orange is the prominent feature. A piece of charcoal is sometimes added to the collection. Associated as the lobster is in the West

with indigestion and things conducive to anything but long life, it may cause some surprise to learn that on this side of the world the lobster typifies longevity, and its presence on the top of the portal expresses the hope that the inmates may live till their backs are bent double and their beards reach to their knees after the manner of the feelers of the crawfish—a truly patriarchal conception of bliss! The fern fronds, in the way they branch and rebranch, are figurative of the desire of a large posterity, and the leaves of the *Yuzuri-ha* signify uninterrupted succession in the family, for the young leaf of the *Yuzuri-ha* always develops well, before the old leaf, growing in front of it, drops off. So the *Yuzuri-ha* is used as a symbol of that fortunate household where the son attains manhood and is able to take his place as head of the family before the decease of the father. The bitter orange *Daidai* means to bequeath from “generation to generation,” from a Chinese word *Daidai*, which means the same. Charcoal is of good omen because its color never changes, and it is therefore used to symbolize the prosperous *changelessness* of the fortunes of the family. It is also impervious to damp and is used by the rich to fill up the grave round the coffin of the departed.

Tokyo seems to take a new lease of life New Year's morn, and not only the young, but the old and those who have been sobered in the school of adversity, step back into its careless springtime and trip it merrily to the rhythm of the heart's own music of mirth and joy and hope. The streets of the city have the appearance of a huge playground, for the New Year is the one sabbath of the year. The shops are not closed, but blinds made of slatted bamboo are hung up to show that all business is suspended, and above the blind the name card of the owner is placed in the butterfly bow of the four-stranded *mizu-shiki*.*

The highways of the city leading to the palace are full of the coming and going of high life. At 9.30 a. m. the Emperor receives the Princes and Princesses of the Blood, the palace officials, the nobility and Imperial nominees to the House of Peers and their wives; at 10 the Cabinet Ministers and their wives, officers

*The red and white string of felicitations.

and the various halls of the palace and Government employees of high rank and wives. The sun glitters on innumerable plume-cocked hats and coats resplendent in their gold lace and the proud display of decorations. The *chokunin-kwan*

While principalities and powers perform ceremonious functions and go thru their paces in high places, making a pageantry of fine feathers and fine birds, the young are having a gay time in the open all over the city. All are dressed

"THE JAPANESE MAIDEN LOVES HER HAGO-ITA ALMOST AS MUCH AS SHE DOES HER DOLLS"

(highest rank) officers are distinguished by white feathers to their hats, while the *sonin-kwan* wear black plumes. At 2 o'clock the foreign representatives, the Ministers Plenipotentiary, the secretaries of legation and their wives are received in Court dress by their majesties.

in the smartest clothes their wardrobes can produce, and little girls, and big ones, too, are out in be vies playing battledore and shuttlecock. As they flit to and fro in their brightly colored *ki-monos*, the long sleeves flashing glimpses of scarlet and multicolored linings,

brighter or subdued as they come into the sun or fall into the shadow, they recall the pretty gatherings of butterflies it is the pedestrian's luck, sometimes, to disturb on summer walks far off among the hills.

As I went my round of calls I caught sight of visions of more sumptuous female attire under the imposing porticoes and in the stately gardens of the patrician and the wealthy. Many were the pictures of sapphire, amethyst and willow-green crapes girdled with sashes glinting with gold and crowned by shining black coiffures and daintily powdered faces. Some of the faces are smudged with white or red paint or black ink, and once in a way a player will smack her vis-a-vis with her *hago-ita*.† These are the various penalties for missing the shuttlecock, which is smaller and far more delicately made than its Western counterpart. The Japanese girl's "battleboard" too is a thing of beauty if not a joy forever. It is made of soft white wood and the reverse side is covered with beautiful appliquéd figures of many of the beacon lights of her history. Scarlet crape and soft white silk are padded and painted into the figures of hero or heroine of renown. Beauties of the conventional aquiline type mincing along in Old World costumes, fierce and dauntless warriors in their resplendent armor ready for the battle or some deed of prowess all live again on these picturesque Japanese battleboards. The Japanese maiden loves her *hago-ita* almost as much as she does her dolls, and the walls of her room will often be adorned with row upon row of fine battleboards, presents from rich parents, relations and friends.

Lads as well as lassies have their special New Year's game, which is kite flying. Overhead in every quarter of the city, like big birds or strange aerial messengers, kites fly in the wind and stud the blue vault of heaven. As one spins along in a jinrikisha not infrequently one has to wait while a group of young urchins pull their different kite strings to one side and allow the runner to pass. Talking one day at the end of the year to some little boys who were trying to learn English, I asked them what they were going to do in the holidays. "I

shall go out every day and fly my kite," said one. "I like to see my kite mount high in the air," said another. "It is great fun to tie a small knife to my kite string and cut the other boys' kites," said a third, with a sense of humor and the sprit of mischief twinkling in his bonny brown face. The Japanese kite is made of paper pasted on a rectangular frame of thin bamboo. Highly colored paintings and caricatures of heroes and fierce-looking goblins adorn the surface. Tokyo boys discard kite tails altogether. Their kites often take the shape of birds and bats, and an ancient archer is a favorite figure with them. A piece of whalebone fastened to the top of the kite makes a great humming against the wind.

Strange to say, tho kite flying has been appropriated by the youths of Japan as their undisputed monopoly at the New Year, it has at certain seasons received as much attention from adults and been as popular a sport in Japan as cricket in England. In Nagasaki kites as large as 36 feet square are mounted with dexterity, and all the world and his wife turn out to see the feat. One such kite requires a company of hands to manage it. The string is covered with ground glass and the company try to so maneuver their string as to cut down all competitors. In the Tokugawa Shogunate period kites so large and strong were the fashion that they were used by spies, who, mounted thus, could with great facility spy out an enemy's maneuvers, and for this reason kites of such dimensions were soon prohibited.

Religion does not play a conspicuous part on New Year's Day with the people. Among the old-fashioned, however, it is the custom to seek the favor of the god whose temple is in that quarter of the compass which corresponds with the name of the year, and in this way different temples are patronized in succeeding years. Thru friends at Court I had the privilege of obtaining a program of the ceremonies at the palace performed on New Year's Day and every day afterward till the 8th of January. According to this His Majesty sets a pious example. His first act is to worship at the four cardinal points of the compass at the early hour of 5.30 a. m. This is done before the innermost shrines of the Im-

† Battledore-let.

perial ancestors, and only two of the oldest masters of ceremony enter the Holy of Holies with the Emperor. The 3d of January is also given up to worship in the palace; worship in the Korei Den (Hall of the Ancestors' Spirits) and in the hall of Jimmu Tenno, the founder of the present dynasty, being the principal items. On the 4th the Emperor opens the Council Chamber and a resumption of state affairs takes place.

On the second day of the year a picturesque mercantile procession is to be seen making its way along the crowded thoroughfares of Asakusa, the busiest district of Tokyo. This is the *hatsuni*, or first distribution of goods sent out by the merchants to the retail dealers. Large wagons heaped with the merchandise and drawn by bulls or horses are decorated with banners, on which the name of the firm from which they have been sent is designated in large hieroglyphics. The seven gods of luck, the Rising Sun, the pine, the prawn and all the felicitous symbols of the season ride on the first car, and each house is represented by a number of men in queerly patterned livery, who follow each wagon beating drums and playing flutes. This resumption of work on the second is simulated in all classes, but it is merely a formal make-believe and resolves itself into a playful handling of work and tools by merchant or scholar or artisan.

Of the many customs connected with the New Year in Japan, the strolling *Eta* maiden, the *Manzai* and the *Shishimai* are certainly to be counted among the most picturesque. From gate to gate, from street to street, the *Eta* (the *Eta* are the outcast class, to whom is relegated all work that is considered unclean) maiden wanders with her *sami-sen*, her face all but hidden in huge, mushroom-shaped straw hat, tinkling songs to charm away the birds of ill omen, who are supposed to hover in the air on the first day of the year. In return for her kindly service grateful households hand her out a few pence twisted up in a piece of white paper. The *Manzai* are men who parade the streets dressed in styles of a day long past and who for a small sum chant good wishes for the future to the throbbing of the drum. A band of two or three children

sometimes compose the *Shishimai*. They wear large lion (*Shishi*) masks and shocks of red hair, which represent the animal's mane. These masks are jerked about to the music of drums and fifes and simulate the movements of a lion ferocious. A lion is the symbol of strength and the demons are believed to flee in fear and trembling from before the *Shishimai*.

There is one article which is lawful merchandise on New Year's Day—the treasure boat—*takara-bune*—holding the seven gods of luck, of which the smiling *Daikoku* on his rice bags is the foremost, the picture of obese contentment. "*Takara-bune*," "*takara-bune*," cries the harbinger of fortune in the shape of a droll little hawker like a smoke-blue gnome. As the sound reaches them, servants slip into their *geta* and rush out to buy a picture sketched in Indian ink on a piece of rice paper of the "*takara-bune*" for two sen. This must be placed under the pillow for good dreams of the future. Lucky indeed are those who, sleeping upon the *takara-bune*, in the silent watches of the night see visions of Mount Fuji, a Hawk or a *Nasubi** or egg-plant: The new year will be an auspicious one for them.

In old Japanese prints men beautifully attired may be seen digging and transplanting tiny pine trees on the hillside or picking spring leaves in the fields. This was a royal custom observed by the Emperor and his court on the "first day of the rat"—the 7th of January. The pine was the emblem of longevity and the spring leaves of green youth. Tho trivial acts in themselves so much ceremonious care was lavished upon them that they gradually assumed the importance and dignity of graceful rites. The plucking of spring leaves, at first symbolical only, has now become a domestic recipe. Seven kinds are prescribed—parsley, shepherd's purse, cudweed, henbit, turnip and radish. These are chopped on a big block with a large knife in each hand to a merry refrain:

"Birds of ill-hap pass us by,
Neyer here from China fly,
Flit and hop, flitting, hopping,
Chip and chop, chipping, chopping."

*A vegetable bearing a purple or white fruit much eaten in Japan.

The herbs are then made into a soup. The pine trees and the decorations were burned about the 14th of the month, but this takes place earlier now. The crackle of the flames was supposed to frighten away the demons.

All servants look forward to the 15th or 16th of the month, for these days are called the *Yabui* or *Yadōri*, "the return of the rustics," and are holidays set apart for them to visit their homes. Generally speaking, the Japanese New Year lasts till about this time, and it is practically impossible to get any work done by

the artisan class till after the middle of the month at the earliest.

If it is true that "*the brightest hope is the beginning of its own fulfilment*," as some optimists declare, then the Japanese ought to be the happiest people under the sun, for nothing can exceed the trustful, positive belief in the future, apparently undimmed by past experience, with which they begin the new year, and in the way of figurative suggestion and auspicious symbolism they leave nothing undone to magnetize fortune their way.

TOKYO, JAPAN.

The Encyclopedia Britannica and Catholicism

BY CARLTON H. HAYES

[Since the Encyclopedia Britannica is the most important reference work in the English language any question of the justice of its established reputation for fairness and accuracy is a matter of general concern. On account of the vehement attacks made by certain Catholic organs in this country upon the new edition of the Encyclopedia and the attempts to boycott the work on the ground of unfair treatment of Catholic topics, we have asked Professor Hayes of Columbia University to examine the articles criticised and state frankly his opinion of the justice of the attacks made upon this edition. The author as a Catholic and a historian is especially competent to discuss the points at issue.—
EDITOR.]

"**N**O Catholic should purchase the eleventh edition of the Encyclopaedia Britannica. No purchaser of it is bound to keep or pay for a work which falls so far short of the representation of the editors and publishers. It should be debarred from our public libraries, schools and other institutions. It should be denounced everywhere, in season and out of season, as a shameful attempt to perpetuate ignorance, bigotry and fanaticism in matters of religion."

These stirring words are the peroration to a pamphlet entitled "Poisoning the Wells—II," which has been widely distributed with the endorsement of the New York County Federation of Catholic Societies, and constitute a culmination of several months' adverse criticism by a number of Catholic journals of the treatment accorded to various religious and historical subjects in the new edition of the Britannica. Contrasted with this sweeping condemnation, with its economic and moral implications, is the per-

suasive prospectus of the editors of the Encyclopaedia:

"Their aim and object has been to look at truth objectively, to face the religions of the world as they are; not as we or others think they ought to be; to present not only what we believe, but what everybody believes. . . . You may say that the book is parti-colored, you cannot say that it is partisan. . . . Articles on particular churches have been assigned to prominent and yet moderate members of those churches. It might be argued that a more impartial account of a community could be written by one who stands without it. But the reader who turns to an article upon any religious body desires to find not a critical relation of such things as the observer may gather from outside, but an insight into the community, as it reveals itself to those who share in its ideals, its mode of thought, its method of worship."

We shall all agree that the editors' expressed ideal was a noble one. But after making due allowance for the manifold difficulties of applying it, some of us will feel that it has not been put as fully into

practice with regard to Catholic Christianity as it should have been. Thus, while the editors entrusted the histories of the Protestant establishments to Protestants, the greater part of the history of the Catholic Church since the Council of Trent was covered by the Viscount St. Cyres, a non-Catholic, in a remarkably unsympathetic manner. It might have been well, moreover, if such fundamental subjects as "religion" and "Christianity" had received a Catholic, besides the non-Catholic, appreciation. And surely within the Roman communion there were competent scholars enough to have ensured an excellent Catholic treatment of the topics of "absolution," "asceticism," "casuistry," "celibacy," "dogma," "excommunication," "fasting," "hierarchy," "holy water," "images," "mysticism," "relics," "vow" and "the Virgin Mary."

Professor Burr, of Cornell, writing of the Encyclopedia in the *American Historical Review*, has found fault with the assumed audacity and omniscience of the historical editors, Mr. Hugh Chisholm and Mr. Alison Phillips, in covering too wide a field themselves and in not seeking the assistance of a sufficient staff of authoritative advisers. Perhaps if a few representative Catholics had been invited to revise the strictly Catholic subjects, especially in theology and history, some blunders might have been prevented and some additional sympathy shown. Certainly such extracts as the following are as offensive as they are uncritical:

"Pictures and stories, carved or painted, seemed no longer necessary now [time of Reformation] that the Bible was in the hands of the common people; they had been too often prostituted, moreover, to idolatrous uses—and 'idolatry' was the worst of blasphemies to the rediscoverers of the Old Testament" (Phillips, "Church," VI, 327).

"Of equal importance was their [the Concordats'] work in freeing Austria from the control of the Church, which checked the intellectual life of the people" (Phillips, "Austria-Hungary," III 28).

In like manner, the natural desire to retain Swinburne's name on the list of contributors should not have hindered the excision of his odious remarks that Mary, Queen of Scots, knew little of repentance, "having been trained from her infancy in a religion where the Decalog was supplanted by the creed," and

that she was willing to fling Scotland with England "into the hell fire of Spanish Catholicism."

Other queer blunders and blots, errors of fact, faults of taste and offensive expressions might be cited. The editors appear to have lacked a proper understanding of the present strength and influence of Catholic Christianity. Their successors will have ample room for improvement along these lines.

Now, it is one thing to accuse the editors of mistakes of judgment in selecting contributors, or even of lack of proper attention to the detailed revising of the wide range of religious subjects, but it is another thing to denounce their work everywhere, in season and out of season, "as a shameful attempt to perpetuate ignorance, bigotry and fanaticism in matters of religion." That is impugning their motives; that is reading them out of the society of scholars. And before subscribing to that conclusion, we should naturally await the presentation in a passionless, critical manner of weighty and convincing proofs.

But when the candid student, be he Catholic, Protestant or agnostic, reads the pamphlet that contains the crushing charge and painstakingly sifts its eighteen pages of "evidence," he may almost be entitled to wonder if some one besides the editors of the Britannica has not been perpetuating "ignorance, bigotry and fanaticism in matters of religion." At the very outset he will be amazed to learn from the pamphlet itself that the editors, guiltily plotting against the Church, entrusted fifty-two articles on saints and religious orders to Abbot Butler, O. S. B., forty-one in Church history to Mgr. Duchesne, twenty-six in hagiology to Fr. Delehaye, S. J., and brief articles to Ludwig Pastor, to the learned Bishop of Newport, England, and to the esteemed Cardinal Archbishop of Baltimore. Verily these are strange conspirators in the attempt to perpetuate ignorance and bigotry!

The effect of the pamphlet is further vitiated by failure to distinguish between real offenses and harmless statements of fact. To illustrate the point, here is presumed to be a strikingly unscholarly quotation: "So despotic did the tyranny become in the West that in the time of

Charlemagne it was necessary to restrain abbots by legal enactments from mutilating their monks and putting out their eyes; while the rule of St. Columban ordained one hundred lashes as the punishment for very slight offenses" (Venables and Phillips, "Abbot," I, 24). Now, as a matter of fact, this is an absolutely accurate statement. There has come down to us a canon of the Council of Frankfort, held in the year 794, formally forbidding thruout Charlemagne's kingdom the blinding and mutilation of monks by their abbots; and the great churchman, Montalembert, and even the Catholic Encyclopedia—for who would question *its* scholarly character?—testify to the severity of St. Columban's rule. It is astounding to see the religious articles in the Britannica criticised as unscholarly by one who is illuminated by such meager scholarship himself.

Two passages will suffice to show how fatally careless—not to use a stronger word—has been the preparation of the pamphlet in question. In one the author states: "Even one of the writers chosen as representative to do part of the article, 'Roman Catholic Church,' W. A. Philipps [*sic*], assumes that the controversy on the Donation of Constantine has been settled once for all, with the further assumption, of course, that the Church was responsible for the forgery, and had used it wittingly with deceit and treachery." Is the author afflicted with strabismus? The present writer has read Mr. Phillips's article carefully from beginning to end, and altho it is probably too positive about the evidence that the document was forged in the City of Rome, it does *not* contain, directly or by implication, the "further assumption, of course, that the Church was responsible" or had wittingly used "deceit and treachery." In fact, Mr. Phillips quite properly and impartially points out the contention of Cardinal Hergenröther, the staunch defender of the Church, that it is possible to exaggerate the importance of the forgery and that "the Popes generally preferred to base their claim to universal sovereignty on their direct commission as vicars of God" (VIII, 409).

An even more absurd attack is made upon James Thomson Shotwell, accusing

him of "ineradicable prejudice" in speaking "of the Dark Ages and the Middle Ages as synonymous," and implying that he said, "From the fifth to the fifteenth centuries there was no progress in art or science." In this case it is extremely doubtful whether the writer had read Professor Shotwell's article at all; if he had, how did the following passages escape him?

"The new synthesis reveals a universal decline from the fifth to the tenth centuries, while the Germanic races were learning the rudiments of culture, a decline that was deepened by each succeeding wave of migration, each tribal war of Franks or Saxons, and reached its climax in the disorders of the ninth or tenth centuries when the half-formed civilization of Christendom was forced to face the migration of the Northmen by sea, the raids of the Saracen upon the south and the onslaught of Hungarians and Slavs upon the east. That was the Dark Age."

—But directly contrary to the statement of the pamphleteer, Professor Shotwell does *not* treat that Dark Age as synonymous with the Middle Age. The latter he sketches as follows:

"The latter half of the eleventh century witnessed the most remarkable political creation in Europe since the days of Caesar, the papal monarchy of Hildebrand. The great scholastic controversies had already begun in the schools of France; the revival of Roman law had called forth the university of Bologna, and the canonists had begun the codification of the law of the Church. The way was already cleared for the busy twelfth century—the age of Louis VI and Henry II, of Glanvill and Suger, of Abelard and Maimonides, of Frederick Barbarossa and Alexander III, of the emancipation of French communes and cities and the independence of those of Lombardy, of the growth of gilds and the extension of commerce, of *trouvère* and *troubadour* and the beginnings of vernacular literature, of the creation of Gothic art, of trial by jury and the supremacy of royal justice. Such are but a fraction of its achievements. The twelfth century stands beside the eighteenth as one of the greatest creative centuries in human history. The thirteenth like the nineteenth applied these creations in transformation of society" ("The Middle Ages," XVIII, 411).

Whence does the pamphleteer obtain the notion that Professor Shotwell says there was no progress in art or science from the fifth to the fifteenth centuries? What the latter does say is: "There was much retrogression with the intrusion of new barbarian races; but from their absorption by the tenth century until the twentieth there is not a century in which some notable gain was not made toward

the attainments of modern civilization."

In several other matters misstatements and unscholarly blunders mar the content of the pamphlet. But it is not only the content that suffers; the general style is almost invariably polemical and at times positively venomous. What follows as a particularly revolting sample of the method of the writer's attack upon the Britannica has already been exposed by Father W. H. Kent, in *The London Tablet*—a truly representative Catholic scholar writing in the most carefully edited Catholic weekly of English-reading peoples. The pamphlet states:

"Of the choice of Taunton as a representative Catholic writer or recognized authority the less said the better. The scathing criticisms of this fanatical revision of Littledale's article on the Jesuits, which have appeared in *America* and in the *Month*, have given the Britannica editors ample reason to repent of their choice in this instance. We trust, moreover, that even they begin to appreciate the injustice they have done to the eminent Cardinal-Archbishop of Baltimore by linking his name with such an editorial group, as if he were party to their editorial scheme for the treatment, or rather mistreatment, of Catholic questions."

After which, in naming "the only representative Catholic contributors who have written on religious subjects," the author sedulously omits Taunton.

Now, it happens that the late Father Ethelred Taunton was a faithful communicant and a loyal priest of the Catholic Church. He was, moreover, an historical worker of no mean merit. Catholic scholars may well feel proud of his "History of the Black Monks of St. Benedict," and his monograph on "Thomas Wolsey." Certainly his writings on such subjects as the Office of the Blessed Virgin give proof of Catholic piety on a level with his learning. It is true that he aroused the opposition of a certain militant group within the Church by his "History of the Jesuits in England," but it is equally true that he died in full communion with the Roman Church which he so dearly loved and had so conscientiously served. And if the Jesuit organs, notably *America* and the *Month*, see fit to attack some of his his-

torical findings, let such a discussion go on decently and in order, as befits the respect due the memory of a dead priest and the chivalrous generosity of the sons of Ignatius Loyola, the soldier saint. If the Jesuits question the accuracy of Father Taunton's statements concerning the history of their order, let them set forth such inaccuracy clearly and calmly, and with historical proof. Until they do that they have no leave to slur him as a scholar, and the pamphleteer no right to read him practically out of the number of the faithful. Ethelred Taunton is dead, but living champions on this side of the Atlantic as well as upon the other are to be found who will defend his honesty and his faith.

It has already been remarked that there is ample opportunity for a scholarly exposé of blunders and blots in the treatment of various religious topics in the Encyclopedia Britannica. The recent pamphlet does not avail itself of its opportunity or rise to the occasion, for while it repeatedly applies to the Britannica the adjectives "unscholarly," "partisan," "offensive," "erroneous," "sectarian" and "in bad taste," it leaves numerous and lamentable openings for the editors to reply in kind. The pamphleteer has descended to *tu quoque* argument, like the proverbial lawyer who wrote upon his brief, "No case: abuse the plaintiff's attorney."

Suppose that a zealous Protestant, or, better still, a brilliant parodist, would criticise the Catholic Encyclopedia in this pamphlet manner, ascribing the merest slips to bigotry and Popish prejudice. He might enjoy himself and be amusing to others. He might conceivably, with the ill-informed, injure the sales of the publication; but no trained person would suspect him of scholarship. The type of scholarship which defaces this pamphlet against the Britannica must in future be avoided if Catholics are to convince the editors of the twelfth edition of the great encyclopedia, and the intellectual generally, that Catholic learning has truthfulness, authority and strength.

NEW YORK CITY.

Tripoli

BY RICHARD NORTON

[The author of this article is a distinguished educator and archeologist, from 1899 to 1907 director of the American School of Classical Studies at Rome.—EDITOR.]

IN view of the war for the possession of Tripoli, which is in progress at the present time, it is well to consider what we know of the country and what economic reasons there are why either of the Powers concerned should desire it. Its interest undeniably is great; its value is questionable. Herodotus tells us that the Nasamonian young men, the first of that splendid band of explorers who have turned the darkness of Africa to light, started inland from the shores of the Gulf of Tyrtis, and Eratosthenes, the first scientific geographer, two thousand and more years ago, came from Cyrene. But notwithstanding the interest the country has had for students from those old days to the present time, our knowledge of the ancient civilization is very scanty. For information concerning more recent conditions of this the last portion left to Turkey of her one-time enormous African empire, we must turn to the works of such famous travelers as Barth, Rohlfs, Nachtigal, Beechey, Pacho, Vischer, Mathnisieulx and the rest. During the last thirty years few travelers found it worth while or even possible to penetrate beyond the coast, tho the Turkish authority has gradually been making itself felt, as was shown by its being possible for the Jewish Territorial Organization to carry out an expedition in the Cyrenaica in 1908, and for the American Archeological Institute to undertake the excavation of Cyrene in 1910. The work of this latter expedition has naturally been interrupted by the war, but it is to be hoped that it is not permanently stopped.

Only the coast line has been properly surveyed, the details of the interior being drawn in the main from the route

maps, and notes of the various explorers. Sufficient, however, is known to make it extremely unlikely that any further discoveries of mineral deposits or agricultural and trade possibilities will materially alter the character of the country as we know it today.

The Province of Tripoli consists of three main divisions. On the west is Tripoli proper, stretching from Tunis to the eastern shore of the Gulf of Sidra, and some two to three hundred miles south; on the east the Cyrenaica, stretching from the Gulf of Sidra to the Egyptian frontier, and with a very indefinite southern extension along the desert; and lastly there is Fezan, reaching from the southern boundary of Tripoli proper to Wadai and Darfur. The climate of the coast line is Mediterranean, but the land along the sea is inhospitable and in no wise greatly productive.

There are but three settlements on the seaboard large enough to be considered as towns. The largest of these is Tripoli town, with a population of some 40,000, of which, before the recent military operations, about 4,000 were Maltese and perhaps 250 Italians. Bengazi, the capital of the Cyrenaica, follows with 12,000 inhabitants, mostly Berbers and Arabs; and Derna houses some 6,000 more. At none of these towns is there a harbor, but merely open roadsteads, so exposed to the gales that sweep the coast that often the mail boats cannot stop. Further to the east are two harbors which are capable of development. These are Bomba and Tobrak, both of which have recently been bombarded. The latter is by far the most important, being two miles long by a mile wide and open only to the uncommon east wind. It is only 80 miles from the Egyptian

frontier, and has been studied by Schweinfurth as a point of disembarkation for the Indian mail which would save twenty hours if sent hither and then by rail to Alexandria. Bomba, with which I am personally familiar, is by no means so important. It is more a bay than a harbor, and large breakwaters will have to be constructed before it is of any real use. Furthermore, the land back of the bay shows no sign of water. As regards the bombardment of this spot, it should be noted that when I was there a short time ago there were only two half-ruined adobe houses, which served to shelter a half dozen coast guards and their horses.

The land along the coast presents little variety from the frontiers of Tunis to those of Egypt. The long ridge of mountains which form the backbone of Algeria and Tunis continues on with a gradual diminution of height thru Tripoli to the borders of the Cyrenaica, where they are little more than a rolling tableland. The northern slope of these hills is steep and difficult, but cultivated in some places, yielding grain, olives, grapes and figs, as on the Gharian ridge, some 40 miles south of Tripoli town. These hills, even in the Cyrenaica, where the greatest height of the plateau is not more than 2,500 feet, are by no means easy of ascent, for besides the sharpness of their slope, they are cut by many sheer-sided wadies, where one must dis-

mount and not infrequently finds the baggage animals stalled or rolling down among the rocks and bushes.

The three divisions of the province vary in character somewhat one from another. In Tripoli the high land is more distant from the coast than further east, but in one part as in the other the wells and springs are few, poor and far between. It is interesting, however, to note that in some of even the most arid parts of Tripoli there are remains of large ancient cities. That there were in old days far more dwellers in these spots than can live in them now is unquestionable, and this is, perhaps, to be explained in three ways—the climate may have changed slightly, the water was better conserved, as is shown by the traces of aqueducts or reservoirs, which I have frequently seen, and lastly, dry farming was practised, as now in our own desert regions. The mountains are distant from the coast of Tripoli some 40 to 75 miles. South of them the land is a rolling, stone-covered plateau, almost waterless, called the Hamada-el-Homra. This unresponsive region covers about 40,000 square miles. Of course, all estimates of the number of population in either the whole or any part of the country are largely guesswork, but in Tripoli proper there are supposed to be 300,000. This number is made up of the Berbers, who live in the towns or lead a comparatively settled life, cultivating the coastal plain,

AN ENCAMPMENT OF TRIPOLITAN BEDOUINS

CHOLERA IS A SCOURGE IN TRIPOLI: HERE WE SEE THE DEAD CART

and the nomadic Arabs, who wander with their flocks hither and yon, according to the season and the water, over the parched hinterland. The trade of Tripoli town and the other smaller settlements along the coast is principally leatherwork, metal, carpets, straw mats and esparto grass. In the olden time, slave dealing was a favorite and lucrative profession, but tho the *London Times* lately (October 2) suggested that this was still a serious evil, I doubt whether all the recent travelers in the country together have seen as many slaves of all colors as could be found in New York.

South of the Hamada stretches Fezan, where the lay of the land is from east to west, and not, as in Tripoli and Cyrenaica, where the valleys run north and south. It is an inhospitable region, where only the valleys and the far separated oases can be cultivated. It does not produce enough to supply the native population, who are thus driven to follow a nomadic existence, and the desert is constantly encroaching on the oases. The population is said by some authorities to be about 40,000, and the chief town is Mersuk, visited two years ago by William Chanler, of New York. It

has about 3,000 inhabitants and is one of the chief places on the caravan route to Lake Tchad. The importance of this route and two others, one leading from Bengazi, has almost entirely faded away of recent years. The stoppage of the slave trade has had much to do with this, and as has also the opening up of Nigeria. Nowadays the ostrich feathers, skins and ivory which used to be despatched to Europe by the precarious overland routes are sent by the cheaper, safer and more speedy way along the Benue and N'iger rivers, and there seems no reason to believe that any change in the government of Tripoli could alter this.

The last section of the country to mention, the most eastern, is the Cyrenaica, with a population of about 150,000. This region is better known, in a vague way, to most people, than any other part of Tripoli. Of late it has been frequently mentioned in the newspapers, and there is a widespread, but unfortunately very false idea, that it is a land of great fertility. We know enough about its ancient history (much more than about the rest of Tripoli) to be assured that in Greek and Roman times it was, at

THE ITALIAN TRENCHES: AN ATTACK ON THE OUTPOST

least, much more cultivated than it is today; and while modern methods of agriculture could undoubtedly produce results of some value, it is quite certain never to pay more than a very small return on the necessary outlay. At present small portions of it are roughly cultivated, but the chief trade is in sheep, goats and cattle, which are sent to Malta and Egypt. It suffers, as does the rest of the country, from lack of water, while the soil is very arid and stony. The region is furthermore much cut up by steep-sided wadies, which will render road building both difficult and expensive. At present there is not a single yard of made road in the whole of Tripoli, and the trails one follows are of the most bone-racking character. In the Cyrenaica, as, for instance, between Ain Shehat (ancient Cyrene) and Marsa Sousa (ancient Apollonia), there are traces of ancient wagon roads, but so little is left of them that they are only to be noticed by the trained eye. But they are sufficient proof that the ancient conditions were very different from the present ones. Slave labor was doubtless an important factor in the welfare of the ancient province, but the only people I can imagine who would find any pleasure

in cultivating these harsh and unsympathetic hillsides are the Maltese, who, as a matter of fact, are the only people who have, during the last twenty years, found it worth while to settle in any large numbers in any part of Tripoli.

The chief interest of the Cyrenaica lies in its ancient history. Of the inhabitants whom the Greeks found there when, in obedience to the Delphic oracle, they first settled, about 650 B. C., on this inhospitable shore, we know little or nothing. But gradually they managed to take root and built the five cities, the chief of them Cyrene, which with four sister cities gave the name of Pentapolis to what is now Tripoli and the Cyrenaica. All over the seaboard portion of the later province are the desolate ruins of long since vanished cities. They offer a most attractive opportunity to the archeologist, but it will be many a long day before they yield up all their secrets. But the time will come, as at last it must, when the soldier will give way to the settler and the scholar, and then we shall be able to cut the pages of another chapter of ancient history and maybe learn how to make the country more prosperous than now seems possible.

The Children's Wonder House

BY SYDNEY REID

"Now I hold it is improper for a scientific gent
To say another is an ass—at least to all in-
tent—

Nor should the one so meant
Reply by heaving rocks at him to any great
extent."

BRET HARTE.

"**T**HEY argue almost to the point of
the bayonet."

That was what Miss Anna Billings Gallup, B. S., said concerning some of the big, earnest boys who come to study at the Children's Museum of Brooklyn, where she is curator.

The big boys conduct the arguments, while the little boys listen breathlessly. When the big boys have said their say and gone their way the little ones, having become partisans, hotly carry on the disputes among themselves.

These heated arguments are not about baseball, football, tops, marbles or kites. They are about moot questions of science. The big boys have exhausted text books, know all that the masters can tell about particular subjects, and are pushing their theories and inquiries into the unknown. Like other theorists they disagree radically. A memorable battle among them was fought the other day in regard to the best method for measuring wave lengths. A regular Montague-Capulet time ensued.

The little boys may not understand, but they can look as if they knew exactly what they were disputing about, and they can talk very fast and very defiantly. The big boys actually do understand, and demonstrate that they can *do* real things that are well worth doing.

One of these big boys (grown into a man) is down in Rio Janeiro now in charge of the wireless station there. He came to the museum first in short trousers, and was particularly interested in insects. In two years he made a complete collection of Brooklyn insects. He was encouraged, given a place to work in, and allowed to use the curator's microscope. Going to high school, he studied physical science. But he was far from forgetting the museum. As soon as his

high school work was over each day he repaired to the museum and did more work for the love of it, and because he "wanted to know"—and in his industry he was typical of the museum boys. Many of them labor afternoons, Saturdays and holidays, from love of their occupations, and because they "want to know." Schoolgirls use the museum and its library freely, but they do no original work.

The boy in question, whose name is Austen Curtis, studied out wireless telegraphy, installed wireless at the museum (with the assistance of other high school boys), persisted until he became an expert operator, and then went off to South America as wireless operator on a coasting ship. And still he did not forget the museum, but presently brought it a fine collection of tropical insects. Two years ago he brought it from Central America a spider monkey, slim and agile, with an earnest countenance that obtained for him the name of Plato.

There are plenty of philosophers and plenty of monkeys, but one who is monkey plus philosopher is rare—and Plato is that. He does his philosophizing in a little house—that some might call a cage—standing in the passage near the coat room. Meditating on abstruse philosophical problems is hard work and should be alternated with brisk physical exercise. Plato knows this and when he has put in an hour or so sitting with his head in his hands gravely considering the whyness of the which, he suddenly sallies out and does stunts which attract attention. He never walks down stairs, but instead slides the bannisters. Sometimes he chases the children about, growling at them like a dog. They run and shriek, but know perfectly well that Plato, who is gentle and kind, won't bite them. He has the freedom of the whole place, and never does any damage. And the boys never play mean tricks on him. They respect Plato as an important official of their beloved institution, and even if he interrupts one of the juvenile

sages by climbing upon his lap, the boy merely wakes up, smiles, says genially, "Hello, Plato!" and rewards the philosopher by patting his little round head and stroking his thick fur coat.

Other boys attending the museum took up wireless, and fifteen have made themselves expert. Not long ago the curator was asked to recommend some one to teach wireless to the New Jersey Naval Reserves. She recommended one of the museum boys less than eighteen years of age. He was asked to take the class at his own price and accepted. Another of these boys was offered \$125 a month to enter the service of a telephone company. He refused, because he wanted to go on with his studies at Cornell. Others are wireless operators on ships, and when they touch at New York they land and make straight for the Children's Museum to have a good visit with Miss Gallup, Miss Lee and their other old friends.

But wireless telegraphy is not by any means the only thing that interests the bright boys who attend the Children's Museum. Some take up botany, some

collect insects, some study birds and animals.

The collections have grown vastly since the scanty and tentative beginning. As Miss Gallup's article in the *Popular Science Monthly* of April, 1908, on "The Children's Museum as an Educator," said: "These collections illustrate zoology, botany, United States history, mineralogy, geography and art. They are attractive in appearance, simple in arrangement, and labeled with descriptions adapted to the needs of children, printed in clear, readable type. Our zoological collections are installed in five rooms, whose contents are prepared for children of varying ages. The youngest children seek the room of 'Animal Homes,' where common mammals and birds of Long Island are to be found with their nests and young. High school pupils make use of synoptic exhibits, and particularly of the insect room. . . . Bird exhibits attract and delight visitors of all ages. . . . That their conception of geography may not end with maps, globes and charts, we employ model

THE CHILDREN'S MUSEUM AND SOME OF ITS ENTHUSIASTS

"OTHER BOYS ATTENDING THE MUSEUM TOOK UP WIRELESS, AND FIFTEEN HAVE MADE THEMSELVES EXPERT"

groups to acquaint children with remote peoples of the earth, especially type races from the various zone belts. One of these scenes depicts the life of the Eskimo, his costume, shelter, implements and industries. The story of his life struggles and the influence of his environment on appearance and conduct are easily understood. From a comparative study of an increasing number of such models, children readily perceive the importance of climate and physical features of localities in determining human settlement, industry and commerce.

"It is as practicable to annihilate time as space by the use of model groups. Therefore, when our children study colonial history the miniature scenes at the museum carry them back into the period when the nations of Europe were establishing permanent colonies in this country. The men and women, dress, homes, social life and customs of those early days become a reality to the child who lives in imagination among these little 'doll people.'"

Two of the museum's rooms are now given up to a children's library. There

are five thousand books, including the best works on natural history and closely related subjects. Often there are four hundred or five hundred readers in these rooms during the course of a day.

The privileges of the museum are free to all children. Pupils and teachers go there from one hundred and fifty schools, some of which are remotely situated. Youngsters get the museum habit when they are four years of age, and drag unwilling nurses all the way across the city, so that they can keep up their acquaintance with the insects, birds and beasts that have charmed them. This is the way that the museum attendance has grown:

1899 Dec. 16 to 31	809
1900 Jan. 1 to Dec. 31	66,748
1901	83,184
1902	92,124
1903	101,809
1904	90,206
1905	94,480
1906	85,943
1907	97,805
1908	117,182
1909	123,185
1910	144,732
1911 11 months	149,632

Largest attendance in one day 2,431, when it was necessary to close the building several times to prevent overcrowding. Average monthly attendance in 1900, 5,562. Average monthly attendance in 1911, 13,578.

Some of Miss Lee's lectures last year were as follows: "What We Study About In Physics"; "Gravitation Explained and Illustrated"; "Falling Bodies and the Pendulum"; "Some Interesting Mollusks"; "Lobsters, Crawfish and their Allies"; "Star Fishes and Sea Urchins"; "Stinging Animals of the Sea"; "Natural and Artificial Magnets"; "Properties of Magnets"; "The Earth's Magnetism"; "The London of Today"; "English Cathedrals"; "The Lakes of Scotland"; "A Trip Thru Ireland"; "Water Birds and their Ways"; "Birds that Live Near the Water"; "The Migration of Birds"; "Birds that Stay with Us in the Winter." Miss Gallup explains how insects pass the winter. All these lectures are profusely illustrated with lantern slides.

Is it any wonder at all that children are so intensely interested in the museum and its collections? They feel that it belongs to them. It has no red tape, and the management, whenever possible, is willing to break rules to help them. It makes them well acquainted with minerals, plants, insects, animals, birds, stimulating and directing their imaginations, causing them to realize what a wonderful, beautiful world this is we live in, and spreading among them the spirit of the Ancient Mariner's saying:

"He prayeth best who loveth best
All things both great and small;
For the dear God who loveth us,
He made and loveth all."

All development has followed lines indicated by interest, so the children have actually made the museum; the management and the city authorities simply doing what was wanted.

Awhile ago there was a small boy who made himself a sort of interrogatory pest after this fashion:

"Oh, Miss Gallup, what a lot of keys you've got! Are they all your keys? That's a Yale key, isn't it? Was it made in Yale? What sort of a key is this? Where was it made? Do these keys lock and unlock doors and drawers here? Will you let me take them and see if I can do it?"

He got the keys and locked and unlocked everything. After a time his mind expanded to more serious things, and he is now doing most excellent work in physics. A Flatbush boy of thirteen years, who attends the museum regularly, is much interested in birds. He is allowed to take some out of their cases and carry them to a table, where he makes notes on their colors, their markings, the color of their eyes, etc. He has learned to recognize one hundred and ten birds, and is still prosecuting his studies in a very thoro and painstaking manner. He does a lot of field work, too, and the prospect is that he will develop into a naturalist. Lately he has had the privilege of carrying some of the birds home for study. These are always returned in good condition. He has learned to prepare, stuff and mount birds.

Another of the museum boys was very much interested in botanizing, and used to go out botanizing with Miss Gallup. He learned how to preserve his collections. Later he took up mineralogy and went far in that. Now he is in the United States Forestry Service, having been graduated from Columbia University.

If anything on earth is accidental (which may well be doubted), the Children's Museum is accidental. Its history certainly makes it look like an accident. Brooklyn just before it merged into New York in 1897 bought a little block of greenery and called it Bedford Park. It was on Brooklyn avenue, near Eastern Parkway, and there were few houses about it.

At the same time Prof. Franklin W. Hooper had about finished his herculean task of turning the old moribund Brooklyn Institute, on Washington street, into a grand, new, up-to-date Brooklyn Institute of Sciences and Art, consolidating every artistic and scientific interest of the boro, and sending new life blood thru each, bringing in thousands of new members and making the Institute a source of joy and pride not only to Brooklyn, but to the whole country as well.

The great, fine, ambitious, dignified Brooklyn Institute building on Eastern Parkway, near Prospect Park, was well

under way, and one section of it was ready for occupancy, when the old Institute building took fire. The most valuable of the collections were saved and transferred to the new building, but space there was limited, and so the old mansion that was in Bedford Park was used as a storehouse for the surplus, which consisted of apparatus for demonstrating physics, a few minerals, and some shells, chiefly of Long Island mollusks.

Presently some one thought that it might be well to arrange shells, minerals and a few birds, and invite the schoolchildren to come and examine them. The schoolchildren accepted the invitation with enthusiasm.

Professor Goodyear first thought of turning the old mansion into a Children's Museum. His idea was to show models of all sorts of paraphernalia used in the schools. But the children's interest dictated quite a different development. The boys used to hang around the cases where the physics apparatus was displayed—apparatus for demonstrating sound, heat, light, electricity, magnetism. This included tuning forks, telephones, thermometers, barometers, lenses, mirrors, telescopes, all sorts of electrical instruments, and magnets.

The boys wanted to get this apparatus out and study it, and so it was arranged that this might be done. Then they wanted some one to explain the apparatus to them, conduct experiments and answer questions. So Miss Mary Day Lee, Assistant Curator, was introduced five years ago. Miss Lee is tall, dark, large-eyed, pleasant, and of infinite patience. She had to explain everything—as far as a human being could—and to answer about a million questions a day. It was hard work but very exhilarating, so many eager young minds about her growing visibly, and coming to her for help. She gave generously, was never tired, and is already reaping her reward, having such a warm place in the regard of scores of boys developing by her aid into fine men.

Miss Lee gave little lantern slide lectures on minerals and physics. The lecture room would seat sixty and hold one hundred, and it soon proved woefully inadequate, because audiences three or

four times too big to get into the room attended. Children who could not get in stood outside and cried.

But Miss Lee arose to the emergency. She repeated her lecture as often as the children required. Sometimes she repeated it twice, now and then three times or oftener, and on a recent occasion she repeated it nine times, because twelve hundred children tried to crowd into the room which now seats one hundred. Most of them had to wait for hours, but finally the last child heard what Miss Lee had to tell.

In her little lectures or "talks," as she calls them, she takes some such subject as coal, and tells about the state of the earth at the time the coal was formed—all about the carbonic acid gas in the atmosphere, the moist heat coming up from the ground, and the giant tree ferns rising and dying, generation after generation, in order to make the fuel upon which our civilization rests. All is in simple language.

In many cases these lectures supplement the studies on which the children are engaged in their schools, and teachers whose pupils are attending the museum have to be extremely careful as to their statements, otherwise they are snapped up by the sharp museum students.

The boys of scientific aspirations took possession of Miss Lee as soon as she arrived at the museum. They made prompt alliance, and she has since acted as their champion and advocate when they wanted some extension of privileges. She understood and sympathized and helped them, and they turned to and helped her and Miss Gallup.

If a fuse blows out or anything goes wrong with museum apparatus, the ingenious and industrious boys immediately fix it. Led by James Parker, they installed a complete telephone service for the museum, and this has worked well during three years.

"How did James Parker learn all about the telephone?" inquired the writer.

"He learned by his own ingenuity," was Miss Gallup's reply.

Miss Lee explained that electricity has especially attracted these boys because they are practical. They want results

"THERE IS NOT IN ALL THE WORLD ANOTHER MUSEUM LIKE THIS"

and can obtain them by means of electricity. With the lens, for instance, all that they can do is to burn a piece of paper.

A wireless operator sitting in the Children's Museum can talk with any other wireless similarly attuned within a radius of one hundred miles. In case the instruments had higher power than is furnished by the electric light current they could talk further. Late in the afternoons, when one of the boy experts is sitting beside Miss Lee, distant cities and towns come in over the wireless to pass the time of day and inquire how the Children's Museum is getting along.

When attendance grew brisk at the Children's Museum the big museum (of the Brooklyn Institute) sat up and took notice. So did the Park Department. So did other city departments. All the officials watched the children, and respectfully attended to the implied directions evidenced by their tastes and predilections. The children were in charge, and whatever they wanted was the very thing that they ought to have.

There have been some suggestions to the effect that the Children's Museum should give up its separate building and become a department of the main museum. Miss Gallup, in a recent pamphlet, opposes this as follows:

"We have reason to maintain that a museum can do the greatest good and furnish the most effective help to the boys and girls who love it as an institution, who take pride in its work for them, and who delight in their association with it. To inspire children with this love for and pride in the institution, they must feel that it is created and now exists for them, and that in all of its plans it puts the child first. The child must feel that the whole plant is for him, that the best is offered to him because of faith in his power to use it, that he has access to all departments, and that he is always a welcome visitor, and never an intruder. With this assurance he will learn to care for the museum as he cares for good friends elsewhere."

Miss Gallup's arguments have evidently found favor with the authorities. In fact, everything about the museum finds favor with the authorities. They smile whenever they think of it.

So they are to give the children a new building to cost \$175,000, and to stand

where the good old mansion is now. Precisely what the materials of the new building will be nobody yet knows. But it will be three stories and basement in high, and fireproof, and will have a lecture room 40 by 60 feet in size, seating five hundred, and a study room for the young savants of the same size. Each will have his table and chair and drawers, and will be able to work by himself to his heart's content.

There is not in all the world another museum like this in Brooklyn, tho there are children's departments attached to various museums.

The American Museum of Natural History of New York has a children's department; there is to be a children's department in the National Museum of

Cardiff, Wales; there is a children's department in the Academy of Science, in Golden Gate Park, San Francisco.

But a children's department of a great museum is apt to be subordinated. It is overshadowed by its companion, and the children must not inconvenience or disturb the older folks.

The Children's Museum of Brooklyn has its own building, its own park, its own collection. It is for children only, and all the older people are there for is to help the children. No one enforces discipline. The youngsters are too much in earnest to need it. That is why the Children's Museum is so popular and is doing such good work, and why it is being copied here and abroad.

BROOKLYN; N. Y.

The Strangers

BY JOHN ERSKINE

[I do not understand how 9,000,000 people can enter into such arrangements as are proposed with 90,000,000 strangers.—Rudyard Kipling, on Reciprocity.]

LAUREATE of England's armed will
Wherever comes the sun,
Of marching men, of men at drill
To keep the empire one,
Barracks at home, campfires afar
Wherever comes the night,
Your soldiers under cloud or star
For England watch and fight.

A khaki suit we cannot meet
On leave in country lanes,
Or two by two on London street
Red coats and swagger-canes,
The regiment with guns agleam
Parading trim and new,
The troop-ships lying in the stream—
But we must think of you.

You took us with your tramping song,
Drum-rally, beat and roll;
Applause for manhood plain and strong;
We gave you, heart and soul;
Sweeter we felt the pride of race—
Ah, stubborn it endures!
Old England with a sturdy grace
Called us—the voice was yours.

Poet, your bright-begotten power
Made us one English heart:
Why will you in your weaker hour
Set kin and kin apart?
How brave men let their fighting blood,
How honor's sword is worn,
You taught us: is it now your mood
To flaunt us with your scorn?

Bringing a people's thanks we came—
Your frown would not unbend;
Our praise of you was half your fame—
You never called us friend;
And when the statesmen forged at last
Despite their foes' intrigue
One link to join our nations fast,
You cried against the league.

O poet-gift that molds our dust,
Star-herald in the rack,
How could you cheat our perfect trust
And turn man's fortune back?
Ay, with the vision and the voice
That love should dedicate,
To summon by deliberate choice
Specters of fear and hate!

Hate us, if you must have it so,
Tho still we own your spell;
You are not England, that we know!
To you, not her, farewell.
The lure of England on us lies
Stronger and yet more strong;
You brought her to our happy skies,
We keep her, in your song.

Her ships are not the strength of her,
Her guns are not her soul;
The armor of her character
Keeps her dominion whole.
Her love of law, her hope of man,
Her conscience without fear—
Ours we shall make them, if we can,
And England shall be here.

COLUMBIA UNIVERSITY, NEW YORK CITY.

PORTRAITS OF CHILDREN

FROM THE WINTER EXHIBITION OF
THE NATIONAL ACADEMY OF DESIGN
NEW YORK

"TWO LITTLE WOMEN"

The painter of this charming group is Mary Fairchild Low, wife of Will H. Low, the decorative painter, who is himself represented by one canvas in the exhibition, besides being the subject of a portrait shown there. A painting like this, with all its bright color, is to be imagined rather than seen in reproduction, but it is not difficult to imagine.

WHAT IS ON THE OTHER SIDE OF THE DOOR?

We do not know, and perhaps A. B. Winter's "Annie" is only being "sent to her room." But we don't believe she deserves severe punishment! This is one of the pictures that is in no sense remarkable from the technical standpoint—only most human, most pleasing.

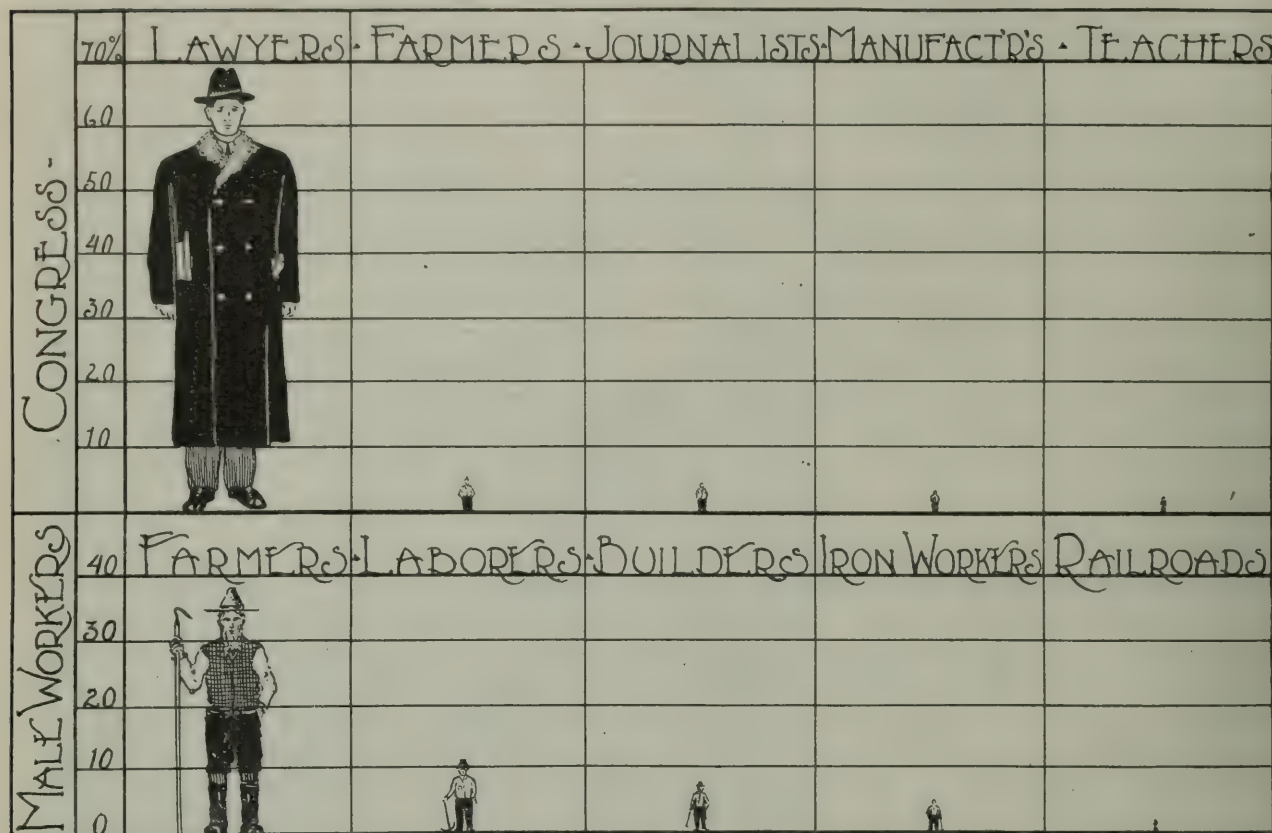

"THE BABY"—BY WILLIAM COTTON

It is an exceedingly alert and interested baby which looks out from the canvas, but the mother who holds it in her arms is scarcely less charming than the infant who plays the title rôle. We are glad that the painting men do not leave wholly to their wives and sisters the portraiture of children, infants, and motherhood. Unfortunately we are prevented from showing our readers one of the most admirable child pictures of all: Mr. Sergeant Kendall's group entitled "Alison."

Occupations of Our Congressmen

BY WILLIAM B. BAILEY, Ph.D.

ASSISTANT PROFESSOR OF POLITICAL ECONOMY IN YALE UNIVERSITY.

SINCE ours is a representative government it may be of interest to determine whether the previous occupation of the Congressmen and Senators differs to any considerable extent from the occupation of the male population of this country engaged in gainful pursuits. The latest Congressional Directory gives the previous occupations of members of the Sixty-second Congress. Now 308 members of Congress, or 69 per cent. of the total number, were lawyers before they entered upon this public office. There were, in 1900, 23,753,836 males gainfully employed, and of these 113,450, or 0.5 per cent., were lawyers. About one lawyer in every 370 was in Congress, while less than one in 50,000 of the total male workers were Congressmen. Of course, not all of the male workers are twenty-one years of age or over and a considerable proportion of them are immigrants who have not yet become naturalized.

The proportion of lawyers in Congress is so preponderating that the rep-

resentatives of the other professions are bound to be comparatively few. Twenty-three members of Congress were farmers, while about 9,000,000 of the male population were recorded in 1900 as farmers or farm laborers. Thus 38 per cent. of the male workers of the country must be satisfied with 5 per cent. of the members of Congress. Sixteen members of Congress were formerly journalists. They thus furnish 4 per cent. of the membership of this body, whereas they furnish only a little over 0.1 per cent. of the male workers. Fifteen Congressmen, or 3 per cent. of the body, were engaged in some form of manufacture. They represent nearly 6,000,000 workers. Ten former teachers are in Congress, and since there were less than 120,000 male teachers in this country in 1900 they cannot complain. The remaining 77 members of Congress, comprising about 17 per cent. of that body, must be considered to represent the 9,000,000 of male workers belonging to the other occupations in this country.

NEW HAVEN, CONN.

Literature

Gideon Welles*

THE time and the man rather than the intrinsic merits of these three volumes give to them a historic value somewhat proportioned to their bulk. Gideon Welles, as everybody knows, was Secretary of the Navy under Lincoln and Johnson and won a recognized position as an honorable and courageous public servant. His narrowness of vision and painful consciousness of his own rectitude of purpose do not make him an altogether lovable character, particularly to those who would rather read Shaw and Chesterton than the impressions of a punctilious Puritan. The diary before us covers the years 1862-1869. It is not confined to a review of the momentous events with which Welles himself was intimately connected, but it includes an almost daily record of the passing show—battles in the field, scandals and rumors in Washington, the doings of civil and military officers and the difficulties of obtaining good and willing domestic servants. The only limits to the diary apparently are those imposed by the physical inability of the author to write more in the time which he could spare from his official duties; if he had had several amanuenses, with the newspapers and Government reports at hand, he might have written one hundred volumes instead of three. Nevertheless, the editor has done well to publish the diary in full, for any process of elimination would have been difficult indeed, and there is a wide and curious class of readers willing to spend hours in finding out what Welles thought about some men or event, altho the only discovery to be made is simply what Welles thought. Welles had strong and positive likes and dislikes and he was always certain that he was exactly correct in his views. He was never slow in making up his mind and he surrendered any opinion which he had formed with painful reluctance.

Nevertheless there are within these three volumes one hundred pages or more that are of priceless value for the historian of the Civil War. Here are recorded intimate impressions of Lincoln, taken at various stages in the evolution of his administration and recorded while fresh in the author's mind. From day to day our author set down what he thought about the distinguished men around him, his personal views on every significant political and military event. He tells us that Montgomery Blair had some egotism and great good sense; that Roscoe Conkling was vain and had ability, with touches of spread-eagleism; that Simon Cameron was a man of talent and right instincts, a safe Senator, but not a politician or statesman of the first class; that Zachariah Chandler was deliberately malicious and a noisy partisan; that Chase was a man of expediency and of no fixed principle or profound or correct financial knowledge; that Mr. Seward delighted in oblique and intricate movements and was beset by an overweening desire that the world should consider him the great man of his party; and so on thruout the long list of men who came athwart Welles's sphere of life. Had he himself been less upright and less devoted to that great cause which he was called upon to serve it would be difficult to be patient with the vitriolic and complacent contempt which he pours out on his fellow servants. All this is interesting to those who delight in historical gossip.

But fortunately Welles's personal impressions on the characters of his day do not crowd from his pages interior views of events which can be seen thru his eyes only. As Mr. J. T. Morse, who writes an admirable introduction, says: "This diary furnishes us our best, practically our only opportunity to see the interior of President Johnson's council chamber during the dramatic impeachment struggle." Moreover it gives us intimate accounts of other events in which Welles personally participated, which throw new

*THE DIARY OF GIDEON WELLES. Boston: Houghton Mifflin Co. 3 Vols. \$10.

light on controversial points. For example, there is the question of Lincoln's motives in emancipating the slaves. As is well known, Lincoln found constitu-

tional warrant for this drastic measure in the contention that the abolition of slavery was indispensable to the preservation of the Constitution which he

THE ENEMY HAD A FINE SILKEN FLAG, WHICH BECAME THE CENTER OF A SHORT AND SHARP STRUGGLE

From an illustration by F. C. Yohn for General Funston's "Memories of Two Wars" (Scribner)

had taken an oath to support; but many of his enemies held that this was only a subterfuge and hypocritical justification for an abolitionist program which he had at heart. According to Welles, Seward and he were the first men to whom Lincoln had mentioned the subject of emancipation, and on that memorable occasion Lincoln had "dwelt earnestly on the gravity, importance and delicacy of the movement, said he had given it much thought and had about come to the conclusion that it was a military necessity absolutely essential for the salvation of the Union; that we must free the slaves or be ourselves subdued." Welles had no patience at all with the radical Republicans, whom he repeatedly denounces as demagogues, and whose motives he always suspects, but his passages on negro suffrage and reconstruction throw no little light upon the origin of radical politics in Washington. He prophesied that the efforts of Northern philanthropists to govern the Southern States would produce evil and generate hatred rather than love between the races. Commenting on Thaddeus Stevens's "blackguard and disreputable speech" of March 10, 1866, Welles says: "This wretched old man displayed . . . those bad traits of dissimulation, insincerity, falsehood, scandal loving and defamation that have characterized his long life." For the administration of the Navy Department and the many perplexing problems in maritime affairs during Welles's administration, this diary is of course invaluable. On the working of the Cabinet system it is illuminating indeed. The author was a Jacksonian Democrat, who was thrown by the vagaries of fortune into a "black Republican" administration, which he served with unquestioned integrity and reasonable efficiency; but from the beginning to the end of his labors in that service he saw the swirling events around him thru the eyes of the man who believed that little good had happened in the world after the inauguration of Franklin Pierce. He was one of the strong characters by whom the tough web of history has been woven, and of his records here set down students of history will take long and careful note.

Memories of Two Wars*

THERE is no reason to complain that the age of adventure is past. The born adventurer can find his natural element even in this prosaic time. That Frederick Funston was endowed with such a disposition he showed when he cut short his academic career at the University of Kansas to take part in a botanical collecting expedition to Death Valley, which expedition came near verifying the name of the locality. Having got enough of heat, he ran to the other extreme and explored the Upper Yukon in a canoe with no companion but an Alaskan Indian. These, however, were but preliminary practice for his life work, which he happened upon that summer evening when he strolled into Madison Square Garden and heard General Sickles plead the Cuban cause. He enlisted at once in the revolutionary army, and being smuggled off to Cuba, became chief of artillery. His previous experience fitting him for the position "consisted in once having seen a salute fired to President Hayes at a county fair in Kansas." Setting up an untried dynamite gun in the field according to a book of directions sent with it from the factory is ticklish business, and it is a question whether the Spanish had more reason to be nervous on that occasion than the man behind the gun. General Funston does not adopt the tone of contempt common with Americans in speaking of the Cuban patriots, but gives them high praise for courage and self-sacrifice, and calls attention to the fact that their losses were greater than in four of our wars—the War of 1812, the Mexican War, the Spanish War and the Philippine Insurrection, altho the number of troops engaged in these wars was many times larger.

Coming out of the Cuban war fever shattered and wounded, Funston did not have long to recuperate before he was called into service as colonel of the newly organized Twentieth Kansas, so numbered because Kansas had sent nineteen regiments to save the Union. The regiment was sent to the Philippines, but stopped at San Francisco long enough to

*MEMORIES OF TWO WARS. Cuban and Philippine Experiences. By Frederick Funston, Brigadier-General, U. S. Army. New York: Charles Scribner's Sons. \$3.

get uniforms and drill. Also long enough for Funston to get married, a swift courtship and capture befitting a warrior.

This, by the way, is the only exploit that the author brags about. He tells his story in a straightforward, soldierly manner, without exaggerating difficulties or complaining of hardships. He does not attempt to glorify war or to conceal its brutality, but takes whatever comes in a matter of fact way and gets out of his disagreeable experiences what fun he can. He knows how to tell a good story and he has plenty of good stories to tell.

He had a chance to see war from both sides, for in Cuba he was aiding an insurrection and in the Philippines he was suppressing one. In such irregular conflicts there is more opportunity for individual initiative than in wars conducted according to the established rules of the game. Funston's Cuban experiences probably gave him more practical training for the Philippine campaign than a West Point course. It was his daring and ingenious exploit of capturing Aguinaldo in his mountain fastness in Northern Luzon that virtually put an end to the war and placed General Funston permanently in the regular army. It is reassuring to see that we still retain that American characteristic of bringing a man of exceptional ability promptly to the front in a national crisis.

South America Today. By Georges Clemenceau. New York: G. P. Putnam's Sons. \$2.

A glance at the external title of this book would naturally lead one to suppose that it dealt with the whole of South America, but on opening its pages we soon discover that the text is confined to "A study of conditions, social, political and commercial, in Argentina, Uruguay and Brazil" only—a comparatively small corner or part of the large Atlantic fringe of a vast territory. Even at this, the writer's travels were limited to a hasty three months' sojourn, covering visits to the cosmopolitan capitals of these three republics—Buenos Aires, Montevideo and Rio de Janeiro and their suburbs, which, owing to their complex populations, cannot be regarded as typical of the remaining seven sister

republics included in South America proper. And yet, with his special qualifications, and the exceptional opportunities afforded him, few could be more capable than the author of inscribing his transitory impressions of the surface aspects of a land and people as he saw them. M. Georges Clemenceau, during his seventy years of life, has been a medical practitioner, an eminent politician and statesman, a mayor, a progressive Radical-Republican, a member and leader of the Radical Assembly in France, a newspaper proprietor and journalist, and (1907-1909) Prime Minister of France. His familiarity with the United States, England and Europe generally peculiarly qualify him to contrast and compare Old and New World conditions, and he succeeds in this in a most interesting manner, with delicacy, good temper and good judgment. Of course, as a Frenchman, the natural dictates of nationality and patriotism incline him in the main to deduce his comparisons with French conditions and ideals. Ten out of the fourteen chapters are almost entirely devoted to the traveler's descriptive account of the city of Buenos Aires, its cosmopolitan peoples, their manners, customs and morals; dissertations on the government and politics of the country, on its educational, charitable and social institutions, especially public schools, hospitals, asylums and prisons; also a graphic portrayal of Argentina's wonderful and expansive pampas, and life on the extensive *estancias* (farms), varying in size from two to one hundred square miles apiece, on the larger of which "ten thousand head of cattle is a small affair." Politically, the author observes that "the South American republics hastened to copy the Constitution of the North" (the United States), and that "a South American Assembly could give a lesson in dignity to more than one European parliament." As to public morals, he writes: "All that can be seen of the public morals is most favorable. . . . In their family relations the differences between the social ideals of the North and South American are plainly visible. The family tie appears to be stronger in the Argentine than, perhaps, any other land." Incidentally, the author explains:

"I have not spoken of shopping, which is the main occupation of the fair sex in North America, for the reason that in Buenos Aires I saw none, . . . and, in fact, in the central streets no women go afoot for pleasure." In comparing the Argentine and American girls he says: "I should like to say something of the Argentine girl. The difficulty is that I never saw her. Every one knows that in North America the young girl is the principal social institution. She has got herself so much talked about that neither

thropology, ethnology, botany and zoology, will find their interests studied here.

Universities of the World. By Charles F. Thwing. New York: The Macmillan Co. \$2.25.

This is a book that needs no introduction to our readers, for four of its chapters were first published in *THE INDEPENDENT*, namely, those describing the universities of Cairo (vol. 68, p. 1389), Calcutta (vol. 69, p. 24), Peking

THE UNIVERSITY OF VIENNA
From Thwing's "Universities of the World" (Macmillan)

Europe nor Asia can help knowing her. In Argentine society, as in France and in Latin countries generally, the young girl is a cipher." Adverting to the immense sums of money being spent by Argentina and Brazil in building Dreadnoughts, M. Clemenceau very pertinently asks: "Against whom are the Argentine and Brazil thus arming? They would both find it hard to say, since they have plenty to do at home without directing their creative energy in European fashion to the business of destruction." The author does not give any information of special interest to business people anent the great commercial and financial possibilities of these countries, because these subjects were not within the scope of his observations, yet he provides the general reader with a remarkably graphic picture of their scenic attractions, and those particularly interested in sociology, an-

(vol. 69, p. 573), and Tokyo (vol. 70, p. 1074). But the volume considers sixteen more universities, all of which, with the exception of Melbourne, the author has visited and can write about with the vividness that comes only from personal observation, however transient. This wide survey enables him to bring out many striking contrasts and comparisons, but, after all, what chiefly strikes the reader is the fact that all these universities are remarkably similar in aims and methods. President Thwing credits the University of Vienna with the finest building, as shown in the accompanying cut, recently constructed at a cost of \$7,000,000, and containing fifty lecture rooms, seating two or three hundred students each, and a library of 700,000 volumes. But its income of \$700,000 a year is not so large as some American universities, which have fewer than its

6,000 students. The University of Budapest, the leading institution of the other half of the dual monarchy, has 7,000 students. Tho this is a larger number than attends any American university except Columbia, yet it is a disgracefully poor showing for Hungary—about 5 university students to 100,000 of the population. In the United States we must have 160 university students per 100,000

interesting facts which fill this unique volume. Besides the universities mentioned, President Thwing includes Oxford, London, Paris, Leiden, Upsala, Madrid, Geneva, Rome, Athens, Berlin, Vienna, St. Petersburg, Bucharest and Roberts College, some of which are rarely visited even by our most traveled educators and about which it is difficult to get recent and impartial information.

GIRLS OF A CHOLO INDIAN VILLAGE POUNDING RICE
From Albert Edwards's "Panama" (Macmillan)

population. The ratios for other European countries are as follows: Russia, 12; Italy, 51; France, 43; Belgium, 82; Holland, 45; Switzerland, 56; Denmark, 47; Sweden, 57. The students of Budapest are reputed to work the hardest and live the cheapest of any upon the Continent of Europe. The instruction is in Magyar and this prevents the Hungarian university from drawing from foreign lands, as do the German and French. But the reviewer must resist the temptation to quote further from the store of

Panama. The Canal, the Country and the People. By "Albert Edwards." New York: The Macmillan Company. \$2.

This is an excellent book for its purpose; that is, to interest the average man in this great national enterprise. It is timely, but differs from most of its numerous competitors in this field in that it will be worth reading ten years from now, for a large part of the volume is taken up with historical matter, with the romantic story of the days of colonization and piracy, and the more recent but

scarcely less romantic story of the revolution and canal construction. The author writes in a lively journalistic style, and the reader gets a great deal of information without realizing it. The most interesting part of the book is that describing the success of the Canal Commission in various enterprises commonly regarded as outside the proper sphere of governmental activity; for instance, the running of hotels of all grades, from the high-class Tivoli to "silver kitchens" for the negro laborers; the building and furnishing of family homes; the editing of a weekly newspaper; and providing the necessities and many of the luxuries of the population of the Canal Zone. Or to quote directly:

"The commission is running a modern department store down here in the tropics which does a business of several million dollars a year, and 'the cost of living' has not soared as far skyward for our people on the Canal Zone as it has in New York. The recruiting and organizing of the labor force—over thirty-five thousand today, with their women and children—has been a sociological problem of many brain-racking complexities. It is necessary not only to make life in the jungle possible for our men—the sanitary department has attended to that—but also to make it attractive. The commission has had to go into the amusement business. An employee can bowl on an alley built by the Government or play pool on a nationally owned table. He can have his saddle horse cared for in the commission corral. He can take his sweetheart to a picnic at San Lorenzo on one of our Government launches, or he can dance with her in a Government ballroom to national airs played by the commission band."

All this can, as the author says, be called socialism, but it is, as he is careful to point out, bureaucratic and not democratic socialism which has proved so efficient in Panama.

The Musical Amateur. A Book on the Human Side of Music. By Robert Haven Schauffler. Boston: Houghton, Mifflin Company. \$1.25.

Mr. Schauffler addresses his delightful essays to "all sorts and conditions of musical amateurs—the interested listeners, the disinterested players and singers, all who love and make music merely for its own sake," and for all he has something entertaining, instructive, and well calculated to increase their devotion to the musical art. Personal reminiscences,

humorous anecdotes, witty allusions and insinuating rebukes are mingled in profusion as the author skips about from one topic to another, each revealing some phase of the experience of the average music lover or aspirant. Mr. Schauffler's gibes always produce a smile, and his reproofs are administered in such a friendly spirit and with such assurance that the faults censured may be easily removed that the reader cannot help enjoying the process of castigation, even when the whip falls on his own shoulders. The fine chapters on the creative and destructive listener direct attention to the value of the hearer's efforts in raising musical standards and in aiding the performer to attain his highest excellence. The enthusiasm of the book is contagious. From its reading not a few musical amateurs will take courage to strike out into new paths and to turn over new leaves. Perchance some homes will find occupation and unity, if not harmony, in seeking for "old King Cole's paradise" along the royal highway of chamber music.

A Motor Flight Through Algeria and Tunisia. By Emma Burbank Ayer. Chicago: A. C. McClurg & Co. \$2.

The extent and success of French colonization in Northern Africa is quite unappreciated by us Americans. Nor have we yet learned, as many Europeans have, that Algeria and Tunis afford fresh opportunities for the sight seer and health seeker. Consequently, this narrative of personal experiences will meet with a welcome which it could not claim by reason of scholarship or literary merit. Its archeological and ethnological data are obtained at second hand and forced in unskillfully, but the volume contains a large amount of descriptive detail of things as they are in this unfamiliar land. The route taken by the author and her husband covered the country thoroly, and extended far into the Sahara at three points, and since it was accomplished without more hardship and unpleasantness than often attends an automobile trip in this country, it will doubtless encourage others to try it, in which case the book will serve as a good traveling companion. It is illustrated with a large number of original photographs.

Literary Notes

....The new catalog of Harvard University describes 900 courses and lists some 700 instructors. The exact number of the latter is 707, an increase from 634 within the year.

....A well designed book for younger readers is *The Heart of the Bible* (Nelson; \$1), containing selected readings with suggestive headings, taken from the American Standard Version of the Bible. It has many illustrations and is edited by Ella Broadus Robertson.

....D'Annunzio is laboring on two works, both of them composed in French; the only language, he announces, which he will, in future, employ. One of them, a tragedy, is to be interpreted by Mme. Suzanne Desprès, and has for its title *La Hache*; the other is an historical novel.

....From the Cosmopolitan Press, of this city, we receive *The Light of the Gods*, a thin, prettily illustrated volume of poems by Grace Granger. There are four of them, all short, and they show a fine appreciation of the fascination of the ancient sites of the Parthenon, Sonium, Peirene and Mars Hill. The verses befit the dainty setting.

....An Anglo-American publisher, Thomas Nelson & Sons, publishes in its series of French reprints (the Collection Nelson; 40 cents per volume) a delightful selection of passages from the works of Maurice Maeterlinck, entitled *Morceaux choisis*. The introduction is contributed by Georgette Leblanc (Mme. Maeterlinck), the singer who is soon to make an appearance at the Boston Opera.

....According to the *Westminster Gazette*, M. Maeterlinck began his literary career in the three "failures." His literary review, the "Pleiade," was the first of these; his initial volume of poems, "Serres chaudes," the second. The third was his play, "La Princesse Malène"; limited, however, to an edition of twenty-five copies, printed by the author's own hands. It was a year before one of these volumes happened to fall into the hands of M. Octave Mirbeau, who wrote articles in the *Figaro* which described Maeterlinck as the Belgian Shakespeare. Lo! he was famous!

....Twenty-five years ago this month, *Scribner's Magazine* was first issued, with a cover by Stanford White upon which no improvement has been made. THE INDEPENDENT is glad to congratulate a fledgling like *Scribner's* upon one of its anniversaries; the magazine is one of those which has made less violent efforts to keep young, and that may be one of the reasons for its good health in the year 1912.

....Automobilists will be interested in Mrs. Harriet White Fisher's *A Woman's World-Tour in a Motor*, published with seventy illustrations from photographs by the Lippincott Company (\$2). The book itself is commonplace enough, but it is exceedingly well printed on heavy white paper, with numerous illustrations from excellent photographs.

....Rev. George Lewis, Rector of Icomb, has translated into English the Greek text of *The Philocalia of Origen* (imported by Scribners), as revised and published a few years ago under the editorship of Prof. J. Armitage Robinson. These selections, which were compiled from Origen's works by Gregory of Nazianzus and Basil of Cæsarea, form a very good introduction to the study of the great Alexandrian.

....The *Smithsonian Report for 1910* barely comes in time to escape being dated two years behind. Why should not the institution skip a year and catch up? Two of the important articles, Chanute's on "Recent Progress in Aviation" and Doncaster's on "Recent Work on the Determination of Sex," are not true to name, for they were written in 1909 and in both fields more "recent" events have changed the looks of things.

....It was before Japan took on Western ways to any great extent, and before a part of China declared the whole a republic, that Prof. Percival Lowell wrote *The Soul of the Far East*, which comes to us now in a new illustrated edition (Macmillan; \$1.60). The book is one of the few volumes of its kind which retains its value year in, year out, and which is destined to prove suggestive to a great many more readers than have already appreciated its high value.

....If popularity is to be gauged by the issue of books of selections from a writer's work, the *Myrtle Reed Yearbook*, made up of "Epigrams and Opinions from the Writings and Sayings of Myrtle Reed," with a foreword by Miss Gilder and a biographical sketch and critical appreciation by Mary P. Powell (Putnam; \$1.50), is proof positive that the novelist's life was not lived in vain. There is a quotation for each day in the year 1912, a few of them in verse.

....Henry Frowde announces the publication of three books interesting to students of Japanese literature and conditions: *A Year of Japanese Epigrams*, translated and compiled by William N. Porter and illustrated by Kazunori Ishibashi (90 cents); J. H. Gubbins's *The Progress of Japan, 1853-1871* (\$3.40), and Robert P. Porter's *The Full Recognition of Japan*, with this sub-title: "A Detailed Account of the Economic Progress of the Japanese Empire to 1911" (\$3.40).

....Rev. J. F. Ohl, superintendent of the Philadelphia City Mission of the Evangelical Lutheran Church, has written an extended account of the antecedents, origin, character and methods of work of the Lutheran movement, which has spread over the world, under the somewhat vague title of *The Inner Mission* (Philadelphia: General Council Pub. House). The book is plentifully illustrated with pictures of noted workers and various homes that have been established both in America and Germany.

....Crime costs America \$125,000 an hour, and a more frightful cost in mental suffering not only of the criminal unhardened as yet, but also of his family. There are many suggestions to ponder in *An Open Letter to Society* from Convict 1776, with an introduction by Maud Ballington Booth (Revell; 75 cents). While it is unduly bitter in some passages, it does give a view of prison from the inside, impossible to an outside investigator; and it voices the criticisms of our penal system made by many other convicts.

....The author of "On the Trail of the Immigrant," Edward A. Steiner, has collected a baker's dozen of short stories of our new citizens, under the title of *The Broken Wall* (Revell; \$1). The wall is that of race-prejudice, the "ethnic barrier," Professor Steiner calls it, and it can only be broken by love. The stories are told with humor and sympathy. We could spare without regret some of the dialect which is unnecessarily copious; but not the warm-hearted humanity and brotherhood of the book.

....A half dozen religious booklets of more than ordinary value have recently come to our table. The smallest of them is a simple but noble address on *Prayer* (75 cents) by Rev. William P. Warburton, issued by the Knickerbocker Press. The most theological of the six is composed of four chapters on the *Social Aspects of the Cross* (Doran; 60 cents), by Prof. Henry Sloane Coffin, but the author's theology is no bar to his understanding of the common lot and needs of men. The other four booklets are published by the Pilgrim Press: Dr. Albert J. Lyman is at his best in his high-souled talks about *The Three Greatest Maxims of the World* (75 cents), one each from the Greek, Roman and Hebrew; Dr. Gladden's heartening counsels are drawn from experience in *The School of Life* (25 cents); Wilfred T. Grenfell, M. D., writes a frank confession of his own attitude toward the Church and gives an encouraging estimate of its worth in *What the Church Means to Me* (50 cents); and Rev. William Allen Knight puts a well told story of the old Galilean days entitled *Peter in the Firelight* (60 cents) into the mouth of St. John, the Aged.

....Rev. Robert A. Hume, D. D., of India, always writes with commendable sympathy and knowledge of the people among whom he has labored so many years. His new volume, entitled *An Interpretation of India's Religious History* (Revell; \$1.25), is no exception to the rule. He is at his best in such chapters as "Some Fundamentals of Hinduism" and "Hinduism's Greatness and Weakness." Another volume of missionary interest is *Islam and Missions* (Revell; \$1.50), which contains the papers and reports given at the Lucknow Conference on behalf of the Mohammedan world. The political and social unrest of the Moslem peoples, no less than their religious condition, is mirrored in these surveys and discussions.

....*Christ and the Gospel or Jesus the Messiah and Son of God* (Philadelphia: McVey; \$2) is the authorized English version of a work by Rev. Marius Lepin, S. S., D. D., of the Theological Seminary of Lyons, France. It is a criticism of the views of Stapfer, Harnack, Wellhausen, Loisy and other liberal theologians in regard to the life and character of Christ. With great skill and learning Abbé Lepin meets at numberless points the rationalizing tendencies of the modern criticism of the Gospels, and by the application of a counter-criticism upholds the traditional dogmas and interpretations of the Church. One of the five chapters of the book is devoted entirely to a refutation of Loisy's views as expressed in his great Commentary on the Synoptics.

....*The Pocket Parkman* is a twelve-volume edition of the historian in limp binding, gilt top, 18mo, at \$1.50 per volume, \$18 the set. And the set will furnish a ten-inch bookshelf. Parkman's publishers, Little, Brown & Co., have performed a good action in bringing out this compact and serviceable edition. Attempts have been made to belittle Parkman by some of the later-day tribe; the historians whom no one reads, except, in some cases, fellow-historians. He has been corrected in this and that detail; worst of all, he is an historian with a style. He is closer to Thierry than to Aulard; he has not the true university ideal of history-writing—founded on colorless, ungeneralizing, scholarly library research, the putting together of one document and another, with no attempt to justify the drudgery except an occasional invocation to that fickle goddess, Truth. Fickle, we say, because we suspect her to be on the side of the historians who have the courage to tell a good story according to their best lights, and who have the genius to make us read their story. Parkman is one of these; and he was fortunate enough to take possession of the one romantic epoch in American history; that of the old régime in Canada, and of the French and Indian wars.

....A generation ago it was the fashion in some quarters to deny the Mosaic authorship of the Pentateuch on the ground that the Hebrews of that period were not familiar with the art of writing. The possibility of such knowledge among the people of the Mosaic age, the systems of ancient writing and their transfer from one nation to another are carefully set forth in their relation to Pentateuchal criticism by Prof. A. S. Zerbe, in *The Antiquity of Hebrew Writing and Literature* (Central Pub. House, Cleveland; \$1.50). The discussion can, of course, have little application to the present methods of literary criticism of the Old Testament.

....George Sand and Dickens had, says the *Mercur de France*, a decided influence upon the political evolution of Russia during the nineteenth century. They brought to the Russian Socialists a kind of new gospel, at an epoch when native literature and journalism, under governmental persecution, were incapable of formulating the slightest liberal aspiration. Dickens's novels were hailed with unprecedented enthusiasm. "Oliver Twist," "Nicholas Nickleby," "Barnaby Rudge" and "Dombey & Son"—pleas for the humble, victims of egoism or injustice—touched Slavic sensibilities to the quick. And this fact is attested in the letters addressed to the British novelist by his translator, Mr. Védensky. Dickens was even urged to take up residence in Russia, where he already enjoyed, according to his correspondent, "a peerless renown." So that Russia, too, may be counted upon to celebrate the great man's centenary.

....Articles contributed by Miss Ida M. Tarbell to a magazine during the last five years, with some additions, are now published (Macmillan & Co., \$1.50) in a book entitled *The Tariff in Our Times*. Beginning with the Morrill tariff of 1861, Miss Tarbell undertakes to analyze all the tariff laws of the last fifty years (including the Payne-Aldrich revision of 1909), considering the legislative and political conditions under which each was enacted, together with some of the influences of private interests by which, in her judgment, rates of duty have been affected. Her purpose is to show that "public opinion has never been fairly embodied in the bills adopted," and to "tell the story of this defeat of the popular will." Her attitude toward the subject is indicated when she says: "Tariff reform calls for more than lowering a duty here and there, more than appointing a Tariff Board, more than negotiating a reciprocity treaty, good as all these may be. It calls for an intellectual and moral revolt against the entire system of protection as we know it." Many will not accept all of her opinions and

conclusions. These are set forth frankly and forcibly, however, and the book gives much information that can be obtained elsewhere only with much difficulty. The subject is one which must be prominent in politics and legislation for some time to come.

....The second number of the *Yale Review* (new series) is dated January, 1912. This is a most interesting quarterly magazine. Prof. Wilbur L. Cross acts as editor and the *Yale Review* is the successor to the *New Englander*, established in 1843, and to the earlier *Yale Review* (1891-1911), conducted by members of the department of political science and history at Yale University. The new review is not, however, an official publication, and contains articles by writers who are not members of the Yale faculty or alumni. The initial article explains "Why Canada Rejected Reciprocity." Dr. Clinton Rogers Woodruff writes on "Simplified City Government": Prof. Grant Showerman humorously describes "The Making of a Democrat"; Robert Munger contributes "Group of Lyrics"; Professor Woolsey signs a biographical sketch of his father, Theodore Dwight Woolsey; Prof. Frank P. Underhill writes of the "Cost of Adequate Nutrition," and Guy W. Mallon of "The Sherman Act and Business." Besides sound book reviews there are articles by Prof. H. S. Canby on "The Rare Earth of Normandy"; by Prof. Edward Thorstenberg on "The Historical Existence of Fairies"; by Lady Gregory on "The Irish Theater and the People," and by Prof. Charles A. Bennett on "The Plays of John M. Synge."

....Synge's art is the subject, also, of an article in the December *Fortnightly*. Mr Darrel Figgis says of the preface to "The Tinker's Wedding" (which is, perhaps, the least valuable of Synge's plays):

"There he ranks drama with the symphony, claiming that it is the function of neither to 'teach or prove anything.' . . . He goes on, however, to speak of the necessity of humor in drama; and there with his criticism comes more closely home to himself. . . . For the result is so deeply sardonic as nearly to overleap humor into the further depths of actual tragedy. . . . The blade of the dramatist searches too deeply into the secrets of living. It seems sometimes as tho the dramatist's energy of thought swept him past his artistic intention."

....Yet the contributor to the *Fortnightly* is persuaded that "the art of J. M. Synge will abide."

"For he brooded on beauty; the very pages of his prose topography are alive with it. He brooded on the soul of man; even when describing the inhabitants of Aran, Wicklow, or Kerry; he does not paint externals, he conveys essences; he does not describe pictures, he carries atmospheres and moods thru the mind. And if sometimes his brooding conveys a sense of utter desolation, it is a 'desolation that is mixed everywhere with the supreme beauty of the world.' Such a mood does not achieve a bulk of work. Moreover, he died young. But he found his soul; he found beauty; and he found the art that could enable him to express one in terms of the other."

....An addition is made to volume nine of the *New English Dictionary*, edited by Sir James A. H. Murray, in the fascicle *Simple-Sleep* (Henry Frowde; \$1.25). Here there are 1,611 main words; in all, 2,408 entries explained, and a total of 3,277 entries. *Single* (verb) figures as two main words, the former with nine subordinate entries, several of these still further specialized; but we do not find there the baseball use of the verb, which is certainly no more rare than the sense of the word in hunting ("to pick out and chase separately"), the nautical use of it, the provincialism (*U. S.*) which applies it to the gait of a horse, or the railway expression ("Just before Penybont the track singles for a short tunnel"). The excellence of this dictionary and its approach to perfect completeness demands no reiteration. The work will be complete in ten volumes, at prices ranging from \$13 to \$16 per volume.

....It is a pleasure to welcome a new volume in the "Musician's Library," published by the Oliver Ditson Company at \$1.50 each in paper, \$2.50 in cloth. The new volume is *One Hundred Folksongs of All Nations*, edited by Granville Bantock, for medium voice. Great Britain and Ireland are represented by fifteen songs, the United States by five (if we include two Indian numbers), Germany by eleven. Eleven is the largest share accorded to any country, and the Oriental lands are given only one or two songs each—as are some of the smaller European nations. The translations are the weakest part of the volume. It is to be hoped that the French and German songs, at least, will be sung by most of the amateurs who will delight in this volume in the original; for the translator works deadly havoc when he attacks *lieder*.

....David Graham Phillips left four novels ready for publication when he died. The first of these to be published is *The Conflict* (Appletons; \$1.30), the story of class struggle in a Western city. The hero is the editor of *The New Day*, a labor league organ; the heroine, a girl rich and energetic, who seeks an outlet for her executive ability in some form of social service. Mr. Phillips' novels always seem accomplished by main strength; a product of crude power. We waited for him to do finer things than came from his busy pen, and when it was struck from his fingers, there was a sense of loss out of proportion to the value of the work he had accomplished, because we looked for a ripening of his genius, and results less harsh and bitter. *The Conflict* is not unlike its predecessors, altho Selma, the woman journalist, is more gently treated than was his wont in depicting the characters of women.

Pebbles

"SHE left me for some motive or another."
"Probably another."—*Lippincott's*

"I UNDERSTAND they are going to revise the football rules right away."

"Yes. They all agree there should be an entirely new assortment of accidents."—*Cleveland Plain Dealer*.

AN eminent architect declares that the National Capitol will not last more than 500 years. But even so the Lorimer hearings can be transferred across the street to the Congressional Library.—*Providence Journal*.

MRS. EDITH WHARTON, according to the *Minneapolis Journal*, was talking in the salon of La Provence about the spoiled children of millionaires.

"They are spoiled even by their tutors," she said. "I know a little Riverside Drive multimillionaire whose education proceeds every morning in this fashion:

"What State is this, Master Clarence?"

"Pennsylvania."

"Right! Quite right!" cried the tutor. "Only it happens to be inhabited by Californians. Pennsylvania, Master Clarence, is a little higher up."

"Then the tutor says:

"Will you be so good as to tell me, Master Clarence, what Parmentier introduced?"

"The oyster," says the little boy.

"The oyster? Quite correct," cries the tutor. "The oyster of the poor—in other words, that is to say, the potato."

"Then they turn to literature."

"What can you tell me, Master Clarence, about Zola's works?"

"No answer."

"Excellent! Perfect," declares the tutor. "The less said about Zola's works the better!"

WASHINGTON.

(With apologies to Browning.)

O to be in Washington when Congress is on tap.

O to hear the Speaker's gavel come down with a rap!

O to see Joe Bailey sulking while La Follette fills the air,

Who is not the least majestic, for the most of him is hair!

O to see insurgents surging round committees here and there,

Presidential booms a-plenty, little leaven in the lump—

Democratic cats a-watching for an easy place to jump;

Clark and Underwood keep smiling, Harmon-y belies its name;

Bosses of assorted sizes, eager to be in the game,

Swarming, buzzing, seeking, begging—in both parties it's the same.

O to be in Washington when Congress fills the eye!

O to be a legislator then, or now, or bye and bye!

—*New York Evening Sun*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$3.00 Single Copies, 10 Cents.

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Taft, Roosevelt and Peace

WILLIAM H. TAFT is President of the United States. Theodore Roosevelt has been. They are our two most distinguished citizens. Last week each gave notable utterance to his views on the arbitration treaties negotiated by Secretary Knox with England and France.

These treaties have now been before the public for several months. They have been the object of the most minute scrutiny by statesmen, publicists, pacifists and militarists. All the arguments pro and con that can be made have been made. They will come before the Senate for final consideration in a few days.

The opposing views, therefore, of President Taft and ex-President Roosevelt may be taken as the last words that can be said on either side of the question.

Mr. Roosevelt, in a long editorial in last week's *Outlook*, vehemently opposes the ratification of the treaties. Such phrases as "farce," "contemptible hypocrisy," "insincere promises impossible of performance," "unctuous and odious hypocrisy," etc., are unsparingly used. Tho one of his editorial colleagues is reported to have said that the keynote of

Mr. Roosevelt's character is "a passion for patriotism," he offers the spectacle to the nations of the world of a man who has held the highest and most dignified office in the gift of the nation, actually defaming the Administration—controlled by his own party and his own chosen successor—and accusing it of "hypocrisy" and "insincerity."

Mr. Roosevelt, however, has plainly stated his objections to the treaties and they are entitled to respectful consideration.

In the first place his editorial completely avoids any endorsement of the report of the Foreign Relations Committee, to the effect that these treaties are "unconstitutional." This is a highly significant omission and would seem to indicate that Mr. Roosevelt realizes the speciousness of that plea.

He is apparently too sagacious to allow himself to be put in opposition to such constitutional authorities as Taft, Knox, Root, Moore, Edmunds, Baldwin, Burton, and even *The Outlook* on this issue.

His fundamental objection, however, to the treaties he states thus:

"I do not believe that we can afford to arbitrate questions of vital interest and national honor, or questions of settled American policy."

He thinks that we would break any treaties if we had to refer to arbitration certain vital issues, and that "would tell against peace." Tho he does not explicitly state it, he must distrust unlimited arbitration, either because there is danger that the court might not mete out justice, or else that some of our contentions and desires would have no standing in equity.

Now what does Mr. Taft say: Last Saturday evening, the day after Mr. Roosevelt's attack on him appeared, he spoke at the Citizens' Peace Banquet in this city.

The way to bring about peace, says the President in effect, is for the nations to agree to settle *all* their disputes with each other by arbitration, the decision of the tribunal to be enforced by public opinion, or, if that is not sufficient, by a system of penalties or even by force. He holds that, owing to our geographical isolation, lack of entangling alliances, disinterested motives and great influence

abroad, we are expected and entitled to lead in this movement. The first step toward this goal is for us to initiate with our mother country, Great Britain, and our great sister Republic, France, arbitration treaties in which we agree to dethrone war and enthrone law as a means of settling all our differences. For this purpose he has negotiated two treaties. For his part he would be willing to agree to have the treaties framed so that the Hague Court itself should determine everything, including the question whether a dispute was "justiciable" or not, but that seemed to be going too far for the present, so the Joint High Commission was created, consisting of three nationals from each country, to whom would be referred the detail of whether a question was justiciable. If the Joint High Commission should decide a dispute to be justiciable he would submit the preliminary "compromis" that would send it to The Hague to the Senate for its advice and consent. In that way he fully conserves whatever prerogatives the Senate may have in the matter.

The President says that other nations are ready to join with us in similar peace pacts as soon as the English and French treaties are confirmed, and he therefore proposes to negotiate similar treaties of unlimited scope as far and as fast as he can. In other words, he looks upon the English and French treaties as the beginning of a movement which will ultimately result in a network of unlimited arbitration treaties between all the nations of the world, and that, of course, would be nothing less than a realization of Tennyson's dream of the federation of the world.

Now the issue thus stated between Mr. Roosevelt and Mr. Taft is perfectly simple and perfectly easy to understand. Which leader will the American people follow?

Our readers know the position of THE INDEPENDENT. Let us restate it. We hold that the world is now living under two systems of ethics—Christian for individuals, pagan for nations, tho there is no double standard in the moral world. Mr. Roosevelt is apparently satisfied with things as they are. Mr. Taft actually proposes to elevate international law to the high plane now occupied by pri-

vate law, and has taken the first practical step in that direction.

President Roosevelt sees the possibilities of the miscarriage of justice thru arbitration. It scares him. President Taft says we might as well abolish courts of law, because there may be a bad judge or an unjust decision. He is not afraid to trust the honor of the United States to the decision of an impartial tribunal, and he sees no especial difficulty in getting such a tribunal. The veteran ex-Senator Edmunds best states this point at issue when he says:

"The always *possible* injustice in an arbitral judgment is infinitely less than the *certain* horrors of war both to the victor and vanquished."

Many observing people now think that Mr. Roosevelt is seeking a renomination for the Presidency. Mr. Taft is unquestionably a candidate to succeed himself. Both men have made good and great Presidents in their own separate ways as far as national affairs are concerned. Internationally speaking, however, Mr. Roosevelt lags behind, and in the present instance he has failed to see that the issues involved in the treaties are primarily moral and not political. President Taft, on the other hand, has already taken the farthest step ever attempted toward the goal of universal peace; and he has only begun.

Which shall the leader be, Taft or Roosevelt?

The Greatest Thing in 1911

WE are going into 1912 with a year behind us packed full of big events. Which has been the grandest, the most stirring in its effect on American life and character, and on the prospective future? This is a question that a good many would answer off hand, we presume, and would specify the broken power of corporate capital to be a dictator of investment, of wages, of war and peace. But this we owe rather more to Roosevelt and antecedent years. Perhaps it has been in 1911 that for the first time we have been confident of that readjustment of capital and labor which will give to labor its fair share of production, and will render capital amenable to supreme law.

The Peace Treaties, with the splendid growth of international law and the broad sunshine that illuminates the peace maxim of Christianity, "On earth peace, good will to men!" will also make 1911 memorable. We are a good stride ahead of one year ago in our ability to bring the people into one world-wide organization of good will. But with all this the abominable waste of war habits is not checked. Navies squander our wealth and multiply our taxes; but costly vessels are built to rot and not to fight—of that we are almost sure. The Moroccan struggle has brought to sight only a selfish scramble, while the Tripolitan embroglio is hateful not only elementally, but for its untimeliness. There is nothing noble in this quarter, nor is there anything anywhere on the horizon that does not make one ashamed of the savagery that has outlived war ages.

The superb coronation in England, and the enormously expensive Durbar in India cannot seem to the twentieth century anything more than as surviving relics of a brute force age, when the will of the man outweighed the will of the people. In reality nothing has occurred at Delhi or elsewhere elementally different from that which has occurred in India ever since the Mogul Akbar. Our age cannot be congratulated on increased glitter and more pretentious exhibitions of power. It is not the forces that destroy, nor the power that dominates, that we are hereafter to consider; but it is the forces that evolve wealth and wisdom and the power that makes for righteousness. The question is how much more of light and truth and human brotherhood have we accumulated? By far better is the response from old England as to her standing with the future, when she curbs the power of rank, and in divers ways undertakes to abolish the extremes of poverty.

What will come out of woman suffrage 1911 has made us question, but it has not solved the problem. It plainly is not a matter that is going to end with the casting of more ballots. It is sure as the stars in the heavens that the two sexes must hereafter learn to co-operate in the higher fields of human exertion,

as in the earlier and simpler forms of life they co-operated in the field. Neither is the wreckage of homes and families, and the permanent disturbance of the common-sense conclusions of humanity, to be the conclusion. We will see what 1912 has to say on this point.

The rejuvenation of China can almost be set down to 1911. The refacing of one-third of the whole world toward democratic principles, and that evolution of social life which has found its best expression in our States, is surely making our faith in humanity axiomatic, and rendering a political miracle natural law. Some of us live who can remember when China held us to be barbarians; and we were nearly as narrow in our judgment of the Chinese. Human brotherhood is making strides no faster than the increased capacity of knowing ourselves.

The struggle of labor to stand at par with capital has gone thru fire, and smells of smirching smoke. We have probably got it written in indelible letters that hereafter this world is to be guided in its evolutions, not by force, but by argument. The power of the people as a democracy in business as well as in politics, including all classes and ranks, has increased perceptibly. We are inventing new and simpler methods of finding out the thought and the will of the people concerning questions of common interest. There is an old term which we use carelessly, common sense, but we mean by it the conclusion of the ages, the summed up opinion of mankind. The effort of democracy at present is more and more to find out the common sense that underlies ballots.

Socially nothing finer has been developed than the emphatic swing of the Church toward social fellowship; the rebirth of democracy in religion; the growing fellowship of political economy and religious thought, of right and righteousness. It looks now as if we should make a good deal less of separating Church and State, and a good deal more of making them coherently able to co-operate. In reality there is but one end of all human effort, that is betterment. The Church is finding this out.

But we are still wandering about in

our search for the greatest thing achieved in 1911. Look the world over as carefully as you please, and study history as a philosopher or as a man of events, you will come back to find that the enormously broadened and glorified position of agriculture affords the most hopeful field for our inquisition. Nothing else in American life during the last few years has anywhere near equaled in its helpful influence, individually or socially, the work of the agricultural forces in our United States and thruout civilization; for already internationalism has its agricultural institute in imperial Rome an institute that means the organic effort of forty nations to co-operate in mutual helpfulness.

Certainly not the most imposing, but really the noblest agricultural achievement of 1911 is that of vastly enlarging the food products of our American farms. Last month a score of boys were the guests of the Department of Agriculture at Washington. They were champions of boys' corn clubs from as many corn States. Each one had a measured acre of ground in which to do his best. Young as they were they stood for the new agriculture which is to rule the world and feed the millions. Each had before him the census report that the average corn crop of the United States has heretofore been fourteen and a half bushels to the acre. And at the end of the season the champions were selected by their records, and the highest crop, that of a lad from Mississippi, was two hundred and twenty-seven bushels to the acre, at a cost of fourteen cents a bushel.

Another lad of Alabama raised two hundred and twelve bushels to the acre, at a trifle over seven cents a bushel. Two or three of our agricultural stations, during this same year, had lifted the record to between forty-five and fifty bushels to the acre. The American boy had beaten his masters. It was an event well worth the glorifying that it received. The boys were provided with trips to Washington; were introduced to President Taft, and, all in all, were the heroes of 1911. They did not receive a Nobel Prize, as they well might have done, but they received diplomas from the Department of Agriculture at Washington.

There is no mistake about it. Our

agriculture has received an impulse that can scarcely be reckoned in figures or described in words. During 1912 we shall bury our heads in political struggles, but in the hands of those who cannot yet vote lies the problem of abolishing poverty and feeding a reduplicated population. Mr. J. J. Hill warned us that American agriculture would not be able to provide for the vastly increasing population as it would be summed up in 1950. He did not count on the American boy and the new training. We know now that our soil will not only feed those whom we fairly expect to count into the census of 1950, but many times that number.

The Mystery of Dr. Sun

THE flitting, elusive Dr. Sun, man of mystery, has appeared at last, visible in the flesh, received in triumph in Nanking, and chosen President of the Republic of China, which he has for so many years sought to create. But who is he? We will tell.

Sun Yat-sen was born forty-six years ago in Canton, a city which has been a hotbed of rebellion for many years. He is, like Yuan Shih-kai, a Chinese and not a Manchu. In his boyhood he was brought to Hawaii and attended the Iolani College under the charge of Bishop Willis. The *Honolulu Friend* tells the story of his early life. It was there that he became a convert to Christian faith, and on his return to China he met so much opposition, and even persecution for this reason, that he returned to his sympathetic friends in Hawaii. Chinese and American, who welcomed the youth ostracised at home, for that was nearly thirty years ago. Thus for the first time driven out of China he was received to their homes by Chinese friends, two of whom are now deacons in the Fort Street Chinese Church, and one of whom, Mr. C. K. Ai, took him out to take a steamer in the offing on his return again to China, passage for which had been secured by the aid of a Chinese gentleman and two Americans. Thus the young man, whose name is now known all over the world, went on to meet the destiny awaiting him.

Arrived again in China he was later baptized by the Rev. Dr. Hager, of the

American Board Mission in Hongkong, and for several years studied medicine in Canton under the medical missionary, Dr. Ken, of the American Presbyterian Mission, and later in the College of Medicine in Hongkong. He obtained his diploma in 1892 and began practice in Macao. Here he became associated in a political movement carried on by the "Young China" party, which first sought peaceful methods of reform, but developed into an anti-dynastic movement. When in danger of arrest he was compelled for the second time to leave China, and he returned to Honolulu, where for a while in 1896 he remained, but before long went to San Francisco and thence to England, where he made his home in London with Mr. and Mrs. Cantlie, dear friends whom he had known in China, where Mr. Cantlie was his teacher.

But he was still known to the Chinese authorities as a dangerous revolutionist; and he was adroitly inveigled into the Chinese Embassy and there forcibly imprisoned for thirteen days, with the intention of smuggling him back to China as insane, there doubtless to be beheaded. In 1907 he published the story in a book entitled "Kidnaped in London." It is a thrilling account of harrowing experiences. Imprisoned in a doubly locked and barred room, reported to be a lunatic, surrounded by a cordon of Chinese and English servants and attachés of the Embassy, it seemed impossible to escape. Already passage had been taken for him. At last he was able to send a line thru an attendant to a faithful English friend, who brought the matter to the British Foreign Office, and Lord Salisbury demanded his release. As an illustration of his religious spirit we quote the following from his book:

"My despair was complete, and only by prayer to God could I gain any comfort. Still the dreary days and still more dreary nights went on, and but for the comfort afforded me by prayer I believe I should have gone mad. After my release I related to Mr. Cantlie how prayer was my one hope, and told him how I should never forget the feeling that seemed to take possession of me as I rose from my knees on the morning of Friday, October 16, a feeling of calmness, hopefulness and confidence, that assured me my prayer was heard, and filled me with hope that all would yet be well."

From this time on Dr. Sun devoted himself to the task of ridding China of

the Manchu domination. He traveled over England and the United States and Hawaii. A price of \$50,000 was put on his head, dead or alive. The Empress Dowager was willing to forgive others, but not Dr. Sun. He organized the revolution. Chinese were secretly drilled in halls, thousands of them, under American officers, and the nucleus formed of an army of men who went to China and there gathered and led recruits. All the Chinese in this country are with him and freely gave money for the cause. In 1906 he printed for private circulation an appeal to Americans for aid, as special friends of China. He said:

"We must appeal to the people of the United States in particular for your sympathy and support, either moral or material, because you are the pioneers of western civilization in Japan; because we intend to model our new government after yours; and, above all, because you are the champion of liberty and democracy. We hope we may find many La-fayettes among you."

After years of planning and plotting, recognized by the Chinese as their wise leader, accepted as such even by the diplomat Wu Ting-fang, his only rival, Yuan Shih-kai, who still holds to the throne, Dr. Sun has just been elected by the military conference in Nanking as the first President of the Republic of China, and at present it appears as if the republican delegates in the other conference at Shanghai, representing the two parties, republican and imperialist, would accept him.

We do not yet know what the conclusion may be. Reports from Shanghai, that great factory of rumors, are conflicting. We are told that Dr. Sun's election as President is farcical, and again that it will surely be confirmed. It may be he, or Yuan Shih-kai, or some other man who will be chosen, but the empire is doomed, and a republic after the American pattern is assured unless all signs fail. When we recall the savage persecutions not two hundred years ago of the Christian followers of the Jesuit Ricci, it would seem as if time were bringing its blessed revenges; for the first President of the Republic of China is likely to be Dr. Sun, whose fervid Christian faith equals his ardent patriotism, or Yuan Shih-kai, who chooses to educate his sons in Christian mission schools. And it is not to Russia or Germany or Great

Britain that the Chinese reformers go for their inspiration and pattern of government, but to our American Republic.

✱

The Cost of Living

PROF. IRVING FISHER, of Yale University, made an address on the 11th ult. in St. Louis. A brief press dispatch, published on the 13th in many newspapers, gave the following report of his remarks:

"Malaria, hookworm and alcohol are three of the greatest factors producing the high cost of living, said Professor Irving Fisher in an address yesterday at the City Club. He recommended an international commission to eradicate these diseases and study the cost of living in all countries. He acquitted the Trusts of blame for high prices."

This was grotesquely inaccurate and misleading. The annoyance caused by such misrepresentation led Professor Fisher to publish a brief statement, of which the following is a part:

"I did not say that malaria, the hookworm and alcoholism were responsible for the rise in the cost of living. On the contrary, I said that the cost of disease had always been with us and was not in the least responsible for the recent rise in the cost of living or any hardships connected with it. It is also not true that I suggested an international commission to eliminate disease, or that I acquitted Trusts altogether of a share in the rise in the cost of living. I said that the causes of the world-wide rise of prices were a matter of dispute, and that therefore there should be appointed an international commission to make an authoritative investigation of that subject. I also said that in my opinion the chief cause of the rise of prices was the great production of gold and the consequent inflation of the world's currencies."

Those who are familiar with Professor Fisher's writings on this subject, some of which have been contributed to THE INDEPENDENT, know what his views are as to the effect of the enlarged output of gold.

Last week, the Director of the Mint published his estimate of the output in 1911. It is \$466,000,000, or \$14,000,000 more than the quantity produced in 1910. The figures in a table showing the annual output for a series of years are impressive. The value has risen to \$466,000,000 from \$262,000,000 ten years ago, and only \$130,000,000 twenty years ago. From 1880 to 1889 the annual product was only a little in ex-

cess of \$100,000,000, the average for those years having been \$104,300,000. The three great gold-producing countries are the United States, Africa and Australia. In recent years this country has shown a small gain; the Australian output has declined; but the gold from Africa, owing to the wonderful development of mining in the Transvaal, has grown in ten years from only \$9,000,000 to \$191,000,000. We are not saying that the rise of prices should be ascribed to the gold flood alone. But we are convinced that of all the causes this has been the most effective.

Professor Fisher some time ago suggested that there should be inquiry by an international commission, and for this proposition he has gained the support of prominent economists and statesmen in Europe. He would have our Government take the first step. He presided last week at a meeting of the American Economic Association, when the subject was discussed. The principal address was made by him, but several Senators, as well as the economists present, took part in the discussion. The proposition relating to a commission was generally approved, and a committee was appointed to report this approval to President Taft.

While Professor Fisher thinks that the increased annual supply of gold is the chief cause of the higher cost of living, he does not overlook several other causes, to each of which some weight should be given. There are certain causes which may be found in one country but not in another. There is at least one cause which is world wide.

One of the papers read at the meeting of the association was the work of the chairman of the board of trustees of the Hospital for Consumptives at Boston, who said at the beginning:

"Every indication points to the conclusion that commodity prices will continue to rise. Inasmuch as this rise will not be accompanied by an equal advance of wages, the possibilities of industrial, political and other troubles which will result as a consequence are unbounded. This condition only fertilizes the field of radical agitation, and makes possible all kinds of ignorant, misdirected, and insincere attacks on established forms of government. For the reason that the causes underlying this advance of commodity prices are international, agreement as to the exact facts

should also be international, and whatever remedies are possible can best be worked out by an international commission; so that an attempt may be made to put them into effect all over the world at the same time."

Such an investigation and such an agreement, he thought, would tend to prevent war:

"An international agreement would serve a useful purpose in furthering the aspirations for international peace. Any scientific report as to the result of the waste of war and militarism, in diminishing production, while increasing demand, would be of the first importance, because war is the first of the evils of the world to be attacked. An international agreement showing the effect of the waste of war on the cost of living would help to drive home the fact that the burden of militarism is felt each time every family sits down to a meal, and is a shadow thrown over their whole life."

We shall be glad to hear that the President has asked for authority to invite other nations to join the United States in creating a commission, and that the authority has been granted.

The Convention Habit

THE trade unionists are not the only people or the first people to discover what may be done by understanding and joint action. Long ago reformers discovered the enlivening effect of a session where the "Cause" may be discussed and the faithful encouraged. Long ago scientific men began to organize into national societies, with meetings, papers, discussions and violent differences of opinion. History, politics and economics, subjects in which Americans are particularly interested, claim their place among scientific subjects to be investigated, reported upon, and applied to the public good.

Each of these three branches of learning is now represented by numerous associations. Together the three associations now count about 7,000 members, and thru a series of meetings running thru more than twenty-five years the habitués have enjoyed many friendly meetings and not a few combats. Frequently the three associations have met together, but this year the American Economic Association went to Washington and the American Historical Association and its younger sister, the American Political Scientific Association, joined forces in a lively meeting at Buf-

falo from December 27 to December 29. The president of the American Historical Association, Prof. William M. Sloane, of Columbia University, opened the meeting with an address on the "Substance and Vision of History," which was a claim for the place of history as a science comparable to the natural sciences in methods and in its discoveries of fixed laws. The Historical Association in its twenty-seventh annual meeting included several groups and affiliated bodies, such as the Mississippi Valley Historical Association, the Conference of State and Local Historical Societies and the Conference of Teachers of History, each of which has its session. Among the foreign visitors who took part in the proceedings were Prof. Charles Diehl, the well known expert in Byzantine history, and French exchange professor to Harvard College, and Mr. H. W. V. Temperly, fellow of Peterhouse, Cambridge University. Sessions were held on ancient history, southwestern history, European history and British imperial problems.

The Political Science Association, which was holding its eighth annual meeting, has already 1,600 members and seems likely to rival the two older societies in numbers and the interest of its work. The tendency toward a practical treatment of governmental problems was reflected in the address of the president, Governor Baldwin, of Connecticut, on "The Progressive Unfolding of the Powers of the United States," and in most of the sessions the principal subjects discussed were courts and judges as governing powers, State constitutions, the county problem in municipal government, and efficient State government, led off by Herbert Croly, author of the widely read book "The Promise of American Life." A joint session was held on Anglo America and Latin America, in which Mr. Henry Gil, an Argentine, now studying at the University of Pennsylvania, captured the audience with his graceful, indomitable insistence that there is no term "Latin America" which could rightfully include the feeble little States of Central America and also big countries like the Argentine, which are destined to rival the United States in wealth and the power of self defense. The American Histori-

cal Association ended by an excursion to and session at Cornell University. The Political Science Association adjourned to Toronto, where it was hospitably entertained by the president of the university. For the first time the Political Science Association set on foot several committees and investigation, which are to report from time to time, among them a commission on State Constitutions, both associations are to meet in Boston in December, 1912, where the president of the Historical Association will be Theodore Roosevelt, author of "Winning of the West," and large contributor to the first-hand material on American government.

The Economists at Washington

THE Economic Association met at Washington, where also assembled the large membership of the American Association for the Advancement of Science. With the economists met the American Sociological Society, the American Statistical Association and the American Association for Labor Legislation.

So large a gathering of learned bodies would have taxed the resources of a smaller town, and some fear had been felt that the sectional meetings would suffer because of the temptation to social enjoyment which such a congregation would offer, and the opportunity for sight-seeing afforded by the national capital. As it turned out, however, the discussions were extraordinarily well attended, and the meetings had a more intellectual quality than has sometimes been observed when fewer counter attractions were competing with the program.

It had wisely been decided to limit the social features of the occasion. One invitation to a general reception was accepted, that extended by the Secretary of the Treasury and Mrs. McVeagh at their home. A great many members and guests of the associations accepted the personal invitation which was sent to each one and carried home with them an extremely pleasant impression of the gracious hospitality of their host and hostess.

The chief event on the program was, of course, the luncheon in the large banquet hall of the Hotel Raleigh, Thursday noon, when President Taft, as the guest of honor, made an address which was listened to with close attention and warm approval, in explanation and defense of the proposition to bring Federal expenditures into correlation and proportion thru the device of a properly organized budget. The President made it clear that his own interest in this proposed reform is sincere, and that he has very much at heart the request which he will make to Congress to continue the existence and activities of the Efficiency Commission.

Perhaps the most exciting session—that of the economists on Thursday morning, when the report of the Tariff Board was discussed—was less important from a scientific standpoint than some others. Professor Emery, chairman of the Tariff Board, summarized and defended the report, and Prof. H. Parker Willis sharply arraigned it. Professor Willis's reputation as a master of data of polemic value and of the sarcastic resources of the English language did not suffer abatement on this occasion, but the opposing cohorts of protectionism and free trade lost no deserters, and probably everybody went forth from the scene of conflict neither much wiser nor any less firm in his faith than when he entered. It may not be true that protectionists and free traders are born and not made, but if made they are fashioned by other forces than those of ratiocination.

An altogether different impression was left by the joint session of the Economic Association and the Sociological Society on Friday morning when the theme was "The Selection of Population by Migration"; by the session of the Sociological Society on Thursday morning, for the consideration of "The City as a Socializing Agency," and by the Thursday evening session of the same society on "Recreation as a Public Function." The convention room of the Raleigh was inadequate to accommodate the assembly that desired to hear Miss Jane Addams, of Hull House, whose plea for the recognition of a proper provision of recreation opportunities as a necessary public

function in urban communities was one of the most cogent public addresses Miss Addams has ever delivered. It included a keen analysis of the social forces that play upon the minds of millions of children in our American cities, and clearly pointed the way to those educational efforts that make for an honest and clean democracy in opposition to mob rule, gang rule and boss rule. Bearing upon the same problem and a thoughtful contribution to our concrete knowledge was the careful paper read by Dr. Frederic C. Howe on Thursday morning on "The City Plan as the Physical Basis of Urban Life."

Two aspects of the migration question were presented on Friday morning, one the restriction of immigration in a paper by Prof. H. P. Fairchild, of Yale, the other, the significance of emigration in a paper by W. W. Husband, secretary of the Immigration Commission. Professor Fairchild's plea for a strict governmental control of immigration, carried to the point of authoritatively placing every immigrant after arrival in America and keeping him under probation for a time, and for limiting immigration to admissions from one country, or a group of selected countries each year, did not meet with much approval. Prof. Emily Green Balch, of Wellesley, whose extensive personal study of immigrant populations here and abroad has won the respect of all persons who really know something of the subject; Prof. Walter F. Willcox, whose clear statistical analyses disposed of two or three of the more pessimistic popular fallacies about the immigrant, and Prof. Jeremiah W. Jenks, who spoke from the inside knowledge of a member of the Immigration Commission, all dissented vigorously from one or more of Professor Fairchild's suggestions.

Other sectional meetings of the associations were of no less value as contributions to fact and practical effort than these which have been selected for mention because of their general interest. All were largely attended, and the audience which gathered to hear the presidential addresses of Professor Giddings, of the Sociological Society, who spoke on "The Quality of Civilization," and of Professor Farnham, of the Economic Association, who spoke on "The Eco-

nomic Utilization of History," was one of the largest gatherings in the history of these societies. There may have been meetings of the economists and sociologists as interesting and worth while as this one last week was, but there has been none better.

✱

How Was the Money Used?

In all the recent discussion of the eleventh-hour raising of a fund of \$240,000 or \$260,000 to be expended for the Republican nominees in the campaign of 1904, little or nothing has been said about the ways in which the money was used. There have been hundreds of columns about the attitude and motives and alleged agreements of the chief actors, but scarcely any curiosity as to the final distribution or allotment of the dollars has been manifested. In the memorable letter to Sidney Webster, the late Edward H. Harriman said that at the request of Mr. Roosevelt, who told him that money was needed for the campaign in New York State, he raised "the whole amount," which was given to Treasurer Bliss and Chairman Cortelyou. He added:

"This amount enabled the New York State Committee to continue its work, with the result that at least 50,000 votes were turned in the city of New York alone, making a difference of 100,000 votes in the general result."

Mr. Sheldon now says that the money was raised, "about a week before election," \$160,000 by Mr. Harriman at Treasurer Bliss's request, not at the request of Mr. Roosevelt, and \$80,000 by Mr. Bliss himself. How was this money used and for what uses was it so sorely needed, only three or four days before the polls were opened? Mr. Harriman said 50,000 votes in the city alone were "turned" by it. Did he mean that 50,000 votes were bought and paid for? We do not think that 50,000 votes in the city could then have been bought for an average of less than \$5 apiece, or that the purchase of so many votes could have been made without protest, exposure and prosecution. If 50,000 votes were "turned," were they "turned" by campaign speeches and argument? But why should a few speeches at that late day have cost \$240,000? We wish Mr. Sheldon or some other person who knows would tell where that money went.

The Winter Academy

While the winter exhibition of the Academy of Design in New York reveals no particular tendency or school, it may be just as interesting for all that. Any fairly representative American picture show offers a variety of highly respectable canvases. American painters have studied under the best of teachers, and some of them are notable pedagogs on their account, Mr. Kenyon Cox, for example, whose vivid "Vision of Moonrise" we do *not* reproduce. The Winter Academy suggests nothing if not the variety of American art; and, with something of its want of unity, something, too, of its persistent want of nationality. The two most striking pictures shown are, beyond a doubt, the Kenyon Cox referred to, brilliant in color alone and daring chiefly in its reactionary quality, and George Bellows's "Girl on Couch." Here are the antipodes. "Before and After Manet" is one of the casual antitheses one might overhear, standing in the crowd. At least Mr. Bellows is strong in actuality; here, in representing a girl who reclines on a couch (the pose bristles with technical problems daringly attacked, just as the couch itself, with cushions and wall space, presents pleasing problems in color and shade well solved), he is as contemporary and as uncompromising as in any prizefighter or snow excavation that he ever hung in an insurgent hall. That Bellows hangs at all in the Academy is an indication of growing broadmindedness on the part of the academic authorities. The outsider is now given a fair show in West Fifty-seventh street, and it is a pleasure to publish this fact. As for the portraits of children which we reproduce in this issue, they are offered partly because it is as true as ever that American painters come nearer to excelling in portraiture than in other fields of art, partly because all the world loves children, whatever they may think of moonrise visions and girls on couches. We do not, because THE INDEPENDENT happens to be published in New York, fall into the error of ascribing to the Academy shows a national character. That belongs more nearly to the annual exhibition of the Pennsylvania Academy than to any other. But other shows—that at the Chicago Art

Institute, for instance—have, year by year, a higher and a higher value for the friend of art.

"Godless" Public Schools

The change of population in eastern New England is emphasized by the statistics just published of the archdiocese of Boston, presided over by Cardinal O'Connell. It claims 676 priests, 263 churches, 226 brothers, 1,942 religious women (mostly teachers), 99 students for the priesthood, 1,342 students in boys' colleges and academies, 1,274 girls in higher branches, 25,086 boys in elementary parish schools, and 30,770 girls, a total of 57,281 children in parish schools, 1,194 teachers, and a Catholic population of about 900,000. If we can judge from the official paper of the diocese, and its bitter attacks on the public schools, the time is not far off when a serious effort will be made to throw the heavy cost of the parochial schools on the State. In its last issue it pretends to explain at length "How Public Schools Were Made Godless." "Godless" is its usual term to apply to our system of public schools, which are no more godless than our courts are godless. It has a ridiculous story that religion was driven out of the schools by the agency of an infidel society of 1839, of which Frances Wright was a leading member. Now every one knows that our public schools were usually opened with the reading of the Bible until, very properly, Archbishop Hughes and other Catholics complained that the Protestant version was used, and that the effect was to strengthen Protestantism as against the Catholic Church. Thereupon, recognizing the justice of the complaint, the religious exercise was given up and religious teaching remitted to the churches, where it belongs. That is the way that the schools became "godless."

New Zealand Nearly Dry

We are accustomed to look to New Zealand for radical legislation, but still it is surprising to see how rapidly temperance sentiment has grown there and how close it came to prevailing at the last election. In the balloting of December 7 there were 265,864 votes cast

for national prohibition and 202,608 against it; that is, the prohibitive policy received 55.93 per cent. of the total number of votes polled. It would, therefore, have carried if the act of 1910 authorizing the referendum had set the required vote at a bare majority or even at the 55 per cent. proposed by the Government in introducing the measure, but it was amended to require 60 per cent., so prohibition was defeated. As this is the first time the issue has been presented to the voters in this form, the vote is encouraging and it is expected by all parties that it will carry at the next general election. At the election of 1908 local option was an issue and twelve districts went dry, and these districts voted for a continuance of the policy at the recent election. As is usual in this country the temperance forces carried on an active and open campaign by means of mass meetings, while the opposition confined its efforts to breaking up the mass meetings and secret work. If this measure had carried it would have gone into effect in 1915, after which it would have been impossible legally to have made, sold in or imported into the Dominion any intoxicating liquors except for scientific, medicinal and sacramental purposes. Prohibition in New Zealand would mean more than it does in some of our States. Instead of merely stepping across the street as does the thirsty citizen of Kansas City, Kansas, the New Zealander would have to journey 1,200 miles to reach the nearest saloon. This is a voyage to discourage the most inveterate toper, especially if he is easily sea sick.

A prize of 1,000 francs is awarded by the French Academy to the author of a book entitled: "The Conquest of the Sahara." It is not the result of the Franco-German "conversations" that is so described. And there is no danger of M. Delcassé's receiving an academic reward for his Moroccan triumphs, whatever their significance. M. Delcassé and his "understandings" with England and Spain are interesting matter for critical study in these days of prating about the "new" diplomacy. Evidently the new diplomacy is as great a hoax as that of our fathers and grandfathers. As M.

Claretie writes, in the course of a literary review, the only secrets left in this age of memoirs and recollections are the diplomatic treaties that determine the future of so-called democracies.

Now that President Taft has denounced the treaty with Russia because of her refusal to admit Jews, and also many Christians, it is greatly to be hoped that a revised treaty may be negotiated that will remove such injustices. Meanwhile it might be well to remember that Germany, Portugal and Guatemala, as well as Russia, refuse to admit to their shores a naturalized American citizen if he happens to be a Jesuit.

We have been requested by those who know the personnel of the Socialist party to state that the McNamaras were not Socialists, but Democrats, and one of them a member of the "Militia of Christ," a Catholic order whose purpose is to fight Socialism; and that Mr. Darrow is not a Socialist, but a Republican. Really, parties are getting mixt up. We wonder if Anarchism cannot find a home in any party.

Mariana Cogswell writes us from Wellesley, Mass.:

In reading the poem "Kipling's Psychology" in your issue of December 28, 1911, I was struck by the fact that the writer attempts to disprove Kipling's statement by drawing her illustrations from the *domestic* animals, which is manifestly unfair, as Kipling in his famous "Study in Natural History" casts no aspersions upon the "domestic" woman!

He left us as John *Murphy* Farley, Archbishop of New York. He will come back, with vast acclaim of processions, as John *Maria* Farley, Cardinal, leaving his Irish name behind him in Rome. Is the change in *gratiarum actione* to the Madonna? His titular church in Rome is Santa *Maria sopra Minerva*.

"So far as I am concerned, I don't understand music. I consider it quite unnecessary noise." So says Maurice Maeterlinck—or so he is quoted as saying. We do not agree with M. Maeterlinck. But a great many persons do agree, and haven't the courage to confess it.

Fire Insurance in Canada

THE recent publication of the annual report of the Canadian Superintendent of Insurance affords statistics of the fire insurance business done in the Dominion during a period of forty-two years. These indicate that the business has only just paid—if it has paid. From 1869 to 1910, inclusive, premiums to the amount of about \$300,000,000 have been paid, losses aggregating 63.63 per cent. Of course expenses are not included in losses; expenses are estimated at 35 per cent. of the net premiums. The United States companies make a slightly better showing than their British and Canadian competitors. In 1910 no fewer than sixty licensed companies—twenty-five Canadian, nineteen British and sixteen American—divided the field, which was overrun also by innumerable unlicensed companies, agencies and underwriters. The average premium per cent. has been as follows:

	1905.	1906.	1907.	1908.	1909.	1910.
Canadian	1.56	1.52	1.51	1.51	1.44	1.38
British	1.60	1.52	1.48	1.48	1.38	1.33
American	1.69	1.60	1.56	1.54	1.45	1.41
Gen. av.	1.60	1.53	1.50	1.50	1.41	1.36

British insurance journals issue a caution against the further lowering of premiums. The rates obtained at present more than cover normal losses plus expenses, and leave a good profit; but what, it is queried, in the case of a serious catastrophe?

THE *Oesterreichische Revue* marvels at the stupidity of the New York law limiting the amount of business which a life insurance company may write annually. "The large and expensive apparatus of life insurance companies cannot be dissolved when the legal maximum of business has been reached," runs the argument, "and the commissions form only a part of the unavoidable cost of the outside service; the limit, consequently, increases the expense ratio of the companies, while it was established for the purpose of reducing it."

THE Metropolitan Life Insurance Company authorized on December 27 a distribution to policyholders of \$5,700,000. This Christmas present was in the form of bonuses to industrial policyholders whose policies have been in effect not less than five years, and is not called for by the policies. The amounts to individuals vary from premiums for five weeks to premiums for a year free of charge. A full year's premium goes to the old people, and every holder of a whole life policy who will pass his seventy-fifth birthday in 1912, or who has now passed his seventy-fifth birthday, will get a full year's insurance free.

At the recent annual meeting and election of the Equitable Life Assurance Society in New York City, it was announced that, for the first time in several years, the society now has its full quota of fifty-two members of the board. The retiring members were re-elected and vacancies were filled as follows: To serve for four years, Charles D. Norton and William S. Skinner; to serve for three years, Charles D. Barney and George C. Boldt; for two years, John D. Crimmins, Alton B. Parker, Samuel Rea, Douglas Robinson, Norman B. Ream and Samuel M. Felton; for one year, Richard H. Williams, Edgar J. Levey and W. W. Finley.

A NEW editor of *Insurance Engineering* took up his duties on January 1; Mr. Ira Gould Hoagland. The new editor has for several years been engaged in improved risk inspection and fire protection engineering, and has, all the same, found time to make contributions to the literature of insurance. A new typographical style will be one of the outward manifestations of the new regime.

MARINE insurance losses abroad were heavy in October and November, and there is a movement in England for higher premiums—10 per cent. higher in the case of cargo boats, 5 per cent. in that of liners. In some cases owners are considering the advisability of forming an insurance fund of their own.

Banks for Export Growth

THOSE who desire an increase of our trade with the countries south of us have frequently pointed out that European exporting countries gain by means of the banks which they have established there or which they control. This is forcibly shown by John Barrett, director-general of the Pan-American Union, in an article circulated by the Citizens' League for the Promotion of a Sound Banking System. Mr. Barrett says:

"The United States is at a crucial period of its trade exchange with twenty republics of Latin America, and especially with that section of Latin America comprehended under the head of South America. The approaching completion of the Panama Canal accentuates the critical condition which it is the point of this discussion to bring out.

"There is not one banking institution south of the Isthmus of Panama which is in any way controlled by United States capital, and yet in every important city or port, like Rio de Janeiro, Montevideo, Buenos Ayres, Valparaiso, Lima, Guayaquil and Caracas there is at least one bank and in some instances there are many banks, controlled by English, German, French, Belgian, Spanish or other European moneyed interests.

"This characteristic is especially true of the great ports like Rio de Janeiro, Montevideo, Buenos Ayres and Valparaiso. As the traveler from the United States goes up and down the business section of Rio de Janeiro or Buenos Ayres he is not only surprised to see banks carrying prominent European names, but he is sadly disappointed when nowhere does he find a single one carrying a North American name.

"The trade of the United States with Latin America is today growing with such rapidity that it is entitled to the very best facilities. The present value of the annual export and import commerce of the United States with Latin America is approximately \$640,000,000, which represents an increase of nearly 100 per cent. in the last ten years."

In the last decade the foreign commerce of Latin America with the world has almost been doubled. It now exceeds \$2,250,000,000. In Mr. Barrett's opinion our share of it warrants the maintenance in Latin America of banks controlled by United States capital:

"The feature of the Monetary Commission plan of vital importance to our foreign trade is the provision for the establishment in the United States of a bank which shall not compete for domestic business and yet may establish branches in foreign countries. Another provision of equally important bearing upon

our foreign trade is that which will permit banks affiliated with the National Reserve Association to accept bills of exchange. Such a bank as the plan proposes also, I take it for granted, would extend the longer credit accommodations which are now customary in trade between Latin America and Europe."

Plans have been completed for the establishment of an American bank at the capital of Nicaragua, but they depend, we suppose, upon the Senate's approval of the pending loan convention or treaty with that country.

....Frederick W. Whitridge, who has been receiver of the Third Avenue Railway Company since it went into bankruptcy, has been elected temporary president of the new company, and within a few days will be made permanent president.

....In the new statement of the Lawyers Title Insurance and Trust Company the capital stock is given as \$4,000,000; the surplus, \$5,500,000; the undivided profits, \$467,562.72; the deposits, \$16,148,471.43, and the total resources, \$26,445,731.71. Despite the unsettled condition of business during the past year, the company is to be heartily congratulated on the splendid statement it makes. The Lawyers Title Insurance and Trust Company was established twenty-five years ago and is a member of the New York Clearing House Association. E. W. Coggeshall is president.

....The directors of the American Sugar Refining Company have prepared for submission to the stockholders a plan for pensioning aged or disabled employees. It calls for no contributions from them, and in some respects is more liberal than the similar plans adopted by the Steel Corporation, International Harvester Company and Standard Oil Company. There is provision for the retirement of an employee sixty-five years old, at the company's option or at his own request, his pension depending upon his wages and years of service, the minimum being \$20 a month and the maximum \$5,000 a year. Payments to the sick and the permanently disabled are also included. The company employs about 7,500 persons.

The Independent

VOL. LXXII NEW YORK, THURSDAY, JANUARY 11, 1912 No. 3293

Survey of the World

Democratic Aspirants On January 2 Governor Wilson addressed the National Democratic Club, at New York, on the tariff question, attacking the protective policy, and asserting that the tariff is once more "the most critical question of a campaign which must decide the policy of our Government not only in this but in respect to a score of things which touch the general adjustments of our life." The settlement of the tariff question "cannot be evaded or postponed." The "control of prices" and shutting down of competition must be abolished; and protection is "a system of favoritism" under which the beneficiaries will never be satisfied, or the oppressed ever content to lie down; "a policy for the benefit of the few at the expense of the many." One bad effect of the system is "that the principle of paternalism should be so monstrously encouraged that a disposition should be created to look upon the Government as an instrument of gain instead of an instrument for the promotion of the well-being of all."—It was said last week that Col. George Harvey, publicist and editor, and long time enthusiastic sponsor of the Wilson candidacy, had "dropped" his candidate. One version of the tale ran that the Governor had called off the editor, asserting that his championship was weakening the cause rather than advancing it. Governor Wilson denies that there has been a break; Colonel Harvey keeps silence. Meantime a fight against Wilson is being waged in New Jersey by the followers of ex-Senator James Smith. Governor Wilson has other enemies, too, and they are busy delving among old letters and speeches. The text of a letter writ-

ten by him in 1905, while he was president of Princeton University, and addressed to Adrian H. Joline, a Wall Street lawyer, has been made public. This letter was composed shortly after the defeat of Judge Parker for the Presidency, and exclaims:

"Would that we could do something at once dignified and effective to knock Mr. Bryan once for all into a cocked hat!"

The letter was first published in slightly modified form. Just how its publication will affect the relations of Mr. Bryan toward Governor Wilson—very cordial of late—cannot now be stated. His only public comment has been this: "Mr. Wilson's letter ought to make him friends among the men who seem to be chiefly interested in digging it up."—Mr. Bryan returned last week from the West Indies, and issued the following elaborate statement:

"I cannot conceive any condition that could arise which would make me a candidate this year."

Mr. Bryan favors a system of presidential preference primaries in all the States. It was expected that his influence in its favor would be exerted upon the Democratic National Committee, which is meeting in Washington this week, and which he attends.—Mr. Bryan received something of a rebuff at Washington on January 6, when Democratic members of the House of Representatives rejected his plan for caucuses open to the press. The new rules adopted were offered as a compromise by Mr. Palmer, of Pennsylvania, favored by Mr. Underwood, and voted by 103 to 27. They provide that a record vote be taken on demand of one-fifth of those present, and that a journal be kept for publication, but debate, etc., will not be made

public.—Mr. Bryan is understood to be sternly unforgiving in his attitude toward Governor Harmon as a candidate. He cannot overlook the Ohio man's defection in 1896. He is said to regard the cases of Harmon and Wilson differently, regarding the former as "a trained officer in the Democratic army," and the latter as "a scholarly recluse." Ohio Democrats hostile to Governor Harmon, and said to be disappointed office-seekers for the most part, plan to meet on January 9 at Columbus.—Among the "favorite sons" being groomed for the contest are three New Englanders: Governors Plaisted (Maine), Baldwin (Connecticut), and Foss (Massachusetts). The latter has been suggested also as a candidate for Vice-President, with Representative Underwood (Alabama) for President. But Governor Foss undoubtedly has larger ambitions, and his friends have opened headquarters for his boom in Boston. Also, he has been indorsed in his aspirations by the Democratic State Committee.—Tammany Hall and New York hotel men are working to secure for the Eastern metropolis the Democratic National Convention in July. The latter would pay \$100,000 for the convention. Madison Square Garden, suggested as the convention hall, is to be demolished, but the owners will postpone demolition if New York is decided upon. Democrats from the South and the West oppose the project, fearing that Charles F. Murphy, the Tammany leader, would have too great an influence in any convention held in New York.

The Republican War "Nothing but death can keep me out of the fight now," President Taft is reported to have said when the speech of Governor Osborn, of Michigan, urging that he and Senator La Follette withdraw from the race, was brought to his attention. The President declares that in no circumstances will he withdraw his name from consideration by the Chicago convention next June, and has asserted that his position with respect to the nomination has not changed in any particular since he entered the White House. Friends of the President add that he

will not reply to attacks made by Colonel Roosevelt, and that the President recognizes his obligation to the former President. For that reason and out of respect for the dignity of his office, he will refrain from entering into a controversy with Colonel Roosevelt, and will, it is said, forbid his followers to attack the ex-President.—It is believed that President Taft and some of his advisers have anticipated the Roosevelt movement. Representative Calder, of New York, leader of the Kings County Republican organization, is said to be frankly admitting that Colonel Roosevelt is a candidate, and that certain business interests do not believe President Taft's re-election feasible. Governor Stubbs, of Kansas, has declared in favor of Colonel Roosevelt.—Meanwhile Senator La Follette's Washington bureau has issued a statement denying that the Wisconsin man has any intention of withdrawing. On January 3 Senator La Follette addressed a sympathetic audience in Chicago. Here, as later at Danville, Ill., he once more undertook to show how the centralized control of credit dominates, not business alone, but the activities of political organizations and the legislature. Speaker Clark, of the House of Representatives, one of the Democratic candidates for the Presidency, was threatened last week with pneumonia, and Mr. La Follette suffered from ptomaine poisoning; but the latter made speeches, all the same, at Joliet and other towns in Illinois. The Senator concluded his tour thru the Middle West at Indianapolis, January 6. Next day, at Washington, he declared his full satisfaction with his ten days' trip, in the course of which he delivered thirty-one speeches in four States. "In thirty years of campaigning I never had larger meetings or addressed audiences more attentive," he said. Now he plans to canvass New England, New York, Pennsylvania and States west of the Mississippi River.—Talk of Justice Hughes, of the Supreme Court, as a possible compromise candidate of the Republican party is still heard, but the likelihood of the former Governor of New York re-entering politics is as slight as ever.

Various Items Senator Hitchcock, of Nebraska (Dem.), attacked the general arbitration treaty with Great Britain on January 4, flatly charging, on the floor of the Senate, that the Administration was blundering into an "entangling alliance." The plan for the nomination of commissioners to a high court of arbitration he declared revolutionary and dangerous. The Senator dreaded British diplomacy more than British dreadnoughts.—The President signed on January 6 a proclamation admitting New Mexico to statehood. On Monday Congressmen-elect Curry and Ferguson presented their credentials and took their seats as the first representatives of the new State. There are now forty-seven stars in the flag.—At Indianapolis, last week, ex-Mayor Charles A. Bookwalter made it known that national labor leaders affiliated with Samuel Gompers and the American Federation of Labor were informed by him two years ago that John J. McNamara had directed a series of dynamite explosions. The knowledge came to him thru a secret investigation conducted at the time. But Mr. Gompers denies that any person "living or dead" ever made such a statement, or even "a hint that J. J. McNamara or any one else was engaged in a dynamiting exploit or campaign." Indianapolis labor leaders denied having been informed by Bookwalter of union labor dynamitings.

Panama and the West Indies

There is to be a committee hearing at Washington concerning Congressman Rainey's resolution for an inquiry as to the secession of Panama and ex-President Roosevelt's assertion about his relation to the acquisition of the Canal Zone. This resolution quotes the statement made by Mr. Roosevelt in a public address and refers to Colombia's request that the question whether a treaty was violated and established principles of international law were ignored by the United States be submitted to arbitration. It is expected that an investigation will be ordered by the committee.—A newspaper in London has opened a campaign against any discrimination in favor

of American ships which shall pass thru the Panama Canal. Among the interviews published is one with the head of the largest association of merchant vessels, who expresses a hope that the United States will make the canal as free as the ocean. The campaign does not excite much interest in Great Britain, many shipping men there holding that for any loss due to discrimination, indirect or otherwise, in favor of American ships there would be compensation for British commerce in a general extension of the carrying trade. Chairman Adamson, of the House Committee on Interstate and Foreign Commerce, says he is unalterably opposed to discrimination by remission of tolls, by subsidy or otherwise. He would not have "the American people robbed for the benefit of American ship owners." The charges, he thinks, should be \$1.25 for each ton of displacement, and \$1.50 for each passenger.—Senator Bristow has introduced a bill authorizing the Secretary of the Treasury to buy fifteen ships—abroad, if the cost here be more than 20 per cent. in excess of the foreign price—for a line to be operated by the Government's Panama railroad company, or by lease to an independent private company; also another bill, forbidding any railroad company to hold an interest in a competing steamship company.—The third resignation from the Cuban Cabinet within a few weeks is that of Señor Martinez-Ortiz, Secretary of the Treasury. These resignations are due to the veterans' attack upon officeholders who opposed the revolutionists.—To the Cuban Government will be given the "Maine's" after turret, with the guns therein, for a monument to be erected in Havana in memory of those who perished on the battleship.—There was a battle last week, near the Haytien border, between soldiers of Santo Domingo's Government and Torribio's revolutionists, but the revolt is said to be of no importance.

Mexico Rudolfo Reyes, son of General Bernardo Reyes, has been arrested and placed in prison with his father. He denies that he took part in the Reyist revolutionary movement. The Government will ask for the

extradition of Emilio Vasquez Gomez, recently a member of the Cabinet, alleging that letters sent by him from San Antonio to the Mexican capital show that he has been engaged in a revolutionary conspiracy. It has been discovered at New Orleans that within the last fifty days eight carloads of ammunition were shipped from Pennsylvania and New Jersey, ostensibly to New Orleans, but were not received there. They were diverted, and it is not known where they are. Several thousand rifles were bought in New Orleans. All this material may have been procured for the Reyst movement, which came to nothing.—At and near the capital, 6,000 textile employees are on strike. They have been working fourteen hours a day for \$6 a week. They demand eight hours and higher pay. In Chihuahua 2,500 miners have quit work, asking for eight hours and a wage increase of 25 per cent.—The Zapatists have not been subdued.—Madero will ask Congress for legislation requiring a direct vote for election to all offices, making the labor day ten hours, and prohibiting the employment of children of school age in factories. He has been urged by many delegations to ask that large estates be cut up for small farms and to favor a large loan for irrigation.—Several hundred convicts recently escaped from the penitentiary in San Luis Potosi. It is now said that certain officers planned to let them out, with the understanding that they would attack and capture the train bearing General Reyes, rescue him, and thereafter become the nucleus of his army. But there was a miscalculation as to the railway schedule, and when they got out the train had passed. Only a few of them have been caught.—Residents of El Paso ask the Governor of Texas to press claims against Mexico for \$1,500,000 in damages for the killing of twelve Americans and the destruction of American property at the battle of Juarez.

**Central and
South America**

The certificate of incorporation for the proposed National Bank of Nicaragua was filed last week at Hartford, Conn. It provides that the bank

may be the fiscal and disbursing agent of the republic and a depository for Government funds, may issue bank notes and coin money, and may establish a new currency system. The capital is \$5,000,000. This is the bank which is to be established and maintained by J. & W. Seligman & Co. and Brown Bros. & Co., the New York bankers, who have loaned \$1,500,000 to Nicaragua and will loan \$13,500,000 more if the Senate at Washington ratifies the pending loan treaty. They are represented in Nicaragua by Clifford D. Ham, an American, who has taken charge of the collection of customs revenue.—Honduras has negotiated a loan of \$6,000,000 from a syndicate led by the Whitney Central National Bank, of New Orleans.—The revolutionary provisional government proclaimed in Guayaquil by General Pedro Montero has been recognized by the coast provinces of Ecuador, and there was a battle on the 1st, at Bahaboyo, where twenty-four soldiers were killed. General Plaza, the Liberal candidate for the presidency, is said to have started from Quito for the coast, at the head of an army. General Flavio Alfaro, formerly Minister of War, in whose interest Montero is said to be acting, arrived at Guayaquil on the 5th and was received with much favor by the people. His uncle, ex-President Eloy Alfaro, arrived on the same day. Our Government has sent the gunboat "Yorktown" to Ecuador from Panama. The revolutionists have seized the railroad between Guayaquil and Quito.—It is said that the Brazilian Government will buy, in Chili, arms to be used by Paraguay's Government against the revolutionists in that country.

British Affairs The cotton strike seems likely to be settled soon thru the mediation of Sir George R. Askwith, of the Board of Trade, who is at Manchester in consultation with the men and the manufacturers. If, however, the men are obliged to concede in this case the right of the manufacturers to employ non-union labor, the same issue will probably be brought forward in other unions, for it is understood that the General Federation of Trades

Unions, which embraces 800,000 members, is determined to establish the closed shop in all organized industries.—Now that Home Rule is imminent the agitation of the Opposition in Ulster becomes more vehement. There are rumors of extensive armament and drilling with the object of resisting by force the authority of an Irish Parliament. Sir Edward Carson, M. P., chairman of the Ulster Orangemen's Association, favors a form of passive resistance rather than an armed revolt. He forebodes terrible riots in Belfast immediately after the Home Rule bill passes its third reading in the House of Commons, and he predicts that Ulster will fight by refusing to recognize the Dublin Parliament.

"For instance, the farmers will refuse to pay their instalments on land they have purchased to the Dublin Executive and if the latter try to sell the farms they will not find buyers. There will be no fighting, but a deadlock. In the sequel it will come to this, that the Dublin Parliament will not have any troops and if they want to exert force they must apply to England for troops.

"The essential question is, Would the English Parliament comply with Dublin's request and send soldiers to enforce an executive order of which England has no official knowledge and over which she has no control?"

It is pointed out, on the other hand, that Ulster is by no means a unit in opposition to Home Rule. On the contrary, Home Rule forms a large majority in five of the nine Ulster counties and a substantial minority in the other four. Of the 33 Ulster seats, 14 have always been held by Home Rulers, 10 always by Tories and 9 sometimes by Home Rulers, sometimes by Independents and sometimes by Tories.

Portugal After the collapse of the attempted counter revolution to overthrow the republic by a raid from Spain under Paiva Couceiro, the Government determined to prosecute certain prominent ecclesiasts on the charge of conspiring against the republic. They, however, refused to recognize the civil authorities by not appearing before the court, whereupon the Government on December 28 ordered the expulsion for two years of the Patriarch at Lisbon, Mgr. Anthony Mendes Bello, the Bishop of Guarda, and the

Administrator of Oporto. The bishops of Portugal united in a collective letter to the President, asking him to withdraw the decree of banishment on the ground that it is a violation of the Constitution, which guarantees the members of the Catholic Church. The Vatican has threatened to break off diplomatic relations with Portugal if the decree is not canceled. The execution of the order of expulsion caused some disturbances in Lisbon, when several thousand clericals, who were assembled at the patriarchate to express their sympathy with Mgr. Bello were attacked by a mob of republicans, who mingled cries of "Down with the clergy!" with the cheers for King Manuel or King Miguel. Words were followed by blows until the troops cleared the streets. Mgr. Bello is announced to be the Cardinal whose name was not mentioned at the consistory when Pope Pius created nineteen new members of the Sacred College.

The Morocco Question Altho the points at issue between France and Germany are formally settled, and the Morocco question thereby dropped out of international politics, it remains a disturbing subject in the internal politics of several countries. In England the Conservatives, who at the time it was delivered hailed with delight Lloyd-George's Guildhall speech, in which he supported France, are now disposed to add it to the long list of their grievances against him. In Germany the Government, in preparing for the momentous election of January 12, makes "the English peril" its chief argument for the defeat of the Socialists and the support of a greater navy. In France the Chamber of Deputies discussed the Franco-German agreement at great length, but finally ratified it by a vote of more than ten to one, altho there were many absentees, among them the fourteen delegates from the Lorraine departments, who declared they could never consent to the cession of any part of French territory to Germany. The most interesting speech made in the course of the debate was perhaps that of Jean Jaurès, the Socialist leader, who vetoed for the ratification in the interests of peace, believing that it would tend to

prevent war between Germany and Great Britain. He said that there were two great forces now working for peace, the internationalization of the proletariat and the renaissance of the old Puritan liberalism in Anglo-Saxon countries. The latter movement was led by intelligent American millionaires who, "with no further material wants to satisfy, now turn their aspirations toward idealism," and this has brought about arbitration treaties between the United States, Great Britain and Japan.—The French Senate, on taking up the proposition for ratification after it had passed the Chamber, insisted upon going over the whole ground again with Premier Caillaux and Foreign Minister De Selves, who were called upon to explain before a senatorial committee the entire history of the negotiations in regard to Morocco between Germany, Great Britain and Spain from 1902 to the present. The advantages of this procedure are not apparent unless it be to help the chances of certain Senators in the election of January 7, for such a disclosure of official secrets is certainly unpleasant to Germany and Great Britain, and will not help France in the negotiations now being carried on with Spain. The object of these negotiations is to induce Spain to relinquish some of the concessions made to her by the Franco-Spanish treaty of 1904, on the ground that France has since then had to pay heavily to Germany by her cessions of the Kongo for the clearing of the way to Morocco by which Spain profits. Spain would like to assume a protectorate over Northern Morocco, including Larache and Alkazar, but France, having become responsible for the administration of the whole of Morocco, refuses to consent to the exclusive control of part of the country by Spain. It is an exasperation to the French people to find by the disclosure of the secret treaty of 1904 that Spain has, without effort of her own, acquired a long strip of territory south of Agadir, extending inland from the Atlantic along the southern boundary of Morocco and so cutting the coast line from Morocco to the French possessions to the southward thru which the railroad connecting Europe with the African port nearest South America will have to be constructed. But Spain insists upon

this coast region as necessary to her fisheries in the Canaries.—The Spanish forces on the Riff coast have had several sharp encounters with the tribesmen recently, in which the natives have lost over a thousand men killed and many more wounded. Over a hundred have fallen on the Spanish side.—The French garrison at Sefru, a day's march south of Fez, was attacked on January 5, but the charges of the tribesmen were repulsed, altho they persisted for eight hours. The French lost five killed and fifteen wounded, and the tribesmen ten times that number.

✱

Persia and Tripoli W. Morgan Shuster on January 7 turned over the office of Treasurer-General of Persia to his American assistant, F. E. Cairns, and the Persian Government has appointed as his provisional successor M. Mornard, the Belgian Commissioner of Persian Customs, who will be assisted by a commission of four Persians. Russia continues her policy of exemplary punishment in Tabriz, and an anti-Russian riot, which resulted in the destruction of the Government Building of Tabriz, affords an excuse for even more severe measures. Two leaders of the Fidiyas and two editors of a Persian newspaper were sentenced to death by the Russian court martial at Tabriz and hanged.—Skirmishing in Tripoli and Cyrenaica has somewhat slackened, probably owing to the expectation that peace will shortly be concluded between Italy and Turkey. The Salonika Committee on Union and Progress, which was the organizer of the revolution and has been the dominant force in the politics of the new Government ever since, is now reported to be considering favorably the question of peace, the difficult point being how to carry out such a policy without arousing internal disturbances. The European Powers are said to be actively engaged in discussing terms under which peace can be made and satisfactory to the two countries immediately concerned, as well as the interests of the several Powers. It is estimated that the total casualties sustained by the Italians to the end of the year 1911 were about 5,000, of which two-thirds are sick and wounded.

The Chinese Revolution

The situation is not at all relieved by the events of the past week. The conference at Shanghai was broken off by a telegram from Yuan Shi-kai ordering the withdrawal of his representative, Tang Shao-yi, presumably because he had shown a disposition to concede too much to the republicans. Tang refused an offer of a position in the Cabinet of Sun Yat-sen, because he does not wish to desert Yuan, and still hopes to be able to act as an intermediary. Wu Ting-fang telegraphed to Yuan to come to Shanghai to discuss matters directly with the republican leaders, but the Premier replied that he could not leave the capital at a time when the responsibility of the empire rested upon him, and he suggested in turn that Wu, having nothing to do, could just as well come to Peking. Yuan's determination to uphold the monarchy has been strengthened by the fact that the court party has of late shown a disposition to contribute something from their private hoards to the support of the Government in this crisis. Gold bars to the amount of 80,000 ounces have been turned over to him, and altogether he has something over \$2,000,000 at his disposal. But it is a question how far he can depend upon the loyalty of the imperial troops, even if he is able to pay them. The Chinese contingent of the troops at Lanchow, on the railroad between Tientsin and Mukden, revolted last week, took possession of the city, sacked the stores and sent out telegrams to the foreign legations and consulates declaring their adhesion to the republic, but they were subdued after a hard fight by 3,000 imperial troops despatched from Tientsin. The Powers after the Boxer rebellion obtained the consent of China to occupy this railroad for the purpose of maintaining open communications between the capital and the sea, and this privilege they have now availed themselves of. The road from Peking to Chinwang-tao has been allotted in sections to Great Britain, Germany, Japan, France and the United States, and it is expected that each of these Powers will provide 250 to 300 men for the protection of their respective sections. The United States has not yet sent any troops to

China except the legation guard of 600 at Peking, so British troops are guarding the American section, pending the arrival of troops from Manila. The foreign railroad guards are under the command of a Japanese general as the ranking officer. The railroad while under such international control may be used by the imperialists, but not by the republicans.—It is rumored that the combined efforts of Great Britain and Japan are now directed toward a division of the empire, the northern part to remain under Manchu government and the country south of the Yiangtse to become independent and republican if it wants to.—The imperial troops are being withdrawn from Hankow toward the north, and while evacuating the city on January 5 they were attacked by the revolutionists and lost 700 men.—A proclamation by Sun Yat-sen, provisional president of the republic, addressed "To all friendly nations," enumerates the evils under which the Chinese have suffered under Manchu rule for 267 years, and promises that the republic will respect all existing treaties, loans, conventions and lawful concessions and protect life and property and grant freedom of trade and complete religious toleration. The proclamation expresses the hope that the republic will be admitted to the family of nations. The provisional government agrees to accord to the Manchus equal civic rights and duties with the Chinese, to give them pensions for life and allow them the exclusive use of the Summer Palace and the Forbidden City in Peking. A note has been despatched to the Powers asking for recognition of the republic.—Representative Sulzer, of New York, chairman of the Committee on Foreign Affairs, has introduced a resolution declaring that

"It is meet and proper to extend our sympathy to all people in their struggles for those rights which we maintain to be inalienable, and that we, as a nation, congratulate the patriotic people of China on the success which has thus far attended their efforts; that we extend to them our sympathy in their endeavor to construct a republic upon the ruins of a despotism, and that we offer our assurance of favoring, at the earliest possible moment, the recognition of the republic of China as a member of the family of nations."

My American Passport in Russia

BY HERMAN BERNSTEIN

[Herman Bernstein is an American citizen of Jewish faith and descent. Tho' born in Germany, he lived the early part of his life in Russia. He is the author of "Contrite Hearts," "In the Gates of Israel," etc., translator of Tolstoy's, Andreyev's and Gorky's works, and has written stories and articles for THE INDEPENDENT from time to time. Mr. Bernstein has visited Russia three times during the last three years and interviewed Count Tolstoy; Count Witte, the former Premier of Russia; M. Kokovtsoff, the present Premier of Russia; Prof. Elie Metchnikoff, and other distinguished Russians.—EDITOR.]

WHEN I decided to visit Russia, the land of more than 130,000,000 passports, where instead of human beings passports are born, where passports marry, and where passports die, I secured my American passport from the State Department, in 1908, and went down to the Russian Consulate in New York to have it viséd. Without the Russian visé upon an American passport, the American document, bearing the seal of the United States and the signature of the Secretary of State, is worthless, if the bearer desires to visit the Russian Empire.

I was told that while the Russian officials discriminated against American citizens on religious grounds, they made no discrimination if such American citizens were willing to cross the ocean on Russian steamers in which the Russian Government was interested. I booked passage on a Libau liner and then went for my visé. I had letters from the *New York Times*, *THE INDEPENDENT* and the *World's Work*.

The vice-consul looked at my passport and handed me a slip to be filled out. I was asked where I was born, what my religion is, and a citizen of what country I am. I answered that I was born in Germany and that I am a citizen of the United States. I did not state my religion. The vice-consul asked me what I was going to Russia for—whether I was going for pleasure or on business. I told him that I was interested in the question of emigration and that I might describe it for the publications which I represented. He took my passport and the slip away; apparently to consult the list of passengers on the Russian steamer, for I had mentioned that I was going on the "St. Petersburg," of the Russian Volunteer

Fleet, and about ten minutes later he viséd my passport.

I went to Russia. I visited some of the most famous Russians, such as Count Tolstoy, Count Sergius Witte, Leonid Andreyev, Prof. Milukoff, Prof. Maxime Kovalevsky and M. Hessen; I was in the Duma and in the Council of the Empire. In a series of articles I described Russian life and Russian politics and Russian brutalities under the so-called "constitutional" regime.

When I decided to visit Russia once more, in 1909, I went down to the Russian Consulate again to get my passport viséd. Baron Schlippenbach was then the new Consul-General in New York. He looked at my passport and asked me to fill out the slip.

"Are you going to describe again conditions in Russia for the American press?" he asked.

"Yes."

"Have you your credentials?"

I showed him my letters from *The Times* and *THE INDEPENDENT*.

"I would be glad to visé your passport," said the Baron upon reading and re-reading the letters carefully. "But do you know that it is against the law to admit Jews to Russia?"

"Is it a new law?" I asked.

"Oh, no, it is an old law," he replied.

"Why, then, did your consulate break the law last year by viséing my passport? You know that I was in Russia last year and that I was in the Duma, and interviewed some of your distinguished statesmen," I said, handing him my old passport, which was fairly covered with Russian seals and stamps.

He turned to the vice-consul and said to him in Russian, apparently thinking that I did not understand his language:

"What shall we do?"

The vice-consul scrutinized the passport, made a wise face and said:

"I think we ought to keep this passport here to protect ourselves."

Another official, who stood nearby, suggested:

"I think we ought to paste this old passport upon the new one—that would show to the authorities that he had no trouble in Russia last time."

But the Consul-General hit upon another plan. He noticed that the old passport, which had been viséd by his predecessor, was good for another year, so he viséd my old passport.

At the frontier all passports are taken away from the passengers by gendarmes. The passports are examined by a staff of officers and the faces of the passengers are scrutinized by political spies.

After waiting for two hours, from twelve till two in the morning, my passport was returned to me and I boarded the train for St. Petersburg.

Immediately upon reaching the hotel in St. Petersburg, I was asked for my passport, which was taken to the police station to be recorded. Of course, each time the passport is taken by a Russian official, there is a fee attached to it. No man, woman or child is allowed to enter any city, town or village in Russia and stay over night there unless the passport is properly recorded. And no man, woman or child is allowed to leave any city, town or village in Russia unless the police report is such as to warrant a permit. Thus, when I was about to start for Moscow, on my way to Count Tolstoy's home at Yasnaya Polyana, the St. Petersburg chief of police wrote across my passport: "There is no objection to his leaving St. Petersburg."

The vigilance of the Russian police has become proverbial. Russia's spy system is known thruout the world. The following incident will serve as an additional illustration. When I called on Madame Tchaikovsky (wife of Nicolas Tchaikovsky, who was at the time confined in the fortress of St. Peter and St. Paul) at Hotel England in St. Petersburg, she led me to her apartment, where I gave her a letter of introduction from a friend of the Tchaikovskys in New York. It was not safe to say a

word in the reading room of the hotel. She read the letter, a very innocent note of introduction, and suggested that I destroy it.

"This innocent note may lead you into trouble simply because it is addressed to me," she explained. "You see, all my letters are opened by the police, and every line is read before I see it."

I was about to tear the letter, but she stopped me.

"That is not the way to destroy a letter here," she said.

Then she struck a match and burnt the note. At this moment I chanced to look out of the window and saw some one standing at another window, watching with an opera glass.

In 1909 I entered Russia by way of Finland. I boarded the train at Helsingfors in the evening and we reached the Russian frontier, Belo-ostrov, at about seven o'clock in the morning. All passports were taken from the passengers by gendarmes as the train stopped. Mine was the only American passport. I remained in the car with several other travelers. Soon a tall officer walked over to me and motioned to me to follow him. He led me into a room where three gendarmes sat by a writing table, and a tall, pockmarked soldier stood at the door. They commenced to question me, where I came from and where I was going. I told them I was going to Constantinople by way of Odessa. They made me sign my name to see whether the signature was the same as that on my passport. Then one of the officers winked to the pockmarked soldier at the door. He walked over to me and, without saying a word, put his hand into my pockets, took out all my letters and placed them on the table. He bent down and felt my clothing to see whether I had anything hidden about me. The gendarmes looked over my letters and papers and then gave me my passport. The search lasted about half an hour. The train was waiting.

When I related my experience at the frontier to Ambassador Riddle, he told me that Mrs. Riddle, the wife of the American Ambassador, had also been searched by the gendarmes at the Russo-Finnish frontier.

Several days after this incident I

went to Finland to visit Leonid Andreyev, the famous Russian writer. On my way back to St. Petersburg I was again questioned and searched at Belostrov.

In Moscow, in Kiev, in Sebastopol, in Yalta I had no trouble with my passport. The hotelkeepers demanded the passport immediately upon my arrival, the police charged various fees for stamping the passport, and then, before leaving each of these cities, the police again stamped the passport, charging a certain sum for the permission to leave each city.

In Odessa I almost missed my boat on which I had engaged passage for Constantinople. I handed my passport to the hotelkeeper and asked him to send it down to the police station to have it properly stamped. But he advised me to go over there myself. The officer whom I approached at the police station glanced at my passport and said gruffly:

"Come back in three days from now and we'll see what we can do for you. The stamp will cost you a ruble."

"But I have bought my ticket for the boat which leaves tomorrow for Constantinople," I said.

"You'll have to wait," he replied rudely. "There is another boat next week."

While we spoke, another American traveler walked over to me and told me that he was in the same predicament. I turned to the officer and asked him

whether he would not allow me to use the telephone for a while.

"To whom do you want to telephone?" he cried.

"I want to speak to the American Consul. I want to find out whether there is no way of making you stamp these passports for us right now, so we can leave tomorrow," I said.

This seemed to produce a magical effect upon the officer. He immediately rose from his seat, walked over to his chief, and in less than five minutes our passports were stamped, at a much lower cost than he had demanded before.

On the boat I met two other Americans, a Philadelphia business man and an American missionary. On the way to Constantinople they related to me the stories of their hardships, and of the horrors and brutalities they had witnessed during their travels thru Russia. The account of the religious persecution directed against the Baptists by the Russian Government was heartbreaking.

These are some of the experiences I had with the passport which enabled me to enter Russia, to study conditions there, to familiarize Americans with the true state of affairs, and to expose the fictitious commissions which were supposed to settle the Passport Question which would perhaps have remained the plaything of politicians, small and big, Russian and American, for many elections to come.

NEW YORK CITY.

The Music at Saint Sulpice

BY FLORENCE WILKINSON

It streams from nowhere,
 Fills the air;
 Booms like the thunder of a sea
 That washes up invisibly,
 Having no shore;
 As if the pillars and the gloom,
 The spaces vast,
 The hight, the strength, the jeweled bloom,
 Made themselves audible at last.

VERNON, FRANCE.

The First President of China

BY YOSHIHIRO YAMAKAWA

[Mr. Yamakawa is the correspondent in New York City of the *Osaka Mainichi Shimbun*, the largest daily paper in Japan, and for several years has closely followed the career of Dr. Sun. We published a portrait of Dr. Sun in our issue of January 4.—EDITOR.]

DR. SUN is not a man of imposing appearance. He is of slight build and only about 5 feet 4 inches in height. He is a meditative, silent man, and when he does speak, his words seem to come out with difficulty. There is nothing of braggadocio in his manner. When in conversation he never looks boldly into the faces of those with whom he is talking, but sits with eyes cast down modestly like a bashful girl; but the more one talks with him the more one realizes that he is no ordinary man. Altogether, he is a man of charming personality.

Not only is he generally regarded as a man of unusual power, but among certain classes in China he is looked upon as a god. Mizuno, a well-known Japanese priest, upon his return from a ten years' stay in China, said: "I was surprised to see that everywhere I went, even the children, the jinriksha-men and the most ignorant soldiers knew Sun Yat-sen better than they knew any dignitary in China, and regarded him as the savior of the Chinese."

It has been said that he is an idealist, a theorist, a man of books; but not a man of action. Even among his followers there were some who said that Dr. Sun would not be the principal factor in the practical side of the revolution.

He is very fond of books. It is said that he cannot live even one day without a book. Mr. Ike says that it is his habit to take a book with him to the table and even to bed at night. After the failure of the first revolution he was compelled to live first in one place and then in another. He had no place to lay his head; but wherever he might be driven, hundreds of books always followed him. When he first fled to Japan he was entirely penniless, but his trunks were filled with valuable books.

The scope of his reading extends from diplomacy, international law, history, etc., even to astronomy, which to the ordinary mind would seem to be of no practical benefit to a man of affairs.

While in Japan, it is said, he astounded his friends by his deep knowledge of astronomy. But among the books which he prizes as his own life are the biographies of the great Saigo, the military leader of the Japanese revolution, Napoleon Bonaparte and Garibaldi. Among his Japanese friends it is said that he knows every detail of Saigo's life better than the Japanese themselves.

As to the accuracy of his knowledge of military science, there can be no doubt. During his stay in Japan, he met many officers of the army and navy, and discussed with them the science of war. No one knows where and when he made a special study of the science, but Japanese officials agree that it is no exaggeration to say that he is a specialist in the science.

In spite of the fact that he was absent during the beginning of the revolution, there is no doubt but that much which has been done was carefully planned by him beforehand. For instance, Mr. Ike says that as early as July, 1910, Dr. Sun outlined to him the plan of a proposed attack on Shanghai, and the attack last year was made exactly as he had planned.

One morning early in the summer of 1910, the newspapers of Tokyo contained the following headline: "Dr. Sun Yat-sen Arrived from America." The reporters throughout the city exhausted every means of tracing him, but failed completely. They began to suspect that the mysterious stranger was not Dr. Sun after all, and some papers even announced that the report was a mistake. One week later, they reported that it was he, but that he had left Tokyo for parts unknown, though they suspected he had gone to the western part of Japan, probably to Osaka or Kobe.

As I was connected with the *Osaka Mainichi*, I resolved to find Dr. Sun if possible. Accordingly, I secured the services of a friend who was a skilled detective familiar with every move of the Chinese revolutionists in Japan. We had often worked together in securing

information, and as he had uncovered many interesting facts in regard to the revolutionists, I fully expected him to be successful in Dr. Sun's case. After a week's untiring effort he came to me and acknowledged his utter failure. Within that time he had communicated with his colleagues at various places in the empire, but none of them could give him the slightest clue. We knew that

guests, that Dr. Sun Yat-sen had been in the hotel all the time working with his friends to secure sympathizers among Chinese merchants there and that he had just left Kobe for Europe.

Last year, Dr. Sun was in the United States for a number of months, but no reporter seemed to know exactly where he was. Only a few days after his departure I learned from a man high in

PREMIER HUANG-SING

COMMANDER LI-YUAN-HUNG

Huang-Sing, the first premier of the republican government in China, was born of wealthy parents in Changsha, Hunan. While still a schoolboy, he resolved to devote his life to the suppression of the Manchus, and a Chinese restoration. At twenty-five years of age he joined the revolution started by Tan Tsui-chan, and when it failed he fled to Japan, where he devoted himself to propagating republican doctrines among Chinese students. After three years' stay in Japan he returned to China and established a school where many of the bright young men of the empire came for instruction. At the same time he formed an association which was called the Hua-Hsin Hui. Li-yuan-hung has commanded the revolutionary forces from the breaking out of the revolution. One can but wonder at his success with an army which was not well organized. As a boy he entered the Peh-lyan Naval Academy, from which he was graduated with high honors. He served as a junior officer in the Chinese Navy during the China-Japan War. Afterward he entered the military school in Tokyo, from which he was graduated. Next he became an officer in the Chinese Army. It was just at the time when Chang Tzu-tong was reforming the army and Li was one of his most influential advisers. He is a great reader of books on military tactics and is regarded as one of the greatest authorities on that subject in all China. But not until last year was he regarded as a republican.

two of Dr. Sun's friends were staying at a large hotel in Kobe, and we strongly suspected that Dr. Sun was with them. I called repeatedly hoping to obtain an interview with one or both of the men, but was always told that they were in bed. After their departure, I learned from the clerk that they had left orders with him to allow no one to see them. It was their custom, he said, to sleep in the daytime and go out at night. Imagine my chagrin a few days later to learn from Mr. Osada, a prominent author who had for years been the intimate friend of one of the mysterious

authority who had been acquainted with the movements of Chinese revolutionists in this country for many years, that Sun Yat-sen had been for several days in one of the largest hotels in New York disguised as a Japanese. Early in his life, he took as his model, Saigo, the military leader of the Japanese revolution, and when wearing Japanese dress he always imitates exactly Saigo's favorite style of kimono.

Owing to the secrecy of Sun Yat-sen's movements, the facts of his life are not well known.

Sun Yat-sen was born in a small

village of five hundred inhabitants in the province of Canton. He was the second son of a farmer, and until thirteen years of age he worked on the farm. He went to school to his uncle, who kept a small school in the village. This uncle had been a soldier in the Taiping Rebellion, and was still an ardent revolutionist in sentiment. He used to tell stories of the war to the little boy just as veterans of the Civil War in this country love to recount their deeds to their children. Particularly did he love to tell of the glorious deeds of the great Hung Shin-chun, leader of the rebellion, and he used to pat little Sun on the head and say, "You must become a Hung Shin-chun! You must be a Hung Shin-chun!" Sun was a very bright but unruly little fellow, and in spite of his father's frequent reprimands he was always playing soldier and fighting sham battles. He used to call himself Hung Shin-chun, and the boys called him so too, and soon it became his generally acknowledged nickname in the village. As Hung Shin-chun, he was fond of capturing other boys, and so common did this practice become that when the boys failed to return home at night their good mothers were not worried about it, but would only say, "Oh, well, they must be captured by Hung Shin-chun."

His brother, who had been in Hawaii many years and had become a millionaire, felt very sorry to have Sun to remain a farmer in a small village, invited him to come to the island, and put him in a mission school. Here he became a Christian in spite of his brother's strong opposition. His brother at last told him that if he did not renounce Christianity, his allowance would be cut off. The boy steadfastly refused to renounce his faith, and at length was sent back to China. This was when he was sixteen years of age. The villagers were very much interested to hear him tell of his experiences in Hawaii, and particularly did his keen observations on modern civilization make an impression upon the village fathers. He told them that their roads were bad and a bar to civilization, and even suggested to them how to improve them. More and more were they impressed with the fact that

he was a precocious and unusual boy. He was elected a member of the town council at seventeen. He proposed many reforms—to buy guns to protect the village from burglars, to build new roads and to light the streets. All his proposals were accepted, and soon he was made president of the council.

His reputation became so great that the villagers decided it was a shame for such a precocious youth to be buried in an obscure village, so they agreed to send him away to complete his education at their expense. Accordingly, he was sent to Canton to a medical school, the village sending him \$3 a month, the sum total of his expenses. The professors noticed that he was a boy of unusual ability, and so great was his progress that within three years he was made assistant professor. He received \$20 for his services, but spent almost all his substance on his friends, inviting them to dinner, setting them up to drinks, doing all in his power to gain popularity. After studying there two more years, he graduated with honors. He then went to Macao, China, where he practised medicine with great success and popularity, altho, owing to professional jealousy, he felt obliged to leave Macao and return to Canton.

Thruout his career as a student and as a physician, he held stubbornly to the republican principles which had been instilled into him as a child. Wherever he went he worked to make converts. After returning to Canton he organized a society whose object was to put down the Manchus, restore the government to the Chinese, and establish the republican form of government.

One day at a secret meeting composed of four or five members of the society, Chen Bi-chen, Sun's assistant, arose and said, "We have already many sympathizers in various places, even in the army and navy; the time is ripe to start the revolution." "Not yet," said Sun; "there is one thing which is badly needed, namely, the San Ho Hui. We are only theorists. Tho the members of the association are rather too violent, yet we must have the San Ho Hui as our instrument." "It is already done," smilingly answered Chen Bi-chen. "To tell you the truth, I am the head of the

San Ho Hui and hereby pledge its co-operation with this society." This was a great surprise to Dr. Sun, for altho he had been closely associated with Chen Bi-chen since they were in medical school together, he had never suspected his connection with the San Ho Hui. For years Chen Bi-chen had been working secretly among the student class. He knew that there were not many men with modern education among his members, so he determined to give his whole attention to securing sympathizers among students. All the time he was at the medical college he had his eye upon Sun, but said nothing about his purpose. While Sun was studious, he did not study at all, for his purpose was not to learn, but to win students. He was one who often visited saloons and helped Sun set the other students up to drinks. When Sun went to Macao to practise medicine, Chen Bi-chen went with him as his assistant, altho he was much older than the young doctor. They were associated together many years, Sun little dreaming that his assistant was the head of the powerful San Ho Hui.

Soon after this revelation, Sun left the members of his society at Canton in Chen Bi-chen's hands and went to Peking, intending to start a revolution there if the situation were favorable. It was in 1894, just before the breaking out of the China-Japan War. Sun knew that war was inevitable and thought it would be a good plan to start a revolution in the south when war was going on in the north, so he began to obtain subscriptions for the revolution. At first he went to Honolulu and secured contributions, his brother being a large contributor. He began buying ammunition; but when he was ready the China-Japan War was over and he could not take advantage of this opportunity. But his preparations had gone so far he could not stop, so he attempted to storm the castle of Canton. Their plan was discovered; many of Sun's associates were arrested; while he, Chen Bi-chen and Chen Shao-beh, members of the reform society, fled to Japan. It was at this time that Sun cut off his cue.

The next year he went to Hawaii to

propagate his doctrine, while his associates remained in Japan carrying on the same kind of work. Later, he visited the United States on his way to England. It was during this visit that he was betrayed by a fellow countryman and kept a prisoner at the Chinese legation for thirteen days. From England he went to Japan without visiting his own country, and there he met many Japanese sympathizers with his cause—Mr. Inugai, leader of the opposition party, being one of them. Mr. Inugai tried to persuade the late Marquis Komura, then Vice-Minister of Foreign Affairs, to see Dr. Sun, hoping to secure the sympathy of the Japanese Government for Dr. Sun's cause. "How can we do anything for Dr. Sun's cause?" said the marquis.

"He is the thorn in the flesh of the Manchu dynasty. To help him in any way is to involve us in international difficulties and lead to endless complications. The very fact that he is staying in Japan is enough to cause the Manchu government to distrust us. We cannot drive him out of the country, but I want you to keep him in Yokohama rather than in the capital."

Still, in spite of the vice-minister's rebuff, Sun went to Tokyo, where he lived many years, secretly working among Chinese students and securing the sympathy of the Japanese. Silently the leaven of his influence permeated the empire. After the revolution of 1898 in China, Kwan and Liuang, two leaders of the constitutionals' party, noted scholars and reformers, fled to Japan. Since then, Japan has been the refuge of Chinese reformers, both republican and constitutionalists, and has become the field for the exploitation of their rival theories. Liuang, by the publication of papers in Japan as well as in Shanghai, and by his eloquence on the platform, has gained quite a following among the older Chinese residents, but he has never been able to gain Sun's influence over the younger men. After the breaking out of the present revolution, Liuang's followers went over to Sun, and he has become the idol of Chinese residents in Japan as well as in other countries, reaching the zenith by his recent election to the presidency.

Shall the Name of the Protestant Episcopal Church Be Changed?

BY CHARLES A. BRIGGS, D.D., LL.D.

PROFESSOR OF THEOLOGICAL ENCYCLOPEDIA AND SYMBOLICS IN UNION THEOLOGICAL SEMINARY.

FOR many years there has been a profound dissatisfaction with the name *Protestant* in the title of the Episcopal Church in this country, and strong, persistent efforts to have it removed have been made. The question has again become a burning one by the action of the last General Convention, and the Church is flooded with pamphlets bearing on the subject. I do not belong to any of the parties in the Church. It seems to me that almost all who take part in the debate write from a partisan point of view, with which I have no sympathy. The interest that I have in the question is partly that of a scholar who insists that historic terms should be used in their historic sense, but chiefly that of an irenic man who is anxious that all party terms, especially when they are inappropriate and misleading, should so far as possible be done away with.

The terms *Protestant* and *Catholic*, both of them terms big with historic meaning of two of the noblest movements in the history of Christianity, have unfortunately been used in the conflicts of British and American Christianity in improper and illegitimate senses as designations of two antithetic parties in the Church of England and her daughter. It is just the confusion between these two meanings of the terms, the proper and the improper, that characterizes the arguments on both sides of the question.

Some years ago a strong effort was made to substitute *Catholic* for *Protestant* in the name of the Church. This was happily defeated, because those who were urging it belonged to the so-called Catholic party, and the name, so far as they were urging it, seemed to their opponents either to have the special partisan meaning, or else to be an arrogant claim to an apparently exceptional right to those characteristics of Christianity

which belonged to all the great Christian Churches.

Catholic is a term especially characteristic of the universal Church based on the achievements of Christianity in the first three centuries of its existence. The three great Protestant bodies, and all their legitimate daughter Churches, have just as good a right to the term as the Romanists and the Greeks, for they all in their common creed hold to the "One holy Catholic and Apostolic Church." The so-called Catholic party, or Anglo-Catholics, have no more right to the name than the so-called Protestant party, for their distinguishing characteristics are not Catholic at all, but simply a reacting tendency to Medievalism and Romanism, by endeavoring to restore some things of importance which were discarded at the Reformation by the Church of England. In some respects I agree with them, in others I do not; but I resent their assumption of the term Catholic. Furthermore, it would be, whether intentional or not, an unworthy and uncharitable assumption of superiority to other Christian Churches, to assume to themselves a name which is the common heritage of all.

The present movement to remove the name *Protestant* from the title of the Church is much more reasonable, and accordingly it is favored by many who have no affiliation with the so-called Catholic party. I see no reason to question the statement of Dr. McConnell, who has written the best history of this Church, that "this name, which still obtains, does not seem to have been the result of any special thought or deliberation, but was adopted unconsciously as the title which best express the fact." At that time there was no doubt that the Church of England was a truly Protestant Church. Her differences from other Churches

was not in her Protestantism but in her institutions, her episcopal form of government which entitled her to the name *Episcopal*, and her liturgy as embodied in the Book of Common Prayer.

The term *Protestant*, in common usage in the Church of England and her daughter, has had since the Reformation a special partisan sense. It does not in this sense connote the great principles of the Reformation, and that consensus of the three great Protestant Churches of the Reformation in their common differentiation from Rome. It means rather an effort to advance the reformation of the Church of England still further away from Rome and Medievalism in the direction of the Reformed Churches of the Continent. I do not mean to imply that all who are not adherents of the Catholic party must be regarded as belonging to the Protestant party. In fact, the great body of the Church of England, and her American daughter, adhere to the normal historical development of that type of the Reformation that distinguished the Church of England from the Lutheran and Reformed Churches. The so-called Protestant party is at the other extreme from the so-called Catholic party. Neither of them is altogether satisfied with the Church of England as it is, and as it has been since the Reformation. The one party would change Rome-ward, the other in the direction of the Reformed Churches of the Continent.

Now, it is just this special meaning of the term *Protestant* which is so intolerable to the so-called Catholic party. They know quite as well as their opponents the full historic meaning of the term. But their opponents are ever in their mind, and unconsciously they think of the improper partisan meaning of the term *Protestant* in connection with the name of the Church.

If this is the situation, then the very same reasons that influence an irenic scholar to oppose the use of the term *Catholic* in the name of the Church leads him to oppose the use of the term *Protestant*. He would reject them both because they both alike have in general usage partisan significance. If the use of the term *Catholic* in the title of the Church is resented by the so-called Protestant party, they ought not to be sur-

prised that the so-called Catholic party should resent the use of the term *Protestant*, and precisely for the same reasons. They do not convey to either party the noble, comprehensive, historic meanings of the terms, but narrow, partisan and ignoble meanings.

If, however, any one should say that we ought not to reject a great historic term because it is abused, I agree with him entirely. But, then, why has he objected to the use of the term *Catholic*? If *Protestant* is a noble term, *Catholic* is much more comprehensive and nobler still. He has objected to the use of *Catholic* in the title, because it seems to be an arrogant assumption of superiority to other Churches which are also Catholic. But is it not precisely the same situation with the use of the term *Protestant*? The American Episcopal Church has no prerogative on the term *Protestant*. The other Protestant Churches all regard her as less Protestant than themselves. What right has she to use the general term in her title as if she had a patent right to it?

None of the great Protestant Churches of the Continent of Europe, or of Scotland, think of using *Protestant* in their titles. They name themselves either "Evangelical" or "Reformed." The Church of England does not do it. Why should her daughter pre-empt the name? None of the Churches which came forth from the Church of England into Nonconformity, and are represented in this country, have taken to themselves the name *Protestant*. They have named themselves by distinguishing institutional names, which clearly indicate what they stand for: Presbyterian, Congregational, Baptist, Methodist, and so on. It is sufficient that the Church which differs from them, chiefly in its episcopal organization, should name itself "Episcopal," and, in fact, that is the common name by which she is known. No one thinks of using "Protestant Episcopal" unless in official documents.

But, some will say, the name is already in the Church, and to throw it out would imply the casting out of what it means.

The adoption of the name *Protestant* into the title in 1780 did not for the first time make the Church Protestant. She

was Protestant in her inheritance from the Church of England. She is Protestant in her Articles of Religion and her Book of Common Prayer. The removal of the name would not change her Protestant character in the slightest degree, in the opinion of herself or of other Christian Churches, so long as she maintains her Protestant faith and Protestant institutions.

If the change of name would throw out the partisan meaning of the term

Protestant, and with it the partisan use of the term *Catholic*, it would be an unspeakable blessing to the Church. It would remove a stumbling block to the peace of the Church. It would be a grand step toward Christian unity in the Church, and ultimately Church unity in a larger Church, conserving and maintaining all that is genuine and valid in both the terms *Catholic* and *Protestant*.

NEW YORK CITY.

The Mistakes of Witnesses

BY STEPHEN S. COLVIN

PROFESSOR OF PSYCHOLOGY IN THE UNIVERSITY OF ILLINOIS.

“SEEING is believing,” so runs the old adage. We sometimes doubt what we hear, and with reason, but we are quite sure that our eyes are good witnesses and we do not question what they show us. Altho we accept the common report of the street, the statements from the platform, the tale of a friend or the stories of the newspaper, with a grain of salt, we unhesitatingly believe the happenings in our own lives as the plain, unvarnished truth. But now comes the psychologist on the scene with the crucible of the experiment to test the reliability of our everyday experiences and our ability to tell accurately the events and scenes to which we have been eye witnesses. Important and startling facts have been discovered in this way which go to show that there is very little indeed of which we have absolute and certain knowledge.

The tests ordinarily used in these experiments are of two kinds. The first is known as the event experiment. A carefully prepared scene is enacted before a witness, and either immediately or some time after the event he is asked to recall what he has seen, after which he is further questioned to determine more exactly the extent and accuracy of his knowledge. The event test has been less often used than the picture test. In this latter test a picture representing a common scene is shown to the subject for a brief period, after which he describes

what he has seen, and is further questioned, as in the event experiment. These two tests can be advantageously combined in the moving picture test. This has not yet been done, but will soon be undertaken. The procedure in these experiments is so simple that it can with success be carried out by any one who has a little self-assurance, ingenuity and patience. The test was first demonstrated in America at Clark University in September, 1909, by the pioneer in this field, Prof. William Stern, of the University of Breslau. At this time two unusually intelligent children, a boy and a girl in the upper grammar grades of the Worcester schools, were selected as subjects. Each was shown separately for the period of a minute a colored picture, entitled the “Bauerstube.”

This picture shows the interior of a German peasant's home. Among other details is seen a table in the foreground, at which a man and a boy are seated, while a woman is standing, evidently serving them. The man has removed his coat, and his bright red vest is clearly exposed to view. The boy is sitting on a bench, his bare feet not quite touching the floor. The woman wears a brilliant red skirt, over which is a blue-green apron. She has a yellow shawl over her shoulders and abundant hair of the same color. Nearby is a cradle of the same striking blue-green as the apron. At the rear of the room is a bed, and over it hang three pictures, one at

the head of the bed and two at the side. These pictures depict landscapes, and in one is a long avenue of trees. At the foot of the bed is a window, thru which nothing is visible except a branch of a tree clothed with green leaves. Near the window is a clock with exposed weights and the pendulum swung to one side. The hands point to exactly half-past twelve. All of the details of the picture are extremely clear; the colors are rich and the hues familiar.

The children examined by Stern were given opportunity in the minute allowed for the examination of the picture to study it in some detail. They knew that they were to be tested immediately on what they had seen and had every incentive to give a careful and accurate report. They were at ease, apparently under no excitement nor strain. Indeed, they gave the impression of thoroly enjoying the test. Had not the audience that witnessed the demonstration been able to follow the details of the testimony by means of a reproduction of the picture thrown by a lantern on a screen at the back of the children, they would have been impressed with the remarkable clearness and apparent accuracy of the testimony, particularly with reference to a certain cupboard which both testified stood near the foot of the bed. This cupboard was described minutely with substantial agreement as to the details. Now, it must be remembered that neither of the children had heard the other give his testimony, and hence this agreement could not have been due to one following the lead of the other. Yet there was no cupboard in the picture, and no piece of furniture that in any way resembled a cupboard. The fiction of the cupboard was developed by a few suggestive questions ingeniously put, such as the following: "Is there a cupboard in the room?" (The reply was "yes.") "Where is it?" "How many drawers does it have?"

The main tendencies demonstrated in this experiment have been amply confirmed by many others of a similar nature. The writer has himself carried on this identical experiment with a score of subjects, both adults and children, and has not found one who could give a completely accurate description of what he has seen, even in the direct testi-

mony, while under the influence of the questions, particularly if they were at all leading, the witnesses have all shown extensive falsification in one or more particulars. Scarcely two witnesses have agreed as to the time of the clock; some have not observed that it was going (a fact clearly indicated by the position of the pendulum); several have described the shoes of the boy in detail (he is barefooted); four have seen the cupboard; several have said that the lawn is visible thru the window and have embellished it with fountain and shrubs; some have seen a road winding beyond the lawn and lined with an avenue of trees (taken bodily from one of the pictures on the wall); the carved legs of the table have without hesitation been transferred to the bench on which the boy is sitting; a non-existent tablecloth has been described as torn; the woman's apron has been given all the colors of the rainbow, but seldom the right one; the sleeves of the man's coat (nowhere visible) have been described as worn at the edges; the brilliant red waistcoat has generally been overlooked; but most remarkable of all, the entire twenty witnesses have taken their oath that the cradle is not blue, but a red or a reddish-brown. What better evidence could be asked than that twenty honest witnesses, who have had ample opportunity for observation and report, should all agree in such an unequivocal manner? Yet this cradle is a striking blue-green, a color of a most obtrusive sort.

The results of this picture test are all the more remarkable when we remember that the witnesses in this experiment are in a much more advantageous position for giving an accurate report than are the witnesses of ordinary events. The witness is ordinarily called upon to relate what has occurred only after a considerable lapse of time. Meanwhile he is subjected to various questions, often by interested persons; he talks about the occurrence with neighbors and friends; he rehearses the event many times, and then he is placed on the witness stand with the injunction to tell "the truth, the whole truth and nothing but the truth." Under such circumstances the wonder is that there is any resemblance between the testimony and the actual facts.

The results of these investigations in the psychology of testimony are by no means all negative. It is true that they clearly show that an absolutely correct report is never to be expected, but they further indicate the nature and the source of the most serious errors, and thus show how some of these may be avoided, or at least reduced to a minimum. Only part of the errors are due to actual distortions of the memory. A considerable portion arise from imperfect observation at the time of the original experience, and these are the most difficult to get over. Witnesses are generally observers by chance, and there is no way of preparing them beforehand for accurate observation. At the most, the only thing that can be done in such cases is to determine in general how accurately they observe by submitting them to a series of psychological tests.

Other errors arise from confusing the happenings of one time and place with those of another and substituting one set of experiences for another set. An example of this in the "Bauerstube" test discussed above is found in the substitution of the carved table legs for the plain legs of the stool and in the transplanting of the avenue of trees from the picture on the wall to the imaginary road outside of the window.

I recall an incident that well illustrates this universal tendency to transpose events in time. It chanced that a prominent man in the community suddenly disappeared, and for months no trace was found of him. At this time a considerable number of reliable and intelligent persons who were well acquainted with the missing man came forward and asserted that they had seen him at such and such a time and place subsequent to his disappearance. These stories, however, were found to be without basis and often in contradiction the one with the other. When the mystery was finally cleared up it was shown that they were all wrong. These witnesses were not lying. They had merely confused the times of the happenings. For this reason an alibi is one of the weakest of defenses.

At a certain famous murder trial some years ago a reputable and thoroughly honest attorney took the stand for the

defense and swore that he saw the accused at a certain place far from the scene of the crime and at the time it was committed. Here again the time element had been disregarded.

The story is told that Lincoln, during the period of his struggles as a young attorney, caught in a lie an opposing witness who testified that the events which he was describing took place on a bright moonlight night. Lincoln by consulting an almanac showed the court that there was no moon on the night in question. Thus he proved the witness a perjurer and won the case for his client. This example of common sense, whether it be true or not, overshoots the mark. It is quite possible for a truthful witness to put the moon on the wrong night. He has had other experiences in which the moon has been a factor, and he may with the best of intentions mix these in his testimony.

Many witnesses do not take the trouble to accurately distinguish between that which they exactly know and that which they vaguely believe. They belong to that type of persons who are always ready to cash in their imagination for actual fact, and they are never quite sure as to the difference. They can easily be detected in this tendency by simple psychological tests. Similar to these are the individuals who confuse hearsay with actual experience and are eager to seize at all sorts of shadowy suggestions and clothe them with complete garments of reality. Indeed, suggestion is one of the most dangerous sources of error, particularly for children. The testimony of a boy or girl before the high school age is practically worthless unless safeguarded in every way. It is true that the courts have attempted to get around this difficulty by ruling out all leading questions. The reply of the witness to such questions may be prevented or stricken from the records, but there is no means of obliterating it from the mind. Its suggestive force cannot be removed by the command of the judge. Further, it is to be remembered that in the interval between the event and the testimony the witness has been subjected to all sorts of suggestion, intentional and otherwise, that may materially have changed his

memory from what it originally was. Here lies one of the greatest dangers in our present court procedure. The witness is never an unbiased witness when he takes the stand. With his own experiences he is mixing the ideas of others.

Witnesses not only follow suggestions both on and off the stand, but many readily yield to the temptation to show off and appear smart. They often try to please the questioner, and strive to prove that they know what they are talking about. A skillful attorney always takes advantage of this amiable but dangerous weakness, and the result is that he often gets just the thing that he is after by a little flattery. This method when employed with children always leads to a distortion of the truth.

While there is no absolute remedy for all of these errors in reporting, there are certain obvious precautions that may be taken to reduce them to a minimum. Perhaps most important of all is to get the witness as soon after the event as possible. Questions asked should always be by a disinterested person. Such a one might have an official court position and be specially designated to conduct the examination. The error should not be made of supposing that the police furnish a colorless medium for presenting the facts. They generally have the attitude of proving the accused guilty. Thru the "third degree" and by milder methods they constantly suggest what they have assumed to be true. Then after the police come the lawyers, who set up the case according to their various interests, while at the trial the presiding justice is often more interested in legal technicalities than in the mere facts of the case. In all of this, somehow the plain, straightforward truth is apt to be lost sight of, and justice miscarry. The day may not be far distant when a psychological expert shall be attached to every law court. This is strongly recommended by Stern for the German courts.

It would be the duty of the psychological expert not only to examine witnesses, as previously suggested, but to determine by well recognized tests their ability to testify. By submitting them to the picture or the event test, he could

ascertain, among other things, their degree of assurance; in other words, their tendency to tell more or less than they are actually sure of. The effect of the oath on their assurance, the tendency to yield to suggestion, the influence of flattery, and so on, can all be discovered and the witness graded as to credibility in these particulars. Further, as has already been pointed out, the ability of the witness to observe can to an extent be found out by a psychological test. Such details as his ability to remember colors, the size of objects and the general arrangement of details are capable of experimental determination.

To such reforms as these both the courts and attorneys will doubtless find many objections. The importance of these reforms is, however, so great that the jurist and psychologist are well warranted in getting together and in discussing what changes are practical. Much has been said and written in recent years in regard to the failure of justice and the burden of the law's delay. The remedy for these evils has been mainly sought in reforming court procedure on its legal and technical sides. What we need, perhaps as much as this, is a reform in the practical methods of getting at the truth. When this is done the respect for the courts will be greatly increased. In the meantime the judge should take it upon himself to see that the witness has a fair chance to tell the truth and that his knowledge of the event is befogged neither by the insidious flattery nor the unfair bullying of the attorneys.

Finally, it must be insisted that whatever else is done or left undone, the testimony of children should not be admitted under the present conditions and restrictions of legal procedure. For some time it has been recognized that the juvenile offender is not to be treated in the same manner as the adult criminal. It is equally important that the juvenile witness be safeguarded both on and off the witness stand; that the common rules of evidence be modified for his special needs, and that the sole attempt be made of getting at the truth in a commonsense way, rather than thru entanglements of legal forms and verbiage.

A Legislative Program for Congress

BY FRANCIS G. NEWLANDS

UNITED STATES SENATOR FROM NEVADA.

WITH the convening of Congress, predictions of a long and exciting session are abundant; but members of both houses, journalists, and the public at large seem impressed with the conviction that, owing to the lack of harmonious support of the President by his party, and lack of harmony between the two bodies, nothing will be done except politics and that the two legislative bodies, insensible to the demands of the country for needed legislation, will simply shape their action with a view to getting some partisan advantage during the next campaign.

I cannot imagine anything that will tend so much to diminish the confidence of the people in their political representatives as such a result; especially at a time like this, when the popular lack of faith in their political representatives is more evident than at any period during the history of the Republic; a time when, wherever the matter is tested, the people are showing a disposition to take into their own hands, thru the direct primary, the initiative, the referendum and the recall, the exercise of those sovereign powers which they have been accustomed to freely entrust to their duly accredited representatives.

This impression is not wholly correct, however, and it does grave injustice to many earnest, patriotic, devoted men handicapped by conditions which might easily be relieved if they were understood and appreciated, not only by Congress, but by the public—the ultimate director, initiator and master of legislation.

Under our form of government the initiative in legislation is given thru recommendation of the President, acting under his constitutional power, by sending messages to Congress. But this initiative means little unless the party to which the President belongs is in power in both houses, and unless the President is the leader of an harmonious party; neither of which conditions exists today. The House is Democratic, while the executive departments and the Sen-

ate are under Republican control, but in the Senate the dominant party is so divided against itself that harmony of action does not exist upon important matters.

In England and other countries where a responsible ministry exists, the initiative in legislation rests with it and it is responsible for framing government measures which are submitted to the legislative body and supported by the ministry thru all the stages of legislative action.

Under our form of government there is no such ministry and, beyond the suggestions of the President's messages, the initiative of legislation rests entirely with the individual members of the House and the Senate. It is true that, under the general custom of the near past, the Speaker of the House and the leader of the dominant party in the Senate, aided by their trusted lieutenants, had much to do with shaping legislation; but under the new era, such power is practically taken away from the Speaker—his powers are now simply those of a presiding officer, who is supposed to preside fairly and impartially over a bi-partisan House—and the Senate has gone thru as radical a change, leaving it a self-governing body, free from oligarchical control. It has emancipated itself from committee tyranny, and today the committees are regarded simply as servants of the Senate and the Senate, as a body, is master of its own business.

For successful legislation we are not yet fully adjusted to the new conditions. It needs no argument to show that a system of legislation which is based simply upon the initiative of an individual member of the Senate or the House will not be productive of substantial results at the present moment and under existing conditions. No bill upon any important question can pass unless there is not only a powerful public opinion but a legislative opinion backing it. No single individual can voice the views of an entire legislative body.

In the first place, he must frame the bill, with all its details, and it must be consigned to a committee for first consideration. If the framer of the bill happens to be a member of the committee to which it is referred, he has some show, but even then his pathway is beset with difficulties which will doubtless prove too great for him unless he has behind him a strong public sentiment and the exprest opinion of the legislative body to which he belongs, insisting upon its speedy consideration and report. If he does not happen to be a member of the committee to which his bill is referred, his difficulties will be greatly increased.

We are told that during the last Congress upward of forty thousand bills were presented. It requires not only extraordinary enthusiasm, but even extraordinary egotism to prompt one member to assert that his measure, above all others, requires immediate consideration. Besides, such an attitude is likely to be resented by his associates; and the very best measure may lie neglected in the mass of matter referred to the committee, even tho the opinion of the legislative body, if called into expression, would strongly favor it.

Naturally, reform measures suffer most seriously. One of the commonest devices for delaying them is to permit them to be swamped under a mass of varied legislation. Bills of a local or private nature and other unimportant measures are pushed to the front to block the way, and the legislative body becomes itself the victim of its lack of system and the confusion of its methods.

An effort is being made to obviate this; but, like all other efforts in Congress, it must have the strong approval of the public behind it before it meets with success. It is not enough to send representatives to Congress under general platform instructions, and there let the matter drop, expecting them to frame, advocate, and carry thru measures, unaided by a vigorous public sentiment. It is necessary to keep up the steady pressure of public opinion; and for this reason it is important that public attention should be focused, at the very commencement of a session, upon important measures. Outside of the customary appropriation bills and legis-

lation of a local and private character, there are ten or twelve questions demanding legislation upon which, in my judgment, the public mind is made up. Most of them have been endorsed in party platforms, representing the solemn pledges of both parties to the people. How are these measures to be plucked out of the mass of bills now impeding the course of legislation, and how is the attention of the public and of Congress to be focused upon them? How are we to get an expression of opinion upon the part of both the Senate and the House as to what are the important measures requiring immediate action? The President can do but little if he speaks to a divided party and to a legislative body of which neither house is in accord with him. We have no responsible ministry that can shape measures and push them; we have no autocratic Speaker, and we have no Senate oligarchy to appeal to. Is it not time that both the Senate and the House, as self-governing bodies, should by some vigorous expression of opinion in the form of a resolution at the very commencement of the session take from this mass of bills the measures upon which public opinion is made up, and thrust them forward for action?

I do not see how there can be any difference of view upon this question. And yet, when this solution is presented, it is greeted with the usual apathy and inertia, and the committees are likely to go on grinding out a mass of local and private legislation in which members are interested, without taking up the great vital issues in which the people are interested.

With a view to organizing the opinion of the Senate upon this subject, I recently introduced a resolution for a legislative program embracing subjects on which, in my judgment, public opinion was formed, and instructing the committees to consider and report upon them. These subjects include the tariff, interstate commerce, banking, river development and regulation, the merchant marine, an auxiliary navy, and the reduction of military expenses. Why should we not legislate upon all these subjects at this session?

Why should we not legislate upon the tariff? If we can do nothing better, we can at least give the people relief to the

extent of the reductions recommended by the President.

Then there is the question of the physical valuation of the railroads. The courts have declared that it is a factor in rate regulation; party platforms and public opinion demand that it shall be entered upon. Why should there be any delay?

Then, also, regarding the trust question. It is apparent that in aid of the Sherman anti-trust act it is necessary that we shall have an interstate trade commission with powers over interstate trade corporations similar to those possessed by the Interstate Commerce Commission over the railroads—not powers of price-fixing, but powers of investigation, publicity, and recommendation to Congress; powers to be exercised in aid of the courts, in breaking up the old trusts and reorganizing their units in a form harmonious with the law; powers of checking the formation of new trusts and correcting objectionable practices. There has been but one expression upon this subject, from the bench, from the Attorney-General's office, from business men, economists, and lawyers who have appeared before the Senate Committee. Why should we delay action upon this question, concerning which there is practically no difference of opinion, simply because men differ upon collateral questions and wish legislation at the same time upon them?

Then there is the reform of the banking system. Why should we not immediately strengthen the individual banks by proper legislation regarding their reserves and capital, and unionize the banks in every State, both national and State, by authorizing local associations for mutual protection and the effective handling of reserves, leaving the question of a central reserve association to be fought out in the future?

Regarding river improvement, is there any reason why we should not immediately carry out the pledges contained in both party platforms for comprehensive plans of river development thru the co-operation of the nation with the States in such a way as to make them not only efficient for transportation, but also for the reclamation of arid and swamp lands and the development of water power?

Regarding our natural resources, is not public opinion made up in favor of protecting our timber, coal, iron and oil against monopolistic control thru the lease of the beneficial use upon such terms as will secure needed development?

And then, as to our merchant marine. We need auxiliary ships for our navy, in aid of the fighting ships, and we need ships for the new service thru the Panama Canal. There is no possible chance of a ship subsidy bill passing. Why should we not immediately authorize the construction of needed ships for the Panama Canal service as a part of the canal expenditure, and provide that such ships shall also be fitted to the requirements of the navy?

Regarding the military expenses, it is safe to say that the public judgment favors its reduction. If so, why not provide for it, thru the aid of a board of army and navy officers to be selected by the President? There is no doubt that under the present system of divided responsibility, of rivalry between the two services and of rivalry between the bureaus in the same service, there is great waste both in construction and in administration.

There is no reason why the game of politics, thru the long session now before Congress, should postpone the consideration of all these measures and deprive the country of valuable and effective legislation. To facilitate legislation under the new conditions, an effort is being made to secure the consent of Congress to a legislative program; that is, that in the early days of the session, when practically little is ever accomplished, Congress shall arrange, in a general way, the work of the session, agreeing upon the important matters which it will take up and consider. If this method is adopted, it will not only greatly aid in the accomplishment of legislation, but will aid to concentrate the expression of public opinion. Such action would do much to diminish the distrust now entertained by the people regarding their representatives—that distrust which is at the bottom of the movement for the new methods of direct exercise of sovereign powers by the people.

WASHINGTON, D. C.

Save the Game

BY G. O. SHIELDS

PRESIDENT OF THE LEAGUE OF AMERICAN SPORTSMEN.

THE aim of broad-minded, generous sportsmen is, not to protect game today that they may kill it tomorrow; nor to protect it this year in order that we may kill it next year. The desire of such men is to leave some game for those who are to come after us; not necessarily that *they* may have the privilege of killing, but that they may have the greater and more valuable privilege of seeing and studying it, alive and in its natural environment.

When the first Europeans landed on this continent they found here a great wealth of wild life. No country on the face of the earth was ever so blessed with big game and birds as this country was.

Ducks and geese moved up and down the whole breadth of the continent, spring and fall, literally in millions.

Wild pigeons were so abundant that on their migrations the flocks often obscured the sun for hours at a time. These moving myriads were so vast that the observer could see neither edge, and so long that it took them hours to pass a given point. The buffalo spread over the continent from the Atlantic Ocean to the base of the Rocky Mountains, and from the Gulf of Mexico north to the Arctic Circle. They were so abundant that the red man was accustomed to speak of the prairies as "one great robe."

Where are these teeming millions now?

They have been wiped off the earth by white men. They have fallen before the advance of our so-called civilization, and their destruction has been as wicked, as reckless, as needless and as reprehensible as that of our great forests by fire.

The people never needed these great hosts of wild animals and birds for food. Millions of pigeons have been shot and trapped in the name of sport, and other millions were fed to hogs. Countless numbers of buffalo have been

slaughtered for their skins and their carcasses left to rot on the prairies.

The destruction of this great heritage of wild life is one of the crimes for which this generation will always be held responsible by posterity.

The wild pigeon is utterly extinct, and we may as well abandon all hope of saving the wild turkey, the sand-hill crane, the wild goose, the ruffed grouse, the woodcock, the wood duck and the canvas back duck, for they are so nearly gone that it is practically impossible to save them.

But it is possible to save for all time to come, or at least for hundreds of years, the quail, the prairie chicken, the mallard, the teal, the widgeon, the blue-bill, the redhead and several varieties of shore birds; the moose, the elk, the deer, the mountain sheep and the white goat.

If, however, these species are to be perpetuated we must curtail our hunting and killing privileges to a minimum. In fact, the time will come when, if we are broad-minded enough and liberal enough to be willing to leave any wild life at all for posterity, we must prohibit *all* shooting.

Now, it is up to the American people to decide as to which they will do; whether the so-called sportsman shall be allowed to go on killing everything in sight, with the most deadly weapons that inventive genius and capital can produce, or whether the rights of the great masses of people, here and hereafter, shall be recognized.

For many years past there has been a decent element among sportsmen, who have tried, year after year, to secure the enactment of laws in the various States that would compel others to be decent; but progress has been lamentably slow. Probably no single subject has occupied more time of our lawmakers or covered more pages of our statute books than the effort to preserve our game. For instance, there have been introduced in a single session of the New York Legis-

MALLARDS

lature as high as three hundred game bills and nearly as many in each of several other States.

Of course, many States have good game laws, but none of them have perfect systems. There are weak places in all of them. Fourteen States and all the Canadian Provinces now prohibit spring shooting; but several other States have, like Michigan, cut it out, and then gone backward and again permitted it. Still others have never yet mustered sufficient

courage to say to the pot hunter: "Thou shalt not kill in the mating seasons." So it is now legal to shoot ducks and geese when on their nesting grounds, in thirty States!

In my judgment a man who kills a bird of any kind at such a time commits a crime against the laws of nature, and it should be speedily made a crime against the laws of man in every State of the Union. A man who would shoot a duck or a goose in the breeding season would shoot a mother bird on her nest if he got a chance. He is utterly without conscience or humane feeling of any kind, and should be ostracized by all decent people.

The next most important principle involved in this matter of game legislation is that the sale of game should be prohibited at all times and in all the States. Game long ago became too scarce to be an article of commerce. The birds and the wild animals belong to the people in

their sovereign capacity and not to the man who may, because of certain opportunities or of skill, go into the woods or fields and kill them. The man who kills does so by sufferance of the people.

So long as the millions of birds and animals were here, it was permissible for men to kill in reasonable numbers and to appropriate the game to their own use; but those times have passed. There is barely enough game left anywhere to perpetuate the species, and if any killing is to be allowed hereafter, it must be only in small numbers, for short terms each year, and with such weapons and appliances as will give the game the greatest possible chance for its life.

Men who make and sell automatic and pump guns prate about their property rights. They have no more right in this matter than a burglar has to carry with him a revolver when he goes into your house to rob you.

All States prohibit the use of pump guns, swivel guns, large-bore shotguns, such as four and six bore; night hunting, by the aid of artificial lights, etc. We prohibit the use of nets and dynamite in taking game fishes. Then why not the use of machine guns in hunting birds?

There are men who will tell you that if we kill all the quails and prairie chickens we can easily restock the country with English and Chinese pheasants, Hungarian partridges, and other foreign birds; but experience has taught us otherwise. Hundreds of thousands of dollars have been expended in stocking depleted covers with imported pheasants, partridges, Messina quail, black game, capercailzie and other exotic birds; but there is only one spot on the continent where any of these are breeding in a wild state, and that is the Willamet Valley of Oregon. All the thousands, yes, the hundreds of thousands, of foreign birds that have been turned out elsewhere in this country have failed to breed in numbers worth mentioning. True, the hens lay eggs every spring, but they drop one here today, another in another place tomorrow, another somewhere else the next day, and never go near any of them afterward.

The only possible way of restocking a country successfully with any of these

imported birds is to keep a lot of breeding birds, collect their eggs every day where they drop them, hatch them under domestic hens, and when the young birds are grown, turn them out for men to shoot.

Several States have game farms in successful operation on this plan, but it is simply a question as to how much money the people may be willing to expend in maintaining such farms, and how long they may see fit to keep up the expense.

There is no question that the repeating shotgun, whether known as the pump or the automatic, should be prohibited as a hunting weapon everywhere and at all times. Of course, makers say not. They tell us that these guns are no more destructive than double-barrel shotguns are. Then why make them?

When the dealer undertakes to sell you one he invariably exploits its great killing power, and I have frequently heard gun salesmen tell prospective buyers that a man with a magazine shotgun, holding five or six cartridges, could get three to four times as much game in a day as he or any one else could possibly get with a double-barrel gun. Every man who ever went into a gun store and talked with a salesman about a pump gun has heard this assertion.

The only reason these guns are in existence is that there seemed to be room for them. The inventors were inspired by the iniquitous desire of market hunters and game hogs to kill all the game possible. And so we have automatic and pump guns.

The automatic gun is, of course, worse and more destructive than the pump gun, because it discharges its five cartridges by a simple pulling of the trigger each time; while in the case of the pump gun the man behind it must shove and pull his fore-end each time, before pulling the trigger.

All the Canadian Provinces prohibit the use of these guns, and these prohibitive laws were enacted almost as soon as the first of the guns appeared on the ground; but Canada has always led the States in game protection.

Night hunting; shooting from sailboats or launches; the killing of female deer and of fawns; the running of deer

with hounds; the killing of deer in the water; all are radically wrong and should be forbidden by law.

We must limit to a minimum the number of birds and animals a man may kill in a day or a season. Some States are down to minimum figures now, on nearly every kind of game; but the best of them still allow too many of certain kinds of birds and animals, while others allow too many of all.

For instance, no State should at this late day permit a man to kill more than one deer in a season, and yet New York, Michigan, Wisconsin, Wyoming, Montana, Oregon, Maine and several other States still allow two in a season, and some of them allow three.

One of the most urgent needs of the day is the enactment of a bill which would provide Federal protection for all migratory birds. Such a bill was first introduced by Congressman George Shiras, of Pittsburgh, about six years ago, and its passage has been agitated ever since; but it always takes Congress anywhere from five to ten years to pass an important bill.

With such a law in effect not only ducks, geese, brant, swans, woodcock, shore birds and snipe would be protected, but all our migratory song and insect-eating birds as well. And these latter are worth millions of dollars to the farmers and fruit growers of this country. In fact, they are losing over \$1,000,000,000 a year by reason of the ravages of insects, and these losses have been made possible by the destruction of insectivorous birds.

The shooting season should open and close simultaneously on all kinds of game in all States. The present plan of allowing men to shoot woodcock, shore birds, gray squirrels, etc., in summer is radically wrong, because there are thousands of so-called sportsmen who, if allowed to go into the woods or fields in summer to shoot these things, will kill young quails, ruffed grouse, ducks and other birds indiscriminately.

The time has passed when long open seasons can be reasonably allowed for hunting game of any kind, yet many of the States do still permit long seasons on certain kinds of game.

For instance, Alabama allows an open

season of five months on quails, four months on wild turkeys, seven months on turtle doves, six months on plover, snipe, curlew, woodcock, ducks, geese, brant and swans!

California allows an open season of three and one-half months on deer, four months on quail, four months on shore birds, ducks and brant, and affords no protection at any time for wild geese.

Colorado, on the other hand, has awakened to the necessity of saving what game she has left, and now allows an open season of only ten days on deer. She has made a perpetual close season on elk, antelope, mountain sheep, wild turkeys, and a three years' close season on quails.

Florida allows a shooting season of four months on quails and six months on ducks; while Georgia allows her hunters four and a half months in which to kill deer, quail and wild turkeys.

Louisiana makes an open season of six and one-half months on wild turkeys, and five and one-half months on shore birds, ducks, geese and brant.

Oklahoma has an open season of eight and one-half months on ducks, geese, brant and swans, and five months on shore birds.

Oregon has an open season of five months on shore birds and four months on ducks.

Pennsylvania, one of the most progressive States in the Union as to game protection in general, makes an open season of seven months and ten days on all species of water fowl!

South Dakota gives the game hogs the widest range of any State, by allowing them nine months in which to hunt all varieties of water fowl.

These States and all the others should read the handwriting on the wall. They should recognize the fact that many species of our most valuable game birds and animals are on the verge of extermination, and should reduce the privileges of the sportsmen to a minimum.

Thirty days is long enough to allow men to hunt at this stage of the game, and the sooner the lawmakers and the sportsmen realize this fact and get together on it, the better for all concerned.

Every State should have one or more game refuges where no shooting should

be allowed at any time of year, and the larger the tracts the better. Many States have either rocky or swampy lands that could be utilized for this purpose without material loss to the commercial interests of the people. In other cases farm lands may be declared game refuges and all shooting forbidden. This plan has been adopted in Indiana and thousands of acres in each of a number of counties have been set aside and protected, so that the game thereon is absolutely safe. In such cases birds are likely to increase rapidly and in a few years overflow to surrounding lands. Meantime the farmers go on cultivating their lands just the same.

All State and deputy game wardens should be appointed regardless of political affiliations and should be required to pass civil service examinations, showing that they possess the necessary knowledge as to game animals and birds, and that they are otherwise capable of discharging the duties of the office efficiently and effectively.

Under present conditions we find men wearing wardens' badges who have been appointed on account of political pull, who scarcely know the difference between a quail and a ruffed grouse, or between a deer and an elk, or between a rifle and a shotgun. Men should be fitted for these positions by education, and if not so fitted should not be appointed.

It is one thing to have good game laws and another thing to enforce them. Those who dance should pay the fiddler, and those who hunt should provide the means for enforcing game laws. Furthermore, if game farms are to be conducted and birds raised every year to furnish fall shooting, the shooters should pay the expense of these farms.

Funds for these purposes can best be produced by assessing hunters for the privilege of hunting; in other words, by licensing the hunters. This plan has been thoroly worked out in many States and it has proven eminently successful.

Thirty-four States now issue resident hunting licenses at a cost of 50 cents to \$2.50 a head. These and non-resident licenses produce anywhere from \$50,000 to \$200,000 a year in the various States. New York realized over \$165,000 from licenses last year, nearly all from those

of the resident form, which cost the shooters \$1 a year each. Wisconsin collects \$135,000 from its resident hunters, Iowa, \$75,000, and Massachusetts, \$60,000.

These funds prove ample for the payment of salaries of game wardens, and in most cases leave liberal amounts for

ing season, is regarded as a game bird in the South. Some States make an open season of three to six months on it, while others do not protect it at any time. Nearly every Southern sportsman delights in killing large numbers of robins whenever he can get out. The bobolink, one of our sweetest singers and one

GREEN-WINGED TEAL

Something freezes your ambition to put salt on their tails

the propagation of pheasants and partridges, and for restocking shooting grounds.

The fourteen States that have not yet enacted laws requiring resident hunters to be licensed should do so at once and should provide that all funds accruing from such licenses should go into the game protection fund of the State.

The Southern people are far behind those of the North in the matter of game protection. Several of the Southern States make no adequate provision for the protection of game of any kind, while others protect only certain species.

Many of our most valuable song and insect-eating birds are considered game in the South and are slaughtered by the thousands. The sweet-voiced robin, which thousands of people in the North love and foster carefully thru its breed-

ing season, is regarded as a game bird in the South. Some States make an open season of three to six months on it, while others do not protect it at any time. Nearly every Southern sportsman delights in killing large numbers of robins whenever he can get out. The bobolink, one of our sweetest singers and one

of our most valuable insect eaters, is called in certain Southern States the rice bird and in others the reed bird. These birds congregate in great numbers on the tide marshes of Maryland, Virginia, West Virginia, the Carolinas, Georgia and Florida, and so-called sportsmen go out and kill them at the rate of from 100 to 300 a day to each gun. There is no close season on the birds in any Southern State, and no limit to the bag!

winter, and you will find great strings of robins, blackbirds, bobolinks, meadow-larks, and even bluebirds, orioles and tanagers, hanging in front of the markets and selling at 10 to 30 cents a dozen. Meantime our farm crops and fruits are being destroyed at the rate of over \$1,000,000,000 a year because there

are not birds enough to keep down the insects.

An extended educational campaign in the South, to teach the people the value of the insectivorous birds and the necessity of preserving them carefully is now the most urgent thing before all bird lovers.

NEW YORK CITY.

Ahoy

BY CLINTON SCOLLARD

SOMETIMES on seas where no great fleets deploy,
 Lone from horizon to horizon line
 Save for the wheeling planets and the whine
 Of the invisible winds that know no joy
 Of peace, but must forevermore destroy
 All quietude, across the midnight brine,
 Where a lost wanderer seeks some harbor sign,
 There rings the heartening hail-cry—"Ship, ahoy!"

Will it be thus when I across the night
 Whereto life leads—the inevitable dark
 Beyond our mortal bliss and sad annoy—
 Will some good pilot my blind voyaging mark,
 And lead me, lonely, to the welcome light
 With kindred heartening hail-cry—"Soul, ahoy!"

CLINTON, N. Y.

The Greatest Desire of the Filipinos

BY MANUEL I. QUEZON, LL.D.

RESIDENT COMMISSIONER FROM THE PHILIPPINES TO THE UNITED STATES.

ARE the Filipinos contented under American control?

This is a question which is almost invariably put to me by every American whom I meet, as soon as he learns that I am representing the Filipino people in the United States.

My answer is always in the negative.

No; the Filipinos are not contented, they cannot be contented, and they will never be contented under American or any other foreign rule. I often wonder why an American asks such a question when undoubtedly he is familiar with these well-known words of Daniel Webster:

"No matter how easy is the yoke of a foreign power, no matter how lightly it sits upon the shoulders, if it is not imposed by the voice of its own nation and of its own people, he cannot, he must not, and he will not be happy under its burden."

This statement is not an empty, high-sounding proposition. It is the utterance of a profound student of human nature; it is learned from all the fields of history. The Filipinos, as a subject people, are not an exception to this political principle.

There are, moreover, some other reasons. So long as the United States Constitution remains as it is, it cannot properly govern a foreign people, because it is not framed for foreign subjects. Indeed, the spirit of the Constitution, if not the letter, is plainly against the subjugation of a foreign people.

Besides, the constant ebb and flow of American politics is hardly fitted for the creation of great colonial statesmen at home and wise administrators in the colonies. Whatever the department in charge of the colonies may be, its head is appointed and kept in office only thru the exigencies of the metropoly, without any consideration as to his familiarity with colonial affairs. Of course it may so happen, and it does happen, that the man appointed for the place is well equipt to deal with the colonies; but

what I mean is, that the equipment of such a man is not the first, nor even one of the prime conditions required.

Americans are sent to the Philippine Islands who have never had any special interest in Philippine affairs. Naturally the first two or three years spent by them in their positions are devoted to the work of familiarizing themselves with the affairs they have in their hands. When these two or three years are over they are ready to go or to be sent home, and new men fill their places, who go thru the same process.

These evils will not be remedied, for the obvious reason that the Philippines will never be a real national issue in the United States. The islands are so far away, the Filipinos such strangers, and the Americans so busy, so much concerned about their own vital problems at home that even if they wanted to they could not give their time to our troubles.

Finally, all governments imposed by force are essentially wrong, because they are not founded upon the only just basis of government—the consent of the governed—and are not responsible to the people.

But are not the Filipinos better off now than they were under Spain? In other words, are they not more prosperous, do they not have more schools, better roads and other means of communication, more freedom and more participation in the government of the islands?

This is the second question I am generally asked.

As to the present prosperity of the Filipinos, there are certain unfavorable facts to be considered outside the growing imports and exports, such as the lack of working oxen owing to the rinderpest and the high duties on our exports, etc. Lack of time and space prevents my discussing those questions at present.

It is true, however, that we have more and better schools, a better system of education, better and more roads, etc.,

more freedom, and more participation in the government of the islands. Is this a credit to the American administration of the Philippines?

Yes, and we gratefully acknowledge it: that the government has given us the opportunity, and even helped us, to do certain things which we would have done were we free and independent.

Note that we pay for our schools, roads, etc.; that there has never been any objection on our part to the expenditure of our revenue for such purposes, except in a few instances, when the road to be built was not justified by the public benefit to be derived from it, considering its expense. Note also that, altho education is not compulsory in the Islands, the number of pupils attending or desirous of attending the schools is more than the Government can afford to educate; that town roads, town schools, etc., are often built by voluntary popular contributions. Even the maintenance of public order rests largely upon the Filipinos themselves. In fact, the improvements along these lines clearly demonstrate the Filipinos to be a progressive people, because it would have been impossible for the Government to do half as much as it has done, in such a short time, without the enthusiastic co-operation of the people.

The fact that the Filipinos have now more participation in the government of their country than they ever had under Spain is not enough to make them contented with their present situation, for they do not have all that they are entitled to have. Nothing but the complete control of their affairs will make the Filipinos happy, because this is their due.

The success of the Filipinos in every branch of the government in which they have been allowed to take part has convinced them, more than ever, that they are right in their contention that if they

were given the chance they could run by themselves their whole national government.

Then what do the Filipinos want from the United States? I am asked again. The American people mean to do them justice, I am told.

After two years of residence in Washington, after having been to several States, after having met Northern, Southern, Eastern and Western Americans, I gladly admit that the American people mean well toward my people.

There is only one thing which the Filipinos ask of the United States, and that is, to free them from all foreign intervention. This is the only thing which will make them a prosperous and happy people. They have attained that stage of national life when a foreign control, instead of being a help, is a handicap to their proper progress and development, both political and social. They assert that they are competent to establish and maintain a good, liberal government. Their assertion is fully justified by their actions during the short-lived Philippine Republic, when they had in their hands the government of the whole Philippine territory, with the exception of Manila, and also by their achievements under American rule.

Let not the American people overlook the fact that the Filipinos were their allies in the Spanish-American War; that the only reason why the Filipinos took the American side was that they had been led to believe that the independence which they had all but achieved from Spain would be recognized by the United States after the war was over; and that the Filipinos have long regretted the "inexplicable stroke of fate" which converted their allies of yesterday into their masters of today.

WASHINGTON, D. C.

Farm Animals in 1910

BY WILLIAM B. BAILEY, Ph.D.

ASSISTANT PROFESSOR OF POLITICAL ECONOMY IN YALE UNIVERSITY.

IN the accompanying chart the domestic animals upon the farms and ranges of this country vary in size according to their value on April 15, 1910:

Horses	2,076	million dollars
Cattle	1,485	" "
Mules	522	" "
Swine	398	" "
Sheep	231	" "
Chickens	140	" "

In 1900 cattle constituted 48 per cent. of the value of all live stock on farms, whereas at present they represent but 30 per cent. Their value has increased less than \$10,000,000 during this decade. On the other hand the value of horses has increased over \$1,180,000,000, or 131 per cent., since 1900, in spite of the great increase in the use of automobiles and power machinery upon the farms of this country. With the increase in population of this country during the last decade we might have looked for the increased demand for fresh beef, milk and butter to be reflected in a large increase in the number and value of cattle. Instead of this we find a decrease of about seven

millions in the total number of cattle. The only class under this head to show any increase was the dairy cows. During the last decade the value of the swine has increased about 70 per cent., and of poultry nearly 80 per cent. But there are only about 3.7 millions of turkeys for about 90,000,000 of population.

The average value of the horses upon the farms was \$112, and of the mules \$131. The cows were quoted at \$34, the swine at about \$10 and the sheep at about \$5 each. Although the number of farms reporting bees has decreased since 1900, there are still over 590,000 to report colonies of them in 1910.

How far these figures concerning the domestic animals which form the basis of the meat supply of this country may explain the rise in the cost of living is problematical, but the fact that the population is increasing more rapidly than the supply of animals used for food purposes would lead us to think that the price of meat is not likely to fall much below its present level for some time.

Literature

A Likely Story

IT is no easy matter to give life and substance to a romance in which two separate groups of actors, living four hundred years apart, are to be set afloat in one sparkling stream, where realism in its sweeter, human and humorous aspects shall appear at its best, where the various and acceptable personages are to be landed at last on one or more of the Islands of the Blest. Mr. De Morgan accomplishes this difficult feat, in the judgment at least of the present reviewer, who would be willing to sit up late, even with a "three-decker" novel, for the sake of the charm of the later chapters of *A Likely Story*.^{*} It must be said at the start, however, that this is by no means a "three-decker," nor is the passenger list large. A heroine—two of them, in fact—one the eidolon or image of the other, seen only indifferently well at first, speaking out of a portrait by a dubious but worthy master, but gradually realizing the qualities of an enticing lady of an old century, if only the reader will be patient, and stop shouting for the excitement of a football match—such a duplex heroine, and a muzzy, bespectacled, dear old dreamer of dreams, with his counterpart in the background, to assist in the curtain-shifting. This double pair make the features on which the reader loves to dwell. The heroes are clearly drawn, but keep out of the way for the most part, while a short list of well-presented sub-characters, of the vividly realistic sort, support the story at every turn, keeping the stage as persistently as does the chorus in a Greek play. They occupy us with humor, wisdom, artists' jargon from the studios, psychic phenomena in the borderland of science and pseudo-science, all in Mr. De Morgan's best vein. The elderly reader will of course have acquired a taste for the author's peculiar ways; the new generation may experience a reluctance to start

out under the lead of that wandering voice from an old century. If he perseveres he will have the joys of the advancing chapters. And how realistically modern they are, with the exactness of finish, appositeness of delineation, humor in dialog, and condensed dramatic action! Dramatic to a degree is the whole method of the author. An ocean of words would not give the picture so vividly as he gives it, when he is ready; often in a hiatus merely, a query, a dash, we have attitude, emotion, action. The choice bit of the book is, however, in the deciphering of an old manuscript which is to elucidate the period when the portrait's face was turned to the wall for some hundreds of years, when its beautiful pictured lips could not speak of events with authority. The chief actors here are Mr. Pelly, the "little, gray-headed, wrinkled man, with gold spectacles," who may have "walked out of the last century but one," and the lovely and most lovable Madeline, hurrying up the reading that she may get at the meat of an old prison rescue scene of the period of the Medici. While he is puzzling over the lacunæ in the manuscript, "she went across to Mr. Pelly, and leant over him, which he liked, to get at the MS." When he lingers over a doubt which she has already resolved in her mind, she says: "It's no use your talking about evidence, because I know I'm right, and evidence is nonsense." When an interruption has gone beyond her patience: "Now, Mr. Pelly, go on again. I do so hope it's a plummy bit."

The prison rescue of that old time approaches completion. The general shape of it was made when the hills were made, but in its variations it outdoes Dumas. The balancing of light and shade in it recalls the chapters in Hawthorne's "House of the Seven Gables," where Phoebe Pyncheon flashes her innocent beauty and sweetness over the gloom of a dying house, or in "The Scarlet Letter," where little Pearl dances out into

^{*}A LIKELY STORY. By William De Morgan. New York: Henry Holt & Co. \$1.35.

the black procession of ministerial spec-
ters with her unpuritanic feet. Mr. De
Morgan loves the borderland of meta-
physical speculation, but he frequents it
very much as Hawthorne frequented the
Utopias of the transcendental period,
that he may have his quiet shy at the
specter there.

**The Economic Principles of Confucius and
His School.** By Chen Huan-chang,
Ph. D. New York: Columbia University.
2 vols., 745 pp. Cloth \$6, paper \$5.

It is rare that a university monograph
makes so timely an appearance. Dr.
Chen's thoro analysis of the teachings of
Confucius and his discussion of their
economic effects will interest the wider
public, which has now come to realize
that the Chinese are not a senile and
fossilized race incapable of progress, but
are merely a belated people who are at
last aroused to the necessity of catching
up with the most advanced nations in
every respect. If men trained in the
methods of scientific research, such as the
author of this work shows himself to be,
can be placed in authority, the success of
the reform movement is assured. The
book concludes with a frank comparison
of the Chinese civilization with ours,
which is of peculiar interest as showing
what an intelligent Chinese who has
spent five years in New York thinks of
the achievements of his own country. We
summarize in his own words:

(1) The Chinese have the best religion—
Confucianism. All the good points of Chris-
tianity are found in Confucianism and besides
Confucianism gives still more.

(2) The Chinese have the highest system of
morality.

(3) The Chinese have the most widely
spoken language. Altho it is difficult for for-
eigners to learn it is the national language of
four hundred million people. In addition the
written language is used in Annam, Korea
and Japan.

(4) The Chinese have produced the best
literature of all kinds. This is beyond dis-
pute. Since the golden ages of the different
dynasties lasted for a long time—much longer
than the Periclean age, the Augustan, the
Elizabethan or the age of Louis XIV—and
since the Chinese language has been used
thruout the whole historical period, it is no
wonder that Chinese literature has reached
the highest development.

(5) In referring to the fine arts we may
take them up separately. The ancient music
of China is unknown, but the modern
music is inferior to that of the West. The

architecture of the present day is not good,
but the buildings of the Chin dynasty and the
Han dynasty were superior even to those of
Greece. Sculpture in China has not yet been
taken up by a high class of people. Similar
to the art of painting, the Chinese possess one
kind of fine art which is peculiar to them only
—penmanship. It is regarded as equal to
painting.

(6) The Chinese system of government is
moderate, democratic, centralized and perma-
nent.

If we take the whole history of China and
compare it with the whole history of the West,
the Chinese should not be ashamed. The civ-
ilization of the Chou dynasty was better than
that of Greece. The civilization of the Han
dynasty was better than that of Rome. We
need not make any comparison with the Dark
Ages. The great trouble has been that, when
the Chinese Government was at its worst, the
modern nations, rising just a little earlier than
China, entered her door and interfered with
her affairs. Therefore, China is inferior, in
some respects, to the West in the present day.

A Study of Southern Poetry. By Henry
Jerome Stockard. New York: The
Neale Publishing Co. \$2.50.

There are many centers of song. Pro-
fessor Stockard sees such a center in the
Southland. Maryland, Virginia, Georgia,
the Carolinas, each in its turn, has its in-
spired rhymester. Maryland alone epitom-
izes the life of our country in two
poems, having furnished in the "Star-
spangled Banner" a song for the march
of the general host, and in "Maryland,
My Maryland," that wild, endearing un-
dersong that nearly ended us as a nation.
In each case the inspiration was tempo-
rary. Not all the singers claimed for
the Southland were of Southern origin,
nor did all mature what gift they had in
the land of the mocking-bird. They
went; they came; and, coming and go-
ing, they took the note that was not al-
ways native to their birthplace. Profes-
sor Stockard's book is full of song for
Jackson and Lee and many other Con-
federate heroes. Of all these the editor
takes account as worthy to be read in
Southern schools, as indeed they are.

The Republic of Plato. Translated by Alex-
ander Kerr. Chicago: Charles H. Kerr
& Co. Parts I to VII.

We are accustomed to receive from
these publishers paper-bound literature
of a radical type, mostly by foreign
authors, but rarely anything so revolu-

tionary as this. The translator does not state what is the language of the original, and the author's name is not in "Who's Who," but he is presumably a young man, to judge from the rashness of his speculations and his evident desire to be up-to-date in all respects. He has adopted as a medium of expression for his political and educational theories the dialog form, which Dickinson, Mallock and Shaw have made popular. He is, of course, a Socialist, but so advanced in his views as to make Marx look like a back number. He has taken up with the eugenics idea, but, as usual, carries it to an extreme, advocating nothing less than the abolition of our present marriage system, which the British Eugenics Society is so careful to respect. We should be compelled to admit the justice of many of his criticisms of the educational methods now in vogue, but here again he goes too far. He would give natural sciences and physical culture almost a monopoly of the curriculum, thus crowding out entirely the ancient languages, literature and history. This shows that he is altogether ignorant of the generally accepted principle of our foremost educators that no one can use his native language with force and propriety who is not familiar with its historic development from antiquity. Mr. Plato shows himself too narrowly pragmatic when he refuses to admit any study for which he can see no use in actual life. He seems to have no conception of pure culture and he understands "science for science's sake" as little as he does "art for art's sake." But he is in accord with the best pedagogic practice of today when he insists that force should not be used in the school, that studies for children should be a sort of play, and that their natural aptitudes should be discovered and developed. He is emphatic in his warning against the tendency of the times to pay too much attention to the industrial and commercial applications of a study, to the neglect of its higher aspects. Astronomy as now taught, he says, turns men's eyes to the ground instead of upward. This sounds like one of Chesterton's paradoxical remarks, but we would not accuse our author of plagiarism without looking it up. Mr. Plato is a strong suffragist and says that it is as absurd to

exclude women from full citizenship as to argue that if bald men are cobblers, we must forbid men with hair to follow the same trade. But he is not blind to the faults which have developed in democratic government, and has evidently acquainted himself with the recent literature on mob-psychology. As we have indicated, Mr. Plato touches on a great variety of topics, and his observations are frequently brilliant and suggestive. But the book is calculated to be unsettling to immature minds, and college authorities will doubtless see that it is not admitted to their libraries. We could not conscientiously refrain from criticism, but we hope that nothing we have said will discourage the author from continuing his promising work. He is undeniably a man of talent, perhaps even with a spark of genius, and we shall await the rest of the series with interest.

A Princess of Adventure: Marie Caroline, Duchesse de Berry. By H. Noël Williams. Pp. 391. With 17 illustrations. New York: Charles Scribner's Sons. \$3.75.

The gay, courageous and not too fortunate Marie Caroline makes an ideal subject for the modern-day author of gossiping memoirs. If she was not beautiful she had at least her charms and her charm; if she was not discreet, she had for that very reason more than her share of adventures. A Neapolitan Bourbon, she was married to an heir to the French throne, and by her vivacity did something to redeem the dullness of the Restoration Court. After the murder of her Duke, and the expulsion of Charles X, she proved herself a campaigner of pluck and abandon; her capture by the servants of Louis-Philippe, after she had been smoked out of her hiding place in a Breton chimney, makes a fine subject for moving picture films. Her imprisonment, and the birth of a daughter in the prison where her unkind kinsman confined her: all this is well known and often recorded romance, but Mr. Williams retells it interestingly enough. The story is closed, not with her death—that did not occur until 1870—but with her release from the citadel of Blaye and her farewell to France in 1833.

Bashful Ballads. By Burges Johnson. New York: Harper and Brothers. \$1.

Mr. Johnson's *Bashful Ballads* have a salt flavor, the tang of the sea and of nautical wit. The ballads need not blush nor apologize. Most of them are frankly facetious, like "Alack a Yak" and "A Lyric of the Llama," but "The Little Yankee College" is better than mere fun: "The little Yankee colleges, God bless them heart and soul—
Each little lump of leaven that leaveneth the whole;
What need of mighty numbers it they fashion, one by one,
The men who do the little things a-needing to be done?"

Literary Notes

....Hints for the host of aspirants to print are to be found in a new monthly periodical, *The Magazine Maker*, edited by Homer Croy. (24 Fourth avenue, New York City. \$1 a year.)

....Dr. A. E. Dunning's little volume on *The Making of the Bible* (Pilgrim Press; 75 cents) may be commended to Sunday school teachers as a brief and teachable introduction to the Old Testament.

....Dr. James J. Walsh, of Fordham University, to whom our readers are indebted for much medical advice and information thru our editorial columns, has also assumed the position of medical editor of the *New York Herald*.

....Prof. James Denney, of Glasgow, has issued a new and revised edition of his book on *The Death of Christ* (Doran; \$1.50) in which he has included his lectures published under the title "The Atonement and the Modern Mind."

....*The Modern Man and the Church* (Revell; \$1.25), by Rev. John F. Dobbs, is a book of high ideals, practical suggestions, and earnest devotion of the aim of the Church which should be the establishment of the Kingdom of God among men.

....*The Common Cause* is a new monthly magazine published by the Social Reform Press, 154 East Twenty-third street, New York City, at \$2 a year. The management is largely Catholic and the object of the periodical is to carry on an aggressive campaign against socialism in all its forms, believing it to be "economically false, politically unsound, morally and ethically bankrupt." It is questionable if a magazine exclusively "anti" anything has a great future in this country. The best way to combat socialism is to reform the conditions that cause it

....The Macmillan Company have just imported an edition of Grimm's Fairy Tales (\$1.50) containing the introduction written by John Ruskin. The illustrations in color are by Charles Folkard. It is to be regretted that the volume does not include the drawings by George Cruikshank. Over-anxious moralists had best reread Ruskin's words concerning the fairy tale, for among his many excellent comments may be treasured the following: "The effect of the endeavor to make stories moral upon the literary merit of the work itself is as harmful as the motive of the effort is false."

....The two leading scholars of the dead language and literature of ancient Persia, still fostered by the Parsees of India, using the English language, are of American birth, the veteran Prof. L. H. Mills, of Oxford University, and Prof. A. V. W. Jackson, of Columbia University. Both are greatly honored by the Parsees. The other day those living in Great Britain presented Professor Mills with a laudatory address in a silver casket as a mark of their profound admiration of his studies of the Avestan literature. We learn from the account that at the age of seventy-five he is finishing a dictionary of the language of the Avestan Gathos, and also a translation of the Gathos into the Vedic Sanskrit.

....In the course of an article on "The Future of the American Novel," which the editor of the *North American Review* assures us was written in 1903, Mr. Arnold Bennett exclaims over the modern opportunity of the romancer:

"What would not Balzac have done with Pittsburgh, the sixteen-hour express between New York and Chicago, Wall Street, Mr. Pierpont Morgan, and the wheat-growing States? He would have said: 'This country is simply steeped in romance; it lies about in heaps. Give me a pen, quick, for Heaven's sake!' And we should have had a second 'Comédie Humaine' compared to which the first was a story by Jane Austen for quietude."

To echo the distinguished critic—playwright—moralist—essayist—novelist (we wish he were *not* so many things), "what would not Balzac have done with Pittsburgh?"—and what, again, would not Pittsburgh have done with Balzac?

....We come to that delightful state of affairs when the best books are the cheapest. Not only are the standard works of the best accessible in such forms as Everyman's Library, but we have also new books by competent authorities on important questions issued in a form that is convenient and at a price that is so low that any one might buy them without hesitation. To the latter class belong *The Cambridge Manuals of Science and*

Literature, which will be welcomed by all who want to read books that are worth while. They are printed in large type, bound in cloth and sold in this country by Putnam's at 40 cents apiece, which tho not so cheap as the shilling which the Englishman pays, is still very low for this country. Some of them we shall have to consider in special reviews, but a few titles may be mentioned here to show the character and range of the series. Readers should send for the list of forthcoming volumes and order in advance such as they are interested in. The *Natural History of Coal*, by E. A. N. Arber; *History of the English Bible*, by John Brown; *The Administration of Justice in Criminal Matters* (in England and Wales), by G. Glover Alexander; *Plant-Life on Land Considered in Some of Its Biological Aspects*, by F. O. Bower; *Cash and Credit*, by D. A. Barker; *The Idea of God in Early Religions*, by F. B. Jevons.

....The leading article in the *Mercure de France* of December 16 is devoted to Robert Louis Stevenson, his art and his influence. M. Gabriel de Lautrec contributes it, and it takes the form of a review of Stevenson's correspondence, recently brought together in four volumes by the Scribners. Several translations of Stevensonian verse are attempted by the French reviewer:

"Le monde est si plein d'une foule de choses
Que je suis sûr que nous devrions tous être heureux
comme des rois,"

is not a remarkably happy rendering of the simple lines from "The Child's Garden." Yet the critic finds in this volume "perhaps the most delicious of ingenuous poems." This is a better translation than the one quoted above:

"Il pleut, il pleut tout alentour.
Il pleut sur les champs et les arbres,
Il pleut ici sur les parapluies.
Et sur le navire en pleine mer."

"The best definition of poets," writes M. de Lautrec "is that they remain children all their lives."

....As for Stevenson the novelist, the French critic quotes with some sympathy Mr. Moore's reproach that he is a champion of art for art, neglecting the representation of life as life is. We wonder if he is correct in his generalizations upon the modern English novel:

"Balzac inspired himself with the realist traditions of which Richardson and Fielding had been in England the authoritative representatives. The English novelists of the middle of the last century were the faithful disciples of Balzac. Twenty-five or thirty years ago, the current which bore the English novel toward realism was growing stronger every day. An accident alone could halt this movement. This happy accident was the work of Robert Louis Stevenson. After him, other writers, Rudyard Kipling and H. G. Wells, for example, to cite only the best known, have launched the English novel in the domain of fiction; have reaffirmed, with a rare felicity, the rights of profound fantasy and of imagination."

Is it true that from Stevenson "a whole literature can be dated"?

Pebbles

THE people are bound to be interested in murders which happen in their midst.—*Collier's*.

IN the midst of life we are in death.

"YOUR nephew is a college graduate, isn't he?"

"Yes," confessed honest Farmer Hornbeak; "but, in justice to the college, I'll own up that he had no sense beforehand."—*Woman's Home Companion*.

JENNIE—Everything he touches seems to turn to gold.

Jim—Yes; he touched me today for a sovereign.—*London Opinion*.

THE darky in question had simmered in the heat of St. Augustine all his life, and was decoyed by the report that colored men could make as much as \$4 a day in Duluth.

He headed North in a seersucker suit and into a hard winter. At Chicago, while waiting for a train, he shivered in an engine room, and on the way to Duluth sped by miles of snow fields.

On arriving he found the mercury at 18 below and promptly lost the use of his hands. Then his feet stiffened and he lost all sensation.

They picked him up and took him to a crematory for unknown dead. After he had been in the oven for a while somebody opened the door for inspection. Rastus came to and shouted:

"Shut dat do' and close dat draff!"—*Chicago Post*.

THE man from Punxsutawney and the man from Kokomo

Discussed the Chinese troubles, and the first said, "Don't you know, I think these Chinese names are queer enough to stop a clock."

"That's right!" replied another man from fair Caucomgomoc.

The man from Kokomo observed, "By ginger! that's a fact!

That's what my brother says—he lives down here in Hackensack."

And still another stranger said the man's comment was true;

And added, with a smile of pride, "My home's in Kal'mazoo."

Another man took up the strain. "Now, down Skowhegan way

And up at Ypsilanti we speak it every day. The names are all uncivilized and heathen in their ring,

That's what I told my uncle yesterday in Ishpeming."

"Hohokus is my native town," another stranger said;

"And I think all these Chinese names the worst I ever read."

"Quite true," agreed a quiet man; "they're certainly uncanny,

That's what my neighbors all assert in Tail Holt, Indianny."—*Baltimore American*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848

One Year, \$3.00. Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

THE index of THE INDEPENDENT for the last six months is now ready, and will be sent free to any subscriber who notifies us that he wants a copy.

The Persian Executions

AT Tabriz last week the Russian invading force tried by court-martial and hanged at least sixteen leading Persian Moslems. Was this an exercise of right, or was it a violation of the law of nations?

This happened in Persian territory. Persia is an independent state. Not only so, but Great Britain and Russia had agreed to maintain its independence. Nevertheless, these two Powers had agreed between themselves to assume, without asking Persia's permission, a certain special influence within assigned spheres in Persia, for commercial purposes, such as railroads and telegraphs, and they had informed Persia that if she did not preserve order they would feel at liberty to do it. Tabriz came within the sphere assumed by Russia.

The brother of the exiled Shah had

engaged in a revolution and had been beaten and fled. Thereupon Persia seized his property, but the Russian consul resisted by force, and required its restitution. The ex-Shah's attempt was helped by Russian officials in every way, and after his defeat Russia sent an ultimatum to Persia requiring the dismissal of Mr. Shuster and submission to other demands, on penalty of a march on Teheran. At the last moment Persia submitted, but the march began, and Tabriz was occupied. Resistance having been made by the Constitutionalists, the Russians came in force and took the city, and have now tried by court-martial and hanged the leaders who defended their country from attack.

These are the plain facts. What defense, under international law, can Russia make for this drastic action? We do not now raise the primary question of the moral right of Russia to invade Persia, but, were we to concede this, what justification could there be for this apparently barbarous retribution on those who had resisted the invasion?

This was either an act of war or of peace. If of the latter Russia had no right when invading a foreign territory to condemn and execute Persian citizens by a court-martial. It is only on the claim that the Russian sphere of influence is Russian territory, and that these leaders were guilty of rebellion and treason, that they could be executed, altho even so such action would be too drastic to be approved by any civilized Power. But Tabriz is not Russian, and there was no treason.

We may, however, consider and do consider that this was a state of war, even altho no war was declared and Great Britain has not publicly admitted it. Under many precedents war may exist before it is formally declared. The war between Japan and Russia began four days before any declaration of war, but there had been an ultimatum, and Russia had received warning. Lawrence, in his "Principles of International Law," 1910, says:

"International morality does undoubtedly demand that no hostile operations shall commence without warning. This is, however, a very different thing from commencing without declaration."

The Second Hague Conference dealt with this subject, and laid down the principle that "hostilities must not commence without previous and explicit warning, in the form either of a declaration of war with the reasons assigned for it, or of an ultimatum with conditional declaration of war." This is exactly what Russia did. She delivered an ultimatum, and declared that if her demands were not satisfied she would march on the capital, and she did begin the march and fought the Persians at Tabriz. That was war, nothing less.

Now, if she was at war she had the right to take prisoners, but not to hang them, unless they were either Russian subjects or, perhaps, were guerrillas. These were not Russian subjects, but Persians fighting for their country; neither were they guerrillas. They held the citadel. They fought under leaders in the streets. The Russians were the attacking party, for there had been no disorder in Tabriz. These patriotic Persians did no more than did the embattled farmers of 1776, whose shot was heard round the world. It is ridiculous to call them guerrillas, but even if so called, they have rights of war under the Hague Conference, which makes guerrillas lawful, if they have responsible commanders, are recognizable as such, carry arms openly, and conform to the customs of war.

This act of Russia at Tabriz is a flagrant outrage. These men—the high Moslem ecclesiastic, Shegat-ul-Islam, and the scholar Sheik Salem, and the other fourteen leaders hanged with them—are patriot martyrs of liberty, and the action of Russia deserves the severe condemnation of the world.

An Extraordinary Biblical Discovery

THE meeting during the holidays of the Society of Biblical Literature and Exegesis was notable by an announcement of interest to students of the biblical text and of Church history, made by Professor Hyvernât, of the Catholic University in Washington. It was nothing less than the account of the acquisition

by the J. Pierpont Morgan Library, in this city, of practically the entire library, consisting of about fifty volumes in good condition, of the old Coptic Monastery of St. Michael, in the Egyptian Fayyûm.

While grubbing in the ruins of this monastery a year ago a company of natives came across a receptacle of manuscripts, mostly of parchment, partly of papyrus, remaining uninjured where they had been hidden by the pious monks during an attack in which their monastery was destroyed. As usual, the Arabs divided the treasure among themselves, knowing that they could thus get a bigger price. When they began very quietly to seek purchasers the discovery became known to a few, as also its value. Thru his agent, Mr. Morgan gathered in very nearly the entire collection, and for about a year Professor Hyvernât has been engaged in its study. He is our principal American scholar of the Coptic language, the successor to the popular speech of the ancient Egyptians; and he is one of the chief editors of the magnificent series of the Oriental Church Fathers, Syriac, Coptic, etc., which is now being issued at Paris under Catholic auspices.

Professor Hyvernât found all these manuscripts to be in the Sahidic dialect of the Coptic language, and to belong to a period from the eighth to the tenth century of our era. The Sahidic was the dialect of Upper Egypt, as the Fayyûmic was of Middle Egypt, and the Bohairic of Lower Egypt. The larger portion of these manuscripts are, fortunately, of the Bible, and they cover all the New Testament except the Revelation, and large parts of the Old Testament. While extensive portions of the Bible in other Coptic dialects had been preserved, there had comparatively little been found of the Sahidic; and yet it is the most important of the three. This translation is supposed to have been made in the second century of our era, the Old Testament from the Greek Septuagint, and so is of about the age of the Syriac and the Old Latin, and is of prime value for the study of the original text of the New Testament and for that of the Septuagint, which is the oldest of

all translations of the Old Testament. The absence of the Revelation is of interest, for it was also absent from the Syriac Peshitto, and we have it in Syriac from a later translation, as it was the last book received into the Canon. The bulky nature of manuscripts of parchment required that the entire Bible should be broken up into a number of volumes, and these are written in large and generous script, and with illuminations, ornaments and elaborate bindings. These are the oldest dated Coptic manuscripts known, and the fine bindings are the choicest and oldest examples in any library.

Besides the biblical manuscripts, there are others of a liturgical character: a lectionary, a breviary and an antiphonary, all complete; also some nine or ten treatises by the ancient monks of Alexandria, which give us fresh knowledge of the saints and martyrs honored by them, such as the lives of St. John, and St. Pachomius, and one on the investiture of St. Michael, after whom the monastery was named, as the head of the heavenly host. These, with the full colophons, written not in the Sahidic, but in the colloquial Fayyumic dialect, will give us an immense amount of new knowledge as to the history of this early branch of the Christian Church, while the pictures of saints illustrate their art.

These remarkable treasures will be published by Mr. Morgan in his usual admirable way, and will form an important part of the series of volumes which have already begun to be issued from his extraordinary collection, which contains only the rarest and choicest objects. It is greatly to the credit of American scholarship that so wise and munificent a collector as Mr. Morgan is to be found among us, and that we have an American scholar, tho of French birth, as competent as is Professor Hyvernat to edit this new and most important collection of biblical and patristic manuscripts. We congratulate New York on the acquisition of this rich treasure, and the Catholic University at Washington on its possession of a scholar competent to edit it. To discover one ancient book is much; to find a whole library is most extraordinary.

Sanitation and Longer Life

THE New York City Department of Health is deservedly proud of the health statistics of the Greater City for the year that has just closed. The death rate for 1911 was only slightly above 15 per 1,000. As it is scarcely more than a decade since a death rate of over 20 per 1,000 was not unusual in large cities, and reductions below 20 were hailed as triumphs of sanitary science, it is easy to realize how highly satisfactory our last year's statistics for Greater New York must be considered. In one month of the year, that of October, the death rate was actually below 13 per 1,000 of population. Indeed, with the deaths of non-residents eliminated, for New York's hospitals and great physicians and surgeons attract many invalids to the city, the death rate was below 12.80 per 1,000. October is, of course, one of the healthiest months of the year, and it would be unfair to compare it with other months. It is quite fair, however, to compare its death rate with that of preceding Octobers. In its recent Monthly Bulletin of the Department of Health of the City of New York (Vol. 1, No. 11) the Bureau of Records said: "Comparing the mortality in October, 1911, with the average of the corresponding month of the previous thirteen years—since the formation of the Greater City—corrected to correspond with the increase in population, the fact stands out prominently that the mortality during the past month was lower than that of any month of the period in question, the next lowest being that of October, 1910. The average death rate for the thirteen Octobers was 15.97 per 1,000, against 12.99 in that of 1911, the latter showing a decrease of 2.98 points per 1,000; that is, if the former rate prevailed during October, 1911, there would have been 6,718 deaths reported as against 5,495 which actually occurred." As a distinguished vital statistician once said under similar circumstances, there were actually 1,223 people alive at the end of October who, according to older ideas, had no business being alive; that is to say, if the death rate of the fore time, with which every one was quite satisfied,

had continued, they would not have been alive.

It is rather interesting to compare the improvement in New York's health as exhibited by the number of deaths during the past ten years. If the average death rate of the last ten years had prevailed there would have been a great many more deaths in New York during the year that has just closed. The decennial rate would have given us altogether 88,980 deaths. The actual number of deaths for the last year was 75,423. The statistician of the Department of Health makes a correction for increase of population during this time, so that what we have here are the actual figures. Altogether; then, during this single year of 1911, in spite of the intensely hot weather of July and most of August, there have been 13,527 less deaths than would have taken place if there had not been a great improvement in the health of New York City during the past decade.

That this saving of life and improvement in health has actually been due to sanitary regulations can be best judged from the fact that the greatest decrease in death rate has taken place among the contagious, infectious and preventable diseases. The mortality from typhoid fever, smallpox, measles, scarlet fever, diphtheria and various forms of infectious sore throats and from tuberculosis is much less than during the past decennium. On the other hand, the diseases that do not come under sanitary regulation have considerably increased in their death rate. Among these the most noteworthy increases are in cancer, organic heart disease, the various kidney troubles that are grouped under the term nephritis, and cirrhosis of the liver. The death rate from pneumonia has decreased to a noteworthy degree, and this is probably due to a greatly lessened prevalence of influenza during the past year than during preceding years.

In general, New York may very well congratulate itself on the very satisfactory amelioration of living conditions within the city. The powers of the Department of Health have been gradually growing during the past decade, and it is indeed satisfying to find that its additional regulations are having the expect-

ed effect. New York's death rate now compares with that of any large city in the world that is in its own class of over a million of inhabitants, and only a few of the smaller cities, particularly favorably situated, surpass its record. It will surely give confidence to every inhabitant of the city to live up to the best that is in him to be told that the municipality is taking care that every possible hindrance to his success and happiness in the way of illness is being removed from his path.

Co-operation in Theological Instruction

THE movement toward consolidation of theological work made in the past few years is most significant. Since 1855 there has existed a liberal interchange of work between Northwestern University, of Evanston, Ill., and Garrett Biblical Institute, located on the university campus. A student candidate for the degree of Doctor of Philosophy, on the completion of two full years at the Institute, by a vote of the faculty of the Institute accepting him as a candidate for the degree, must complete his course by two full years' work. Of this work two-thirds must be taken in one department of the Institute, and the remaining one-third may be taken in not more than two departments of the Institute or of the College of Liberal Arts of the university. Students in the Swedish Theological Seminary, Evanston, Ill., in co-operation with the Northwestern University, are admitted to all of the advantages of the university. The students of the Norwegian-Danish Theological Seminary, affiliated with Garrett Biblical Institute, are admitted to classes of the College of Liberal Arts of the university for which they have proper preparation.

In the alliance of Harvard Divinity School and Andover Theological Seminary the latter does not in any degree lose its autonomy or identity, but by the removal of Andover Seminary to a new site close to Harvard University a most intimate co-operative arrangement between the two institutions is established. The location of Berkeley Bible Semi-

nary, Pacific Coast Baptist Theological Seminary, Pacific Theological Seminary and Pacific Unitarian School for the Ministry in close proximity to the University of California invites a co-operative arrangement that may work in two ways: The co-operation of each of the above-named institutions at Berkeley with the University of California is very cordial; the theological schools and the university with each other, especially in the case where a particularly strong man is the dean of a given department.

The establishment of Wesley College, providing instruction in biblical languages, philosophy, theology and Church history, adjoining the University of North Dakota, is another illustration of the movement. The university permits credit for work done in Wesley College, and on the completion of a prescribed course, together with credits earned in the university, the degree of the college may be conferred on the student. The affiliation of Union Theological Seminary and General Theological Seminary, New York City, with Columbia University and New York University along lines of sociology and philanthropic work, and the recent agitation of the question whether or not Meadville Theological School, Pennsylvania, shall be removed to the West, with the possibility of an affiliation with the University of Chicago, still further illustrates the trend in the movement toward the location of theological schools close to leading institutions of higher learning and within or near great centers of population. A large understanding of men of all classes and conditions can only be gained by such actual knowledge as can be found near large centers; and men trained merely in the seclusion of lecture and library will have great difficulty in holding their own in the new and severe competition.

Is Mr. Roosevelt a Candidate?

WILLIAM J. BRYAN'S name was placed on the Democratic Presidential primary ballot in Nebraska, last week, by a petition filed with the Secretary of State. Immediately afterward, his brother, Charles W. Bryan, said:

"This was done against Mr. Bryan's wishes and without his knowledge. Both the Secretary of State and Mr. Arter [whose name stood first on the petition] will be asked to have the petition withdrawn. There will be no legal proceedings unless they should become necessary."

William J. Bryan was in the South. At Charleston, that night, he said:

"My brother did the proper thing in entering a protest. They have no business to put a man in as a candidate unless he wishes to be one."

He has declared that he "cannot conceive that any condition which could arise would induce" him "to become a candidate this year."

At an earlier date Mr. Roosevelt's name was placed by petition on the Republican Presidential primary ballot in Nebraska. He could have written to the Secretary of State, asking him to remove it, or he could have sought to compel the removal of it by legal proceedings. He has taken no such action. It is now asserted that his name will be on the primary ballots of Oregon, California, New Jersey and North Carolina. The prediction is made that it will be placed on the New Jersey ballot by the Progressive League of that State. Everett Colby, a prominent member of the League, says that this should be done.

Mr. Bryan desires it to be known that he is not a candidate and cannot be induced to become one. He asks that his name be crossed off. If Mr. Roosevelt is not a candidate and cannot be induced to become one, in opposition to Mr. Taft, the time has come for him to say so. An inviting opportunity was offered when his name was put upon the ballot in Nebraska. He failed to take advantage of it.

There is a widespread belief that he is a candidate. This belief tends to build up opposition in the national convention to the renomination of Mr. Taft. The movement in favor of Mr. La Follette will probably give him only a small minority of the convention's delegates, but, owing to the belief mentioned above, it is now expected that several States will send unpledged and unstructured delegations. Men who seek the nomination of Mr. Roosevelt are saying that they can already see enough of these unpledged delegates to make, with

those who will stand for La Follette, about one-third of the convention.

Mr. Roosevelt has declined to answer the question whether he is a candidate. One of his intimate friends, Mr. Lawrence Abbott, said, on the 4th inst., that he was not, that he did not desire to be one, and that he had discouraged all talk of his candidacy. If Mr. Roosevelt should ever again be elected President, he added, it would not be because he sought or wanted the office, but because the country wanted him "to perform a certain job." But when Mr. Abbott was asked a day later to say whether Mr. Roosevelt would accept a nomination, he replied: "I don't know. I don't believe Mr. Roosevelt himself knows." To a similar question, Mr. Gifford Pinchot makes the same response.

Some think that Mr. Roosevelt regards the declaration made by him immediately after his election in 1904 as a sufficient indication of his present attitude. He said then:

"On the fourth of March next I shall have served three and a half years, and these three and a half years constitute my first term. The wise custom which limits a President to two terms regards the substance and not the form, and under no circumstances will I be a candidate for or accept another nomination."

But Mr. Roosevelt knows that, in the opinion of many of his friends, this declaration should not prevent him from seeking a nomination now, or from accepting one now for a second "elective" term, which would not really be a third term, and which would be separated from his earlier service by the intervening term of Mr. Taft. Is his opinion about this in agreement with theirs? Many would like to know.

Mr. Taft is a candidate for renomination. There is no room for doubt about that. He has permitted it to be known that "nothing but death" can keep him "out of the fight." His renomination would be assured if there were no room for doubt as to Mr. Roosevelt's attitude and purpose. Even if Mr. Roosevelt should openly announce his own candidacy, he might not be able to overcome Mr. Taft in the June convention. So long as his attitude shall remain undisclosed, however, there must be some uncertainty about the convention's action.

There are indications that those who

desire his renomination are at work in many parts of the country to promote it and thus far there has been no evidence that they are doing this with his disapproval. It is asserted that the Progressive movement in the party is in some places a cover for a Roosevelt movement. Many see much significance in the successful opposition, at the recent meeting of the Ohio Progressives, to an indorsement of Mr. La Follette as a candidate, and in the fact that this opposition was led by Mr. Garfield and Mr. Pinchot. Press correspondents, in their dispatches from Washington, say the politicians there are convinced that Mr. Roosevelt is seeking the nomination. If he is not, and if he does not oppose the renomination of Mr. Taft, we think he ought to say so.

The Moving Picture Movement

It would take the kinematograph itself to record the rapid development of this newest of the fine arts. In taking editorial cognizance of its progress every few months we can only call attention to a few of the more striking novelties. Most conspicuous among these is the solving of the problem of color reproduction. We believe it may be fairly called solved, for moving objects are now photographed in their natural colors, altho not all of them are correctly represented. To obtain a perfect reproduction of all shades would require an exposure three times as rapid as the ordinary, that is to say, about a fiftieth of a second, and this is practically impossible, since the photographs have to be taken thru colored ray filters, which absorb a great deal of the light. The three-color process has, therefore, not yet been successfully commercialized, but a very fair substitute is found for it in the two-color process called the "kinemacolor." The two colors selected for this purpose are orange and its complement, which can only be defined as "white minus orange," a bluish green. The photographs are taken on a single roll of film alternately thru filters of these tints and afterward projected thru screens of the complementary color. These successive views ordinarily fuse together to the eye, altho there is some-

what more flickering than in good black and white work. But when an object moves too quickly, the separate colors appear. Sometimes this produces a curious effect, for when a man walks across the foreground one leg is red and the other blue, as tho he were a soldier in a motley Franco-American uniform. The kinemacolor comes as near to catching all tints as a two-color printing process, and is of course smoother in detail because it is photographic, not lithographic. In the pageants and reviews connected with the Coronation, where it was first employed, the scarlet coats of the British soldier, the green of the grass, the brown of the ground, and the blue of the waves, were admirably rendered, but nobody would have suspected that there was any gold or brass about uniforms and armament, for yellow is left out from the kinemacolor spectrum.

The Italians have taken most enthusiastically to the motion picture. Convenient and attractive little theaters are to be found everywhere in Italy, and regularly attended, for the kinoscope journal presents the news daily in the form of pictorial scenes, often more interesting and always more accurate than the best reporter could do it thru type. The visits of royalty, the marching of troops, the launching of ships, the flights of aeroplanes, the burning of buildings, the racing of horses, the unveiling of monuments, anything of a spectacular nature, which can be reached in time, is promptly produced on the screens everywhere, and often seen to much better advantage than by the most favored spectators. How seriously the Italians take the subject is shown by their efforts to reproduce worthily in it their great national epic, the Divine Comedy. A group of Milan artists are said to have expended a year's time and \$100,000 in the preparation of these films. They certainly show the marvelous capabilities of the new art. The grottos of the Bay of Naples and the smoking craters of Vesuvius afford a suitable setting for some of the infernal scenes, and we see Virgil and Dante passing thru acres of naked human forms writhing upon the lava beds, or ferried across a lake filled with despairing sinners that cling to the boat with

hands and teeth. As in the poem, so in the pictures, Inferno is more easily depicted than Paradiso. The kinoscopist seems competent to make real anything in the lower regions that Dante or Doré could imagine; the demons fight in mid-air, doomed souls see visions of the sins that brought them there, the giant Anteus picks up Virgil and Dante on his palm and lowers them into the ninth circle, the decapitated Bertran de Born carries his grimacing head in his hand like a lantern, and finally at the center of the earth there is Lucifer, eternally Fletcherizing that tough morsel, the head of Judas, whose feet are kicking out between his teeth. Demonology always contains an element of the ludicrous, and the torments invented by medieval theologians fail to frighten us nowadays. Still, the scenes thus vividly presented retain sufficient of the horrible to send women of very sensitive nerves into a faint or out of the theater.

But kinoscopy is not only a new form of the drama and a new method of journalism, it is a new instrument of science, comparable in importance to the telescope and microscope. For, just as the unaided eye is incapable of seeing things far distant or very minute, so it is also restricted in the scope of its perception of motion. Change is imperceptible to us when it is either too fast or too slow. When man acquired control of spacial relations by means of lenses enabling him to enlarge or reduce to suit his purpose, the realm of the invisible was opened to his gaze in both directions, toward the stars and toward the atoms. Now he has for the first time brought time under the same control as space, and by means of the magic strip of film he can retard, accelerate or reverse the course of events at will. He has acquired a "time machine" almost equal to that imagined by Wells years ago. The growth of a plant, the progress of a disease, the development of an embryo, the engulfing of a microbe by a phagocyte, the formation of a crystal, the erection of a building, the expansion of a railroad system or of an empire, all such changes, too slow for actual appreciation, can be speeded up and brought within the scope of a few minutes by taking the photographs at sufficiently long intervals and running them off at any rate desired. On the other

hand, motion too swift for human eye, the legs of a racehorse, the arm of a baseball pitcher, the passage of a bullet, the breaking of a bubble, the beating of an insect's wing, can be slowed down and studied step by step. It is wrong to regard such an instrument as this as a mere means of entertainment, and it is a great mistake to impose upon it, now in its infancy, such legislative restrictions as would confine it to the theater and practically exclude it from the school, the church and the family circle.

The Tamagami Tenderfoot

JULIAN HAWTHORNE, Josiah Quincy and their associates in the Tamagami-Cobalt Mines, Limited, may be convicted in the criminal branch of the United States District Court of conspiracy to defraud and fraudulent use of the mails, or they may not be. The thousands of tenderfoot investors who have contributed \$3,000,000, more or less, to the literary and academic exploitation of Canadian resources will presumably escape with such damages as they have already sustained. This is a pity. There ought to be due process of law thru which their names should appear in the trial of the defendants now at the bar.

Mr. Hawthorne is a son of Nathaniel Hawthorne, who sat at the receipt of custom in the town of Salem, Mass., and wrote novels. Josiah Quincy also comes of Puritan stock and Harvard University. He has been a member of Congress, was First Assistant Secretary of State under President Cleveland, was for four years Mayor of Boston, and is now a member of the Boston Transit Commission. That men of such ancestry and social standing should be compromised by the inordinate desire of inexperienced investors to get rich quick is deplorable in the extreme.

It would be an undue extension of the paternal functions of government, we suppose, to forbid college professors, high school teachers and the literary element in ladies' clubs to excite their imaginations by reading mining stock fiction, but there are less drastic ways of shielding them from mental and moral—and incidentally economic—ruin, and some way should be found. The public

has long been familiar with the kid who buys a bowie knife and a belt and goes forth to slaughter Indians because he has been allowed to read dime novels, and many excellent devices have been invented to catch and save him before he is utterly lost. Surely, if philanthropic effort is worth while in his case, it is even more important in behalf of the tenderfoot investor, because, as the sorry instance now under consideration proves, the ruin of the tenderfoot investor inevitably involves and compromises distinguished reputations. It would have been far better that every one of the investors in the Tamagami-Cobalt enterprise should have been personally appealed to and perhaps even impertinently instructed by his pastor (or other discreet friend) than that Mr. Julian Hawthorne and Mr. Josiah Quincy should have been indicted as common criminals in a Federal court.

It is plain that education in America has not yet accomplished all that we have a right to demand of it. It should not be possible for children to get thru all the grades of the public schools—and the Sunday schools—and become themselves instructors of youth and leaders of the literary element in ladies' clubs, with minds and characters so little disciplined that they can by thousands be led astray by such crudely sensational fiction as Mr. Julian Hawthorne's abhorrent story of "The Secret of Solomon."

It is true that anonymous critics have described this work as "delightfully written" and as containing "many pithy epigrams." The quotations that have appeared do not bear out this judgment. One of them is: "The only way to get money is to dig it out of the ground." Another is: "Nathaniel said to Julian, 'Whatever else you do, don't try to make a living by authorship.'" Now, these epigrams are not, strictly speaking, pithy. They are examples of the trick of meaning the opposite of what you say, and the quality of this trick, when employed for literary purposes, depends entirely upon the subtlety with which the humorous idea is exprest. In this case there is no subtlety at all. Mr. Hawthorne has not dug any money out of the ground. That is why he now stands indicted. Moreover, it is clear that, what-

ever else he has done, he has disregarded his father's warning and has tried to make his living by authorship.

No, the case is clear, and it is a sorry business. American education is a pretentious thing. It is portentously organized and it costs a great deal of money. But for some reason or other it is not delivering the goods. It permits youth to struggle thru its labyrinthine curricula and grades, and when they are thru and out to mistake "The Secret of Solomon" for a true account of how to get something for nothing. Then their lives are embittered by failure, and, worse than all, their folly and ignorance tempt their cleverer fellowmen really to get something for nothing, including now and then an indictment.

The Monetary Commission's Plan

At the meeting which preceded the completion of its report and bill, the National Monetary Commission added to the latter a provision restricting the power, in the proposed Reserve Association, of any combination or chain of banks. A group of banks controlled by one man or by a syndicate of capitalists can have but one vote. Within the last few months the commission's original plan has been repeatedly modified and revised, the purpose of these changes having been to set up all possible safeguards against control of the Reserve Association by powerful financial interests and to meet the objections of those who asserted that the plan was designed to give such control to "Wall Street." So it has come about that New York, with more than 30 per cent. of the country's banking power, has only 10 per cent. representative power; that all the Northeastern States have less than 25 per cent. and that the South, whose banking power is 10 per cent., has 23 per cent. in the association. Surely the commission cannot justly be accused of favoring the banking interests of the New World's money center. It is unfortunate that the revised and perfected plan must encounter in the halls of legislation the opposition of so much prejudice and partisan hostility that acceptance of it, even with amendments, cannot be expected during the

term of the present Congress. Reform of our patchwork currency system is sorely needed. The character of much of the opposition is indicated by the attempts of a House committee to show that the panic of 1907 was "manufactured" by New York bankers and capitalists to serve their selfish purposes, and by the movement for an investigation of what Representative Lindburgh calls the Money Trust. It is indicated also by the speeches of Mr. La Follette, who asserted last week that the panic had been "manufactured" in order that the Steel Corporation might get possession of the Tennessee Coal and Iron Company, and that the entire business interests of the country are controlled by less than 100 men, who dictate prices for buyers and sellers. Legislators who ask the public to believe such assertions, which are their political stock in trade, would not consent to the adoption of the best currency and banking system that could be devised by competent men.

Restraint of Religious Liberty

Last week the woman who let her child die without any medical treatment except the present and absent treatment of a Christian Science healer was released on the ground that she meant no ill and did not know any better. But the child died, and the jury thought we ought to have some law to prevent such deaths. A few days before, the fanatic Sandford was sent to prison because he let the dupes in his vessel die for lack of food; for he said and believed that God told him to pass on without stopping at a port for fresh provisions. In both of these cases religion was concerned. In one case the man was imprisoned, and properly, for following his religion; and in the other the woman was not punished, but blamed, and the jury advised that the action taught by the religion be limited by law; and yet we believe in religious liberty. But religious liberty, like other liberty, must have its limits. It is religion which made Hindu widows burn themselves on their husbands' funeral pyre and Hindu mothers throw their babes to the crocodiles; but the British Government forbids the free exercise of such religious liberty. Gov-

ernment has rights as well as has religion, and one right is to defend the lives and welfare of its people. When religion is beneficent or innocent it must be protected; but when religion disturbs the peace or menaces health or life, and thus runs athwart the one object for which government exists, such overt acts cannot be allowed, and such pernicious religious liberty has to be put under restraint.

Government Forestry That our Government is engaged in agricultural work on its own responsibility, altho it is looking for its crop only once in forty years, the people hardly realize. Ten thousand acres of trees are planted by the United States as a corporation every year, and it has been doing this sort of work for some time. This year fir trees are almost altogether the choice of the planter, but last year walnuts and hickories were planted. The intention is to keep on the heels of disastrous fires and other destructive forces, and set the trees at work again before erosion has made our hillsides incapable of growing any vegetation whatever. This is a practical sort of conservation, and there is a vast profit in it, by and by. It is an investment of the people, and for the people. It costs less than \$2 to plant an acre of barren land, with the trees 7 feet apart. Along the Coast Range, where fogs are the rule, it is estimated that every tree planted will return an average of 1,000 feet of lumber, worth \$2, as stumpage, inside forty years. It takes ninety trees to the acre, and this means that the lumber will be worth \$180 to the acre. Today this land is not worth \$1 an acre. The planting is done by lines of fifteen men, each armed with a heavy hoe and a bag of seed. They aim to keep a space of about seven feet from each other, leaving the hills 7 feet apart; in this way making a sort of orchard of fir trees, all in lines and easily cultivated. These men cost the Government about \$3 a day and, working as they do systematically, each acre planted will cost less than half a dollar. The plan of setting out young trees is considerably more expensive. The work that has been done during the

last three years shows scarcely the loss of a single hill, and trees started from seed, as a rule, make the best trees.

The Deadly Automobile

It is the general impression that of the species of vehicular traffic the automobile is more deadly than the mail and other wagons. Perhaps it is, for even yet there are not in our cities as many automobiles as of vehicles drawn by horses, altho on the main streets they seem to fill the way. But in the number of accidents and deaths caused in this city automobiles fall behind the wagons. Last year there were 142 deaths caused by automobiles, while wagons caused 172 deaths and trolley cars 109. Of course many of these accidents were caused by carelessness of chauffeurs and drivers, but half of them were of children under sixteen, and when children play in the streets, as they have to, and run in front of a vehicle, the most careful driver cannot avoid hitting them. We need laws and judges which will see to it that carelessness is punished. Those on foot have the first right of way, and it is the double duty of drivers to take care not to hit them. Yet civilization and improvement cannot be halted by such mortality. We must not blame a useful business because it kills some people. The fishing city of Gloucester, Mass., is an illustration of the fact. It is full of the widows and orphans of men drowned on the fishing banks. The Gloucester fishermen took a hundred million pounds of fish in 1911, and it cost the lives of sixty-two seamen, who left twenty-two widows and forty-four orphans. And yet we must have fish. Those who eat it should provide for those widows and orphans.

The Carnegie Peace Foundation

The organization to which Mr. Carnegie gave ten million dollars to aid the cause of international peace has presented a reasonable program. It does not propose to act as a rival to existing societies, but will rather aid them. Large plans are in view to make good use of the near half a million of annual income. The larger part of

the expenditure will be in foreign lands. There will be three divisions of work, one of Intercourse and Education, one of International Law and a third of Economics and History. The first of these will be directed by President Butler, of Columbia University, but will work chiefly thru the reorganized American Peace Society. The division of International Law is directed by James B. Scott, late of the Department of State in Washington; and Prof. John Bassett Moore has been invited to prepare a collection of all arbitration treaties as a basis of precedents for future arbitration. There will also be a school of international law at The Hague, with lectures by the most distinguished scholars. Prof. John B. Clark, of Columbia, will be in charge of the department of Economics and History, and will study the historical and economic causes of war. Such questions as international loans and their use for gaining influence over other states, the position of organized labor and of Socialism on war and armaments, the effects of war on the supply of the world's food, the influence of the open door, the burden of armaments, and the relation of military to civil expenditures, indicate the scope of this department. This peace foundation cannot buy off war, but it can educate the nations to see its evils and avoid it.

Dickens The life of Dickens began in a grim year—1812—and ended in another grim year—1870. The year of his birth was darkened by the war between America and England, and by Bonaparte's disastrous campaign in Russia. The year of his death was that of the Franco-Prussian War. But the life of Dickens, bounded by these years, was not a sinister one. On the last page of one of Arnold Bennett's novels, two men discuss the character of the hero: "What has he ever done?" the first inquires; "he never did a day's work in his life." To which the other responds: "He is engaged in the great work of cheering us all up." That was Dickens's work—as Professor Phelps, in quoting the Bennett book in a centenary essay on the great English humorist, most aptly remarks;

"Life was inexpressively sweet to him, and he had a veritable zest for it. He loved the streets of London because they were filled with crowds of men, women and children. His zest for life is shown in the way he describes a frosty winter morning, the pleasant excitement of the departure of a coach, and the naïve delight he takes in the enormous meals his characters devour."

Now that there remains no **Ireland** urgent reason for a reduction in the population of Ireland—for Ireland is now underpopulated—the movement still flows on, to the alarm of Irish patriots. To many Irish folk America is far nearer in imagination than is England. A Nationalist member of Parliament, Mr. Stephen Gwynn, tells of being unable to find any penny postage stamps at a post office in Connemara. That was before two-cent postage between the United States and the United Kingdom was fixt upon, and all the village's correspondence was with the States. The depopulation of Ireland has its sad side. A great while ago, Lady Wilde, in a poem called "The Exodus," wrote:

"'A million a decade!' Calmly and cold
The units are read by our statesmen sage;
Little they think of a Nation old,
Fading away from history's page;
Outcast weeds by a desolate sea—
Fallen leaves of humanity.

"'A million a decade!' What does it mean?
A nation dying of inner decay—
A churchyard silence where life has been—
The base of the pyramid crumbling away:
A drift of men gone over the sea,
A drift of the dead where men should be."
America is the new Ireland—as Dion Boucicault recognized fifty years ago in his "Peasant Woman's Song":

"I'm very happy where I am,
Far across the say,
I'm very happy far from home,
In North Amerikay."

America is the new Ireland—as it has been the new Sweden and the new Germany and the new Italy; and as it is fast becoming the new Russia, and—shall we add?—the new Jerusalem.

Ulster Defiance The Unionists of Ulster, who would have it that home rule for Ireland meant disunion and secession, now are organizing rebellion themselves. The

Unionist Council of Ulster has issued a manifesto declaring that never, never will they submit, now that home rule seems to be near at hand. They declare that as soon as a home rule measure has been passed by the Parliament, a provisional government will be constituted which will refuse to recognize the act of Parliament, and that "the most extreme measures" will be resorted to for the defense of Ulster. What are "the most extreme measures"? Does that mean resistance by arms? It sounds like it, as the Ulster Orangemen have enjoyed fights in the past. We cannot but believe that all this is bluster and braggadocio. Such action would be as revolutionary and seditious as anything attributed to the Clan-na-Gael. There is no sort of danger that an Irish Parliament would do any wrong to the Ulster Protestants, and the world is old enough to let religious wars come to an end. In this country Protestants and Catholics can live together in peace in the same State, even Irishmen, and why not in Ireland?

Sunny England The English papers are commenting upon the astonishing amount of sunshine in December. Some of them are inclined to view with favor the climatic change; others, truer to the traditions of the British press, complain of the "unseasonable weather." During the first three weeks of December the sun was sufficiently bright to make its mark upon the sensitive paper in the sunshine recorder at Westminster for an hour and a quarter a day on the average. This is ahead of the record years of 1893 and 1909, when there was a little less than an hour a day of bright sunshine. The average for the past twenty Decembers or more is only twenty-five minutes a day, and some have fallen much below this, for example, 1903, when the sundials were working only seven minutes; 1884, when they had a three-minute day; and 1880 and 1890, when they were laid off the whole month on account of a lockout by the clouds. No wonder that the inhabitants of "the City of Dreadful Night" are astonished at such an unprecedented clearing of the atmosphere,

but we will try not to be envious of their good fortune.

Parcels Post Abroad In Switzerland they have parcels post, and it is very popular. Parcels weighing one pound or less are carried for three cents, and one weighing 40 pounds can be carried for 30 cents. We are told that the small shopkeepers like it. Parcels weighing 10 pounds can be carried from Switzerland to Chicago for 83 cents, and they would come by a fast mail steamer, but to send such a parcel from Chicago to Switzerland would cost several dollars, for it would have to go by express, and that means by freight steamers and freight trains in Europe. The parcels post is very popular in Europe. So small a country as Denmark reports 5,890,446 parcels sent in the year 1909-10, with a value of \$57,333,023. In the provision for the convenience of the country by parcels post we are behind the civilized world, but we can retort to other countries that we have large and rich express companies to beat the world.

The Russian Way in Persia The Russian way in Persia is less blustering, as shown by Dr. Cochrane's letters, and, we imagine, more effective:

"The Russian priests have so far visited ten villages. In all of these they have called the people together and have invited them to enroll themselves as candidates for membership in the Greek Church. They inform the people that they have been sent in response to numerous invitations from the Nestorians, who are desirous of joining their Church. Then they read to them the 'Confession of their Faith' and tell all those who desire to do so, freely and of their own will, to give them their names. If this were all, they would do little harm and would get but few followers. But, on the one hand, there is an in-born conviction on the part of the Christians here that political salvation is to come to them at the hands of the Russians, and that it is now at hand. . . . They promise the most delightful conditions of citizenship to those who give their names, absolute freedom from all oppression and from all fear, while at the same time they threaten with all manner of evils those who do not come over to the Russian side."

Again:

"Whatever the Russian Church does in Persia, and it is likely to do more and not less

than it has already done, politically. Russia is tightening its hold upon the country and government. The railroad of Erivan is now completed and the contracts for work on to Julfa are being given. In Eastern Persia, along the Afghan border, there are railroads planned, and even on the Persian Gulf the Russians are more or less active. But where their influence and power are felt most is thru the representatives at the Court in Teheran and in the larger cities and in the loans which they make to them."

This is from a letter dated December 18, 1901. And once more:

"Already the Russians control the administration of the customs, with the Belgians as their agents. Also of the postal service. The large loans which the Persian Government has secured in Russia and Belgium give the Russians again a powerful hold upon this country. . . . Strong feeling prevails among the ruling classes as well as among the peasants, that Persia is practically in the hands of the great Czar, to do as he pleases with it."

This is dated from Urumia, June 3, 1903. These extracts are sufficient to show that the situation that exists today has long been preparing. And the world is invited to look upon what will evidently be the end of a nation, if not of a people, that has had a distinguished career in the past, and played a great role in the destiny of the ancient world.

Very properly President Taft let it be known that he intended to nominate Judge Hook, of Kansas, for promotion to the Supreme Court, for that gives the public the chance to criticise or approve the selection. The President will judge of the criticisms, and we trust him to do it wisely. Yet the question with him will not be whether the decisions rendered by Judge Hook are what the President or the people would desire them to be, but whether they are in accordance with the law and the Constitution. Those who ride in the cars will like a two-cent-a-mile State law, but it is not the question what they would like, but whether such a law meets justice and the Constitution, which is quite a different thing. To say that a decision of a judge does not allow what the people want is no argument against it. That is not what judges are for. We would all like a one-cent fare.

Japan takes the lead of the nations in reducing its appropriations for the army and navy, and it is to be wished that other

nations might follow the example. But not for the same reason, for we judge that pacificism has nothing to do with it. The Japanese have been taxed to the very limit of endurance. The revenue and expenditure of the country are estimated at \$530,000,000 yen annually (\$265,000,000), while the total exports are only about 400,000,000 yen (\$200,000,000). The revenue of Great Britain is only one-fourth of the exports; that of France is about the same, and only in Spain, Italy and Russia does the revenue slightly exceed the exports, while in no other country is the excess equal to 20 per cent., as in Japan. The present Cabinet is absolutely compelled to retrench, in fear of bankruptcy. A shortage of money is a deterrent to war.

In an interesting article in the new *International Review of Missions* President Harada, of the Doshisha College, discusses "Christianity in Japan," its obstacles and its hopefulness. We are specially interested that among the things desirable is visits to Japan of men of standing, not Christian teachers alone, but leaders in the business and political world, in industry and applied science. As Christian men they would have influence with Japanese in similar lines of enterprise. And, again, he believes that Christian forces should pay more attention to international peace. Deep-seated international prejudices, says President Harada, are not confined to the Japanese, and from the standpoint of both religion and politics it is a prime duty to remove these prejudices which stand in the way of peace.

In a chest at the Naval Academy in Annapolis there have been stored 150 flags and ensigns taken in battle or after battle since 1798. That period covers the War of 1812, the Mexican War, the Civil War and the Spanish War. They are invaluable historical relics, but they are ill-preserved, some much moth-eaten, and Commander Cole, U. S. N., of the Committee on Memorials and Exhibits, after a careful study, finds that they need to be backed with fine linen sewn on with silk, which for material and labor would cost over \$25,000. Then they could be displayed, and might last

as long as the Bayeux Tapestries, which were embroidered nearly a thousand years ago. The sentiment is worth the money, and Congress should appropriate it.

Academic exchange is effective today, not only between the universities of the United States and those of Europe, but between the latter and South American institutions. Prof. Antonio Dellepiane, of the University of Buenos Aires, is the guest of the University of Paris, and has just concluded a series of lectures on "The Theory of Progress." Two French professors have visited the younger institution: MM. Martinenche, of Paris, and Duguit, of Bordeaux. But there is nothing new about this cosmopolitanization of culture. The Middle Ages had the ragged cosmopolitan, the student who walked his way from faculty to faculty. Distances are greater nowadays, and scholars voyage by ocean greyhound and cattleship.

Vocational education is all right, and the Illinois Bankers' Association is quite right in demanding that the next session of Congress advance such education from a national standpoint. Farmers endorse the movement, and believe it should be applied along the line of conservation of our national resources. There is no call for national agricultural universities, or anything of that sort—not at present. The Agricultural Department at Washington sufficiently correlates the State colleges and experiment stations. There might, however, be a change about, giving to agriculture the \$300,000,000 that now goes to war, and to war the \$30,000,000 that has gone to agriculture. Why not?

At the Royal Academy art schools last year the women pupils gained most of the prizes, ten out of fourteen for painting; the men's prizes went for sculpture and architecture. The president, Edward Poynter, does not like it, and in bestowing the prizes he scored the men roundly. He said to them:

"The female students are in earnest and work hard; the men are slack, and either do not know how to work, or do not sufficiently care. . . . I believe that while the men talk

and believe themselves superior the women are busy and win."

We have heard similar reports in our co-educational institutions.

The Englishman who made his first visit to New York recently by the "Lusitania," and went back on the same boat thirty hours later saw all he could in a bird's-eye view of the city; but he was beaten by that other stranger from up the river who went down in the subway and returned by the same route, boasting that he had had a worm's-eye view of New York.

Count Boni de Castellane went prancing to Rome confident that he would get an annulment from the Pope of his marriage to Anna Gould; and he has had to return crestfallen. It was she that got the divorce and was given charge of the children, and for good reason; and it is to the credit of the Church that the Count's influences did not prevail.

Our attention is called to the fact, which we overlooked, that there is a monument to the mother of Abraham Lincoln in the Nancy Hanks Memorial Park in Indianapolis, for whose maintenance the State appropriates \$1,000 a year. The grounds and the pavilion are open the year around for visitors and meetings.

Not only the labor unions contributed for the defense of the McNamara brothers, but the *Catholic Fortnightly Review* tells us that they "were professed Catholics and members in good standing of the Order of Knights of Columbus, at whose behest, we understand, Mr. Joseph Scott, of Los Angeles, became one of their chief counsels in court."

A telling point in favor of diversified agriculture in the South is thus formulated: If it takes eighteen bales of cotton to buy a mule, would it not be better to raise the mule?

Those Chinese rebels who melted a big bronze image of Buddha to replenish their war chest had evidently lost their faith in the power of their gods.

Life Insurance and Public Health

PEOPLE are learning to realize more and more year by year that concerted action is necessary for public health and the prolongation of life, in the matter of intelligent supervision over and regulation of food and water supply, sanitation and hygiene. Already the national Government is bestirring itself to protect the people from impure food and the various town and State authorities are displaying interest in such questions as dairy inspection, mosquito extermination, safe water supply, disposal works for drainage, the prevention of contamination of rivers, open air schools and the proper nourishment of public school children. A nation-wide fight against tuberculosis is now well under way and even the concoction of patent medicines is being critically scrutinized.

Should our American life insurance companies take any active part in this vast work and interest themselves in the many needed reforms? It is axiomatic that the better the mortality record of a company, the better it is for the company. A company whose policies have an average life of fifteen years naturally cannot do so well as one whose average is eighteen or twenty years. It would seem, therefore, at first glance, that the business of life insurance as a whole would be benefited by a general increase in longevity. A number of American companies have recently been seriously considering the question of taking up aggressive work for better health conditions, and at the recent convention of the Association of Life Insurance Presidents, held in New York last month, a committee was appointed, called the Life Conservation Committee, and a sum of money was appropriated so that this question might be thoroly investigated.

The question as to what part a life insurance company should take in this movement for the betterment of public health does not seem to be a difficult one to answer. A purely stock company has a perfect right to spend some of its earnings in this way instead of apportioning

them among the stockholders. If the stockholders are willing thus to relinquish a portion of their dividends they have a right to do so. But it must be remembered that a life insurance company only insures selected, adult lives. Any money spent by it for the lessening of infant mortality, or for school hygiene, would be of no direct benefit. And, as the number of people insured in any one company is only an infinitesimal fraction of the population, any money spent for improving the health of the general community would only have a very slight effect upon that particular group of policyholders. It is safe to deduce that the only practical result from this expenditure would be from the advertising which that particular company would derive from the publicity.

In regard to mixed and mutual companies, the law expressly forbids the spending of the policyholders' money for any purpose whatever outside the business of life insurance. The law definitely fixes the legal reserve, and any profits made beyond this reserve must be divided among its policyholders. It can no more spend its profits in philanthropic or charitable or public welfare movements than it can contribute to political campaigns.

A large mutual company, however, with an enormous number of policyholders living all over the country—all of them selected lives and representing the better and provident class of society—can considerably help the cause of public health by publishing, for the benefit of its own members, practical articles on hygiene in the leaflets and periodicals which it issues to its policyholders and agents. Many of the mutual companies are now doing just this thing. Articles supervised by the medical departments are now appearing, urging policyholders to see that the dairies in their neighborhood are regularly inspected, that their children are sitting in well-ventilated schoolrooms, that their water supply is kept pure and that their homes are hygienic. Thus may a mutual company do much good in the cause of life extension.

Trade with Russia

OWING to the treaty controversy with Russia and to talk about a possible tariff war with that country, there have been many inquiries in Washington as to trade between Russia and the United States. An official statement shows that in the last fiscal year our exports to Russia were nearly \$25,000,000, against imports amounting to \$12,000,000. But Russia's official reports show greater imports from the United States, because many of our shipments, which ultimately go to Russia, are consigned to firms or middlemen in Germany or England. This is true of exports of cotton. Our trade with Russia has practically been doubled in the last ten years. The leading items in the list of our imports are hides and skins, \$5,409,000, and wool, \$2,097,000; at the head of the list of our exports are agricultural implements, \$8,126,000, cotton, \$6,240,000, and iron and steel manufactures, \$3,500,000. Thirty years ago the value of the agricultural machinery used in Russia was only \$15,000,000; in 1910 the value had risen to \$48,000,000, and Russia was manufacturing a little more than half of her supply. A large part of the remainder was imported from this country, and we understand that American capital is interested in the Russian manufacturing plants.

....All State records for production of oil were broken in 1911 by California, whose output, 73,010,560 barrels, was nearly 35 per cent. of the country's total.

....The capital of the new J. I. Case Threshing Machine Company, a combination which will compete with the International Harvester Company, is \$40,000,000.

....Seven trust companies in Philadelphia have taken advantage of the recent offer of full membership in the Clearing House of that city. With a capital of \$10,000,000 they have \$90,000,000 of deposits and \$29,500,000 of surplus and undivided profits.

....Exports of American automobiles have increased from 8,440 cars, valued at \$13,190,296, in 1910, to about 18,500 cars, valued at a little more than \$20,000,000, in 1911.

....The directors of the New York, New Haven & Hartford Railroad Company have ordered that electric power, now used from New York to Stamford, be used between Stamford and New Haven, an additional distance of forty-one miles. The cost will be about \$4,000,000.

....The Guaranty Trust Company's statement shows substantial growth, deposits having increased from \$124,684,139, on December 31, 1910, to \$156,022,851 on December 21, 1911, while \$450,000 has been added to the undivided profits, altho the dividends of the year have been 40 per cent., or \$2,000,000.

....On the occasion of the sixtieth anniversary of his connection with the Atlantic Mutual Insurance Company, President Anton H. Raven was given a dinner of sixty-seven covers, last Thursday. His hosts were the members of the Institute of American Underwriters. The Atlantic Mutual was chartered by the State of New York in 1842, so that this was in effect a celebration of two anniversaries.

....The Windsor Trust Company has adopted, for the benefit of its employees, a profit-sharing plan which will take the place of the annual bonus given by many financial institutions. It provides for a graduated distribution of profits, ranging from 5 per cent. to 12 per cent. of them, an increase of the total causing automatically an increase of the employees' proportionate share. Payments are measured by the year's salaries, without regard to longer terms of service. This is one of the projects by which President Clark Williams, formerly State Superintendent of Banks, and afterward State Comptroller, has sought to strengthen the company's working force and stimulate the interest of those employed. Since he became president the company's deposits have grown from about \$4,000,000 to \$7,200,000.

The Independent

VOL. LXXII NEW YORK, THURSDAY, JANUARY, 18 1912

No. 3294

Survey of the World

The Presidential Campaign

Baltimore will have the Democratic National Convention of June 25.

This was decided at last week's meeting of the National Committee, held at Washington. A certified check for \$100,000 was a part of the Baltimore argument. The Democratic conventions of 1844, 1848, 1852, 1860, and 1872 were held at Baltimore. In 1872 Horace Greeley received the nomination, altho he was a so-called "Liberal Republican."

—The resolution for Presidential preference primaries in States where they are not now held came out of the subcommittee slightly altered. Delegates and alternates "may, if not otherwise directed by the law," be elected directly "if, in the opinion of the respective [State or Territorial] committees, it is deemed desirable and possible." Mr. Bryan advocated Presidential preference primaries without reservations or loopholes. Mr. Bryan was defeated also in two test cases on the seating of National Committeemen from Alabama and Pennsylvania.

—Both the declaration on Presidential primaries and the selection of Baltimore as the convention city are regarded as favoring the chances of Governor Woodrow Wilson as a Presidential candidate. In Philadelphia Mr. Bryan was reported to have declared for Governor Wilson's candidacy, but in New York a few hours later, he denied having committed himself. He would not discuss the "cocked hat" letter of the New Jersey Governor. He repeated, however, his denial of his own candidacy. As to Mr. Roosevelt, Mr. Bryan made this statement:

"I regard the third term objection to his candidacy as a very substantial objection; that no matter what opinion one might have of

Mr. Roosevelt, personally, or of his capacity, a third term would raise a very serious question, namely, if Mr. Roosevelt is able to overthrow a precedent—a two-term precedent—which has existed for more than a century, who would be able to establish a precedent more binding?

"I do not know of any Democrat living or dead whom I would be willing to support for a third term. I say this to show that I am not applying a rule to Mr. Roosevelt which I would not apply to a Democrat."

—William Allen White, the Kansas editor and Republican leader, has declared for the Roosevelt candidacy. "Unless the Republicans change leaders the country will change parties," he says; "it is Roosevelt or bust." A Washington despatch states that supporters of Mr. Roosevelt look to George W. Perkins to raise money for the promotion of his candidacy. Ex-Senator Beveridge is said to be working for the former President's nomination. On the other hand, Senator Townsend, of Michigan, supposed to favor Mr. Roosevelt, has declared for Mr. Taft; and Senator Cummins, of Iowa, has entered the race on his own account.—At St. Louis, Governor Judson Harmon, of Ohio, declared that economy and tariff revision would be the issues of the campaign. He regarded Democratic prospects as bright, and saw no indications of party disunion. The insurgent Republicans, on the other hand, seemed to have strayed so far from the fold that it was possible they might never return. "The present tariff law sticks out like a sore thumb," Governor Harmon said at Chicago. As for the regulation of trusts, this is a big question, he declared, reminding the public that he "was the first Attorney-General to make the Sherman anti-trust law stick."

The Arbitration Treaties

Senator Lodge, ranking member of the Committee on Foreign Relations, offered in executive session, January 11, his resolution ratifying the general arbitration treaties with Great Britain and France, but providing that nothing in the treaties shall be construed as weakening the Senate's powers. The advance toward general arbitration proposed by the treaties lay in the power conferred on the joint high commission, in Article III, to decree by unanimous voice, or by a vote lacking one of unanimity, that differences must be arbitrated. The majority report of the Senate committee, rendered last summer, recommended amendments eliminating that provision, and the Lodge resolution accomplishes the purposes proposed by that report. Last summer, however, the Massachusetts Senator was one of the most vigorous opponents of amendment. Secretary of State Knox denies that the resolution involves any material sacrifice. It is said that the Administration accepts the resolution because persuaded that the treaties as drawn up would not be ratified. The text of Senator Lodge's resolution is published in our editorial on the subject.

Diplomatic Questions

Robert Bacon, appointed Assistant Secretary of State by Mr. Roosevelt, and acting Secretary of State prior to Mr. Knox's appointment to that office, has resigned his post as Ambassador to France. Mr. Bacon received this appointment from President Taft, and has been found in Paris an acceptable successor to Mr. Henry White, who held the position during Mr. Roosevelt's term. Mr. Bacon announced his resignation in a letter addressed to the President, in which he stated that he had been elected a Fellow of Harvard University. As such his residence in or near Boston was imperative, and as he regarded Harvard University as the greatest single influence for good in America, he had made up his mind to throw up diplomacy to take up his duties as one of the governing body of his university. Mr. Bacon entered the State Department from the

banking firm of J. P. Morgan & Co. His resignation was perhaps desired by the President, who regarded him as a Roosevelt man, it was suggested in certain quarters. Colonel Roosevelt characterized this statement as absurd. The Minister to Belgium, Mr. Larz Anderson, of Ohio (formerly of Boston), is named as Mr. Bacon's probable successor at Paris.—According to a St. Petersburg despatch to the *Paris Temps*, President Taft wished to send Mr. Kamaiky, director of the *New York Jewish Daily News*, to Russia last summer to study the emigration of Russian Jews to America. Baron Rosen, then Russian Ambassador to the United States, was notified of the project, but informed our State Department that, as Mr. Kamaiky was a Russian subject and a Jew, the Russian embassy could not indorse his passport. Mr. Sulzer, chairman of the House Committee on Foreign Relations, next wrote to the President, criticising the position of the Ambassador and the denunciation of the commercial treaty of 1832 followed.—On January 9 the President sent to the House of Representatives a message furnishing information in response to a resolution voted December 8 in regard to the wood pulp situation. Under Section 2 of the reciprocity agreement with Canada, which became operative on July 1, 1911, wood pulp and print paper are admitted from Canada duty free, independently of the result of the negotiations for general reciprocity. Several months ago Germany, Austria-Hungary, Belgium, Norway, Denmark and Sweden made formal application for concessions similar to those granted to Canada, under the favored nation clauses of existing customs treaties. This application was denied by the Treasury Department, pending a decision on moot points by the United States Court of Customs Appeals. Mr. Taft so reported to the House of Representatives.—The organization of the international joint commission created by the United States and Great Britain to adjust differences between this country and Canada over the uses of the boundary waters was last week perfected. At a meeting of the American section of the commission

today James A. Tawney was named chairman to succeed the late Thomas H. Carter, of Montana. The other American commissioners are George Turner (Washington) and Frank S. Streeter (New Hampshire). The Canadian commissioners are Thomas C. Casgrain, Henry A. Powell and Charles A. Magrath. Among the problems that will have consideration at the hands of the commission are the application of the Lake Champlain and St. Lawrence Ship Canal Company to construct a canal wholly within Canadian territory, regulating works to be erected in the Richelieu River, which will impound the flood water in Lake Champlain and raise the level of that body of water on this side of the line; and the application of the Long Sault Development Company to construct a dam across the Long Sault, in the St. Lawrence River, to improve navigation and develop power.

Postmaster General
Various Items Hitchcock announced on January 14 that he will recommend to Congress that the Federal Government acquire all the American telegraph lines and run them thru the Post Office Department. Mr. Hitchcock has unearthed a statute enacted by Congress some forty years ago, under which, he contends, this action is legal. It is estimated unofficially that this undertaking would cost the Government somewhere between \$300,000,000 and \$500,000,000. But the service would be a source of profit to the Government if efficiently managed, and Mr. Hitchcock says that the prices of telegraphic service could be cheapened. Certain newspapers suggest that the President was not consulted before Mr. Hitchcock made his project public. One result of government ownership of telegraphs would be the creation of another army of officeholders. —Unrest among the 25,000 textile operatives of Lawrence, Mass., developed into violence on January 12, when strikers at the Washington and Wood mills of the American Woolen Company took possession of the big plant, where more than 10,000 persons are employed. The outbreak followed a reduction in wages, necessitated, the mill owners say, by a cut in the running time from fifty-

six to fifty-four hours a week, under the new Satter law, in force since January 1. On January 15 the militia was called out to suppress disorder. —On January 9, William Lorimer, of Illinois, took the witness stand in his own defense before the Senate committee investigating his election. He prefaced his testimony by a sweeping denial of personal responsibility for corruption in connection with his election to the Senate, and disclaimed any knowledge that money had been used corruptly to influence his election. Lorimer's testimony tended to establish the fact that Governor Deneen and his friends in the Legislature were primarily responsible for the failure of the Republicans in the Legislature to elect Senator Hopkins on the first two days of the balloting. Next day, the Illinois man charged the *Chicago Tribune* with corruptly conspiring to prove him guilty of bribery. But he confessed having lent \$10,000 to Lee O'Neill Browne, the Democratic leader in the Assembly. The money has not been repaid.

Mexico There was peace in Mexico last week, except where Zapata's bandit army was at work, and in Tabasco, where arbitrary imprisonments by the Governor caused a revolt against his authority. Officers of the National Railways say that since the surrender of General Reyes foreign capital has been coming into the country and there have been inquiries from abroad relating to projects for making immigrant colonies in two or three States. At Brownsville, Tex., on the 8th, thirteen men about to be tried for violating the neutrality laws by assisting General Reyes pleaded guilty. Colonel F. A. Chapa, who is on Governor Colquitt's staff, was tried and convicted. Chapa is a wholesale druggist of San Antonio, who aided Reyes in getting arms and a few soldiers. Reyes's revolutionary proclamations were printed in a shop owned by him.

Hostilities in South America There have been two or three battles in Ecuador between the forces supporting Gen. Flavio Alfaro and those commanded by General Plaza. In one fought on the 11th, Alfaro was victori-

ous. Ex-President Eloy Alfaro has issued a proclamation in which he proposes that both sides shall lay down their arms and elect a civilian to the Presidency. Our Government has warned both parties that American lives and property must be protected. The railroad connecting Guayaquil with Quito is controlled by American capital, and much of its property has been destroyed.—There are revolts in two or three Brazilian States. In Bahia, Federal warships shelled the capital last week, destroying the Palace and other Government buildings, killing twenty persons, and causing a loss of \$1,500,000. The State government had refused to obey a judgment of the Federal court granting writs of habeas corpus in the cases of several Opposition Deputies who were in prison. The Governor has resigned, and also the Federal Minister of Marine. In the State of Espirito Santo, the troops fired upon a meeting of the supporters of Señor Santor, nominee for Governor, and killed several men.—It is said that a syndicate of American and Canadian capitalists has bought 9,000,000 acres of land in Brazil, intending to compete with Argentina in the export beef trade.—The revolution continues in Paraguay, where the forces in revolt captured, last week, a Government warship.—Freight traffic in Argentina has been stopped by a strike on the railways and at the docks.—Our Minister in San Salvador reported last week that the Government there was alarmed by Guatemala's warlike action on the border, fearing invasion. Guatemala's Minister at Washington says that President Cabrera is an earnest supporter of the Central American peace agreements, and that his troops have been placed on the border to prevent the organization there of revolutionary expeditions against the present Government of San Salvador.—It is expected that President Diaz, of Nicaragua, will soon resign in favor of General Mena, who is supported by the army and has virtually been president for several months past.

English Labor Troubles Up to January 15 the great strike in the cotton mills of Lancashire had not been settled. The energetic efforts

of the Government, represented by Sir George Askwith, have not availed to bring about an acceptable compromise, or even the six months' truce requested by the employees. The employers declare that they will not open their mills until they get definite assurances from the operatives that they will not again strike on account of the employment of non-union labor. The whole trouble arose from the refusal of Mr. and Mrs. Riley, of Accrington, and Margaret Bury, of Great Harwood, to remain in the union. None of them were opposed to unionism on principle, but they objected to being coerced into joining, and the employers refused to compel them to join under penalty of discharge. The feeling against them was so strong that their lives were endangered. The Rileys fled from their home within a few days, but Miss Bury stuck it out longer, until the police advised her to leave on account of the difficulty of protecting her from the mobs besieging her house day and night. On January 10 she was escorted by a large force of police to the station. There are 150,000 cotton weavers idle and as many spinners on half time. The losses so far to both employers and employees amount to \$17,500,000.—The coal miners of Great Britain have taken a three days' ballot to determine whether they would strike in support of their demand for a fixed minimum wage, and the vote was overwhelmingly in favor of the strike. If no agreement is made with the companies before March 1 there will be 200,000 men out. The amount of coal available for private consumers would not last longer than a fortnight, and its exhaustion would result in great distress and probably serious disorders. The Admiralty has drawn upon all the coal it is entitled to under its contracts and has also availed itself of the emergency clauses to obtain more. A number of steamships have been chartered to replenish the supplies in the British naval stations during the next month and a half. Manufacturers, municipalities and householders have taken similar measures, so in consequence the price of coal has advanced enormously, thereby providing the mine owners with abundant funds to fight the strikers.

Fall of Caillaux Ministry

The Morocco question has developed into the Morocco scandal, thanks to the determination of the senatorial committee to unearth all the secrets of the negotiations between France and Germany. Clemenceau, who has the reputation for overthrowing more ministries than any other man, can now make another notch on his gunstock, for it was his persistent cross examination of the Premier and the Foreign Minister which disclosed and widened the crack of cleavage in the Cabinet. Premier Caillaux was asked if there was any truth in the charge that while M. Jules Cambon, the French Ambassador at Berlin, under the guidance of Foreign Minister de Selves, was officially conducting negotiations with the German Foreign Office, there were secret negotiations going on thru other channels. The Premier denied this and stated that he was happy to give his word of honor that there had been no negotiations except those of which M. de Selves and M. Cambon were fully cognizant. Clemenceau then rose, and addressing the Foreign Minister, asked him: "Will you confirm the statement of the Premier?" M. de Selves at first refused to answer and when pressed by the chairman of the committee, Senator Bourgeois, said: "I cannot answer the question. I am tied between a double duty—to stick to the truth and tell all and not to hurt the interests of the country by deserting the Cabinet." The committee immediately broke up in great confusion, and M. de Selves sent in his resignation to President Fallières. The Premier then offered the portfolio of the Foreign Office to Delcassé, who accepted it on condition that a man of distinction could be found to take the Ministry of Marine, which he had filled. But this the Premier was not able to do, so he resigned with the rest of the Cabinet the following day. The heated discussion of the incident in the newspapers has brought out many discrepant versions of unofficial *pourparlers*, more or less documentary and all somewhat discreditable to French political methods. It is alleged that Caillaux began his secret negotiations with German agents while he was Finance Minister under Monis and continued them after he became Premier

without the knowledge of the President, the French Ambassador to Germany, or the Minister of Foreign Affairs. The intermediary on the French side was M. Fondère, concessionaire in the Kongo, and on the German Herr Semler, a deputy in the Reichstag, who was seeking similar privileges. The negotiations are said to have taken a wide range, including such questions as the formal acquiescence of France in the annexation of Alsace-Lorraine, the withdrawal of Germany from the Triple Alliance, the Turkish situation and the cession of the greater part of French Kongo or at least the grant of a railroad thru it which would make Germany the dominant power in Central Africa. These conferences between French and German financiers were begun before the German gunboat "Panther" was sent to Agadir and were continued afterwards. Public opinion in England is indignant that Great Britain should have been brought to the brink of war in defense of French interests while the Premier himself was willing to trade away French territory. —M. Raymond Poincaré, cousin of the mathematician and philosopher, Henri Poincaré, has accepted the task of forming a new cabinet, and has selected an exceptionally strong list of men: President of the Council and Minister of Foreign Affairs, M. Poincaré; Minister of War, Alexandre Millerand; Minister of the Interior, Jules A. J. Steeg; Minister of Marine, Théophile Delcassé; Minister of Colonies, Aubert François Lebrun; Minister of Finance, Louis Lucien Klotz; Minister of Public Works, Pierre Dupuy; Minister of Education, M. Guistau; Minister of Agriculture, Jules Pams; Minister of Commerce, Fernand David; Minister of Labor, Léon Bourgeois. M. Briand was unofficially announced as Minister of Justice, but as we go to press it is stated that he is not a member of the new ministry.

Socialist Gains in Germany

The election on Friday showed a large increase in the vote for the Social Democratic party, tho their victory is by no means so complete as was anticipated in some quarters. Probably the "blue black block," as the Conservative

Clerical coalition is called, will remain the dominant factor in the Reichstag, although it will not command a majority. The Socialist gains have been chiefly at the expense of the radicals and liberals, and apparently portends the division of the country into two large parties of extremely divergent aims. About one-third of the voters are Socialists, and the number of ballots cast for that party aggregates over 4,000,000. The chief Socialist gains are in the large cities. In Berlin all but one section of the city went Socialistic. This is the first district, known as the "Kaiser's seat," because it contains the palace and residences of officials. Here Duewell, a member of the staff of the Socialist newspaper *Vorwärts*, ran against Kämpf, a Radical, while the Conservative candidate in that district received only 500 votes. A second ballot will be necessary here, and there is a possibility of a Socialist victory. In that case the Kaiser has announced his intention of residing in Potsdam, rather than submit to the humiliation of being represented by a Socialist, but the veteran Socialist leader Liebknecht will contest Potsdam with a Conservative on the reballoting and may win there. In districts where no clear majority was obtained secondary elections will be necessary, so it is likely that the Socialists will raise their representation to 90 or even 100. When the Reichstag was dissolved in December, the Socialists held 53 seats. The former high water mark of the Socialist party was in 1903, when they held 81 seats. The returns reported, with only forty-seven districts missing, are as follows:

Socialists—Seats won, 62, with a net gain of 24; reballots, 113.

Conservatives—Seats won, 32, a net loss of 18; reballots, 65.

Centrists—Seats won, 82, a net loss of 6; reballots, 35.

National liberals—Seats won, 4, a net loss of 13; reballots, 59.

Radicals—Seats won, none, a net loss of 12; reballots, 51.

The Near East

The Italians destroyed a flotilla of Turkish gunboats in the Red Sea on January 7. It was suspected that an attempt would be made to transfer some

of the Ottoman troops now in Arabia across the Red Sea and so smuggle them into Tripoli, and for that reason Italian vessels have been cruising up and down the coast since the war began, occasionally bombarding a Turkish fort. The cruiser "Piemonte" and the destroyers "Garibaldi" and "Artigliere" sighted seven Turkish gunboats off the Bay of Kufida and opened fire on them from a distance of 6,000 yards. The fight continued until evening and all of the Turkish vessels were destroyed. Some of the Turks escaped by jumping into the water, but many more lost their lives. The Turkish fire was weak and misdirected, and did no damage whatever to the Italian ships. An armed yacht accompanying the gunboats was captured.—The Young Turks have succeeded in overthrowing the Government by preventing the Government bill for modifying the constitution from receiving two-thirds' majority. This will cause the dissolution of Parliament.

Russia Threatens Mongolia

Russian designs on Mongolia, which, as explained in the editorial columns of this issue, have been developing for many years, culminated this week in demands for Mongolian autonomy under Russian control. The exact contents of the note presented by the Russian chargé d'affaires, Mr. Shekine, to the Peking Government are unknown, but its purport is that China is not able to maintain order in outer Mongolia, and demands that the Chinese troops be withdrawn from that region, that no more Chinese colonists be sent there, that the Kutuku of Urga be recognized as the temporal as well as the spiritual ruler, and that Russia shall assist him in the maintenance of order. It is stipulated that in any case China is not to punish the Mongolian princes who have visited St. Petersburg for the purpose of asking Russia to support their interests. The note also brings forward the project for a trans-Mongolian railroad, which China has hitherto declined to accede. The plan was for this railroad to follow the old trade route across the Gobi Desert, from Kiakhta, near Lake

Baikal, in Siberia, to Urga, and thence southeast to Kalgan. The Chinese have themselves constructed a railroad from Kalgan to Peking, to which they appeal as proof of their ability to develop their own railway system without foreign aid. The capital for the Peking-Kalgan road was provided by Chinese, the material supplied from the iron works at Hanyang, and the planning and construction carried out by Chinese engineers, altho the line was a difficult one owing to the numerous bridges and tunnels required in the mountain passes. The railroad proposed by Russia could be a branch of the Trans-Siberian and would bring Peking within a few days of Europe. Russian troops are said to have already crossed the border at Kiakhta for the ostensible purpose of quelling riots that arose when the Mongolian authorities in Maimatchin, ordered the Chinese emigrants to go back to Manchuria. They refused, attacked the officials, disarmed the police and threatened to loot the market unless they were allowed to remain. The Chinese Government, in order to make real its hold upon Mongolia, has in recent years adopted the policy of establishing colonies beyond the Great Wall, and diverting to them some of the surplus population which formerly went to the United States and its island possessions. This action has been resented by the Mongolian princes, whose lands were confiscated and range curtailed. Their resentment has been stimulated and their resistance encouraged by Russian agents, who have also played upon the political aspirations of the ecclesiastical authorities. The Chinese Government has not always shown that reverence for the leaders of Lamaism to which they think they are entitled, and even the Grand Lama of Tibet met with somewhat of a cold reception at Peking last year when he left his own country for a long tour in Mongolia on account of the invasion of the Sacred City of Lhasa by the English.—According to Russian statements the inhabitants of the Ili Valley, in Chinese Turkestan, have petitioned for Russian protection. The Russians occupied this region from 1870 to 1887, and only a few months ago sent troops to Kulja to enforce their diplo-

matic demands for increased control over the trade routes of Mongolia. It is supposed that Russia and Japan have come to an agreement as to their respective shares of Mongolia and Manchuria in case of a break-up of China.

The Retirement of the Manchus

The Manchus have practically given up the struggle, and the leaders of the Imperial clan at Peking have decided upon the retirement of the court to Jehol, the former city of the family, beyond the Great Wall to the north of the capital. In preparation for the movement the troops were sent there some weeks ago and the palace buildings put in order. It is probable that the child Emperor will abdicate before long. Yuan Shi-kai has, by his threat of resignation, thrown the responsibility for these decisions upon the Manchus. He states that he is not fighting to maintain the Manchus in power, but to preserve law and order, and that his military plans are for the present purely defensive. He is willing to leave the decision of the form of government to a national convention if truly representative, but not to a packed convention at Nanking such as the revolutionists insisted upon. President Sun Yat-sen is organizing his Government and putting the revolutionary army and navy in a condition for an advance upon Peking in case an agreement is not reached before the expiration of the armistice, which now holds for two weeks longer. He declares his willingness to resign the presidency in favor of Yuan Shi-kai if the monarchy is abolished. The republican assembly at Nanking voted for the adoption of a gold standard and authorized the bond issue of \$70,000,000 security on the income of revenue for five years, with interest at 8 per cent. Republican notes circulate freely in the south.—The United States has decided that it cannot delay longer joining with the other Powers in protecting the railroad from Peking to the sea, so four companies from the Fifteenth Infantry, together with a machine gun detachment and hospital corps, were dispatched on the transport "Logan" from Manila on January 12.

JOHN GRIER HIBBEN

The professor of philosophy in Princeton University who succeeds Woodrow Wilson as President

The New President of Princeton

BY ANDREW F. WEST, LL.D.

DEAN OF THE GRADUATE SCHOOL OF PRINCETON UNIVERSITY.

PRINCETON is a university which lives on two impulses—memory and hope. Its store of memories, antedating our national life, then helping to enrich it and ever growing with its growth, forms the accumulating tradition of Princeton, its invisible heritage, the family treasure yielding its increase from generation to generation. And a *living* self-renewing tradition, if it be a good one, is the greatest treasure a university can possess. The precious elements of the living Princeton tradition are four: In religion a clear Christian faith; in education a discipline in central studies of general value followed by gradual and progressive freedom of election; in patriotism a passionate devotion to American liberty from its very beginnings; in student life a clean straightforward delightful democracy, not only free from snobbery and pretense, but mercilessly hostile to it. These are the things in the tradition of Princeton which Princeton men think worth preserving at all hazards. And these are the things President Hibben conspicuously and most faithfully represents, not because they are traditional, but because they are invaluable—the life of whatever is good in Princeton.

Such a tradition, if it be alive, is a good basis for hope. And here President Hibben appears as singularly, perhaps uniquely, fitted for his task. It is not the task of “going back” to any former state of things, nor of galvanizing a moribund impulse into the semblance of new life, but it is the task of understanding, grasping and directing this living powerful tradition to the highest uses and to new progress. Only one who knows what this tradition is and means can so use it, unperturbed by passing misunderstandings. For Princeton has passed thru a storm, and in a storm the mist and spray sometimes hide the view, and things get “shaken up” a lit-

tle. The things that are easily shaken—surface things—have been shaken, but only in order “that the things that cannot be shaken may remain.” President Hibben is intimately familiar with all this recent history. He has figured in it with modest independence, winning from men of all shades of opinion high regard for his moderation and fairness. He may take part in a battle, but will never descend to a quarrel.

His personal fitness for the task is the only force which has elected him. It is partly a question of his social temperament. As he has always been—open, friendly tho not demonstrative, modest without being shy, approachable, considerate, unaffected, independent without being aggressive—so we believe he will always remain; never a “boss,” and always our hospitable counsellor and friendly leader. I do not know why friendship should not be added to the list of virtues. And the force of friendship will be a great upbuilder of President Hibben’s administration.

It is also a question of his intellectual temper. He has a clear, deliberate and quiet mind which never “jumps at conclusions,” but carefully works them out in balance and proportion, and finally with clean exactness. To this he adds a remarkable power of clear exposition—the art of stating the essentials very simply and unmingled with other things. He has honored his chair of Logic by being himself an example of logical clearness, and has honored his teaching of Ethics by his skill in revealing the inevitable moral bearings of complex pressing questions of thought and conduct. Of this his debate with Professor James on “Pragmatism” is a good example. Philosophically he is a thinker of logical method and ethical aim—orderly, clear and elevating.

Applied to questions of administration this means he will simplify and clarify

routine, will perceive and disentangle the main questions from the little ones, and will give definiteness, coherency and continuity to the movement of the university's life. He may thus be expected to make clearer and clearer from year to year the specific meaning of Princeton as a force in education.

Applied to the question of studies, it means that he may be depended on to maintain and develop the curriculum on the basis of the Princeton tradition. The liberal arts and sciences—the classics and mathematics, philosophy and science, history and modern literature—these will be required and exacted. Yet not all of them from everybody, but “according to his degree.” Not Greek for all—but Greek for the Bachelor of Arts degree.

President Hibben is also a determined friend of the preceptorial plan of teaching. This and the course of study and the discipline, and all else of good established or strengthened in the preceding administration, will be carried on and carried as far as the strength of the university permits.

Moreover, the much discussed and finally acquired graduate college will come into its own. It will not be, as it is sometimes misrepresented, an independent institution in any sense. It will be what it has always been planned to be, a distinguishable but inseparable part of the university. It will not be the home of “sumptuous luxury,” or social aloofness, or “undemocratic snobbery.” Not at all. It has the unreserved and enthusiastic sympathy of President Hibben, as it had of that most democratic democrat, who advocated it so earnestly, ex-President Grover Cleveland. And when this stately house of high scholar-

ship, whose foundation walls are now building, is peopled with young scholars doing advanced work in the liberal arts and sciences, and adding the capstone to the Princeton system of liberal studies, then the Princeton tradition will be invigorated anew and President Hibben's administration will reap rich fruitage as the just reward of his unshaken confidence.

There is an indefinable charm about a rural university like Princeton. It is the still air of studies, the sylvan shades, the exquisite architecture, the elms and ivies, every one living “in shouting distance,” the free comradeships which make a little world, the sense of withdrawal from the rush of worldly life so as to have once in a lifetime the time to learn, time to think, time to dream, time for youth and faith and friendship, time to look into wise books and the lore of nature and to “get wisdom and understanding” thereby, time to test one's powers, time to plan one's future, time to discover the true aims of life, time to test and judge the restless, shifting Spirit of the Age by the calm Spirit of the Ages. He who has so lived has had his eyes opened to see the things of greatest reality—the things invisible. And as he leaves the old place—informed, enlightened, elevated, ready for anything he is to meet—he is taking with him the living tradition of Princeton's best to help him live better in the world. To preside over this old home of faith and knowledge and patriotism and democracy, where he belongs and which he deeply loves, President Hibben has been summoned. He will do his part well.

PRINCETON, N. J.

My Experiences in the Chinese Revolution

BY C. BROWNELL GAGE

[This graphic picture of the outbreak of the revolution in the province of Hunan is from the pen of the chairman of the governing board of the Yale Collegiate School and Hospital at Changsha. Mr. Gage was graduated from Yale College in 1898. He has been in China seven years and speaks the language. The flag adopted by the Chinese republicans is here reproduced. It consists of a red field and a blue union on which is displayed in white a twelve pointed star.—EDITOR.]

MOST characteristic of our point of view, here in the presence of the revolution, is the fact that we know so little about it. In Shanghai, where I am writing, with daily papers, and telegraph lines converging from many parts of the empire, we get a better perspective than at the scene of action. But in the interior, from Changsha to the coast, even at Hankow, the center of the stage, we found every one crammed with details about local events but gasping for news of *the revolution*—would it succeed or be crushed? Was it a series of local revolts or was it a rising of the people everywhere? This uncertainty is not simply due to isolation and the wildness of rumor. It is, with the revolution, as with most pieces of Chinese organization, from the movement of a tourist's baggage to the composition of the classics. There is the utmost apparent confusion of parts, but an effective principle of organization hidden somewhere which accomplishes the desired result. Every unit seems to work by itself in a haphazard fashion, but together they produce an irresistible mass movement. Only after the rebellion has been going on for several weeks is it evident that there are brains guiding it, and even now it is difficult to tell whether the wires are being pulled from Wuchang, from Shanghai, or some other place. Where unity of action exists, it seems to be due more to the strength of a common purpose than to organization by a central authority.

This quality of Chinese action appears

in the revolution as it occurred in Changsha, the capital of Hunan Province. There were several days of uncertainty and wild rumor, with rushes on the banks and general excitement. The regular troops were known to be revolutionary, for their brothers, when sent to put down the revolt at Wuchang, had joined the rebels without a moment's hesitation, and had won great applause by marching direct from their transports into the city gates. So the provincial governor tried to offset danger from the regulars by strengthening the local militia. The regulars were deprived of ammunition and confined to their camps outside the city walls, while the militia, on the city wall, were supplied with a generous number of rounds. But the regulars seized the arsenal and helped themselves to ammunition. At the end of the Chinese month they were not paid, and the militia were. These conditions produced a situation that was nasty enough to cause general anxiety and the fear that Changsha was about to witness scenes like those which have since been seen in Nanking. But fears were disappointed, and the revolutionists were able to secure unmolested freedom for their actions, if they failed of general co-operation.

The change from the dragon flag to the white banner of the republic took place as quietly as the opening of a June rose. About eight in the morning of Sunday, October 22d, the regulars marched into the city unopposed by the militia on the wall or the governor's guard, took possession of the yamen and

REVOLUTIONARY FLAGS FLYING IN SHANGHAI

hoisted the white flag. His Excellency, seeing that resistance was hopeless, submitted quietly and retired thru a hole in his back wall. But he carried his seals of office with him, instead of surrendering them, and for several days the city was searched for him, and the gates kept closed. He ultimately escaped by a Japanese steamer. Of the other high officials, some escaped, some submitted. Only two were executed, a sturdy military taotai named Huang and the Changsha district magistrate, in whose hands was found a black list of revolutionists whom he was about to execute. A young military officer described to a foreigner with much gusto how the magistrate had been given a farewell feast by his executioners. At the appointed moment, the officer arose, seized the doomed official by the queue, severed the head from the body, and, catching the spouting blood in his hands, drank to the confusion of the enemies of the republic.

Revolting and unnecessary as these details were, a revolution from an ancient absolutism to a democracy, effected with only two deaths, seemed a very

temperate and self-controlled affair. The city settled down to the new order with general enthusiasm and confidence. This confidence was increased by the fact that the first proclamation of the new government was issued in the name of T'an Yen K'ai, president of the provincial assembly, a man of excellent ability and force of character. The proclamation was similar to those issued in Wuchang ordering the shops to keep open and business to go on, and threatening the death penalty for various offenses, especially for any harm done to a foreigner. A military government was proclaimed; but the chief posts were filled by the various Chinese who had received a Western education, chiefly teachers and students connected with the higher government schools.

I say "the posts were filled," but there were few regular appointments. The work of government was done by volunteers, with a minimum of organization. In spite of the lack of central authority, the individual units worked together for a while with more efficiency than was expected. Many of our Chinese friends who had been known as in-

conspicuous private citizens suddenly appeared in high offices, but their conduct of these elevated positions was marked by Jeffersonian simplicity and informality. Instead of the former taotai of maritime customs, with his nodding peacock feather, big green sedan chair, red umbrella and outriders, preceding

"Not faster than dateless Olympian leisure
Might pace with unblown ample garments
from pleasure to pleasure,"

the commissioner of customs was awaited upon by a gentleman in European dress, speaking excellent English, and coming unannounced with friendly and informal manners.

Every one in the new government was friendly to foreigners. On the afternoon of the day of revolution, I tried to reenter the city, whence all the foreigners had been summoned by consular authority when the soldiers entered. The city gates were fast barred, but at that moment a file of soldiers appeared with the white rag of revolution around their arms. I saluted the lieutenant in command, and asked if one might enter the city. "Certainly," he replied, "we will take you in." While we were waiting for the guard within the gates to respond to his summons, the officer noticed a handkerchief tied on my arm in respect of the revolution. He smiled and bowed low, with the polite Chinese response, "We dare not presume." For the next few days the city gates were kept closed, but the guards on the wall considerably provided a ladder, which they put down to allow foreigners who had business inside to go out and in.

The new government kept perfect order. Soldiers patrolled the streets, and every shop was open as usual, tho little business was done. On the morning of the 22d, you could scarcely have told whether the shopkeepers and householders sympathized with the revolution or not. Most of them would have given you an evasive answer. In the afternoon, not a one but had a white flag out, some the size of napkins; some as large as sheets, some plain, some marked with the character "Han" (a name distinguishing Chinese from Manchu) and others with the words, "Middle Flowery Republic."

In spite of this apparent harmony,

there was a rift in the lute. First there were rumors that the friends and relatives of the murdered taotai, Huang, were seeking vengeance. Then we were told that this quarrel was patched up, and the revolutionists responsible for his death were to give him a grand funeral, that his shade might be propitiated. Then there were rumors of other differences, especially between the military governor and lieutenant-governor, Chao and Ts'en. Chao resigned, but his resignation was not accepted. Then Ts'en was said to have been prevailed upon to resign. Suddenly, one afternoon, when people had begun to hope that a period of harmony and order was at hand, rifle shots were heard in the city. It was learned that Ts'en had been dragged from his horse and killed, and Chao had been shot in his headquarters in the governor's yamen. The president of the provincial assembly, T'an Yen K'ai, was led forth and installed as military governor. He entered the yamen weeping, it was said, at the bloody doings of the party with which he had thrown in his lot, but which he could not control.

Several explanations were given for the death of the generals, but the one which is probably nearest the truth, and the official explanation of the revolutionary party, was not heard until we reached Shanghai. A Chinese editor in close touch with Wu Ting Fang gave me the story that General Ts'en, the military lieutenant governor, had been bribed with \$10,000 to resign, and Chao connived at the transaction. So the apparent anarchy was only the stern effort of the new government to cleanse itself of the old official corruption. The revolutionists everywhere have made it clear that they would not tolerate the old system. One other Changsha official had been summarily degraded for giving appointments to a crowd of his relatives—a policy which was always expected under the imperial government. Nothing in the revolution has so commended it to American sympathy as this intolerance of corruption.

Whatever the true explanation of the killing of Chao and Ts'en, public confidence in the provisional government was badly shaken for a time. The ardent

THE HEIGHTS ABOVE WUCHANG

enthusiasts, who had been so ready to volunteer their help at the beginning, concluded that this kind of revolution was more than they had bargained for, and their turn might come next. A reign of terror was freely predicted, even by the friends of the new order. Many posts were suddenly left vacant, and even the new military governor could not be found for a time. Two of the gentry applied at the Yale Mission Hospital to buy Red Cross flags, which they thought had efficacy to protect them from both sides. One gentleman, with wise generosity, offered his spacious residence as headquarters for the new Red Cross Society, and after his offer was accepted, the society might have had a similar residence in every ward in the city.

It was only natural that the foreigners, who could not help sympathizing with the new order, should be somewhat discouraged by the apparent disintegration of the republican party. Their hopes had received a number of shocks. When the government was taken over by the new regime, the foreigners living inside the city walls were called to come outside for fear of disorder. A signal had been prearranged—a red flag on the customs flagstaff to indicate an impending riot and a black ball to show that a riot had already broken out. The red flag was raised prematurely, and the foreigners living in the city gathered, according to plan, at the residence of the commissioner of customs on an island in

the river. The commissioner's hospitality was equal to the occasion, and twenty-five or more people formed a sort of concentration camp in his house, the men sleeping on the floor of his large unused drawing room, and the ladies finding accommodations in the chambers above. The red flag caused great commotion among the Chinese, for this color had been adopted by the revolutionists, and the rumor spread that the maritime customs had gone over to the revolution, when the imperial officials still controlled the government. The customs taotai came down in high dudgeon to see the commissioner, and the signal was speedily removed, and the staff of the Standard Oil Company substituted at the foreign signal station.

When all remained quiet in the city, the men returned to their homes, only to be called out again, four days later, when the actual revolution took place. The new provisional military government, while keeping perfect order, did not feel itself secure enough to be responsible for the protection of foreigners, and requested them to remain outside the city. The community was patient for a time, but after a reasonable interval, the British Consul, Mr. Giles, pointed out to the new officials that they must accept the responsibilities of government, and we were allowed to return to our homes once more. Then came rumors of disagreement among the new leaders, and finally the killing of the two generals. The two consuls in the port,

British and Japanese, were again advised to withdraw their nationals from within the city, and the British advised all who were under his care, including Norwegians and Americans, to take all women and children to the coast.

The only steamer in port at the time was a Japanese boat, with a first or European cabin having three staterooms, a second cabin for Chinese, and steerage accommodations on the lower deck. The European cabin being full, and the Japanese passengers having taken all available space in the second cabin, there was nothing left but the steerage. A good party of us tried to charter the forward steerage compartment, thinking it might be made habitable if we had it to ourselves. There were fifty double decker bunks filling a low, dark room, with narrow aisles between them. But we had reckoned without our host. A regiment with gatling guns could scarcely have kept the Chinese from crowding in, and the best we could do in the end was to screen off one side of the room for the foreign women and children. The foreign men in the party slept on boxes or on deck, wherever space offered. We had to remain on board thirty-six mortal hours before sailing, to hold these elegant accommodations, and, to make matters worse, a horde of Chinese were admitted to the hold, an unventilated space below us, entered by a hatchway opening

in the middle of our quarters. The fumes of their smoking and breathing came up, and added to the density of the atmosphere, in a room where the utmost vigilance of our party could scarcely keep the one window and door open, in the face of the Chinese love of cosiness. The humor of the situation was increased by the presence of some of the recent republican officials in the passenger list.

On arriving at Hankow, however, the situation assumed a different aspect. The native city, to be sure, had been recaptured by the imperial army, and two-thirds of it were a mass of smoking ashes, as we passed. The concessions were only slightly injured, though shells had been bursting in their boundaries for several days, in some cases entering buildings and wrecking or injuring rooms. The landing hulks of the steamship companies had gone several miles down river, with most of the native employees and domestic servants of the port on board. Westerners in the Orient are not accustomed to live without servants, and it was odd to see gentlemen buying their own bread (at famine prices) and carrying it home under their arms to eat without help of cook or waiter. Coolies to move our baggage could only be obtained at five times the regular rates. If famine was imminent, an epidemic was also threatening, for the river banks

REVOLUTIONARY FIELD GUNS READY FOR ACTION

below the city were lined with the unburied dead, and numerous corpses could be seen in the water.

But even these signs of warfare were evidence, to some extent, that the revolutionists were in earnest and that the imperialists were not having it all their own way. And this impression was strengthened by a visit to the Red Cross hospitals. Most interesting of these was the Chinese cathedral of the Protestant Episcopal Church. Nave and transepts were filled with improvised beds made from the pews, which could be easily moved about on the stone pavement. The smell of iodoform had taken the place of the odor of incense. Instead of the choir boys one was accustomed to see, marching down the aisles, there was a large staff of doctors and trained and volunteer nurses. One good soul among the last declared she "could wash their feet but couldn't see them put the cloth in the wounds." So while the "cloth" was being packed in some of the patients, she introduced us to a revolutionary "general," who told us how he was fighting to have a country like our "Great Beautiful Country," as the Chinese call America. This prostrate congregation of imperialist and republican soldiers, lying peacefully side by side, brought the seriousness of revolution home to us, and left it no longer the stage comedy it had sometimes seemed in Changsha.

The most impressive thing to be seen was the spirit of the revolutionary soldiers. There was no mistaking the fact that they were fighting for their country as truly as the heroes of Lexington and Bunker Hill. One of them could scarcely wait while the surgeon dressed his wound, so eager was he to get back to the ranks. Another had just broken down and wept because he was told he could not return to the firing line for several days. The same eager, fighting spirit animated them all, according to the hospital staff. The "grays" or "imps," on the other hand, were apathetic and content to obey orders, and many were deserting. One felt that the earnestness of the "rebs" more than offset the disadvantage they suffered as raw recruits opposed to trained soldiers. The "imps" might recapture Hanyang and Wuchang (and they have succeeded in tak-

ing the former at the date on which I am writing), but the trained troops at the disposal of the Emperor are too few to conquer half the country, if the people are in earnest.

The popular interest in the revolution, especially in the cities, is shown in many ways. The humble bobby on the beat comes up to the foreigner and inquires anxiously for news, showing by tone and words that his hopes are with the republican armies. The other day a Chinese newspaper was mobbed for publishing the news of the fall of Hanyang to the imperialists. The Chinese papers did not dare publish this news until it was four days old, and the first paper to announce the unwelcome tidings was thought to have been bribed by the imperialists. The same spirit was shown in another way at Hankow in the early stages of the fighting, when the populace ran on to the field of battle, reckless of bullets, to carry refreshments and dainties to their fighting heroes. The members of the Christian mission churches are unanimously for the cause, and it is difficult for the foreigners associated with them to maintain that neutrality which has been thought to be our role. One church took up a collection last Sunday for the revolution. A missionary from Wusih, a city near Soochow, told me that one of his clergy came to him the other day and asked,

"What are you going to do about the prayer for the Emperor?"

"We shall read the prayer as usual."

"But he is no longer Emperor!"

"O yes, he is still on the throne."

"We can't pray for him as *our* ruler."

"All right, I'll take that part of the service myself."

"Well, nobody will say 'amen.'"

This last shot was too much for a man who believed in *common prayer*, and the prayer for the Emperor was omitted from the service.

One quality which will stand the people in good stead is their genius for compromise. Already, the defeated army of General Li and the victorious troops of Yuan Shi-kai have agreed to an armistice at Wuchang, in the hope of compromising their differences. Arbitration and compromise are better methods of settling political differences than the appeal to "reeking tube and

THE BURNING CITY OF HANKOW

iron shard." One cannot help feeling that warfare is an un-Chinese way of settling differences, and the feeling is strengthened by seeing the way they fight. The raw recruits, firing from the hip, gun tilted in air, imagining that their work is done if only the gun goes off, may be only evidence of inexperience. But this banging away for an hour and then stopping for breakfast, banging on again till dusk and then stopping because an eight hour day has been finished; this starting a rebellion and then sitting inactive instead of seizing or destroying the railroad by which your opponent can concentrate troops against you; this recapture of strongholds like Hankow and Hanyang, and then stopping to parley with a dangerous rebellion when its army is at your mercy—are these things not evidence that the Chinese do not believe in the appeal to arms as the *ultimate* arbitrator of their differences? I do not mean that their warriors are not in earnest, or that they are lacking in courage. The Chinese, of all people, can die for a cause.

But the use of force is approved by their morals only when it is a necessary first step, a kind of jockeying for position, to secure justice in the negotiations. Rebellions like the Taiping, which were fought out to the bitter end, are condemned less because rebellion is wrong in general, or because their particular cause was evil, than because they were so obstinate and uncompromising. The Confucian ideals regarding the use of force must be taken into account as one asset of this people in establishing self-government. They will be spared many of the experiences of our neighbors of Central and South America.

We cannot expect this people to do things in the Anglo-Saxon way, but they may find a Chinese way equally effective. They may find new solutions for the problems of self-government which we have vainly struggled to solve in the West without success. We look at our own revolution thru a halo of idealization. Let us look at the Chinese revolution with eyes of sympathy.

SHAN TAI CHUNG.

The New Postal Savings Banks

BY FRANK H. HITCHCOCK

[This article has been prepared for THE INDEPENDENT under the direction of the Postmaster General of the United States and reviewed and authorized by him.—EDITOR.]

POSTAL savings banks are not new to the world at large. Many important countries have flourishing systems long established. Neither is the demand new in the United States. For years the question has been mooted, both in and out of Congress; but strong opposition in various quarters, and some grave fears as to its desirability, forced the advocates thru a long and earnest struggle before the consent of Congress was obtained, in the act of June 25, 1910, appropriating \$100,000 for the establishment of a postal savings system in this country. Both the doubtful and enthusiastic have eagerly awaited the result of the initial efforts of the Postmaster General and his assistants to establish the depositories—and it is not too much to feel that to all they must be astonishingly satisfactory.

Briefly put, the situation is this: A year ago the postal savings bank system existed only in the words of the Act of Congress referred to, while today it is a successful banking institution of the United States, receiving, through five thousand cities and towns, deposits aggregating a million dollars a week; stimulating the commercial life of the whole country by bringing out into circulation the hoarded savings of numberless people who could not or would not trust their treasure to ordinary banks; by tempting the saving of small sums from many who would never have attempted to open an account in a bank; by encouraging women and children to avail themselves of the opportunity for independent bank accounts, however small, guarded and secured by the United States; and further helpful because the money thus collected is deposited by the postal savings banks with the local banks of the community where it is collected, for which deposit local improvement bonds are accepted as security.

But the passage of the act authorizing the establishment of postal savings banks

was only the beginning. It is doubtless impossible for one who has not been intimate with the work to imagine the task involved. The experience and methods of other countries were helpful and suggestive, but none were adapted to the peculiar conditions and demands of our vast and varied country. After the approval of the act the Postmaster General appointed a committee of officers of the Post Office Department to go over the ground, considering carefully all the other systems and the requirement which must be met in this country, and devise the best possible plan for putting the law into effect. The result was a complete system of accounting, and proposed regulations, and instructions for postmasters, unique in several respects, prepared by this committee and approved December, 1910. Following this plan experimental depositories were opened January 3, 1911—just one year ago—in forty-eight second-class post offices; one in each State and Territory; and the immediate returns and favorable working of the system assured those most anxious for the success of the undertaking that the plan devised was not only satisfactory but in many respects far better, for this country at least, than any in operation in other nations.

After testing the system for four months with these initial offices, and finding the operation to be undoubtedly practicable, the service was extended as rapidly as possible to all Presidential offices. On May 1 forty-five offices were designated and then in groups of fifty to one hundred at intervals of only a few days, thru subsequent months. August 1 offices were opened for deposits in New York, Chicago, Boston and St. Louis, and during the two months following in nearly all of the larger cities.

The law places the designation of these depositories in the hands of the Postmaster General and provides that

persons from ten years old may open accounts and deposit amounts in multiples of \$1, not to exceed \$100 dollars a month in the case of any one depositor, or a deposit larger than \$500 to any one account. The depositors receive interest at the rate of two per cent. a year to be credited to their accounts once a year, on all amounts remaining on deposit thruout the year.

The receipts of each office are to be deposited, apportioned according to the capital and surplus of each, among all the National and State banks in the community which are willing to observe the regulations and furnish as security public bonds approved by the Board of Trustees. These deposits are to bear interest at the rate of not less than two and one-quarter per cent. No bank, however, is allowed to receive a sum greater than its capital and one-half of its surplus; and in the absence of qualified local banks the money is to be deposited in other banks most convenient to the locality.

The Act requires that the Board of Trustees shall withdraw five per cent. of the total receipts to be held as a reserve fund and at its discretion may withdraw thirty per cent. more for investment in bonds and other securities of the United States. The remaining sixty-five per cent. is to be kept as a working balance and may only be withdrawn by order of the President under extraordinary public conditions. All of the funds must be available, at all times, for the payment of depositors.

The limit of \$500 as the account of any one depositor does not, however, limit the possibility of utilizing the postal savings banks to any extent, for the law provides for the purchase, by depositors, of United States postal savings bonds, bearing two and one-half per cent. interest and payable in twenty years. These bonds can be issued whenever there are outstanding bonds of the United States subject to call or in lieu of part of a bond issue under other authority. They are exempt from taxation, either Federal or local.

The first issue of these postal savings bonds took place on July 1, 1911, and the amount of deposits immediately exchanged for bonds was \$41,900, a little

more than six per cent. of the balance to the credit of depositors on June 30. Application for the exchange of deposits for bonds at the time of the second issue, January 1, 1912, amounted to \$416,920. But large as the sum is it is a considerably smaller proportion of the amount on deposit January 1.

The Act also contains general pro-

FRANK H. HITCHCOCK
Postmaster-General of the United States

visions for the safeguarding of the postal savings funds, and the assurance "That the faith of the United States is solemnly pledged to the payment of the deposits made in postal savings depository offices, with accrued interest thereon."

In nearly all foreign countries the depositor in postal savings banks on opening an account receives a pass book, in which each deposit and withdrawal must be entered by the postmaster, and at certain intervals all of these pass books are called in and sent to the central office for inspection, where an account is kept with each individual depositor. The amount of ledger work necessitated by this system is evident in the fact that the British Post Office Savings Bank em-

employs about 3,300 clerks in the central office alone, while, even when our system has become fully developed, it is not believed that more than a few hundred clerks, at most, will be employed in the central office—chiefly engaged in the examination of the accounts of the postmasters and banks.

The passbook also appeared cumbersome to the depositor, for in making a withdrawal he must surrender his book and wait to have it sent to the head office where the transaction must be recorded and payment authorized. The Postmaster General gave much personal attention to the problem of devising a better method to evidence deposits and finally determined on a certificate of deposit. At his direction this was made the essential feature of the plan evolved by the departmental committee.

Certificates are furnished to postmasters in fixed denominations and they are required to render account for each of the forms by serial number. Each postmaster alone keeps account with the individual depositor, for whose identification he is personally responsible. The certificates are non-transferable and will be paid only at the office of issue. Withdrawals and accrued interest are paid to the depositors by the responsible postmasters, from current postal savings receipts, the surrendered certificates being sufficient vouchers and providing a complete check upon the postmasters. Thus, under ordinary circumstances it will be unnecessary for the depositor to give any notice whatever of his desire to withdraw any part of his savings on deposit. The certificate is a safe and substantial evidence of indebtedness and it is impossible for any person to obtain money on it wrongfully, from the postmaster, or for the postmaster to defraud either the depositor or the Government. The postmaster must keep on file a duplicate of each certificate issued, with certain notes for identification and a record of the issue and payment of all certificates.

This greatly reduces the complex bookkeeping of other systems and holds the postmaster to strict account for every certificate form and for all money passing through his hands in a way which appears to leave no opportunity for fraudulent transactions on the part

of post office employees, while it also protects him and estops any fraud being perpetrated upon the postal savings bank. When an application is made to open an account the postmaster or his clerk obtains the necessary information to fill out an identification blank which is signed by the applicant. As many certificates are issued as are necessary to cover the deposits, and the duplicates filed with the application. When he wishes to withdraw any amount the redeemed certificates are canceled and with the duplicates are forwarded to the central office with the postmaster's monthly account.

Besides the certificates, which are in multiples of one dollar, cards are issued with ten cent stamps, under the provision of the Act for the accumulation of sums less than a dollar. These cards and stamps are transferable and are sold to any one, in any amount desired. They will quite probably be kept on sale by druggists and other merchants, for the convenience of their patrons. The device is most helpful and popular among school children, and the card, with sufficient stamps affixed, is redeemed at the postal savings bank with regular certificates of deposit. The value of certificates issued in exchange for cards and stamps up to June 30, 1911, was less than four-tenths of one per cent. of the whole issue of certificates, but it will increase as it becomes better known and will encourage many small savings.

Under the law governing the postal savings banks, deposits made by married women are free from any control or interference by the husband; but it is an error to suppose that only small wage earners and children are interested in the postal savings banks. The total number of depositors on June 30, 1911, less than three months from the date of opening the first forty-eight depositories, was 13,869. Of these 3,984 were female—2,159, about fifteen per cent. of all the depositors, were married; 3,691—about twenty-seven per cent. of all—were foreign born; 1,062 of them came from the United Kingdom, where postal savings banks have been longest in operation and the people have become most familiar with the advantages of the system. Four hundred and sixty-six were Italians. Of 10,166 native born depositors,

364 were negroes; while the statistics concerning occupation show conclusively that the postal savings banks are not appealing to any limited class.

During the first month of their operation the deposits at the forty-eight offices amounted to \$61,805. At the end of six months \$778,129 had been deposited in our postal savings banks. Three months later the amount on deposit was more than \$4,000,000, and on the 1st of January, 1912, there was probably over \$15,000,000 deposited.

In the provisions for disposing of the postal savings funds by deposit in local banks, our system differs notably from the methods followed in foreign countries, where the funds are accumulated at the national capital and generally invested in government securities. The interest received from the banks where our postal savings receipts are deposited is first applied to the payment of interest due to depositors. The remainder, according to the Act, is to be converted into the postal revenues. It is probable that as soon as the total deposits amount to fifty million dollars, this item alone will defray the entire expense to the postal

service of administering the Postal Savings System. For notwithstanding the extra work involved in the designation of depository offices and the opening of accounts with such a large number of banks, the central office, at Washington, has up to the present time employed only 112 clerks, all under the immediate supervision of the Postmaster General, who thus far has given the development of the system his personal attention. But now that the vast work of extending the service to forty thousand fourth class offices is to be undertaken it has become necessary to organize the Postal Savings System on a more independent basis, coordinate with the other large bureaus of the Post Office Department. As a first step in this direction on January 3, 1912, the first anniversary, the Postmaster General announced the appointment of Theodore L. Weed, formerly Chief Clerk of the Post Office Department and Secretary of the Board of Trustees, to be the first Director of the Postal Savings System, sure that he was placing it in good hands for continued growth and prosperity.

WASHINGTON, D. C.

A Polite Argument

BY ELLIS O. JONES

"There is nothing new under the sun."

"Oh, pshaw. That trite old platitude makes me tired. It simply is not true. Everything is new under the sun."

"Oh, of course. I see what you mean. And you're quite right about it. If you look at it in a certain sense, everything under the sun is new."

"To be sure. But then, I don't want to be dogmatic about it. In a certain sense, of course, there is, as you said in the first place, nothing new under the sun."

"That's just it. In a certain sense, there is nothing new under the sun. That is to say, nothing under the sun is novel."

"That's the idea. And I was going to explain why. Now, any old proverb or adage like that, which has been uttered

over and over for so long, is pretty sure to be right. It has stood the test of time."

"Exactly. It has stood the test of time. People would not keep saying it if there weren't an element of truth in it."

"No. But then, on the other hand, you mustn't forget that the masses are superficial and proverbs like that really don't mean anything to them."

"That's true. When you come to think of it, in a certain sense, they are more liable to be wrong than right."

"I think I agree with you. Do you know it is a great delight to talk to a sensible man like you."

"Same here."

NEW YORK CITY.

The Winter Woods

BY O. W. SMITH

CROSS-COUNTRY tramping thru the winter woods is for the rugged, the red-blooded, the physically fit. I do not mean to say that this tonic would not do the pale-faced house-ling more good

than doctor's physic and artificial exercise, but that only the exuberantly healthy dare face Jack Frost in his lair. And Jack isn't a half bad fellow after all, even tho he has an unenviable reputation. He is only a boisterous, blustering bully. Run from him, lock yourself up in a close, stuffy house, and he howls about the corners like a veritable fiend; but face him boldly and he kisses your cheeks until they glow with life and color, while the good red blood finds its way to your very finger tips. A tramp thru the deep snows of the winter woods will do more toward conquering tuberculosis than will a dozen multi-colored stamps stuck on the back of a letter written in a hothouse. A pair of snow-shoes or skees will carry you over the drifts and into otherwise inaccessible corners of the white wilderness, but a simple walk along a highway, or better yet, a farmer's road to his wood-lot, will repay you a thousand fold in health and pleasure.

The architecture of new-fallen snow is beautiful beyond description. The woods are transformed by their white burden into a veritable fairyland, and you have only to gaze in one direction long enough to behold the glint of an evanescent wing, the glitter of priceless jewels. A black pine stump, capped with white, becomes an altar at which the purest white-robed priest might officiate without sacrilege; and a gnarled and deformed tree trunk becomes an ivory statue when mantled by the transforming snow. Even a brown weed, the

dried remnant of a midsummer golden-rod, lives again—a blending, airy, fairy thing of ineffable white, not less beautiful than in the days of its pristine loveliness. So the clinging snow works wonders, performs miracles in every nook and corner of the woodland. Strange figures, half completed statues, igloo-like domes press the wanderer upon every side; beautiful always, grotesque never.

Strange that one can live pent up all winter within a few miles of wonders as great, beauties as surpassing as those found within the Yellowstone Park, and yet not make an attempt to behold them. Stranger yet that some seem able to live amid the snow-transformed trees and not see them—at least, are unappreciative of their beauty. The woodchopper is but moved to profanity, for the overloaded branches will drop their white burden upon him in an unsuspecting moment, or

IN THE NORTHERN WOODS

Master Craftsman.
Would you behold cathedral
spires such as never
have climbed the skies in
haunts of men? Would
you behold beauties such
as are imagined by paint-
ers and poets only in
their maddest moments?
Then go to the winter
woods, where God lets
His imagination run riot.

effectually quench his fire at noontime. The weary huntsman returning to camp, dragging behind him the spoils of the chase, is thankful that the soft snow makes his labor less arduous, all unconscious that he is trailing thru a world more beautiful than that imagined by John when in a vision on Patmos, more beautiful than has yet been transferred to canvas by skilled painter. A single spruce tree, transformed into a white spire of immaculate purity by pounds and pounds of snow, is more productive of spiritual thought than the tallest church spire of smoke-begrimed city. The latter is man's attempt at soul expression, the former is the result of the labor of the

THE ARCHITECTURE OF NEW-FALLEN SNOW

"The woods are transformed by their white burden into a veritable fairyland"

building, and, like a child at play, destroying that He may build again.

And the winter woods are not bloodless and lifeless, as some would have us believe. Life, real life, is ever present. Cold indeed is the day when the red squirrels, loquacious and inquisitive, will not gather to berate you for daring to invade their domain. Even while they express their contempt for you, emphasizing their words with ludicrous contortions, they are not above stealing the last slice of bread and butter from your lunch basket. There are birds too in the winter woods, many birds if you know where to look for them. It is not in the province of this paper to catalog the birds one will meet on days when sky and tree-tops meet, but I must offer my tribute to courageous and friendly chickadees, those lively sprites of the midwinter woods. When you sit by your noon-day camp fire, give them slight encouragement and they will hop about your feet seeking for the crumbs that fall from your hand; show that you are friendly, scatter food with prodigal hand, and they will respond by perching about you and upon you with utter disregard of consequences. I know of no bird that will so quickly respond to a show of friendliness. If the day be slightly warm with a hint of storm in the air, the blue jays, brilliant and assertive,

will hunt you out, adding a dash of color to the sober white of the landscape. The nuthatches and woodpeckers, too, are hardy lovers of snowy woods, where they are "at home" to every caller who braves the fancied rigors of a winter day. Even in midwinter in northern Wisconsin I have found a stray robin hopping about in company with chickadees, apparently contented with his lot; and a few years ago, when walking toward the woods one cold January morning, I discovered a meadowlark sitting on a fence post and gazing disconsolately over the snow-buried fields. Why had he lingered behind his companions? Was he hungry? My question remained unanswered, for he repudiated my friendliness with scorn.

In conclusion, as the preachers say, not the least enjoyable part of a day in the snow-clad forest is the dinner eaten at the foot of some bluff, where, sheltered by pine trees, you forget the cold, and doze and dream, your nostrils filled with the piquant odors of wood smoke. The short day will slip away ere you are aware, and (the word of a lover of snows and cold for it!) you will return to the city at nightfall, rested mentally, tired physically, and ready to attack the problems of life with greater courage than before.

DURAND, WIS.

Men We Are Watching

BY A WASHINGTON JOURNALIST

Brigadier-General Clarence R. Edwards.

A NAIL was never fairer hit upon the head than when General Clarence R. Edwards was recently dubbed "The Godfather of the Philippines." With a kind of personal pride—call it patriotism if you like—we note the reports of travelers, or of inspecting officials, hunting for words to express the marvelous strides in development of the 8,000,000 naked savages, gory head hunters, grinning Moros, and what-not, making up the mess which Dewey pulled out of the wet in under our star-spangled umbrella.

There may still be those who believe that we should be better off without the Philippines; but we have them, and that settles it; while few there are who today would venture the assertion that the Philippines would be better off without

us. We wander over the islands safer than in New York or Chicago, or London or Paris. We find more natives talking English than ever spoke a word of Spanish, tho Spain's domination lasted out ages, while ours has hardly covered its first decade. We find the hostile spearmen of ten years ago in fine white uniforms proudly patrolling as policemen, fierce barbarians peacefully cultivating vast areas which were rank jungles but a short while back—greatly increasing their own and the country's revenues. We find 6,000 graduated and

diplomaed natives teaching schools in English. We find the city of Manila able to expend six million dollars on improving her harbor—and everything in proportion.

We feel a personal pride in it all—tho goodness knows how many of us have spent the years in declaring the regeneration

preposterously impossible—we take a personal pride, rarely stopping to realize that somewhere in the background there must have been a personality equal to the task. It is, of course, the composite brain and brawn of many devoted men which has done this developing, but the man at the helm—in it from the first gunpowder to the last pacific energy—has been Clarence R. Edwards, Brigadier-General United States Army, now Chief of the Bureau of Insular Affairs—Godfather of the

BRIGADIER-GENERAL CLARENCE R. EDWARDS
"Godfather of the Philippines"

Philippines. He is a signal instance of the right man rightly placed—what tho he came to it all by accident and chance. He was passing thru Washington in January, 1899, on his way to Havana, when General Lawton held him up with the request that he be appointed his chief of staff, to go with him to the Philippines. He was under fire 112 times and was four times recommended by General Lawton for brevets "for distinguished gallantry in the presence of the enemy" while officiating at the birth of freedom in the

islands and preparing to stand as god-father.

General Edwards has just passed fifty-two, if the calendar is correct—which one who knows him must doubt—for he was born on New Year's Day, the year before the opening of the Civil War, in Cleveland, Ohio. He is a West Point graduate of 1883, and what he has not been in the army since then—from commissary to chaplain under various emergencies—it would be hard to say. Since July, 1902, he has been Chief of the Bureau of Insular Affairs, with the development of the Philippines vitally near his heart. A born soldier—and a good one—he is also an unusually able business man. He has charge of the surplus money of the Philippines to such an extent that he has already collected nearly \$3,000,000 interest on funds placed in his hands, and has demonstrated his loyalty by recently declining an outside offer of \$30,000 a year.

Oscar W. Underwood, M. C.

When a man makes good he has the watching eyes of the world fixt on him,

OSCAR W. UNDERWOOD

Chairman of the Ways and Means Committee of the House of Representatives and a Democratic candidate for the Presidency

regardless of parties and politics. He cannot help it. Oscar W. Underwood strikes one forcibly as a man who would rather help it if he could. He is charmingly cordial, with unaffected Southern gallantry, but he constantly impresses one as saying, *sub rosa*, "I have my business to attend to, and I propose to attend to it without fear or favor, to the best of my ability. I have no time for notoriety." But he can't help it—especially in times of tariff revision—for he is chairman of the potential House Committee on Ways and Means; the famous committee over which Sereno Payne presided with such Serenity for some years back, until the upheaval a year gone.

Underwood came from Alabama to the National House of Representatives some years ago, and began at once to make good in a way that sent him climbing, and in the upset left him chairman of the great committee. There he has followed out his *sub rosa* suggestion of himself—there and as floor leader of the new majority—in a way that has seemed to some rather bold and defiant, and accordingly pleased others beyond words. It has made him a national character, whether he would or no, and it is not surprising that from many places come whispers connecting his name with an event in 1912 over which there is much speculation.

Mr. Underwood is a thoro gentleman, of the South's best type. He was born in Louisville, Ky., fifty years ago. He is tall, with a strong—not too expressive—face, with thick, brown hair, and no end of inherent dignity which rarely allows him to exhibit impulsive qualities except in the exigencies of debate, on the floor, when he is capable, as he has proved, of rising to any occasion which has thus far presented itself. His voice is low and beguiling, when the other kind is not necessary. He speaks and moves deliberately, in a way which instinctively impresses one—whether from the floor of the House or in private conversation—that he understands the meaning and value of words and believes precisely what he says. His smooth-shaven face is always ready with smiles, but large, alert eyes, a solid jaw and firmly closing mouth indicate not only convictions, but the courage of them. It is only another

indorsement of the first impression that while he has not sought for notoriety and does not like it, he is capable of sustaining himself thru any kind of a tempest to the satisfaction of his own opinions, at least, and regardless of their effect upon his personal popularity. The Congressional Directory is another indication of the man. Members of Congress are given pretty well *carte blanche* to tell the world about themselves, and frequently take a half-page to write themselves up. Underwood found four lines enough—and two of those are a recount of the dates of his re-election to Congress.

The world knows Mr. Underwood—and obviously will know him better as time goes on—simply by what he accomplishes in the line of making good, which is quite in accord with his evident convictions. Socially he is a man who commands the warmest appreciation and confidence of his friends.

The Director-General of the Postal Savings Banks.

The long fight for postal savings banks in the United States was finished only a year ago, but the colossal labor of arranging an adequate system for our vast country has already been performed—savings banks galore have already been established, something like fourteen millions or more have been deposited and—a fact almost beyond belief—the system has already reached a self-supporting basis. It is therefore a system tried out and found not wanting, and the next thing incumbent upon the Postmaster-General was to secure a competent Director-General for the new bureau which will handle the postal savings business that will shortly comprise at least fifty thousand postal savings banks.

It is an office of grave responsibility and the interests of many thousands thruout the country center in the incumbent. Postmaster-General Hitchcock has been particularly happy in various important appointments which he has made, and there is little fear of this one being a disappointment. He has announced the name of Theodore L. Weed for the position and all who know Mr. Weed are confident that the vast business could not have been placed in better hands. In

THEODORE L. WEED

First Director General of the Postal Savings Banks

making the appointment Mr. Hitchcock declared his belief that before the end of the current year the deposits would reach fifty million dollars and the system be a source of profit to the Government.

Mr. Weed, the first director, is not untied. He was born in Norwalk, Conn., in 1876, and graduated from the George Washington University. His entire career, thus far, has been in Government service, where he has made a rapid climb conspicuously suggestive of merit and ability. He began as stenographer in the War Department. He was chief of the Civil Division of the Military Government of Cuba from 1899 to 1902; private secretary to Secretary Straus, Commerce and Labor, for two years; private secretary to Postmaster-General Hitchcock while he was chairman of the Republican National Committee during the campaign of 1908; then Chief Clerk of the Department of Commerce and Labor, and later Chief Clerk of the Post Office Department, from which position Mr. Hitchcock has promoted him to his present office.

Mr. Weed is well prepared for the

duties he assumes. For some time he has been chairman of the Board of Trustees directing the establishment of the system and is largely responsible for its present organization and efficiency, so that he is no stranger to the work.

Intelligence, courtesy, keen common sense, and absolute devotion to the interests he represents are vivid characteristics of every word and act with Mr.

Weed, accounting for the rapid progress he has made and promising his success in the future. He is not a large man, but the personification of energy and cordial good will, making friends and keeping them. There is no doubt that Postmaster General Hitchcock has made a good selection for the first director of the new postal savings bank system.

WASHINGTON, D. C.

The Eugenics Movement

BY GERTRUDE C. DAVENPORT

[The eugenics movement has now reached a point where the interest and co-operation of the public may be invited without danger of injury to the cause thru popular misconception of its aims and perversion of its scientific ideals. The coming International Eugenics Congress will show to the world how much has been accomplished by the study of human heredity which has been so actively prosecuted in recent years. The chief center of this work in America is the Carnegie Laboratory for Experimental Evolution at Cold Springs Harbor, under the directorship of Charles B. Davenport. Mrs. Davenport has collaborated with him in many of these researches and is thoroly familiar with the movement whose meaning and method she here explains.—EDITOR.]

A HISTORY of Eugenics should begin not with primitive man, but with primitive protoplasm, with the first living beings; for nature was the first Eugenist and the instruments with which she wrought were the struggle for existence and selection in nature. Nature molded and discarded from this protoplasm for generations before she fashioned man. And not even with man as he was, or, for that matter, is now, is she content. Whenever and wherever man is left in the hands of nature he obeys her behests and is little menace to himself. Thus when primitive man struggled for very life with the soil, with climate, with wild beasts, with disease and with other men, nature saw to it that he who was incapable of contending with all or with any one of these adversaries was cut off and no longer could his "seed" "inhabit the earth." Thus nature fashioned men with endurance, keen sight and quick judgment. The blind, the lame, and the wavering fell prey to man or beast. When man ceased his nomadic life and settled in fixed habitats, his life began to depart from the ways of

nature and his heredity suffered in consequence. Then when he went to war he went as a selected body, the strong of brain and brawn, while the lame, the halt and the blind remained at home with the women and children. At this time there began to be a constant dropping off from the other end of the human scale and the timid, the lame, the halt, and the blind remained at home to increase their kind. And in this condition man remained for centuries and from it he had only recently begun to emerge. Of course there have been notable exceptions, as witness the Spartans. But in contrast to the Spartans was the Roman Empire in which the best were either killed outright in war or were sucked from the wholesome land into that glittering whirlpool of the city of Rome itself, only to succumb eventually to its struggles and vices.

When man became converted to the teaching of kindness and brotherly love it was not consistent with his faith to expose on the bleak hill sides the new born babe, be he ever so blighted. Indeed, in his happiness to be free from

constant physical contention, from the horrors of famine, cold and disease, man forgot that those who lived thru famine and epidemics of pestilential diseases were the strong and the immune; and, in his forgetfulness, he builded, at the expense of the state when necessary, shelters for the defectives and delinquents, where they have been permitted to live in security. Thus far nature smiled, for aught we know, but when man set the blighted free at the age of maturity to reproduce their kind, then nature commenced her reckoning with normal man by means of these same blighted men.

It is only in the present decade that we have begun, to any great extent, to realize that man, in his zeal to control his own destiny has failed to consider how beneficent are nature's laws and how terrible is nature when her workings are thwarted. It is the realization of these facts that has convinced man that some change is necessary in his management of his own affairs. It is the realization that five per cent. of our population is incompetent thru such bad heredity as imbecility, criminality and disease entail, and that the care of these incompetents is costing the taxpayers of the United States annually one hundred million dollars, that brings the private citizen and the politician to the realization that we must do something to stem this tide of incompetency and, we are told, this yearly toll of incompetents is increasing in proportion to the normal population and the money for their maintenance must, in consequence, increase in proportion to the whole budget. It is this realization that has brought about the so called Eugenics Movement.

It is little over a half century since we have known much concerning the laws of heredity in plants and animals despite the fact that man has controlled the reproduction, more or less, of many of them since before the dawn of history. Not much time has been lost in applying these laws to human beings. The stimulus to our present Eugenics Movement came from Francis Galton and from the rediscovery of the laws of heredity as formulated by Gregor Mendel. Forty-two years ago Galton published his "Hereditary Genius," in which he sets forth the part that heredity plays in the

production of great men and draws the obvious conclusion that man is uplifted by the mating of the best.

Thirty years ago Loring Moody of Boston wrote a booklet entitled "Heredity: its relation to human development. Correspondence between Elizabeth Thompson and Loring Moody." In this book Moody sets forth his "earnest hope and expectation" that colaborers will soon appear to aid him in founding an "Institute of Heredity which shall found a library, establish lectureships with schools of instruction, and take in hand the diffusion of knowledge on the subject of improving our race by the laws of physiology." These plans failed with the death of the projector.

A little less than a quarter of a century ago, Dr. Alexander Graham Bell established the Volta Fund which now amounts to over \$100,000. With this fund the Volta Bureau is maintained in Washington, D. C.. Here are housed the records of over twenty thousand deaf-mutes. The names and histories of these deaf are systematically arranged so that they can be turned to on a moment's notice. All these manuscripts and indices are kept in a fireproof vault.

About 1905 the late Sir Francis Galton again contributed to the advancement of Eugenics in England by founding a Eugenics Laboratory at University College, London, and at his death he made this laboratory his residuary legatee. This laboratory is publishing the "Treasury of Human Inheritance" under the direction of Professor Karl Pearson. Another English publication is *The Eugenics Review* now in its third volume. This is published quarterly in London by the Eugenics Education Society. The objects of this society are (1) "persistently to set forth the national importance of Eugenics in order to modify public opinion and create a sense of responsibility in the respect of bringing all matters pertaining to human parenthood under the domination of Eugenic ideals. (2) To spread a knowledge of the laws of heredity so far as they are surely known, and so far as that knowledge might effect the improvement of the race. (3) To further Eugenic teaching, at home, in the schools, and elsewhere."

In Germany many splendid articles

and books dealing with human heredity are being published from time to time and the journal entitled *Archiv für Rassen- u. Gesellschafts-Biologie*, now in its eighth year, publishes a number of articles based on investigations upon and contemplations of human heredity.

The pendulum swings back again to America and in October, 1910, the Eugenics Record Office was started at Cold Spring Harbor, Long Island, N. Y. This office is managed in connection with the Eugenics Section of the American Breeders' Association, organized a year or two previously. The Record Office is situated on a tract of eighty acres of land and is well housed in a large residence to which has been added a concrete, fireproof vault. Here a portion of the office staff is kept busy supplying heredity blanks to those who voluntarily offer to fill them out, and cataloguing the blanks when returned. Here, also, is being established a library of genealogical and town histories. It is hoped in time to make this library a very complete one for the United States. In addition this office maintains a considerable number of "Field Workers" whose duties are to go to localities, as directed by the office managers, and collect data concerning the inheritance of particular characteristics, both mental and physical. The reports of these field workers are either cataloged and filed for future use or when sufficiently voluminous and enlightening are published by the office. Thus the main work of the office "is investigation into the laws of inheritance of traits in human beings and their application to Eugenics." These investigations are published in two series of publications, an octavo series of bulletins of which five have appeared and a quarto series of memoirs. "The Eugenics Record Office wishes to cooperate with institutions and State boards of control in organizing the study of defectives and criminalistic strains in each State. It will offer suggestions as to the organization of local societies devoted to the study of Eugenics. It proffers its services free of charge to persons seeking

advice as to the consequences of proposed marriage matings. In a word it is devoted to the advancement of the science and practice of Eugenics." There are very few individuals who may not contribute at least to the accumulation of facts by giving their own hereditary histories and that of their families. Or they may call the attention of the record office to cases of the transmission of unusual mental and physical characteristics that they may have observed in others. It is important from the Eugenics standpoint to know the hereditary behavior of genius as well as that of crime and disease.

So rapidly is Eugenics making world-wide progress that it has been deemed expedient to hold the first International Eugenics Congress in London during the last week of July, 1912. The president of the congress is Major Leonard Darwin, son of Charles Darwin and kinsman of Sir Francis Galton. Seven of the twenty-eight vice-presidents are Americans, while Germany, France, Switzerland and Italy share largely this honor, too. The official announcement states that:

"At present the most urgent need is *more knowledge*, both of the facts of heredity and of the action of social institutions in causing racial change and the ways of modifying and controlling them." "It is necessary that those who are alive to the dangers of the present social situation should combine together for the purpose of exchange of views and mutual instruction and should agree upon a concerted scheme of action."

"It is hoped, by means of this Congress, to make more widely known the results of the investigations of those factors which are making for racial improvement or decay; to discuss to what extent existing knowledge warrants legislative action; and to organize the cooperation of existing societies and workers."

The congress proposes to receive papers that may be grouped in the four following sections:

1. The Bearing upon Eugenics of Biological Research.
2. The Bearing upon Eugenics of Sociological and Historical Research.
3. The Bearing upon Eugenics of Legislation and Social Customs.
4. Consideration of the Practical Applications of Eugenic Principles.

COLD SPRING HARBOR, L. I.

In the Name of Christ

(Persia, December 1911)

BY C. H. CRANDALL

Softly the bells of St. Petersburg shiver the frosty air;
Softly, in silks and furs, the people flock to prayer,
Princes, nobles and ladies—jewels and cheeks aglow—
Standing in hushed devotion, watching the ikon's glow;
Prayers for the "Head of the Church"—the Czar—on every tongue;
Chimes for the gentle Christ—and the Czar—are sweetly rung.

(RUSSIAN NATIONAL HYMN)

*God save the noble Czar!
Long may he live in power,
In happiness, in peace to reign!
Dread of his enemies,
Faith's sure defender,
God save the Czar!
God save the Czar!*

Resht! Resht! Resht! whisper it low in dread!
Resht! Resht! Resht! city of ravaged and dead!
Women, and maids and children! What is your awful crime?
Just to be born in Persia, sunny and storied clime?
Only to love your vineyards, valleys of song and dream?
Daring to walk or breathe in sight of a bayonet's gleam?

(*God save the noble Czar!*)

Who is coming from northward over the mountain chains?
Is it the Bear, bloodthirsty, or is it the Christ who reigns?
Answer, dwellers of Tabriz, tenters of Ispahan!
Answer, cold brown faces, mute for the world to scan!
Are we gathering farthings to rescue a heathen soul,
Hearing our Christian cannon over their corpses roll?

(ENGLISH NATIONAL HYMN)

*O Lord, our God arise!
Scatter His enemies
And make them fall!
Confound their knavish tricks!
Frustrate their politics!
On Thee our hopes we fix!
God save us all!*

England! Is it all sleeping, blood of the days gone by,
Brain and brawn of the Saxon, springing once to the cry
Against the proud oppressor, wherever he levied toll,
Waterloo's awful vortex, or far Sebastopol?
Are ye buying vantage? Or, for your conscience, ease?
Watching this bloody pathway grow to the Southern seas?

(*O Lord, our God, arise!*)

May not an ancient people dwell any more as of old?
Must they be thrown in the hopper, turning their flesh to gold?
What is your right, O Russia, haughty and proud and great?
What is their crime, or where is the man who sold you a State?
Who was it helped to loosen a brown hand from your throat?
Bear that fleeth the lions to ravage the kid and goat!

(*O Lord, our God, arise!*)

God of the Gathered Nations! Have you a tongue to speak?
Every eye averted? Red upon every cheek?
Where is the world of brothers, bonded in thought and life?
Where is the Court of Honor, to check the lustful strife?
Never in vain the rubies of innocent blood shall run;
"I will repay"—He says it—God and Allah in one.

(AMERICAN NATIONAL HYMN)

*Our fathers' God to Thee,
Author of liberty,
To Thee we sing!
Long may our land be bright
With freedom's holy light,
Protect us by thy might
Great God, our king!*

Literature

The Catholic Encyclopedia

ON opening these stately volumes the reviewer is first impressed with the wide circle from which the contributors have been drawn. In their advance announcements the promoters of the work claimed that twenty-seven different nationalities were represented. The three volumes under discussion* seem to bear out this assertion, their writers coming from many of the countries of Europe, and even from distant Australia, Hawaii and the Philippines.

Most of the articles on the various dioceses are written by persons resident therein. This naturally makes for authoritativeness, especially in matters of statistics. In a Church so strongly centralized as the Roman Catholic Communion it is a great advantage to have articles written by those connected with the very innermost administration of ecclesiastical affairs. Thus in the article on "Monsignor" it is a domestic prelate who informs us as to the proper use of that title. It is a professor of the college of the propaganda who tells of the activities of the congregation of the same name. A similar observation may also be made concerning the articles on the various religious orders, most of which are written by members of the same.

One naturally turns to Protestant encyclopedias for information on Protestant subjects. If, however, the *Catholic Encyclopedia* is consulted on this, it will be manifest that the editors have aimed at fairness in their treatment of those outside the Roman Catholic Communion. Take, e. g., the article on "Protestantism." Bearing in mind the lofty claims of Romanism, the article is in the main as fair as Protestants could expect from a Catholic pen. Occasionally there are outbursts of the *odium theologicum*, as in the last sentence of this article. "Cath-

licism numbers some 270 millions of adherents, all professing the same faith, using the same sacraments, living under the same discipline; Protestantism claims roundly 100 millions of Christians, products of the Gospel and the fancies of a hundred reformers, people constantly bewailing their 'unhappy division,' and vainly crying for a union which is only possible under that very central authority, protestation against which is their only common denominator." The article on "The Reformation" is written with considerably less asperity, tho the opening sentence is a splendid illustration of what logicians call *petitio principii*, or the assumption in an argument of that which should first be proved. The Reformation is defined as "The usual term for the religious movement which made its appearance in Western Europe in the sixteenth century, and which, while ostensibly aiming at internal renewal of the Church, really led to a great revolt against it, and the *abandonment of the principal Christian beliefs*." (The italics are the reviewer's.) In the main the article is surprisingly fair in the frankness with which it admits "the various abuses in the lives of the clergy and the people." "In the Papal Curia political interests and a worldly life were often prominent." "The Pope's removal to Avignon in the fourteenth century was a grievous error." "The promulgation of indulgences for the new St. Peter's furnished Luther with an opportunity to attack openly indulgences in general, and this attack was the immediate occasion of the Reformation in Germany." In discussing the method of spreading the Reformation, naturally great stress is laid upon "the use of violence by the princes and municipal authorities." "The history of the Reformation shows incontestibly that the civil power was the chief factor in spreading it in all lands, and that in the last analysis it was not religious, but dynastic, political and social interests which proved decisive."

As a rule the various Protestant de-

*THE CATHOLIC ENCYCLOPEDIA. Vol. X (Mass-Newman), XI (Newhull-Phil), XII (Philip-Reval). New York: Robert Appleton. \$6 to \$15 per volume. Earlier volumes were reviewed in THE INDEPENDENT, as follows: v. 62, pp. 1150; v. 64, pp. 103; v. 65, pp. 855, 962; v. 66, pp. 51; v. 67, pp. 657; v. 63, pp. 580.

nominations fare pretty well at the hands of the writers of the *Catholic Encyclopedia*. It is the unhappy Modernists who are under the hammer. Writers on other topics go out of their way to attack this latest heresy. Thus, under the heading "Present Day Protestantism," we read: "The modern 'Ritschl-Harnack' school, also called Modernism, has disciples everywhere and not only among Protestants. For an accurate and exhaustive survey of its main lines of thought we refer the reader to the encyclical 'Pasce Gregis' (September 8, 1907), the professed aim of which is to defend the Catholic Church against Protestant infiltrations." In the article on "Modernism", in agreement with encyclicals of the reigning Pontiff, "curiosity and pride" are assigned as "two remote causes" of the movement. Fifteen pontifical documents concerning Modernism are referred to, and a most useful bibliography of Protestant sources, Modernist sources and Catholic sources is appended.

Perhaps with the intention of warding off from the *Encyclopedia* all suspicion of Modernism, perhaps in accord with the tendency universal in Roman Catholic circles of exalting Petrine claims on every possible occasion, the Second Epistle of Peter is claimed for that Apostle (article Peter, Epistles Saint) in the following words: "In the present state of controversy over the authenticity it may be affirmed that it is solidly probable, tho it is difficult to prove with certainty." In the advance announcements the editors made this statement: "The scriptural department of the *Encyclopedia* furnishes the information needed by every one who claims to be an educated Catholic and who wishes to meet the educated non-Catholic on terms of equality on Biblical questions." Does such a statement concerning II Peter put the Catholic reader on terms of equality with the non-Catholic on questions of Biblical criticism?

It is interesting to note in this connection that the *Catholic Encyclopedia* is severely attacked for its Modernism in the *Ecclesiastical Review*, the leading Catholic quarterly in this country, by the Bishop of Victoria, B. C. He takes up the article "Patriarchs," and discovers that the writer does not believe that the

early patriarchs lived for hundreds of years, that he thinks the genealogy of the descendants of Cain is confused with that of Seth, and that these patriarchs take the place of demigods in other legendary accounts. This is higher criticism, which the bishop severely rebukes. We confess we are surprised to find it here, for Leo XIII laid down the doctrine:

"We must absolutely hold that God, speaking by the sacred writers, could not set down anything but what is true."

But after all has been said in the way of shortcomings, it must be stated that the sins of the *Catholic Encyclopedia* are those of omission rather than commission, venial rather than mortal transgressions—e. g., one searches in vain for an article on "Recluses" to compare with that found in the new Schaff-Herzog, nor is there even a cross reference in the *Catholic Encyclopedia*. Indeed, a much more frequent use of cross references would add greatly to the ease of consulting the work.

The articles on Necromancy and the Occult Sciences are a distinct disappointment. When one considers what a prominent part these played in the Middle Ages, how even the great Innocent III, according to Salimbene, dabbled in necromancy, one regrets that this picturesque phase of medieval life should have been passed over so lightly. Surely such writers as Stephen of Bourbon, Jacques de Vitry and Cæsar of Heisterbach might have been placed under contribution.

On the other hand, the articles on Pilgrimages and Relics are most interesting and exceedingly well done. Protestants will be interested to read this sentence from the latter article—for the *Catholic Encyclopedia* purposes to be authoritative: "Neither has the Church ever pronounced that any particular relic, not even that commonly venerated as the wood of the Cross, is authentic; but she approves of honor being paid to those relics which, with reasonable probability, are believed to be genuine, and which are invested with due ecclesiastical sanctions." One misses from the bibliography on Pilgrimages the useful book of John Gough Nichols entitled "Pilgrimages to Saint Mary of Walsingham and Saint Thomas of Canterbury."

The reviewer has reserved for a closing word of praise the bibliographies. These are, to his mind, a sufficient reason for any scholar, Protestant or Catholic, desiring to possess the *Encyclopedia*. Protestant works are cited in them, tho not as frequently at times as one could wish. It is, however, as an index to the Catholic writers thruout the world that these lists of books are invaluable.

The Works of George Meredith. Memorial Edition. Vol. XXVII "Various Readings and Bibliography." New York: Charles Scribner's Sons. \$2. (Sold only by subscription.)

Messrs. Scribners' handsome and dignified subscription edition of George Meredith's writings reaches its completion with this volume, which exerts a potent appeal for all true Meredithians. Its larger part is devoted to the numerous changes the author made in his revisions of his novels and poems. Meredith was ever a fastidious worker, filing and revising time and again, going over his volumes with emendatory pen even after years of publication—in some cases deleting a whole chapter, in others only a word here and there. These deletions as well as all changed and added passages and words are given in this new volume, and they provide an interesting study in the author's growth in artistic sensitiveness, and to some extent an indication of his development in thought and opinion. The alterations he made in his earlier novels are extensive and important. The variants to "The Ordeal of Richard Feverel" fill 105 pages; and about 50 pages each are required for those to "Evan Harrington" and "The Adventures of Harry Richmond." In the later works there are few changes. The variants to the poems fill 40 pages. "A Chronological List of George Meredith's Publications, 1849-1911," compiled by Arundell Esdaile, is a painstaking bibliography and notes both English and American publication in book form and in periodicals. The volume contains also two poems and has for frontispiece a portrait of Meredith at eighty, seated in a bath-chair and holding his dog Sandie in his arms. It worthily completes a beautiful, definitive edition which every lover of Meredith will wish to own.

The American Woman and Her Home. By Mrs. Newell Dwight Hillis. New York: Fleming H. Revell Company. \$1.

The American woman will not fail for lack of advice. She may be overwhelmed by the abundance of it. Mrs. Hillis tells of her successes and failures, her education, her various responsibilities to Church and State, but especially her duty of building her own home:

"The American is too busy for family life. Husband and wife take their ways separately. . . . In the meanwhile the State is losing its best service, the united effort of men and women; the home its best atmosphere, a quiet peace and harmony, men and women their greatest happiness, the interchange of perfect confidence and trust. The present agitation concerning the rights of woman, whether or not it results in giving her suffrage, should clarify the mind of woman so that she can see her own position clearly."

Mrs. Hillis's book is an attempt toward such a clarification. Her criticism of the American woman is often severe, but it is not unjust. Her strictures upon the busy-idleness of many women of the leisure class, who make a vocation of bridge and a life-work of social engagements, are no more scathing than they are deserved. She recognizes the stir and lift of the great movement for emancipation from the petty and stultifying interests:

"The 'woman question,' in its large meaning, is a vital subject, and is not confined to any one land, but is the expression of a distinct forward movement in civilization, and whether or not any particular individual is interested and sympathetic, or critical and annoyed, the movement will go on just the same. If it results in more intelligence, more ability, more strength and power, even more independence, society will be so much the richer by so much as she has really gained."

A Touch of Fantasy. By Arthur H. Adams. New York: John Lane Company. \$1.25.

A romance with the scene laid in Sydney, Australia, ought to have a freshness and novelty that would ensure an immediate interest. We are not sure that the author of *A Touch of Fantasy* has made the most of his good fortune in having the priceless material of a new field of fiction. We learn with a start that December 24 is midsummer in Sydney, and the people are hurrying home thru sultry streets, their arms laden with Christmas packages; but there is not

much else that is distinctively Australian in the book. It is a story of illusion, thinly veiled under the allegory of magic glasses; the idealization of love—or of being in love, rather—which blurs the actual image of the man or woman with the prismatic hues of imagination. Mr. Adams says some startlingly true things, like: "Only when a husband can laugh at his wife and she at him, is their love complete." But the story is also of disillusionment and is unnecessarily painful. Less sordid facts would have left the book cleaner as well as more probable and persuasive.

Literary Notes

....Printed in red and black, with many delightful illustrations, is Anne Macdonell's *Italian Fairy Book*, imported by Stokes. There are almost two score of good tales here.

....*The Living Church Annual*, just out for 1912, reports for the Protestant Episcopal Church 5,606 clergy and 947,320 communicants in 91 dioceses in the United States, besides 12 missionary dioceses in foreign parts (Young Churchman Company, Milwaukee).

...More than once we have taken pleasure in praising the Centenary Edition of Charles Dickens, published in this country by Charles Scribner's Sons, at one dollar per volume. We now receive *Little Dorrit* (two volumes) and *Reprinted Pieces, etc.* One does not weary of this edition.

....As editor of a series of agricultural and horticultural books there is no one to compete with L. H. Bailey, whose *Farm and Garden Blue-Book* we now receive from Macmillan. It is a 12mo volume of 587 pages (\$2 net), and is very compact and comprises clear information on about everything that a farmer or a quasi-farmer or gardener ought to know, but usually does not know. We commend it to those who do not care to buy Professor Bailey's four-volume cyclopedias of American Agriculture and Horticulture.

....Rev. William V. Kelley, the scholarly and cultured editor of the *Methodist Review*, has collected a number of his scattered essays on various topics of literary and religious interest and published them under the title of *Down the Road and Other Essays of Nature, Life, Literature and Religion* (Eaton & Mains; \$1.50). Dr. Kelley's sensitiveness to the charm of nature, his graceful style, and

large appreciation of life and literature combine to make his writings pleasant and profitable reading. The longest essay is that devoted to "Emily Dickinson: The Hermit Thrush of Amherst."

....The Putnams are about to publish, in two volumes, the *Irish Folk History Plays* of Lady Gregory. These present, in the form of buoyant comedy and poignant tragedy, the spirit of Ireland. Lady Gregory was pronounced by George Bernard Shaw in a recent interview "the greatest living Irishwoman." The author of "Blanco Posnet," that Lady Gregory's friends the Abbey Theater players are acting in this country, glanced at recent events in adding:

"Even in the plays of Lady Gregory, penetrated as they are by that intense love of Ireland which is unintelligible to the many drunken blackguards with Irish names who make their nationality an excuse for their vices and their worthlessness, there is no flattery of the Irish; she writes about the Irish as Molière wrote about the French, having a talent curiously like Molière."

....Miss Margrete Münsterberg, daughter of Professor Münsterberg, has brought out in Berlin a German translation of Mrs. Marks's prize play, "The Piper." Miss Münsterberg's preface to the play enumerates the many versions and forms of treatment of the legend of the Rat Charmer, in German and English poetry and music, to remark that in the new American version, the Rat Charmer becomes "the spokesman of the socially disinherited. In his words is voiced a protest against the sordid mercantile spirit prevailing the narrow streets of Hamelin. The Piper sings there of rainbows, of happiness, and of the stars. He leads the town's children out into the open—into that world which he himself loves, as does a child. He thus brings enlightenment and enlargement of mind and heart to the anguished citizens, thru bereaving them of their children. Such is the spirit of American poetry, which is not yet appreciated in Germany. Among the Germans, the New World is supposed to be given over wholly to the pursuit of dollars. May this fairy play from America, irradiating the old German folk-lore with a new light, bring the unknown and unappreciated poetry of the New World nearer to the Old."

The translator dates this pretty and kindly note from "Cambridge bei Boston, U. S. A." which seems to the Boston editor who brings the translation to our attention "a happy invention, conveying new honor to either bank of the Charles."

....Raymond Patterson is a colored man who has written *The Negro and His Needs* (Revell; \$1.25). He was a classmate in Yale of President Taft, who has written a page to introduce him. Mr. Patterson has had unusual opportunities to learn the condition of the negro in all parts of the country, and he has given here the results of his studies with generous quotations from interviews with white men and black. He tells very freely the worst facts about negro conditions, and his conclusions are along the line that all educational efforts should be developed within the

grammar school, and that when illiteracy has thus been removed it will be time to develop higher education. We do not accept this view, but the book is well written and full of interest.

....What scholar would not try to translate, or imitate, Horace if he could? The last sympathetic attempt is by Prof. George M. Whicher, of the Normal College of this city, and his son George F. Whicher. (*The Tibur Road. "A Freshman's Horace."* Princeton University Press.) Some of those that are translations are done as nearly in Horatian meter as rhymes will allow, and are in good taste, while in others which give Horatian tone to modern events or situation is not a little real humor. It is a fair addition to the library of Flacciana.

....The fourth volume of Prof. Charles F. Kent's "Historical Bible" is concerned with the period extending from the fall of Jerusalem to the death of Herod the Great, a period in which the historical and literary materials are hard to untangle, but an understanding of which is very important as a preparation for the study of New Testament times. In *The Makers and Teachers of Judaism* (Scribners; \$1) Professor Kent gives a popular yet careful account of the canonical and apocryphal writings of this era with enough of the historical setting to make clear their origin and purpose. The abundance of literature discussed has made it impossible to give more than representative extracts in so small a volume.

....The desire for better guidance on the part of parents in training their children in religion and morals is constantly increasing. The careless neglect of the past is giving way to anxious inquiry into methods and ideals. In response to this awakening sense of responsibility many are taking in hand the careful study and elucidation of aims and the proper means of attaining them. *The Training of Children in Religion* (Appleton; \$1.50), by Dean Hodges, of Cambridge, is a careful survey of the conditions of religious culture in the home, the Sunday school and the church, with suggestions in regard to the best methods of inculcating and developing the true spirit of religion. This is one of the most inspiring and practical books of its kind in creating a proper ideal of what religion should be and how it should be manifested in children. Of quite a different kind, but equally suggestive and valuable, is Professor St. John's little volume on *Child Nature and Child Nurture* (Pilgrim Press; 50 cents). The topics are all related to the training of young children, and are confined to moral questions, but the principles involved have a much wider application.

....The intricacies of census taking are very graphically described in Francis Rolt Wheeler's *The Boy With the United States Census* (Lothrop; \$1.50). The record receives the endorsement of Washington. Told in the form of successive stories which constitute the hero's experiences in various parts of the United States, the reader is given an insight into the Kentucky feuds, child labor, the emigrant at Ellis Island, the negro of the South, hoboes on the tramp, dwellers in the frozen North, and is taken into the dangerous districts of a city. The narrative has a human value, and at times mounts to eloquence that is totally at variance with the fictional character of the book. When the child glass blower assistant quotes Jane Adams and sundry authorities, the artificiality of the method becomes apparent. But the reader learns much in these pages. *The Boy With the United States Census* is one of the "United States Service Series," the manuscript for each volume undergoing severe examination by the heads of departments in each government bureau. The United States Survey and Foresters were the foundations for former stories.

....*The Natural History of Religious Feeling* (Putnam; \$1.50), by Isaac A. Cornelison, D.D., attacks the doctrine of conversion as it has been quite generally held, and adduces a large amount of evidence, old and new, to show that the phenomenon is the result of natural forces that have been given a religious bent, and not at all the product of supernatural agencies. The book opens with a consideration of similar or related manifestations in nature and in social life outside of Christianity, and after a discussion of conversion, its causes and effects, the bearing of the author's conclusions on Christian organization and effort is pointed out. Dr. Cornelison does not deny the miraculous, but holds that miracles, even of conversion, are no longer needed, and to regard conversion as a miracle leads to the distortion of a perfectly natural religious process into a struggle and final settlement between the soul and an angry God. There is much of worth in the volume, altho the presentaion is disjointed and clumsy.

....Prof. Robert F. Harper, of the University of Chicago, is making good progress in his very considerable effort, the latest result of which we find in volumes x and xi of his *Assyrian and Babylonian Letters* belonging to the Kouyunjek collections of the British Museum (University of Chicago Press; \$6). These two octavo volumes include 198 letters in the cuneiform script, and without translation. A few have been previously published by Winckler & Thompson, but for information of the meaning of any of the rest

one would have to go to the catalog published by Strassmaier. It is well that these letters should be thus put within the reach of scholars who can read the original text, and the work of the eleven volumes already printed, with their nearly one thousand tablets, is a monument to the diligence of Professor Harper and the use he makes of his summer vacations in the British Museum. They will prove of value, when translated, to the historian and the student of social and business life. Such men as Harper, Clay and Jastrow, with their original labors in this difficult field of study, are an honor to indigenous American scholarship.

...Tudor Jenks is the originator of the "What Shall I Be" series, in which two volumes have just been published by the A. C. McClurg Company (\$1.25 each). These are *The Sailor* and *The Fireman*. Every boy has his wild dreams, and the nearest excitement is always the profession for him. Now he will be a policeman, again a conductor, and still again a motorman. Mr. Jenks takes this desire in serious vein and in a thorough manner analyzes the duties of the sailor and the fireman; he seeks to dignify the professions, to emphasize the details that call for thoroughness, for obedience, for quick action, and for strength of character. His little books are civic treatises, and after one has read *The Fireman* he understands everything connected with the routine of the life; he comprehends the importance of a well-organized department in city government. The text very well illustrates the science of putting out fires, of protecting property from loss. With the same thoroughness, Mr. Jenks approaches the subject of *The Sailor*. In the descriptive portions, the books are a little too matter of fact, and show evidences of hasty writing. Yet withal they are handy and will be welcomed by many boys on the brink of a profession.

...The memoir of the late Professor *Alexander Viets Griswold Allen* (Longmans; \$2) by Rev. Charles L. Slattery will be welcomed not only by Prof. Allen's former students and personal friends, but by a much wider circle of readers who knew the Cambridge divinity teacher thru his contributions to Christian literature. From the foundation of the Episcopal Theological School in Cambridge in 1867, for upwards of forty years he held the chair of Church History in that institution, during which period he wrote the books which entitle him to high rank among American theological writers. His "Continuity of Christian Thought" and "Jonathan Edwards" were followed by his volume in the International Theological Library on "Christian In-

stitutions." Before this task was completed he began work on "The Life and Letters of Phillips Brooks," whose intimate friend and admirer he was. This great two volume work, together with the shorter life of Brooks, was in many ways the crowning achievement of his life. Mr. Slattery has told the story of his early struggles and later successes very largely in Prof. Allen's own words, selected from his letters and other writings, and it is an inspiring story to read. Prof. Allen was not a great scholar and his limitations in other ways are often noticeable, as, for example, his lack of appreciation of Emerson and Goethe or the modern school of German theology, but he had the happy faculty of seizing on the essential and significant and then going thoroly and enthusiastically over this limited area. In reading Mr. Slattery's book one feels that he is coming into touch with a fine spirit and sturdy will that made the most out of the gifts and opportunities of their possessor.

Pebbles

A Knight to Palestine did fare;
He had the colic; when and where?
In the middle of the (K)night.

"Do you know of any good remedy for a deadlock?"

"I should suggest a key to the situation."—*Baltimore American*.

"No," said Mr. Cumrox; "I don't in the least disapprove of my daughter's marrying a title."

"But you seem dissatisfied."

"I am. What I object to is the fellow that goes with it."—*Washington Star*.

THE APOLOGY FOR PLAGIARISM.

"He preacheth best who stealeth best
All thoughts both great and small;
For the great mind that preached them first
From Nature stole them all."

HARRY GRAHAM, in "Canned Classics," offers an amusing parody of Wordsworth's "Solitary Reaper":

I.

"Behold her single in the street,
Yon solitary Suffrage lass,
Where 'coppers' with enormous feet
Decline to let her pass.
Alone she kicks and bites her way
Thru crowds of constables at bay
O, listen, all the world it seems
Re-echoes with the maiden's screams.

II.

No peacock on a garden lawn
No infant girl attacked by bees
No rooster at the break of dawn
Can make such sounds as these," etc.

—and, as the *London Spectator* remarks, "every phrase of the noble original is tracked down, even to the line, 'And battles long ago.'"

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00. Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

The Peace Treaties and the People

EVIDENTLY seeing the writing on the wall, Senator Lodge last week introduced into the Senate the following resolution to accompany the act of ratification of the peace treaties with England and France:

"The Senate advises and consents to the ratification of the treaty, with the understanding, to be made a part of such ratification, that any Joint High Commission of Inquiry to which shall be referred the question as to whether or not a difference is subject to arbitration under Article I of the treaty, as provided by Article III thereof, the American members of such commission shall be appointed by the President, subject to the advice and consent of the Senate, and with the further understanding that the reservation in Article I of the treaty, that the special agreement in each case shall be made by the President by and with the advice and consent of the Senate means the concurrence of the Senate in the full exercise of its constitutional powers in respect to every special agreement, whether submitted to the Senate as the result of the report of a Joint High Commission of Inquiry under Article III or otherwise."

There has never been the slightest doubt of the fact that the "special agreement" which refers each dispute to arbitration, whether resulting from the con-

currence of the executives of the countries in dispute or from the arbitral decision of the Joint High Commission, must be referred to the Senate for its "advice and consent," just as under certain conditions it must similarly be referred to a British colony or the French Parliament. We cannot see the slightest objection, therefore, to this resolution. It merely amplifies and states unequivocally what is manifestly implied in the wording of the treaties. Dispatches from Washington, undoubtedly inspired, would make it seem that the resolution is a "ladder by which the Administration can climb down," whereas it is a ladder upon which Senator Lodge can climb up. If it will appease recalcitrant members of the Senate and save the face of Senator Lodge and his followers, we will not begrudge them the satisfaction thus obtained.

We can thus consider the argument originally put forth that the treaties are "unconstitutional" as now abandoned. The only issue, therefore, before the Senate is the question whether England, France and the United States have yet reached that stage of civilization where they can with safety substitute a system of Christian for pagan ethics in their mutual relations. This is what the Senate must decide.

There is no doubt whatsoever as to what the overwhelming mass of the American people think about this matter. They are now quite ready and determined to settle all their disputes with these great sister nations by law rather than war. With the exception of Theodore Roosevelt and Richard Olney we recall nobody of importance in this country who opposes these treaties. Tho initiated by the Republican administration, they constitute no party measure. All the Democratic leaders are on record supporting them. Andrew Carnegie has done the country a conspicuous service in getting Champ Clark, W. J. Bryan, Alton B. Parker, Woodrow Wilson, Judson Harmon, John A. Dix, William J. Gaynor, Simeon E. Baldwin, Eugene N. Foss and George Gray to come out openly in their favor.

The entire body of Christian ministers of the land have been furnished with ma-

terial about the treaties by the peace societies. On a conservative estimate more than three-quarters of them have preached and prayed for ratification. Almost all the various denominational conventions have passed favoring resolutions. Every Congregational convention, for instance, North, South, East and West, has sent resolutions to the Senate urging ratification. Cardinal Gibbons, representing the great Catholic Church, is committed to the treaties, while the Vatican itself is understood to be favorable.

The powerful secular press is almost a unit for the treaties. The press clipping bureaus show that thousands and thousands of favorable editorials have been written.

The leading Chambers of Commerce and Boards of Trade in at least 300 cities have passed resolutions urging their Senators to vote for the treaties. These cities are not the unimportant ones, but include New York, Chicago, Philadelphia, Boston, Baltimore, New Orleans, San Francisco, St. Louis, Cleveland, Indianapolis, etc., etc. Thousands of business men—the ones who determine the economic policies of the country—have written personal letters to Senators.

The labor unions and granges are fully committed to the cause of peace. The workers of the world are at last beginning to realize who are the ones who suffer the horrors of war and pay the taxes of armed peace.

Probably from every American college and university presidents, professors and students have been pouring letters and resolutions in upon the Senate.

Every State in the Union has been organized by its public-spirited citizens for peace, while almost every large city has held a ratification mass meeting from which petitions have been forwarded to Washington.

Indeed, all classes and conditions of men have united to make their sentiments known to the Senate. No measure that has been proposed in a generation has been hailed everywhere with such universal delight and enthusiasm.

The people of this country are now in no mood to stand any partisan attempts to play Presidential politics with the

treaties. Nor have they the slightest sympathy with quibblings and pettifoggery over Senatorial precedence. Senators will be held individually and collectively responsible if they attempt to put petty politics or their supposed dignity above the cause of the world's peace. Above all, the Senate should discuss these treaties, not behind closed doors, but in open session. The people would know how their public servants vote and the reasons given therefor.

We remind the Senators that the peace movement is no longer a little "cult of cranks." It is now representative of all that is best in the life of our people. It is directed by some of the ablest men and women in the land and is munificently financed—not entirely by Mr. Carnegie either.

So let these great and righteous treaties be speedily ratified. The moral and material benefits which will accrue to our nation and to all mankind for this leadership in the cause of the ages will be beyond human computation.

After the Durbar

THE fifth of the Georges, but the first to give honor or credit to the name, is safely out of Calcutta and India, and Dame Britannia heaves a sigh of great relief. That King George and Queen Mary should visit India, discontented, sullen India, should have landed in Bombay, should have gone to the ancient capital Delhi, there to be proclaimed Emperor and Empress, required both courage and faith. And no less faith and courage were required, after Delhi had been proclaimed capital, then to go direct to Calcutta, from which the capital had been removed, thence to embark in the royal yacht for England. To be sure, a sop had been given to Calcutta in restoring it as the capital of the reunited Bengal, but the local feeling of pain must have been great at the loss of primacy, and it was feared that this would intensify the political bitterness which has been growing of late against the British rule, and which has shown itself in more than one assassination. "A happy escape!" said many a loyal heart

when their Majesties were safe on British timbers and on the wide sea.

To those who know little of India the removal of the capital from Calcutta to Delhi, regarded as the most important change announced at the Durbar, may seem a small matter, or one that might have an ill effect on the influential, even predominant, people of Bengal, of which Calcutta is the capital, as it has been of all India. But they would be mistaken who so think. Our forefathers were wise who moved the capital of the new nation from New York to Washington. There would be a jealousy in having our capital city in the metropolis of the country, and affected if not controlled by the public sentiment of the city and State. So they set the example of carving out a new District of Columbia, that should belong to no State, that had no population, that would be purely national and have no sectional interests, and that should be as nearly as possible in the central region of the then Atlantic Coast States. That example has since been followed by Canada and Australia. Calcutta has a million and a quarter population, Delhi has 200,000; Calcutta represented 75,000,000 Bengalis; Delhi represents nothing local, only the great history of all India. Calcutta is in one corner of India, and is the most unhealthy of all its cities; Delhi is in the center of India, on the highway from Calcutta to Bombay, and can be lived in by Europeans eight months of the year. Hitherto the Governor-General and his court could remain in Calcutta but two or three months of the year, and for the rest of the year they were in the hills at Simla. They will now have to be in Simla but three or four summer months.

But it is not the grand memories of Delhi, the capital of the Mogul Empire, nor its healthier and central location, which gives special importance to this change of capitals, nothing so sentimental as that; it is the tremendous political meaning of the change, accented in the reasons given for it in the document sent by the Government of India to Earl Crewe as Secretary for India, which announces the purpose of the Liberal Government of Great Britain, now irreversible; that India shall be governed for

the Indians, and as speedily as possible by the Indians. This document said:

"It is certain that, in the course of time, the just demands of Indians for a larger share in the government of the country will have to be satisfied, and the question will be how this devolution of power can be conceded without impairing the supreme authority of the Governor-General in Council.

"The only possible solution of the difficulty would appear to be gradually to give the provinces a larger measure of self-government, until at last India would consist of a number of administrations, autonomous in all provincial affairs, with the Government of India above them all, and possessing power to interfere in cases of misgovernment, but ordinarily restricting their functions to matters of Imperial concern."

This benevolent policy requires the separation of the capital of India from the provincial capitals, so that the provinces may develop self-government by their provincial councils in which already the native members have a strong, if not a controlling influence. The plan is that they shall become independent and learn how to govern, so that in time the total government of India shall belong to the people, as part of the British Empire, much as Canada, South Africa and Australia now are dominions, not colonies ruled from Downing Street. In 1909 the Indian Councils Act gave this new power to the people of India of taking their large share in legislation, and its incalculable importance is now seen. And the removal of the capital from Calcutta to Delhi separates imperial from provincial interests while emphasizing the self-government of the provinces. India is not to be ruled by Bengal, but each province will carry its own share, and work out its own problems.

Delhi, while not a large city like Calcutta or Bombay, has historical memories which compare, for India, as Earl Crewe reminds us, with those of Constantinople or Rome. It has the imperial tradition. It returns to its old estate. It was the one place for the imperial durbars. Thither the princes and maharajas went up to pay honor. It is no new city of commerce like Calcutta, built up by British trade. It is pure Indian in history, and possesses the most magnificent monuments of pure Indian architecture. It is to be hoped that the more magnificent city which will be built there will not be

made a replica of European capitals, but that native architects will add their art to Western science, so that Delhi will become one of the most beautiful, one of the most magnificent cities of the world; while yet the removal of the capital into the very interior, the last retreat of the Sepoy Rebellion, will make it clear that India shall remain a part of the great world empire, and that the British overlordship is not camping on the coast, waiting the time when it shall have to sail away and leave chaos behind.

The removal to Delhi thus means good will, means more and more self-rule more and more consideration for the people of India. And this appears also in the reversal of Lord Curzon's unfortunate blunder in the division of Bengal. Britain will trust Bengal. She no longer divides to conquer. If the capital leaves Bengal for the Punjab, Bengal is pacified, for her people are again united in the way they would themselves choose, and form the greatest of the provincial divisions of India. The present Liberal Government of Great Britain proves itself supreme in its imperial policy, as it is in its domestic reforms.

Mr. Taft and the Offices

A DAILY newspaper which is the foremost representative in the East of the movement for the nomination of Senator La Follette published last week a dispatch from its correspondent in Washington, beginning as follows:

"Orders have gone forth from the White House that the Federal office holders in all Southern States must get busy at once organizing conventions and electing delegates pledged to the renomination of President Taft. It is the scheme devised by the President and his secretary, Hilles, to meet the threatened primary declarations in Western States for La Follette, and the growing demand among politicians for the nomination of Roosevelt in order that his popularity may hold them in their present jobs."

We believe that this correspondent has been misinformed.

At about the same time two or three prominent Democratic papers were predicting in their Washington dispatches that the President would, in the near future, use all "the power of patronage" to promote his renomination. One of these had said in December, with refer-

ence to the message in which the President made a memorable recommendation concerning the civil service:

"President Taft in this position is doing more for popular government and honesty and efficiency in the public service than all the advocates of 'progressive' nostrums can do put together. His great courage will be recognized by all, and his great patriotism, which loses sight of party in the welfare of the nation, will not be questioned."

What was the recommendation in the message of December 22? Simply that substantially all of the offices which can be used by a President for political or selfish purposes, in the Southern States or elsewhere, be taken away from him and from the Senators and Representatives who have assisted him in filling them; that all the postmasters (even those in our large cities), all the collectors of customs, all the collectors of internal revenue, and all the marshals of the Federal courts, be selected and appointed under the merit system, after competitive examinations. This is what he said:

"I wish to renew again my recommendation that all the local officers thruout the country, including collectors of internal revenue, collectors of customs, postmasters of all four classes, immigration commissioners, and marshals, should be by law covered into the classified service, that the necessity for confirmation by the Senate be removed, and that the President and the others, whose time is now taken up in distributing this patronage under the custom that has prevailed since the beginning of the Government, in accordance with the recommendation of the Senators and Congressmen of the majority party, be relieved of this burden.

"I am confident that such a change would greatly reduce the cost of administering the Government, and that it would add greatly to its efficiency. It would take away the power to use the patronage of the Government for political purposes. When officers are recommended by Senators and Congressmen from political motives and for political services rendered, it is impossible to expect that while in office the appointees will not regard their tenure as more or less dependent upon continued political service for their patrons, and no regulations, however stiff or rigid, will prevent this, because such regulations, in view of the method and motive for selection, are plainly inconsistent and deemed hardly worthy of respect."

If Congress should honor this recommendation by legislation it would increase by about 60,000 the number of officers and other employees in the classified service. More than 50,000 of those

so placed under the merit rules would be postmasters or postal clerks. With these would be 122 collectors of customs (the Collector of the Port of New York included), 67 collectors of internal revenue and 36 marshals. Mr. Taft did not make this recommendation in December last for the first time. And the Postmaster-General, Mr. Hitchcock, whose office is regarded as one in which much political influence may be exerted, recommended in 1910 that "the entire postal service be taken out of politics." He now says:

"It is apparent that the highest degree of effectiveness in the conduct of this tremendous business establishment cannot be attained while the thousands of postmasters continue to be political appointees. As an important reform, Presidential postmasters of all grades should be placed in the classified service."

If Mr. Taft desired to use the power of patronage for his own benefit and that of his party, why did he recently add 42,000 rural free delivery carriers to the number of employees who must be selected by competitive examinations?

If Democratic legislators and politicians and the friends of Senator La Follette have feared that the President would use this power for his party or against rival candidates for the Republican presidential nomination, they should have taken him at his word and should have enacted the law for which he asked, a law taking from him the power of appointment. Bills were introduced last year, but they came to nothing. The record of the year is given as follows by the National Civil Service Reform League:

"The Lowden bill in the House and the Lodge bill in the Senate, enacting into law the present merit system in the consular and diplomatic services, failed to pass. The Burton bill for the classification of first, second and third class postmasters, and the Frye bill for the classification of collectors, assistant collectors, surveyors and naval officers in the customs service, both of which were recommended by the President, failed to pass. Senator Smoot introduced a bill to classify collectors of internal revenue, auditors, treasurers, assistant treasurers, general and assistant inspectors, appraisers and assistant appraisers, examiners of drugs, and officers of the mint and assay. This also did not pass."

There is still time for the enactment of such bills before the beginning of the Presidential campaign. The Democratic

majority of the House should take them up, and we shall expect to see Mr. La Follette working for them in the Senate. As Mr. Taft has shown an earnest desire to be relieved of the burden of appointing so many officers whose influence can be used for political purposes, we shall not believe that he is using them to promote his renomination until convincing proof of this is shown.

China Without the Wall

WHILE the republicans of the south and the imperialists of the north are quarreling over what shall be the form of the future government of China, that portion of the empire which lies beyond the Great Wall is in danger of slipping away. The Mongol chiefs at Urga have shaken off their allegiance to China and chosen as their Great Khan the high priest of Lamaism, the perpetually reincarnated Buddha. What is more ominous, the Russian Ambassador has notified the Peking Government of the Czar's willingness—or determination—to assume a protectorate over Mongolia. A revolt in Urga is one thing and a protectorate by St. Petersburg is quite another. In the former case the lost ground could doubtless be recovered, as it has been many times in the past, but land that the Russian bear has once got his paws on will be hard to snatch away. The western frontier of the Chinese Empire, where it touches on Russian Turkestan, is 2,400 miles from Peking, and there are no railroads to reach it. On the other hand, the Russian railroad strategy has had obviously in view the ultimate absorption of Mongolia. One long line stretches along the northern border of Mongolia and curls about its eastern end. Another line runs straight from St. Petersburg to the western end and there stops short, waiting on the steps of China's back door. Just beyond the temporary terminus of this railroad, but inside the nominal boundary of Chinese Turkestan, there is Kulja, which Russia took possession of some months ago, to facilitate her negotiations with China, and has ever since neglected to let go.

The Russian advance on these outlying regions of the Chinese Empire be-

gan two hundred years ago, when a gentleman from Tobolsk went over into Mongolia and came back with twenty pounds of gold dust which he had gathered on the headwaters of the Yellow River. He presented the dust to Peter the Great, and that prompt sovereign had a fort built at Semipalatinsk, which then was a good way beyond and now is a good way within the Russian frontier.

In recent years Russian schemes have been advanced by commercial and diplomatic rather than military methods. The Buriats, who are Russian Buddhists, have been employed to gain over their coreligionists in Mongolia and Tibet, and it was only by a quick march of British troops over the Himalayas to Lhasa a few years ago that the Grand Lama was stopped from shifting his allegiance from the Celestial Emperor to the Great White Czar, as now his rival in sanctity, the Buddha of Urga, has done. The Mohammedans of Turkestan dislike their Chinese rulers even more than the Buddhists of Mongolia. Henry Lonsdell, who as a missionary scout was the first Englishman to enter China by the back door, found the people praying that either Russia or England would come and rescue them from the Chinese. Corrupt and cruel as the Russian administration has been, yet Turkestan, during the last forty years, has prospered under it more than that part of the country which is under Chinese control. It has established peace and order; it has brought in railroads and schools and the cultivation of cotton. The people are not squeezed by Russian officials any more than they were by the Chinese officials, and they get something for their money.

It is interesting to recall that the inhabitants of Kulja, who it appears are now willing to welcome the Russians, are in large part the descendants of the tribe of Torguts who migrated in mass from the Volga to the Ili in the eighteenth century to escape from Russian rule, under which they had lived for several generations. There is, said De Quincy, no great event in all recorded history more striking to the imagination than this flight of half a million men, women and children, who burned their

houses and journeyed for eight months to find a new home, while their numbers were daily reduced by the attacks of the Cossacks and the privations of the desert. At any rate, the event struck the imagination of De Quincy, since from the arid Chinese chronicle he developed the glowing pages of his "Revolt of a Tartar Tribe."

Even if China should in the course of her revolution be robbed of her colonies it would be no great loss. Two or three millions will not be missed from a nation of three or four hundred millions. The hold of China on the territory outside the Wall has always been slight and intermittent. Mongolia belongs to China, not because the Chinese conquered the Mongols, but because the Mongols conquered the Chinese. The Manchu Emperor claims the throne now as the successor of Jenghiz Khan, the Mongol chieftain who broke thru the Great Wall about the time the Magna Carta was signed. His grandson, Kublai Khan, was visited by Marco Polo and dreamed about by Coleridge. Near Urga was the Mongol capital, and the yak's tail banner waved over a territory extending from the Baltic to the Sea of Japan.

After a century the Chinese succeeded in expelling them, but in the course of time the Mongols and Manchus again swarmed over the Great Wall and established a dynasty which lasted two hundred and sixty-eight years—and how much longer, who can tell? The Great Wall has not served its purpose of keeping the Mongolians out. It remains to be seen whether it will suffice to keep the Chinese in.

New Light from Princeton on Jonah

THE INDEPENDENT takes great pleasure in announcing fresh discoveries, and particularly those bearing on the Bible. Last week we reported the discovery of the library of an old monastery in Egypt, with manuscripts of the Bible in an ancient Coptic dialect, to be edited by Professor Hyvernatt, of the Catholic University at Washington. This week we report quite new light from Princeton University on Jonah and the whale, given to us by Prof. George Macloskie, of the de-

partment of biology, now emeritus. He gives it to the world thru *The Bible Student Teacher*, organ of the "Bible League."

The new light was suggested to Professor Macloskie from a late work on the Japanese whale fishery. He tells us that a big whale weighs as much as 800 men. its mouth is big enough for ten men to stand abreast. It takes as much air at a breath as 800 men would take in twenty minutes. Here we must quote:

"As it [the whale] skims along the sea, it scoops in its food of jelly-fishes and small crustaceans and other surface animalcules, which quickly enter its stomach; but a larger object, Jonah's body, for example, must go the wrong road (that is, for the whale, but the right road for Jonah) into the air-chamber."

That is a bright thought which had not occurred to commentators who were not also zoologists. Just what the air chamber is we are not told. We take it that the learned professor assumes his readers will understand that with no more difficulty than they find in the whale's food of "crustaceans and other surface animalcules." He simply tells us that "the air chamber of a whale is large enough and convenient enough to serve as a harbor of refuge for anybody that might come in its way." We must conclude that as Jonah would have got tangled up in the lungs themselves, he must, after having fortunately escaped the gullet, have got safely lodged in the windpipe or in one of its divisions. But how was he to compose himself in his air chamber? Let Professor Macloskie tell:

"Here Jonah might be wide awake, able to meditate on the situation, and to pray to God, and to sleep over night."

Yes, "two days and three nights," the story tells us; and, we add, this gave him time to compose and commit to memory a prayer which is largely a cento from the Psalms. We take it that he need not have lacked food if he crawled near enough to the whale's gullet to seize some of the "jelly-fishes and small crustaceans and other surface animalcules" which his host was straining out for itself. But the reader will be anxious to know what light the professor of zoology has to cast on the manner of Jonah's escape:

"But tho not very inconvenient for him, the whale itself might feel discomfort, and might

seek relief by hurrying to shallows and sandy beaches where it coughed up the prophet on dry land."

This explanation gives no little relief, altho it raises some minor difficulties which we will help Professor Macloskie to resolve. That Jonah was in the "belly of the fish"—for the Bible does not say *whale*—has been a source of difficulty, for how could he live and breathe there "two days and three nights"; but any part of the whale's interior, lungs or windpipe, could loosely be spoken of as its belly; and if we are told that the fish "vomited out Jonah upon dry land," the word might include coughing. Those that watched the performance would not know the difference. The Macloskie theory is very happy in providing both food and air for the prophet.

Other minor difficulties can be easily explained by accepting facts previously unknown as to the behavior of whales. It had not been generally known that whales when choking "seek relief by hurrying to shallows and sandy beaches." Altho this fact is not definitely stated by the author on the Japanese whale fishery, quoted by the professor, he does tell us that whales are often "stranded on the Japanese coast." Very likely they have swallowed a fisherman and have hurried to the shore to cough him up, but we wait fuller observations. Another difficulty can perhaps be as easily explained. The Princeton professor supposes the whale when in distress to have been "hurrying" to the shore to cough up Jonah. But Jonah was in the whale's windpipe two days and three nights, and he was swallowed down when the ship was coasting along the shore, for the sailors "rowed hard to get them back to land," but the storm was too severe. We learn here a new fact about whales, that they may not notice for days so small a morsel as a man lodged in their windpipe, until, as was probably the case, the prophet moved into closer quarters, where the breath was obstructed, and then the whale began to "feel discomfort" and hurried to a convenient sandy beach where it could find relief by coughing.

We thank Professor Macloskie for this valuable biblical and biological study, and we echo the pleasure of *The Bible Stu-*

dent Teacher that this article "will help many to meet the scoffing skepticism of the day that voices itself in the sneering question, 'Did Jonah swallow the whale?'"

Our Vacation Number

ALREADY THE INDEPENDENT is planning its Vacation Number: an annual issue the annual success of which we credit to our readers. For what we especially like about these Vacation issues is the letters from subscribers that form a substantial part of each one of them. Letters simply written, with the genuineness of the letters of real friendship, it is a pleasure to receive, to read, and to print. We look, above all, for the personal touch, for intimate humor, for the picture of tangible things seen and enjoyed, for the account of experiences diverting or impressive or enlightening. We cannot print, in this department, more than 800 words from any one amateur contributor. We suggest 400 words as the best number. And we hope that the 1912 crop of letters will, much of it, come to us illustrated: whether with pen-and-ink or pencil sketches, or with photographs. Prizes will be awarded for the best letters—one prize of \$15 and one of \$10. Two yearly subscriptions will go to each writer of a letter published, but not receiving a prize. And we can use a good many letters! We hope that they will come to us from all parts of the world—since our readers are everywhere. But the prize-winning letters will just as likely as not come from the next street to ours, or from a farm somewhere in Iowa.

Apart from the letters and any illustrations which may accompany them, we want our readers to send us, in a second competition, their best vacation photographs. Prizes of the same amounts are offered—and two subscriptions will be entered for each photograph reproduced, but not awarded a prize. Our last set of Vacation pictures was limited to photographs illustrative of "Greater America." For 1912 we desire water pictures. We do not say "marines," for inland waters will furnish innumerable subjects. You, Mr. Fisherman; you, Mr. Rower, and you, Sir Canoeist, know the truth of this com-

monplace. There is no part of the world where photographs offering a share, at least, of their interest in *water* cannot be taken in abundance. And any picture that has water in it—even a bath tub scene or a water-wagon or an impression of Broadway on a rainy evening—will stand its chance of selection.

We do not say that you must send in the letter or the photographs which we hope you will submit *now*. But we hope you will do so—or at least before your plans for the coming summer drive out of memory your recollections of former vacation doings. In any case, send them to us before April. Naturally, we cannot undertake to report on manuscripts or photographs addressed to the Vacation Editor as promptly as we do on everyday offerings. The Vacation Editor is a leisurely person; he follows the cult of *mañana*. But he does not want readers of THE INDEPENDENT to put off their action because he is slothful. Indeed, the sooner their contributions reach us, the more likely will they be to score success. And may those of our readers fortunate enough to enjoy winter vacations find healthful and joyous recreation at the present season!

A Postal Telegraph System

At last we have from a Postmaster General the definite recommendation that our Government take over the telegraph service of the country, as all other civilized countries of the world have already done. The nation would have to buy at a fair rate the telegraph companies, paying perhaps \$250,000,000, but they would be a source of income, as they already are, even at reduced charges. In a multitude of cases the postmaster would be telegraph operator, and the telegraph service would be extended to many small towns which it does not now reach. We do not expect this advance—sure to come—to be immediate, for the extension of parcels post has the precedence, but we hope it will not have to wait so long as the postal banks had to wait after Postmaster General Wanamaker's first recommendation. Why should Spain and Japan leave us in the rear in providing for the convenience of their people? Already 950,000,000 people have government owned tele-

graphs, and in every case to the advantage of the people, while we give this public utility to the profit of millionaires. This proposal will not involve the simultaneous assumption by the Government of the telephone system, at least only in part, where telephone and telegraph are now interlocked, but the sooner the telephones also can be added to the postal service the less the purchase will cost the nation. With the beginning of the year Great Britain assumed control of all its telephones, but we are foolish enough to wait a while longer even for telegraph service.

Mr. Shuster's Associates As was to be expected, Russia has her way with Persia, crushes her brave attempt at self-government, forbids her to gain courage and strength, destroys the new parliament, drives out the financial controller, hangs the leaders who resisted, and makes the way easy to annex half the country, if she has not already annexed it, as she rules Teheran. It is a very serious fact that Mr. Shuster's assistants cabled to our State Department that Mr. Russell, our Minister to Persia, had not given them proper support. That is not improbable. He has not the reputation for independence and force such as are required. Directions have been sent him to do his duty, and our Government has its duty to protect these men, and to see that their claims are allowed, and that they be paid and allowed to leave the country. They were engaged as assistants to Mr. Shuster, and now that his office has been turned over to his opponent, who is a tool of Russia, it is only just that they should be relieved and properly provided for. We cannot doubt that our Government will support them with vigor.

Shade Trees A friend, referring to a brief editorial on trees for streets, which appeared recently in THE INDEPENDENT, doubts whether Southern California cannot do what our Northern cities are surely unable to do, plant every street with a distinct variety of tree. He tells us that there are in common use in Los Angeles and in other cities of Southern

California, many varieties of eucalyptus alone. In addition there is the camphor tree, the acacia, several varieties of palm, grevillea, locust, all of which can be used to distinguish and at the same time shade streets. Our correspondent seems to object to the prevailing system that it does not give symmetry to a street. He would have a uniformity on each single street if possible; a policy that has been successfully carried out in Washington. Our objection was not to uniformity on each street, but to the express determination to plant each street with a separate variety of tree. It certainly is possible to have half a dozen elm streets, half a dozen mulberry streets, half a dozen Norway maple streets, half a dozen scarlet oak streets, etc. It still remains to be made sure that we have any large number of trees that will come to their best in any one city. Southern California, of course, can collect from a much wider range. The chief trouble with lack of uniformity in our street planting, however, is not the selection of different varieties, but the use of those that give too sharp and unpleasant contrast. The maple is a uniformly shaped, round-headed tree, that must not be trimmed or meddled with after it has attained much height. In fact, it is a tree that in the street is always liable to be maimed or ruined entirely by the saw. With the maple can be easily planted the white ash, and several of the oaks; but with the maple cannot be wisely planted the overhanging white elm, nor the beech, nor the locust. In fact, we should much prefer to see one of our smaller cities select two or three trees that will surely thrive and do their best in its soil and with the conditions it can offer, and then make all of its streets sweet and shady. As for Southern California, we are not quite so sure. The camphor tree, which our correspondent names, is a tree that sits on the ground like a well grown spruce; some of the acacias make fairly good street trees; the locust, however, is brittle and short lived, or if the gleditschia is meant, surely the thornless sort must be secured. As for the palms, they certainly are Oriental and unique; but not all of them are to be preferred for shade. On the whole, we are in-

clined to adhere to our previously expressed opinion, that we have not more than half a dozen really prime varieties of shade trees in any one section of the country; and that street planting should be confined almost entirely to these. One or two sorts are fortunately to be found over a very large extent of territory, and half a dozen of the best of these would be basswood, Norway maple, sugar maple, ash, elm, oak in variety.

Luther on the Staircase

It has been a pretty story, that of Luther's climbing the "Pilate's Staircase" at Rome on his knees, repeating a *Pater Noster* at each step, and suddenly thinking of Paul's quotation from Habakkuk, "The just shall live by faith," and stopping the ascent in the middle as no way of appeasing God. The story has been questioned of late as depending on the word of Luther's son, who says he heard it from his father's lips. But the son was then very young, and Luther's enlightenment as to Paul's teaching came later. In the German *Zeitschrift* for Church History Dr. Buchwald gives a passage from an unpublished sermon of Luther's in which he gives his own account of the incident. It reads:

"So at Rome I wished to deliver my grandfather out of purgatory, and ascended Pilate's Staircase. I repeated the Lord's Prayer on every step. For it was believed that he who so prayed would redeem a soul. But on reaching the summit I thought 'Who knows whether this is true? This prayer is worthless, etc.'"

The indulgence allowed was to deliver any soul from purgatory in whose behalf one should repeat a *Pater Noster* and an *Ave Maria* on every step. It appears, then, that Luther did climb the steps on his knees, did repeat the required prayers in behalf of his grandfather, and all the spiritual change in him at the time was one of doubt and not of sudden revelation. The story of the text that flashed on his mind must be given up.

That is an extraordinary riot that is calling out the militia in Lawrence, Mass. The Legislature reduced the hours of work in the mills, at the demand of labor, from fifty-six a week to fifty-four. Thereupon the mills reduced the wages proportionately. But what the operatives

wanted was less work and the same pay, and they struck, struck violently; and they invaded the mills and damaged the machines and attacked the foremen, marching with American and Italian flags, for the mob was largely Italian, and almost wholly foreign. Let them stop work, if they think it best, but no violence and no sabotage.

This is Cardinal Farley's week in New York City. He will own the city, return a conquering hero, and the streets will be filled with processions and the sidewalks lined with spectators, and all glory given to the Cardinal Archbishop. It is not wholly an unwise policy, and yet it does not seem exactly unworldly. No other Church would think of thus glorifying its leaders, as if they were more than human. We should hold the Church in more honor if it showed more modesty rather than barbaric splendor.

Robert Bacon, who was Secretary of State before he was made Ambassador at Paris, resigns this post to take what he considers a higher one, that of one of the six Fellows who rule Harvard University. He is quoted as saying that he regards Harvard as "the best single influence for good in America." Then he has done right in leaving the less for the greater field of usefulness, if not of honor. His new office gives much work, brings no salary, and is for life.

A more shameless act than that which has just passed the Maryland Legislature could hardly be conceived. It is intended to disfranchise ignorant voters, and it applies to twelve counties which it is desired to hold for the Democratic party. It forbids party emblems to be put on the ballots, and it also forbids the publication of sample ballots which can be examined beforehand. It can equally be used to disfranchise illiterate white voters.

It is an indefensible action of the Haitian Government by which it has revoked all licenses granted to Syrians, some of whom are American citizens, to do trading in the island. It is such an act as, if persisted in, might call for intervention on our part.

Insurance and Financial

The Prudential's New President

FORREST F. DRYDEN, first vice-president, was last week elected president of the Prudential Insurance Company of America. Mr. Dryden is the only son of the late Senator John F. Dryden, the founder of the company, and was born in Bedford, Ohio, in 1864. From 1882 to 1884 he served as an errand boy and clerk in the Prudential, and then entered Phillips Academy, Andover, returning to the service of the company as inspector in 1888. He later became acting superintendent, superintendent, assistant secretary, and in 1890 secretary. In 1903 he was elected third vice-president, in 1906 second vice-president, and in 1911 first vice-president. Mr. Dryden's training makes him eminently fitted to occupy the position of president.

The first vice-president and actuary is John K. Gore, who was born in Newark and was graduated from Columbia University in the first honor class in 1883. In 1891 he became a clerk in the actuarial department of the company. After serving as assistant actuary he was elected actuary in 1897, and ten years later became a member of the board of directors. In 1909 and 1910 he was president of the Actuarial Society of America. Jacob E. Ward, the new second vice-president, is

a brother of the late Dr. Leslie D. Ward, and for thirty years has been associated with the company. He was assistant counsel and then counsel. His special work has been in the legal and investment departments of the company's business. The third vice-president is Wilbur S. Johnson, who, born in 1857, was educated in the public schools of New Jersey and entered the service of the Prudential

as assistant bookkeeper in 1880. After serving as cashier a number of years he became comptroller in 1904 and fourth vice-president and comptroller in 1905. He was later elected third vice-president. The fourth vice-president is Edward Gray, who, born in England, has been in the service of the Prudential for twenty-nine years. He worked in the field with the late president, Senator Dryden, and nine years ago was elected secretary. He is now a director as well as vice-

FORREST F. DRYDEN
Newly elected president of the Prudential Insurance
Company of America

president. The new secretary is Willard I. Hamilton, promoted from the position of assistant secretary. All these promotions have the hearty approval of the large army of agents and workers of the Prudential. The Prudential Insurance Company of America was organized in 1875, and was the pioneer in industrial insurance. Its assets, which a year ago were \$227,000,000, now exceed \$250,000,000.

Destruction of the Equitable Building

THERE was a time in the history of New York City when the Equitable Building, which has just been destroyed by fire, was the most imposing edifice dedicated to business purposes within its boundaries. For its period it was so lofty that, in order to secure tenants for its office rooms, the then modern innovation called elevators, to the number of two—were put into it, greatly to the perturbation of the members of the society's building committee. Said the elder Hyde on that point afterward: "All the members of the building committee, except myself, were opposed to the introduction of elevators, but finally consented to have one erected. It required quite a struggle on my part to obtain their consent to put two in the building." The building itself, its elevators and all its attributes, were an expression of the character of the man who organized and made the Equitable Society—and marked a step forward in human activity.

For years the palatial residence of the society held a place among the objects of curiosity or admiration in the metropolis which visitors from all parts of the

THE EQUITABLE BUILDING ON JANUARY 10

country must not miss; and as such its advertising value was large. But the world—and New York leads it—has moved far since 1870, when the first portion of the Equitable Building was thrown open to occupancy; indeed, the distance covered since 1888, when it had been extensively enlarged and beautified, is great. Broadway's chief architectural jewel has long since suffered eclipse. Grander and more magnificent edifices completely surround and virtually obscure it, to the vision of even the way-faring stranger, who would be more likely to notice it than those familiar with the neighborhood.

This brings us to the stories which went about for years respecting its extravagant cost. Perhaps there really was great waste in its erection and equipment. The company's first years were years of struggle; it had fought hard for a place; it had buffeted many difficulties. It eventually waxed fat and prosperous and prodigal thru its rapidly developed tontine system of life insurance. It accumulated the income of a prince, and was not niggard in the spending thereof. Therefore it would not be surprising to know for a certainty

FIGHTING THE BIG FIRE FROM BROADWAY

that its building had cost a great deal more money than it was worth.

And the time finally came, particularly after the introduction of the skeleton steel model of architecture, when rapid depreciation was its fate. As a type of office building it long ago became obsolete. As an investment, occupying the valuable land it covered, it was probably not worth the materials of which it was composed. It is not strange, therefore, to learn that no insurance was carried

cial loss to the policyholders. True, it did cost the policyholders some millions of dollars—six, eight, perhaps ten millions. But it is quite probable that the present membership of the society have sustained no pecuniary loss; that burden fell upon their predecessors. The society's present financial condition is not in the least affected by the fire—if anything, it is improved, for the time was not distant when the great value of the land would demand the erection of a

This drawing shows Broadway in 1865 between Cedar and Pine Streets: the site of the Equitable Life Assurance Society building. The building at the corner of Pine Street on the right was the Metropolitan Bank building. Next to this building, marked with the cross, was the store erected in 1850 by Henry C. Bowen, head of the house of Bowen & McNamee and also founder of THE INDEPENDENT. This building was subsequently sold to the New York Life Insurance Company, who occupied the same, and was later used by Delmonico's. It was the first marble building erected on Broadway.

on it as a protection against loss by fire. Comparatively speaking, it was of little value. It has been described as fire-proof. This is a great error. It was not so much as of "slow burning construction," as the fire underwriters say, nor could it ever have been so considered by the latter. This fact is attested by the rapidity with which its interior was consumed only ten days ago.

Unless the general impression is erroneous, the value, whatever it actually may have been, of the building itself, has been written off the account books for some years. As it no longer figured as an asset, its destruction was no finan-

structure more modern in design and more profitable as an investment.

.... Henry M. Wells is now president of the National City Bank of Brooklyn. He has been connected with the bank for twenty-seven years, becoming a clerk in 1885 and cashier in 1897. He was born forty-five years ago in the parsonage of the old Dutch Reformed Church in Flatbush, of which his father, the Rev. Dr. Cornelius L. Wells, was pastor. The capital of the National City Bank of Brooklyn is \$300,000; surplus and undivided profits, \$595,097; deposits, \$5,239,499; and the total resources, \$6,253,397.

The Independent

VOL. LXXII NEW YORK, THURSDAY, JANUARY 25, 1912

No. 3295

Survey of the World

A Presidential Message on Economy

The President sent another message to Congress on January 17. His subject is economy and administrative efficiency, and he asks Congress for a continued appropriation for the Commission of Economy now investigating the organization of governmental departments. Two hundred thousand dollars for the commission's work, and fifty thousand more for publishing its results, are asked for. There is need, the President informs Congress, of reorganization of the Government departments, and consolidation or weeding out of bureaus that overlap in their work. Scores of "local offices" thruout the country should be abolished, and hundreds of political appointees who do but little work should be taken off the payroll, and there should be an improvement in the personnel of Government employees thru the introduction of the civil service in practically every field. Business methods should be employed by the Administration just as big corporations use them. The Economy Commission, he said, had recommended the abolition of the revenue cutter service, which would mean a saving of \$1,000,000 a year. In one department it costs \$5.84 per thousand to handle incoming mail and in another department \$84.40 per thousand. For handling outgoing mail one department expends \$5.94 per thousand; another, \$69.89. Either one department pays too much or the other not enough, he said. In travel alone the Government expends about \$12,000,000 a year. Definite tests, he pointed out, have shown that a saving in this item alone of a little over half of one cent a mile probably could be effected. The President urges the adoption of the budget system, which would bring be-

fore Congress, the press and the people of the country not only the proposed expenditures of the Government, but its revenue.

"It is a matter of public record that the three largest insurance companies in New York, when under legislative investigation, spent more than \$500,000 for expert services to assist the Administration to put the business on a modern basis; but the economies the first year were more than tenfold the cost. I am informed that New York, Chicago, Boston, St. Louis, Cincinnati, Milwaukee and other cities are prosecuting inquiries, the cost of which is largely disproportionate to the cost incurred by the Federal Government. Furthermore, these inquiries have the vigorous support and direct cooperation of citizen agencies which alone are spending not less than \$200,000 per annum, and in several instances these combined agencies have been working not less than five years to put the cities on a businesslike basis, yet there is still much to be done."

Probably the most radical proposal advanced by the President is that all administrative officers of the Government in the departments at Washington and in the field be put under the civil service; be removed from the influence of politics, and that their terms of office be not limited, as at present, to four years. Such officers should not be appointed by the President with the necessity of Senate confirmation, he said, but upon merit. "The extension of the merit system to these officers and a needed readjustment of salaries," said he, "will have important effects in securing greater economy and efficiency." Harvey S. Chase, of Boston, a member of the President's Efficiency and Economy Commission, said last week that Mr. Taft would employ widespread publicity in his efforts to obtain from Congress the legislation necessary to carry into effect his plans of efficiency and economy in the Government's business. "The President doesn't expect

that the measures we have proposed and which he has approved will be received by Congress without opposition from some quarter or other," said Mr. Chase.

"For instance, the placing of the heads and other appointive officers of many departments under the civil service regulations would mean the abolition of the patronage of perhaps 10,000 offices, which will not please the politicians. But he believes that if the people once understand what 'scientific management' in Government administration means to the welfare of the country a public sentiment will be created which Congress cannot resist.

"The saving we are trying to bring about is in expenses, not expenditures, which is a distinction that needs to be understood. The saving must be effected by getting efficient return for every dollar expended."

✱

A Warning Note to Cuba The demands of the Veterans' Association in Cuba have been reported in this record of current events. It will be recalled that the veterans insisted upon the removal of all officeholders who had in past years opposed the movement for Cuban independence; that at first President Gomez refused to be guided by them; that Congress suspended the civil service law for eighteen months, in order that it should not protect the officeholders in question; that two Cabinet officers and one judge resigned because of the veterans' hostility; that the veterans threatened to lynch all Spaniards or "guerrillas" who should be retained in office, and that the Government and the veterans united in forming a "decapitation" commission to consider demands for removals. Recently officers of the army and rural guard have joined the veterans in this movement. At the beginning of last week our Minister in Havana, Mr. Beaupre, reported to the State Department that many of these officers had attended and taken part in the veterans' meetings, in defiance of a decree issued by President Gomez and also in violation of military law. The veterans had addressed to the President a demand that his decree should not be enforced. "The situation," said the State Department, "is regarded as the most serious that has presented itself since the veterans' movement began." On the 16th, Secretary Knox cabled to Mr. Beaupre the following note of warning, to be delivered by him to the Cuban Government:

"The situation in Cuba, as now reported,

causes grave concern to the Government of the United States. That the laws intended to safeguard free republican government shall be enforced and not defied is obviously essential to the maintenance of the law, order and stability indispensable to the status of the Republic of Cuba, in the continued well-being of which the United States has always evinced and cannot escape a vital interest. The President of the United States looks to the President and Government of Cuba to prevent a threatened situation, which would compel the Government of the United States, much against its desires, to consider what measures it must take in pursuance of the obligations of its relations to Cuba."

There were indications that a military party might be formed in Cuba. The veterans had even been threatening to start an armed revolt and to "destroy" the Congress. Altho it was not expected at Washington that intervention would be required, General Wood said that 8,000 soldiers could be placed on the island within five days. Much excitement was caused in Havana by the note. President Gomez said there was no warrant for intervention; he was in full control and could enforce the laws. General Nunez, the veterans' leader, said their only purpose was to purify the civil service; if the United States should intervene it would have to fight the veterans. The first effect of the note was a union of the two factions of the Liberal party. They decided to renominate Gomez and Zayas. There were several conferences at the palace, representatives of all parties and of the veterans' being present. The veterans' leaders undertook to issue a circular letter, urging the local veterans' clubs or lodges to become merely beneficial institutions, for the aid of veterans' families, and to co-operate with the Government in developing Cuba's resources. Two or three of the local clubs disbanded. It was agreed, according to public statements, that the campaign for removals should be discontinued, but in private some of the leaders said it would not be checked. All felt there was danger of intervention, and apparently desired to leave no excuse for it. On the 20th an agreement was signed. It required the veterans to decide whether the "decapitation" commission should be dissolved or should continue to serve; but in either case there should be no proceedings against officeholders after February 24, when the President

will ask Congress to revoke its suspension of the civil service law. The veterans are pledged to confine the activities of their association to the purposes defined in its constitution and bylaws; to act as guardians of the peace of the country, and to aid the Government.

Union Labor Thirteen hundred delegates, representing almost 300,000 out of some 750,000 coal miners, gathered at Indianapolis last week in the convention of the United Mine Workers of America. Representatives came from the various States and from Canada; and John P. White, international president, and subsequently re-elected as such, called the convention to order on January 16. The convention has especial importance, since, for the first time in the history of the organization, the wage scale agreements in both the anthracite and the bituminous fields will expire synchronously (March 31). There has been no change in the mining rate since 1902. An effort was made to commit the convention to the Socialist party. The constitution of the United Mine Workers stipulates, however, that it shall be non-political, and the resolution was rejected; while action was deferred on a substitute resolution endorsing the policy of workingmen using their ballots in the interests of organized labor, tho Vice-President Hayes declared that the time had come "when labor must organize politically." The Berger bill providing for old age pensions for men and women past sixty years, introduced in Congress by the Socialist representative from Wisconsin, was, however, endorsed; and an invitation to Mr. Berger to come to Indianapolis to address the convention was extended. Action was deferred on a resolution providing that the United Mine Workers should withdraw from the American Federation of Labor, condemning the National Civic Federation as an agent of capitalists, and sharply criticising Samuel Gompers, John Mitchell and other leaders of the Federation of Labor for co-operating with the Civic Federation. Mitchell, tho attacked as "a labor leader in the grasp of capitalists," received more votes than any other candidate for delegate of the Mine Workers to the American Fed-

eration of Labor. At a meeting of the Pittsburgh Coal Operators' Association, held on January 16, it was decided to meet Ohio, West Virginia and Indiana coal operators at Pittsburgh, January 18. On the latter date the operators accepted the invitation of the president of the Mine Workers for a joint wage conference at Indianapolis, January 25, eight operators and eight miners from each State to attend. There is now little talk in the Pennsylvania field of striking for better wages. The fact that of the 150,000 mine workers in the anthracite region eligible to membership in the union fewer than 8,000 are actual dues-paying members is discouraging, and so is the fact, disclosed in the report of Secretary-Treasurer Edwin Perry, that on December 1, 1911, there remained in the national treasury only \$197,216.—The executive board of the International Association of Bridge and Structural Iron Workers, admittedly because of troubles expected to arise from the dynamite cases, is keeping in force a special assessment levied against its members last September. This special assessment brings into the coffers of the union approximately \$7,000 a month more than the usual and ordinary revenues of the union. In addition to the general fund of the union and the special assessment, a "defense fund" of about \$35,000 is now available. This fund was created six years ago, not to become available until January 1, 1912. It was created the same year the execution of the dynamiting plots began, and, altho members of the executive board of the union have denied that J. J. McNamara had any more than other delegates to do with the creation of the special fund, it has been charged by detectives that McNamara was the power behind its establishment.—On January 17, Ortie E. McManisgal, the dynamiter, went before the United States grand jury at Indianapolis and began his story of how he was induced to enter the dynamiting business in 1907, of the trail of wrecked buildings, bridges and machinery he left behind him as he was sent from place to place by those at the head of the conspiracy, and of the local labor men in different cities who showed familiarity with the plans of the dynamiters.—By January 16, eight companies of mill-

tia had reached Lawrence, Mass., the seat of disorder in the woolen mills. That day the strikers, thru their executive committee, agreed to confer with the mill agents, in the presence of the State Board of Arbitration and Conciliation. A clash between strikers carrying flags and the militiamen occurred, however, the next day. On January 18 it was stated that the mill owners would concede the modified demands of the 15,000 strikers, the latter having foregone additional demands of a 15 per cent. increase in wages over the fifty-four hour rate. They insist, however, on the abolition of the bonus and premium system. Prominent in the negotiations, which had been quietly carried on for two days, were Governor Foss, Col. E. Leloy Sweetser, commander of the State militia, who were called out to preserve peace; Max Mitchell, president of the Jewish Charities of Boston, and Board of Conciliation and Arbitration.—On January 20, eleven arrests were made at Lawrence after the discovery in the Syrian quarter and elsewhere of a quantity of dynamite fuses and detonating caps. There were then 1,200 soldiers in town; more were sent for.

Various Items Charles W. Morse, of New York, who has been serving a fifteen-year sentence at Atlanta for violation of the Federal banking laws, received a commutation from the President, to take immediate effect, on January 19. His wife carried the papers from Washington as a special messenger of the Department of Justice. Morse was too weak to be moved from the prison hospital at once. A statement issued at the White House explains that the President's action was taken on the recommendation of the Attorney-General, based on the following report of Surgeon-General Torney:

"He [Morse] is suffering from a combination of diseases due to degenerative changes which are incurable and progressive. . . . Both the condition of the kidneys and of the heart is growing worse. . . . In my opinion the prisoner's duration of life will in all probability be less than one month if kept in confinement, and in the event of his release under commutation of sentence it is not probable that he will live as long as six months."

—The Heyburn subcommittee of the Senate which has been investigating the re-election of Isaac Stephenson, of Wisconsin, unanimously agreed, on January 18, upon a report holding that the charges of corruption and bribery have not been proved; and subsequently made their report to the Senatorial Committee on Privileges and Elections.—After holding conferences last week with various insurgent Senators, Senator A. B. Cummins, of Iowa, announced, on January 20, his candidacy for the Republican presidential nomination.

Mexico Zapata's bandit army has not been subdued, but Congress has ordered a suspension of the constitutional guarantees in the States, near the capital, where it still defies the Government. The Maya Indians in Yucatan have gone on the war-path, and there is a revolt against the State government in Tabasco, but there was peace elsewhere in Mexico last week. Madero will ask Congress to abolish the national lottery. It has been decided that the case against General Reyes is one for the civil courts, and not for a military tribunal. Therefore it is predicted that the penalty will be nothing more than banishment for two or three years. Colonel Chapa, of Governor Colquitt's staff, who was found guilty, at Brownsville, Tex., of assisting Reyes in his revolutionary project, has been required to pay a fine of \$1,500. The sheriff of Webb County, Tex., pleaded guilty to a similar charge and paid a fine of \$1,200. Several other Texans, indicted at the same time, who pleaded guilty, were sent to jail for six months. It is asserted that Madero has discovered frauds amounting to several million dollars in connection with contracts and material for the construction of the National Theater and the new public buildings at the capital.

Wars in South America Much blood was shed last week in South America's civil wars. On the 15th, in Ecuador, the Quito Government's army, led by ex-President Plaza, won a victory at Hulgra, over the troops commanded by Gen. Flavio Alfaro, whose base is at Guaya-

quil. Three days later the Quito forces, this time commanded by Gen. Julio Andrade, attacked Alfaro at Yaguache, 15 miles from Guayaquil, and again were victorious. In this battle, the killed and wounded were about 1,000. Alfaro was disabled by wounds, and his place was taken by his uncle, ex-President Eloy Alfaro. There was fighting in Guayaquil on the 20th, the day when a peace commission, of which the American and British consuls are members, began its conferences with Andrade and Alfaro. Our Government has ordered the cruiser "Maryland" to join the "Yorktown" at that port, where Great Britain has asked our ships to protect British interests.—In Paraguay, on the 15th, the revolutionists entered Asuncion, the capital, and captured President Rojas, forcing him to resign. The garrison remained neutral, but other Government troops were approaching the city. The revolutionists called a session of Congress for the election of a President, and it was predicted that the office would be given to ex-President Baez. Four days later, however, after desperate fighting in the streets, the revolutionists were driven from the city by Government troops.—An arbitration treaty for Argentina and Colombia was signed last week by the Ministers of the two countries at Washington.—Argentina's Government attempted to end by mediation the strike which has checked railway traffic in that country. The companies refused to dismiss their strike-breakers, and the strikers insisted that all of their number must be taken back or none.

✻

British Affairs Sir George Askwith, of the Board of Trade, has succeeded in inducing the employers and operatives to consent to a truce, which, tho it does not settle the open-shop question, provides against strikes or lockouts on this issue for at least a year. At the end of six months Sir George Askwith will, if asked, submit suggestions aiming to provide means whereby both sides may maintain their principles without injuring the rights of each other. If this does not solve the problem neither side will do anything in-

volving a stoppage of work without six months' notice. This proposal was accepted by the strikers by a vote of two to one, and the cotton mills will be opened immediately.—The vote of the Miners' Federation on the question of a general strike at the earliest opportunity was 445,801 for the strike and 115,921 against it. Notice has been given to the employers that the present working agreement will be terminated February 29. There is some prospect that a settlement may be reached before that date and the strike averted. The chief demand of the men is for a guaranteed minimum daily wage for men underground such as is now assured to men above ground. They claim that the present piecework system works hardship on the miners who have hard places where they cannot get out the ordinary amount of coal. The employers, on the other hand, hold that it would be impossible to prevent shirking by the men if piecework were abolished and that where the fixt wage has been adopted the yield per man is half or less than when payment is made by results. They further point out that the bonus percentages have steadily increased for nearly thirty years and that the miners have had the benefit of favorable legislation, establishing the eight-hour day, providing for compensation for accidents, regulating mines and requiring insurance against sickness. The men are dissatisfied with the working of the eight-hour law, because it makes them go on duty at inconvenient hours, causes more frequent accidents thru speeding up and prevents their getting extra pay for overtime.—The Protestants of Ulster are becoming daily more infuriated over the prospect of the establishment of home rule in Ireland. Drilling is said to be going on and a provisional government organized to be put into effect the day that the Home Rule bill passes Parliament. The 50,000 women members of the Ulster Unionist Associations have issued a manifesto asking the aid of their British sisters to defeat the bill. Winston Churchill, John Redmond and other Liberal leaders are billed to speak at Belfast February 8, but an organized effort is being made to prevent their being heard. The Unionists are planning to

pack the hall and streets with thousands of their partisans for days in advance.

✱

French Vessels Seized A new question in neutrality has arisen which has strained the relations of France and Italy, that is, whether aeroplanes are to be regarded as contraband of war. Naturally the recognized codes of international law have nothing to say on the subject, and there are no precedents to appeal to, for the first appearance of aeroplanes in warfare was their use by the Italians in the present Tripolitan campaign. The French mail steamer "Carthage" was on her way to Tunis when she was overhauled by Italian destroyers and ordered to surrender an aeroplane belonging to the French aviator Duval, who was on board, and parts of another, belonging to the aviator Obré, who had gone to Tunis in advance. The commander of the "Carthage" refused to surrender the aeroplanes, so the vessel was taken to Cagliari, Sardinia, and kept there four days. The Italians held that the aeroplanes had been purchased by the Ottoman Government, and were to be turned over to the Turks in Tripoli for use against the Italians. The aviators, on the contrary, asserted that they were to be used for exhibition flights in Tunis, Cairo and Athens. The French Premier and Minister of Foreign Affairs, Raymond Poincaré, made immediate and emphatic protest against the retention of the "Carthage" or the removal of the aeroplanes and finally, upon the assurance of the French Government that they would not go into the hands of the Turks, the vessel was released with her cargo undisturbed. The French Government will make claim for damages and may appeal to The Hague on the grounds that mail-boats plying between neutral ports are not liable to search or seizure and that aeroplanes have never been specified as contraband even in the list prepared by Italy at the beginning of the war. It is said that the aeroplanes now being used by the Italians in Africa were ordered from France by way of Switzerland since the war began. The seizure of the "Carthage" caused great indignation in France, and this was increased by a sec-

ond incident of a similar character immediately following. The mail steamer "Manouba," from Marseilles, had almost reached Tunis when Italian destroyers stopped her and demanded the surrender of the twenty-nine nurses of the Red Crescent Society, which corresponds to the Red Cross of Christian nations. This being refused, the "Manouba" was also taken to Cagliari, where the Turks landed and were taken as prisoners of war and the vessel allowed to proceed. Their funds, amounting to \$50,000, were also seized. The Red Crescent nurses are, like those of the Red Cross, under the protection of international law, but the Italian Government claims that among them were several Turkish officers, who were to take command in Tripoli.—The British ship "Africa," bound for Aden, was held up by a gunboat in the Red Sea and relieved of twelve Turkish officers, among them Riza Bey. The Italian squadron has completely cleared the Red Sea of Turkish vessels, and has bombarded the Turkish forts on the Arabian coast.

✱

The Persian Situation W. Morgan Shuster, with his wife and two children, has left Persia and arrived at Vienna by way of Baku. He accepted dismissal from the new Persian Cabinet in accordance with the wish of Russia and Great Britain, but as no proper provision was made for turning over his office to M. Mornand, appointed as his successor, he left his assistant, F. E. Cairns, in charge. M. Mornand sent to the Americans, as well as the other officials, threats not only of dismissal, but also of punishment. When Mr. Cairns protested against such a letter he was informed that his translation was incorrect and that the threat of punishment was only intended for Persian officials. M. Mornand took possession of the treasury, ignoring the Americans, but one of the four Persian commissioners appointed to share the responsibilities of the office with him refused to serve. The mejliss has been dissolved, and the Government fears to call for elections lest the new parliament should be even more decidedly anti-Russian than the former. The Americans are bitter against our Minister to Persia, Mr. Russell, for not

supporting their claims. The following telegram was sent to Mr. Sulzer, of New York, chairman of the House Committee on Foreign Affairs:

"The fourteen American officials affected by the Russian ultimatum equally with Shuster desire their release on the same terms. Have presented claims to the Persian Government for full salary unexpired terms, traveling expenses and allowances. The Anglo-Russian legations are supporting the claim in good faith. The Persian Cabinet will obey their instructions. Department of State is influenced by demented American Minister here who is endeavoring to destroy our claims and is obsessed with the idea to compel Americans to remain in Persia regardless of our desires and of the unbearable conditions. Your assistance thru State Department is imperative.

FRANK E. CAIRNS."

—The Russian hold on Persia is daily strengthening all along the northern provinces. Meshed, capital of the province of Khorassan on the northeast, was occupied by 2,000 Russian troops, and the whole province of Azerbaijan, to the northwest, is now in the possession of Russia. At Tabriz the court martials and executions still continue, among them prominent Armenian merchants and leading Mohammedan ecclesiastics. An attempt was made to assassinate Major Bruce, an American officer of Mr. Shuster's treasury guards. The Persian who shot at him on the street is said to have confessed that his motive was to force American intervention.

The Foreign Minister of the Nanking Government, Wang

Chinese Republic

Chung-wei, on January 19, sent the following despatch to Washington, Tokyo, London, Paris, Berlin and St. Petersburg:

"The Manchu Government, having entered into negotiation with the Republic of China for the purpose of abdicating its entire sovereign rights, powers, and privileges, we fervently pray for recognition in order to avoid a disastrous interregnum."

No action is likely to be taken on this request at present, altho the foreign Powers, even those most anxious for the maintenance of the monarchy, seem to have become more dubious of the possibility than they were a month ago. How many of the Powers took part at that time in the attempt to check the republican movement and what form their interference took has not yet been divulged,

but the best informed Japanese papers stated repeatedly and authoritatively that the British Minister, Sir John Jordan, and the Japanese Minister, Mr. Ijuin, assured Yuan Shi-kai, just previous to the Shanghai conference, of their sympathy and support and informed him that their Governments held a monarchical form of government preferable to a republic for China. According to the statements of the semi-official Japanese organs and of Premier Yuan, all the other Powers represented at Peking, including the United States, took the same view.—It was generally expected that an edict of abdication would be issued in the name of the child Emperor Pu Yi and that Yuan Shi-kai would be authorized to organize a republic, but there has been some hitch in the negotiations, perhaps owing to lack of confidence on the part of the Manchus in the promises of the republican leaders that a generous pension, said to be \$3,000,000 a year, would be paid to them. The republicans are willing that Pu Yi, after his retirement to Jehol, shall retain the title of "Manchu Emperor," but not "Emperor of China." They insist that all Manchus be excluded from the provisional government and that the capital be elsewhere than Peking.—An attempt was made to assassinate Yuan Shi-kai on January 16. He was driving by the residence of Dr. Morrison, correspondent of the *London Times*, when a young Chinaman standing on the corner threw a bomb at his carriage. The bomb fell short by about 30 feet and exploded, killing two of the guard and wounding 17 other soldiers, as well as many civilians and several horses. The carriage was preceded and followed by an escort of cavalry, and the entire route had been lined by police and soldiers, five yards apart, facing alternately inward and outward. Yuan was undisturbed by the attack, and after directing the care of the wounded was driven home by a side street, thereby escaping other conspirators stationed along the route. Three of them were arrested, including the bomb-thrower, and were strangled next day by the official executioner. Dr. Sun Yat-sen, the republican president, disclaimed any knowledge of them, and sent a telegram of congratulation and sympathy to the Premier.

HON. CHAMP CLARK

• Democratic Congressman from Missouri and Speaker of the House of Representatives

The Duty of the Democrats

BY CHAMP CLARK

SPEAKER OF THE HOUSE OF REPRESENTATIVES.

HISTORY teaches that in a country whose institutions are based on suffrage the government will be a government by parties. It makes no difference whether we want it that way or not, that is the way it has been, and is, and perhaps will always be. History also teaches that in such a country there will generally be two great parties and never more than two simultaneously. It teaches, furthermore, that in a long lapse of years one party will conduct the government about as much as the other.

When President Taft was inaugurated the Government had existed 120 years under the Constitution. The Democrats had run it for sixty years, precisely one-half the time, and the Federalists, Whigs and Republicans the other half—that is if we count John Quincy Adams as a Democrat, John Tyler as a Whig and Andrew Johnson as a Republican.

During Queen Victoria's reign the political complexion of the British administration changed twenty odd times, which is a higher rate of change than with us. To put it moderately, the signs of the times indicate an impending change in the political complexion of our administration. While the present situation is by no means unprecedented, it is somewhat unusual. The Democrats have a working majority in the House, and the Republicans have the President and a precarious majority in the Senate. In the impending campaign both of the great parties, betwixt which there is now a division of power, will contend with might and main for control of the House, Senate and President—all three. Therefore everybody is on the *qui vive* to find out how the land lies and what the prospects are.

Until the inauguration of President Taft, the Republican party, considered simply as a machine, was perhaps never equaled in politics, certainly never in the politics of this country. Its discipline was superb, its audacity unequaled; it went into every contest confident of vic-

tory. On the other hand, the Democrats had been so often and utterly defeated that they had formed the habit of defeat. Now all this is changed. The parties appear to have swapped positions entirely. The Republicans are split up into bitter and irreconcilable factions. It seems impossible for them to get together in the comparatively short time between now and the election. Most of them appear to be hopeless of success. On the other hand, the Democrats are united, enthusiastic and confident. The truth appears to be that the only possible bar to a sweeping Democratic triumph is overconfidence.

The Republican party is divided into two great factions, the Regulars and the Progressives. The Democrats are unified. There is a large body of independent voters, not particularly tied to any party, and their votes will in all probability be decisive of the result.

Democrats desire progressive legislation. Independents and divers Republicans want it. The majority of the American people favor it. The only way to achieve it is at the hands of the Democrats. The insurgent Republicans would no doubt enact some remedial legislation if they could, but the standpatters are in the majority in that party, and it looks as tho they will continue to dominate it indefinitely; it may be for years and it may be forever. They have control of the Republican machine, and they will run it over the insurgents ruthlessly.

The independents, having no separate party organization, will make their influence felt at the polls by voting for those candidates who appear to most nearly approximate their standard, but as they can entertain no reasonable hope of remedial legislation from the Republican party so long as it is dominated by the standpatters, it is to be hoped that they will give us their aid and comfort by voting for Democratic candidates this year.

As the insurgent Republicans can achieve nothing except when working in

conjunction with Democrats, they would most easily and most certainly accomplish their purpose by voting for the Democrats all along the line.

The famous old recipe for cooking a hare applies with peculiar force to those desirous of progressive legislation. "First catch your hare." In this exigency first elect a Democratic House, a Democratic Senate and a Democratic President. That is the *sine qua non* of progressive or remedial legislation.

In order to reach this consummation so devoutly to be wished, all those who are opposed to the standpatters and to standpat policies must stand together, pull together, work together. If they do this they will triumph together, otherwise they will go down to defeat together. We are politically somewhat in the same condition which wise old Ben Franklin described himself and his compatriots to be in when, after signing the Declaration of Independence, he exclaimed: "Now we must all hang together or we will all hang separately!"

Consequently I cordially invite all who desire to remedy existing evils to cooperate with us in our efforts to rescue the Government from the hands of the standpatters.

One thing is clear as crystal—in order to win we must hold all the voters we had in 1908 and draw to us about 800,000 who were against us then. Consequently it is of supreme importance that we enter the impending contest thoroughly united in purpose, in principle, in policy and in heart.

We owe the present Democratic House to the splendid record of the House Democrats of the Sixty-first Congress, and we owe our present improved—vastly improved—status in the country to that record plus the magnificent record of the Democrats in both House and Senate at the extraordinary session of the present Congress. It was a record characterized, illustrated and glorified by unparalleled unity of purpose and of action and by constructive statesmanship of highest character. We set the pace for future Congresses as to quantity and quality of legislative work done. It detracts nothing whatever from our record that the President nullified by his vetoes the beneficent results which would have

flowed from our enlightened and patriotic endeavors.

We made our record; he made his. The people—the court of last resort in politics—must decide the case upon those records next November.

There is no reason why the Democratic House should not make as good a record at this session as it did at the extra session. We were green hands at running a majority then; we are something of veterans now. At the extra session our conduct was such as to please nearly all Democrats and independents and a great many progressive Republicans. This is demonstrated, not only by individual opinions and the voice of the public press, but by the historical fact that on nearly every important bill and resolution our majority was much more than the normal Democratic majority in the House, which means that quite a number of progressive Republicans voted with us on many of these measures. We most cordially welcome their assistance.

In the very nature of things this session will be a long one in fact as well as in name. President Taft by vetoing our tariff bills prolonged this session by at least two months, and it bids fair to continue until far into August. At the long session a great deal of time is consumed—and properly consumed—in scrutinizing and debating the great appropriation bills. At the short session these are, from the necessity of the case, jammed thru with very little consideration, but at the long session, where time is not the essence of things, members insist on understanding and ventilating the various items in each bill. We intend to pass five or six tariff bills—perhaps more. We believe that we are right and that our cause is just, and that we have the people on our side. The results of the November elections demonstrate that where the tariff was the dominant issue the Democrats won. This was notably the case in Massachusetts, where Governor Foss, who was re-elected, made the tariff the sole issue, and in the special Congressional elections in Nebraska and Kansas. The Hon. Joseph Taggart, of Kansas City, Kan., is the first Democrat elected from Kansas since 1900. Another proof is that on the 9th of January we elected a Democrat in the "Big Seventh" dis-

trict of Kansas by 1,500 majority to succeed Judge Madison, a Republican, who was elected in 1910 by 5,000 majority. I am not guessing what was the issue in the Nebraska district and in the two Kansas districts. I speak from personal knowledge, because I stumped those districts myself, and revision of the tariff downward was the resounding theme of every tongue. These late elections demonstrate two incontrovertible facts: First, that the people endorse our scheme of revising the tariff, schedule by schedule. Second, that the people cannot any longer be scared by that ancient and overworked fable—that Democratic success means a panic. The standpatters have sedulously cultivated the story that Democrats are hostile to the business prosperity of the country. This has been utterly exploded. It is a thing incredible that any sane man desires to injure in any way or to any extent any legitimate business of the country. Consequently we propose to proceed as we have begun, revising the tariff schedule by schedule, taking the most objectionable schedules first. We will undoubtedly consider an anti-injunction bill; also a bill regulating proceedings in constructive contempt cases; a bill for the automatic compensation of employees in certain pursuits; a bill regulating tolls on the Panama Canal; river and harbor bills, and perhaps a bill amending the Sherman Anti-trust law. While I am not authorized to speak, either for Congress or for the House, I take it that the measures named, together with the ordinary run of small bills, will occupy the time of Congress until everybody is anxious to adjourn. Of course, there may be other important matters which do not occur to me now.

It ought to be stated here that so far the appropriation committees of the House have made considerable headway in reducing expenditures. If there is as much retrenchment in proportion in the bills which are yet to be reported as has been made in those which have been reported, we will be able to show retrenchment, which, in the aggregate, will amount to several millions of dollars. What the Senate will do about it I have no idea. The chief desire of the Democrats is to save to the taxpayers every dollar not necessary for the economical and effective administration of the Government. I put in the word "effective" because no good citizen, by whatever political name called, desires to see the Government crippled in any legitimate function, but we do not believe in expending two dollars to do a thing which can be accomplished just as well by spending one dollar judiciously. The tariff bills which we passed and which President Taft vetoed would have saved to the American people about \$500,000,000 a year and at the same time would have raised abundant revenue to support the Government. That is about \$5 per capita for the American people; \$27.50 to the family. This may seem to be a small saving to some people, but when it is remembered that the average head of a family in the United States receives only about \$420 annually on which to support five and a half people, it must be conceded that it is a gross outrage to take from him \$27.50 unnecessarily. No number of vetoes will budge us from the path we have determined to travel. We believe that we are on the right track, and that the American voters will support us in our line of conduct.

WASHINGTON, D. C.

Chinese Revolutionary Methods

BY HENRY BLAIR GRAYBILL, M.A.

ACTING PRESIDENT OF CANTON CHRISTIAN COLLEGE.

THE course of the revolution in Canton and its province has been especially interesting. Canton has been called the hotbed of revolution from of old, but it has been more remarkably a center of peaceful and steady progress in business, when the less energetic people of the northern provinces had not even begun to make steam launches or to stop footbinding. First to receive foreign trade and first to send out emigrants in large numbers, it has got experience, wealth and energy while the other provinces have maintained their reputations for conservatism and sloth. Farthest from Peking it was naturally first to call the Manchu rule to account. And having the largest number of men educated in America and returned from their foreign homes in other democratic countries, it first was ready to declare that both the dynasty and the type of government should be changed.

From days even earlier than the Taiping rebellion of the past century the Cantonese and their neighbors desired a change to a sufficient extent to organize some sort of anti-dynastic movement. This organization was not confined long to the South, and its widespread success explains the success of the present revolution. The societies assumed various names and differed at times in methods and aims. But lately there had been co-operation and consolidation on a large scale. To show how the Koh Ming Tong of South China worked will do something to explain this unique revolution. When has there ever been such sudden and surprising overturning of the government of tens of millions of people a day for weeks? How could it be done when the Imperial Government seemed to be stronger than it had been for centuries? The Chinese have not yet got to the place where you should think it so difficult. But it was easier than to know now what to do next.

When the war with Japan and then the Russo-Japanese war had left the people of China with a vague sense of impending doom, they knew full well that the sins of the past were more those of the dynasty than of the people, and when the Government laid large plans for a new army and a new navy immediately after the war with Japan the people said that it was high time. But the Koh Ming Tong said it would be done more easily and economically if the orders did not come from Peking. The revolutionary society profited by every mistake of the Government. Its ranks filled. Students returned from abroad found they were not needed by the Government, so they joined the Koh Ming Tong and began to hope for a less corrupt government. Returned emigrants found the officials of late years just as corrupt as ever, and a little more powerful on account of the new army. They were told of a new China with a representative government, and so they joined the same secret society. The merchants both in China and in foreign countries supported the movement with funds and excited the people to action against the Government whenever it could be done without danger. The sense of shame, so keen with the Chinese, made many a scholar and schoolboy join the revolutionists when he saw how his country was looked down upon by other nations. And then of course there is always a large number of poor farmers, of robbers, of beggars, and what not, who will join anything that offers a change in life conditions.

So the secret societies grew. But it was a big movement to handle among ignorant people and people not always to be trusted as individuals. Outsiders said they could never succeed. They would inform on each other. Their plans could not be kept secret. They were watched too closely by the Government. But the remarkable thing in it all was that the Government itself did not realize the

Chinese ability for organization and co-operation. They never knew till the cloud burst that the Koh Ming Tong was so well organized and so big a society. How was it managed? In the first place there are no older hands at secret and complex organization than the Chinese. When the Government determined to raise an immense army for protection against foreign countries, the Koh Ming Tong believed it was for the oppression of the people, and found it increasingly easy to make the people believe so, too. So they took their first great step toward the overthrow of the Government. They enlisted. When the Government established a naval or military plant of any kind they were the first to seek employment. They bought offices of importance at high prices. They enlisted as ordinary soldiers and sailors in great numbers. At the arsenals they were careful to get by one means or another the positions which made it possible to turn out poor guns and wooden shells, and keep the good guns and ammunition for use when the arsenal should be captured by the rebels. Even the mints were supplied with a sufficient number to ensure their continued usefulness if they fell into rebel hands. The schools everywhere had branches of the Koh Ming Tong or a sister institution in them. These steps were possible largely because of the fact that they seemed not very dangerous but might prove to be of tremendous importance—as they did. When the time came the members were informed of the course events would probably take and were instructed how to act. When it was confessed by the authorities that the army seemed to be honeycombed with revolutionists, the Koh Ming Tong smiled, for it knew that the whole structure of the Government outside of the touch of the Manchu hand was likewise affected, and that everything else in the Empire was almost as full of their members as the army was.

Meanwhile the ranks of the Koh Ming Tong were filling with new recruits. Inside of the army itself they dared to enlist new members, and won as members or sympathizers even the officers. A few members in a school rapidly increased to a body that made a rebellious atmos-

phere. A school that was not even suspected by its teachers of so much as harboring one rebel would upon some pretext or other refuse to give a reception to the officials of the province, or suddenly show its antipathy to the Government in some unguarded moment. The farmers gradually acquired large numbers of guns for protection against robbers and tigers, very real dangers in most provinces. But they had been informed that even if they were not rebels at the time there would soon be a time when they could enlist.

Up at the top of the organization progress was made too. The rich rewards that might fall to all were great incentives. The reward of a chance to work the rich mines of China or help build its great trunk lines or enter other such enterprises with no official "squeeze" to ruin them, was sufficient for many a well educated young man. Many were made faithful members by the most real patriotism. Many of these men at the top were discovered and lost their lives. Many of them gave their lives willingly when necessary, and were not of the stamp to reveal anything under torture. They went ahead with their plans, but kept the strictest secrecy.

This secrecy has, of course, been enforced constantly. It is a rule that has been easier to enforce than one would think at first. As long as the government in power is rebel hunting, it goes without saying that to make a revelation as to one's own opinions is not safe unless one has carefully ascertained the inclinations of the other man. Even then it is not wise to tell much. A member of the Koh Ming Tong does not necessarily know any other member except the one who enlisted him, the head of his group. This head man in turn knows none except his enlisted men and his superior. Even if he should turn traitor he could not reveal much. His victims would not spread the weakness, and if they should be put under torture, as they very certainly would be and have been, they could not reveal much. Those who would be endangered would quickly discover the danger and get away. Moreover, the Chinese have, and rightly so, a great dread of the power of these secret societies. For a member to turn traitor

would endanger his whole family to the punishments of the society. The men higher up in the organization do not know those lower down, but they know their numbers and character. They hold the funds and so the power over them. A few nights ago I had the good fortune to witness the working of the society. An order came down from the leaders at Hongkong to assemble the men of this district. Within an incredibly short time every village had sent forth some of its young men with their rifles, the ones that had been procured to hunt tigers and brigands with. By three o'clock that night they were ready for the march, and numbered over a thousand under arms. They marched by in the moonlight without a word being spoken, and disappeared over the hill toward Canton.

But the most remarkable part of the movement in Canton and its province has been the complete success that the revolutionists have had with almost no bloodshed. The situation has been complex to a degree. The city, which means almost the whole province where waterways are so good, has been held without difficulty. The Viceroy was a man of great determination and efficiency and had besides the new army a small army of older soldiers from Hunan Province. The admiral had several times showed his ability to cope with difficult situations. He held the waterways and so much of the land with his well equipped gunboats and faithful soldiers and sailors, who seemed to have been kept from the revolutionary influence. The inner walled city was held not only by the Manchus, but by the Bannermen, Chinese from the north brought here as a colony generations ago to help hold the city. Besides all this the merchant supporters of the Koh Ming Tong and the people of the province in general had one great reason for opposing an attack upon Canton: this would draw away their guards in the country and Loke Laan Ching and Lei Tang Tung (Lamp Chimney Lei) and other robber chiefs would be left free to carry on their depredations far and wide, while the confusion and ruin within the city would be worse still, since the walls run not around the whole city, but thru the best part of it. This pre-

sented a situation that the officials seemed confident that the rebel society would not be able to cope with. The beginning of operations on the Yangtse confirmed their belief that the Cantonese rebels had given up their task in the south and gone to other provinces to enlarge their organization. It would have been nearer the truth to say that the south was considered by the rebels as already theirs.

This is the way it was done: The Manchus in the city were considered hopeless as far as conversion was concerned, but not beyond being scared into surrender. They were told of the great strength of the Koh Ming Tong and informed that if they would lay down their arms they would be considered Chinese citizens. The Viceroy, Chang Ming Chi, also beyond conversion, was calmly informed of the fact that within a few hours' march of Canton, tho entirely concealed from his view, lay thousands of troops with arms, ammunition, bombs and other military supplies. If he wished to prove it this could be easily done by his sending a representative to make test of the statement, for example, that so many men could be brought up in a night at any point. He had been informed previously that certain things would happen, and found that there was no mistake about the information. It was told that if the new Tatar general put his foot upon Cantonese soil he would be blown to atoms. But still belief in the word of the Koh Ming Tong had not become firm. So the Tatar general came, two days before he was supposed to come, on a different ship from the one he was declared to be on, unmet by Canton officials, thru a side street, and most carefully guarded. The people were told three times that he would be killed by a bomb, and yet it seemed impossible. When the explosion occurred a dozen houses were wrecked and scarcely a small bit of the Manchu could be found. Could a Viceroy be expected not to tremble when he was told that for the sake of his city and himself he should surrender? The rebels knew everything, and the Viceroy with his costly detectives could discover nothing. The rebels would actually inform the whole city of the date upon which certain things would

happen, and yet defy the authorities to catch them. The new army was itself a menace, so the Viceroy scattered them all over the province and effectually prevented a rising. This seemed such a master stroke that people said Canton was secure. They did not know of the secret armies working in the rice fields with their guns hid in the houses of the villages. The Bannermen were frightened and persuaded into being neutral and giving up their arms, or putting them out of use. They are Chinese; why should they suffer for what their ancestors did for the Manchu cause? But the robbers seemed a factor that could not be dealt with. They were old warriors and strong, and better fighters than either the government troops or the rebels' untried ranks. Then the merchants and gentry and the Seventy-two Gilds must be dealt with; these in times of peace are the real masters of the city in large affairs. A meeting was held and it was decided, thru the careful diplomacy of the rebel advisers, that the city should not assist either the rebels or the government in the war in the north. This was the same as independence. The Viceroy saw that, but promised that if the people would go on quietly with their work and business he would take the step for the sake of the province. But be-

fore the morning came he received a telegram from Peking calling upon him to hold out, and stating that the Imperialists were victorious. Then the rebels called out their village armies and told the Viceroy how many there were. And to add to his consternation and to the peace of mind of the people they made a bold move with reference to the robber chiefs and their bands. They enlisted them all. There was promise of good pay if they succeeded in securing hold of the government and chance for unlimited loot if the city had to be attacked. But the latter was not necessary. The Viceroy gave in and raised the rebel flag. The leaders came to Canton and took over the government amid the rejoicing of all. The old officials temporarily kept their places, with a few exceptions. The secret armies now came in for rewards and enlistment, including the robbers of all descriptions. The rebel plan was to send them to relieve Canton.

It is a large leap from years of quiet toil in the dark against the established government to actual hold upon the reins of control and the official purse-strings. The question upon every lip has become: "Can a republic stand the strains of ignorance and inexperience it finds in China today?" But the Chinese are a peaceful and a remarkable people.

CANTON, CHINA.

Rough-Housing

BY FRANK A. WAUGH

ARTHUR was not expecting me. Naturally I thought it would be a pleasant surprise for a homesick freshman to have his father drop in unannounced. His pleasure in my visit was obvious enough and his surprise all that could be wished, but he was plainly displeased that I should catch him and his roommate and another freshman in the midst of a right royal rough-housing exercise.

It had been so long since I had attended a rough-housing of this kind that I was at first a trifle upset by it, and

probably Arthur saw my disapproving surprise. The session was promptly adjourned. I was introduced to the young strangers, the bed was hastily put to rights, the other furniture sorted out, and in three minutes I was going out with Arthur to visit the few old haunts and call on the few old friends that yet remain to me about the campus.

As I could stop only two hours between trains, it was a very hurried reunion I had with my former cronies, but I came away filled with a most vivid and unusual rejuvenescence. The sense of

the old days came back with peculiar freshness; I felt less like an intruder than I had ever felt since I graduated and went away with the grand old class of '88. At first I thought this home-like feeling was caused wholly by having a son in the college, but as I mused over matters going out in the train I became thoroly convinced that it was my brief participation in that glorious rough-house that had made me feel so young again.

Certainly nothing could be more characteristic of the spirit of boyhood or of the universal experience of college life. I am glad that I did not rebuke Arthur on this occasion. I quickly remembered the high old times Fred Coburn and I used to have in the same strenuous way—good old Fred Coburn who, with many other fine and manly qualities, was one of the most irrepressible rough-housers who ever smashed a chair.

When I got to thinking of it thus, I easily saw how important and valuable is this form of exercise. College athletics, for which a great deal has been claimed, is confined to the few—the rough-house is for all. Football is strenuous in the extreme for a few weeks, after which there are ten months of inanition; while the rough-house runs daily the year thru. Baseball and hockey are promoted, organized, artificial, while rough-housing comes as naturally to a boy as swimming to a tadpole.

Being thus instinctive and universal, it must have some deep meaning and purpose; it ought to be understood and perhaps cultivated like other sound organic instincts. Why should it be discontinued at graduation? Just now, in my revulsion to the feelings of thirty years ago, I suspected I had been sacrificing something worth while merely to satisfy a conventional and worthless dignity. For a moment the question arose in my mind of introducing the rough-house in my office, or of inviting companies of friends to evenings of such social exercise at home.

Reflection, however, satisfied me that this was as unnecessary as it was inex-

pedient. The gentle sport of rough-housing had not been lost on leaving college—it had only shifted its ground a bit. The whole essence of this pleasant game I saw to consist in the play of good animal spirits, engaged in a manly, open, equal, personal struggle. Business, in fact, is the man's rough-house. Beside it, the exercises of Arthur and his co-freshmen are literally boys' play. Here man meets man in an open, friendly and (normally) equal struggle. The better man wins, the poorer one does not necessarily lose, and both come off laughing and anxious for the next bout. See with what zest men play this business game. It is remarkably like a pillow fight: and the deeper one penetrates into the spirit of the thing, the more remarkable is the similarity.

Politics, too, commonly recognized to be a man's sport, is merely a grown-up rough-house. It is a rough-and-ready, hand-to-hand struggle, in which no dyspeptic, anemic, sour and pessimistic player stands the smallest chance in the world. Our distinguished friend, smiling at the top of the political heap, arrived there largely by means of his three hundred avoirdupois of animal spirits. How could he have made all those long railway journeys without that capital? And our recent gubernatorial election in Massachusetts was decided absolutely on the same issues,—the man with the superior animal spirits winning, as he deserved to. Who wants to vote for a quiet, modest, mute man, when there is a lusty, husky, yelling chap dragging him all over the floor or sitting on his chest with a pile of pillows?

Even in religion animal spirits are indispensable. No sour and pessimistic preacher can help anybody, and a missionary to the heathen, unless he is good-natured and fat, will not please his clientele, either cooked or raw.

I peculiarly enjoyed my little visit to the squalid old dormitory simply because I breathed for a great instant the spirit of a universal, elemental, human experience.

AMHERST, MASS.

Curbing Cuba

BY FORBES LINDSAY

[Mr. Lindsay has lately returned from Cuba, and in view of the Administration's note of warning to the Cuban Government this article by the author of "Cuba and Her People" will be read with interest.—EDITOR.]

IN 1903 the United States terminated the occupation of Cuba which followed the war with Spain. The control of the island was turned over to its people under what appeared to be ideal conditions for successful self-government. In 1906 a rebellion against the Palma Administration necessitated a resumption of American authority and a return of American troops. Less than three years ago the last of these were withdrawn. During the intervening period two or three incipient uprisings have been subdued by force, or allayed by compromise on the part of the Cuban Government.

This constant unrest in a country enjoying a high degree of prosperity, may be evidence of unfitness for self-government on the part of the people, but it should not be accepted as an indication of a general inclination toward lawlessness and disorder.

The truth of the matter is that the greater part of the population have neither active part nor serious interest in these political disturbances. They are the work of professional politicians to whom the possession of the administrative machinery means the opening of avenues for acquiring money by easy, and not always honorable, methods.

In Cuba there are no political parties based on principles, and no more elevated platform than one whose main purpose is to secure the spoils of governmental control. The Miguelistas and Zayistas support their respective leaders on the promise, or in the hope, of obtaining office under them, and not in the least on account of their ability, patriotism or purpose.

In the last analysis the political parties of Cuba resolve themselves into the "ins" and "outs," neither any better nor any

worse than the other, and all actuated by the same selfish motives.

A few months ago a new element was introduced into the political situation by the organization of the Veterans' Association. The chief demand of this body is the discharge from Government service of all officeholders who had sympathized with Spain in the struggle for independence.

Failing to obtain the acquiescence of the President in their demand, the Veterans planned, and avowed their purpose, to march thru the island lynching the obnoxious civil servants, and meting out similar treatment to any judge who might have had the courage to allow indictments to be filed against any of their members.

Latterly many officers of the army and police have been enrolled in the association and have openly attended its meetings in defiance of the law prohibiting them from taking any part in political affairs.

The radical and lawless program of the association is sufficient to cast the strongest suspicion on its profession of patriotic motives, and to raise the assumption that its true purpose is precisely the same as that of the other political parties. Nevertheless, the Veterans' movement is a serious one. It has gained great strength numerically and by reason of the inclusion of leaders of all parties. A realization of its power to subvert the Government, and probably a knowledge of its intention to do so, led to the recent threat of United States intervention.

The note of warning from Secretary Knox created consternation in Havana, but the Veterans received it in a defiant attitude. General Nunez, their leader, is reported to have declared that they "will fight to the death" in opposition to

the reoccupation by the United States of the island.

The alliance of antagonistic political parties for the purpose of withstanding the Veterans might have a repressive effect at the polls, but few believe that the latter will await the issue of the election, which will not take place until December.

Among those most conversant with conditions in Cuba it is confidently believed that if the Stars and Stripes are again hoisted over the Government buildings in Havana they will never be removed. It is certain that the strongest pressure will be brought to bear upon the United States Administration to secure annexation. The foreign interests, which own 85 per cent. of the property in Cuba, are as a unit in favor of annexation. Among the better element of the natives a similar sentiment is widely entertained. The peasant is indifferent, but would welcome any change that should promise improvement in his physical condition.

Indeed, the chief opposition to annexation would arise in the United States, Congress would not readily consent to a repudiation of our oft-repeated promise to maintain Cuba's independence. The cane growers of Louisiana and the beet raisers of our Western States would naturally oppose a step which would bring them into free competition with Cuba's sugar. Our tobacco and fruit interests would be moved to antagonism on similar grounds. And it is doubtful whether our people at large would look with complaisance on the addition of a Territory populated entirely by persons professing the same religion and speaking a foreign language.

On the other hand, how long will the taxpayers of the United States submit to our costly and troublesome police supervision of Cuba? It seems probable that another intervention will give rise to a demand for the establishment of some form of closer protectorate, with a constant influence over the political affairs of the island.

NEW YORK CITY.

Song of the Street-Sweeper

BY RICHARD M. HUNT

O gi' me the silent night-time and gi' me the empty way,

When the dark is deep an' the folks asleep
That throngs the streets by day—

That throngs the streets by day,

An' raises the dust that's gray:

But I sing a song as I sweeps along,

An' clears their dust away.

For I am the city sweeper, an' I sweeps the pavements bare,

In the night-time hush, wi' me whirling brush,

That's drawed by me trusty pair—

That's drawed by me trusty pair,

On the streets that's dark and bare:

An' I sing a song as I sweeps along,

An' cleans the dust what's there.

Most folks is folks o' the day-time an' raises their dirt o' days,

But when night is come an' the folks is home,
I'm a-sweeping the dust they raise—

A-sweeping the dust they raise,

In the chilly, stilly ways:

An' I sing a song as I sweeps along,

An' clears the dust they raise.

When the sky gets pale to the East'ard an' the damp o' the mawn creeps on,

I hoist me broom an' turn toward home,

While folks o' the day sleep on—

While folks o' the day sleep on,

In the still o' the early morn:

An' I sing me song as I sweeps along

On the way to me home in the dawn.

WINCHESTER, MASS.

Star Drift

BY MARY PROCTOR

[Miss Proctor is the daughter of the distinguished astronomer, R. A. Proctor, and a popular lecturer on astronomical topics. In this article she explains the new theories of the constitution of the stellar universe.—EDITOR.]

THAT the stars are all in motion, drifting to and fro across the depths of space, is now a well established fact. Nevertheless, even the nearest stars are so far away from the earth that their motions during an entire year, or even during a century, as indicated by their displacements on the sky, are quite imperceptible. If Hipparchus or Ptolemy should come to life again and view the heavens, they would not find any change, recognizable by them, to have taken place in the relative positions of the stars during the past two thousand years. Had they been exact observers they might notice a slight change in the position of Arcturus, which has been moving ever since their time at the rate of probably more than eighty miles per second—possibly twice as much. Generally, however, the motion of a star is much smaller, ranging from an imperceptible quantity up to fifty miles a second.

Powerful means of measurement are required for the detection of the star motions. The majority of the stars visible, even in a small telescope, do not yield to these means of accurate measurement. When it comes to detecting peculiarities in these motions, the most accurate measurements over a long period, repeated hundreds and even thousands of times, are required. It was not until 1750 that the measurements by Bradley, the Astronomer Royal of England, became precise enough to be of much use in solving the problems presented by even the nearest portions of the stellar universe. For

the great majority of stars, their speed tho really enormous, some of them moving at an average rate of about twenty miles per second, the motions do not become surely recognizable in their displacements upon the sky within less than a century.

Within the last ten or fifteen years activity in making these measurements, and in studying the meaning of their peculiarities, has received an impetus such as this branch of astronomy has never hitherto known. An active part in these researches has been taken by nearly a score of able and industrious investigators, and the work has been shared on an extensive scale and with great zeal and effect by the Carnegie Institution of Washington, in its Department of Meridian Astrometry both before and after its formal establishment six years ago. This department is located at the Dudley Observatory, at Albany, N. Y., in charge of Prof. Lewis Boss, who was one of the pioneers in the modern development of this branch of astronomy.

The first great work accomplished by the department newly established by the Carnegie Institution was the completion of the great catalog of the positions and motions of 6,188 stars, including all that are visible to the naked eye in the entire sky from the North to the South Pole of the heavens. This work was completed and the results were published by the Institution two years ago. It became at once an authority upon the proper motions of the stars as exhibited upon the face of the sky. The motions of these

stars were calculated on the basis of all the precise measurements that have been made during the history of exact astronomy from 1750 down to the present time.

As soon as his catalog was completed, Professor Boss and other astronomers at once began the task of studying these motions to find out their systematic peculiarities. By this means a rare opportunity was offered for making an accurate and authoritative determination of the various tendencies of these motions, and their meaning. Thus, a new and far more reliable determination of the motion of the sun in space was made possible, by which it was shown from the computations of Professor Boss that the sun, carrying the earth and all the other planets with it, is moving at the rate of about twelve miles per second toward a point about eight degrees west and four degrees south of Vega, or Alpha Lyrae.

The already limited but imperfectly established acceleration of the motions of the stars in space was thoroly proved and firmly established. Taking into consideration the apparent motion of the stars, due to the motion of the sun, it was discovered that the actual motions of the stars were shown to be directed toward a point in the Milky Way where it traverses the constellation Orion, as well as toward the point in the sky exactly opposite.

That the sun was drifting among the stars was first suspected by Sir William Herschel, and the rough guess he made at the direction in which it is going now proves to be surprisingly good. Not much real progress was effected in the solution of this problem during the next fifty years; and in perfecting this knowledge the gain was very slow for fifty years more, until about twenty years ago, in the controversy over methods of computation, some extremely critical astronomers began to express doubts as to whether it is possible to assert with confidence whether the sun moves at all in a way that can be definitely stated. It is only during the last ten or fifteen years that, beyond asserting the sun's motion, any important further generalization of the laws of stellar motions could be stated with any degree of confidence.

It has long been thought that some of the stars have a tendency to move in re-

stricted groups, having approximately parallel directions and equal velocities. An opportunity to prove this mathematically occurred to Professor Boss three years ago in relation to a group of forty-one identified stars in the constellation Taurus. This group is already known to contain many more stars, for which the motions cannot yet be calculated with sufficient precision to rank them with the forty-one stars of the General Catalog upon whose motions the discovery was founded. This group is found to be moving toward a point in the constellation Orion with an average velocity of about twenty-eight miles per second, and in closely parallel lines.

Since that time Mr. Benjamin Boss, one of his assistants, has found that twelve stars of very large proper-motion, scattered all over the sky, are moving at the rate of about sixty miles per second toward a point in the sky near that toward which the Taurus group is moving. In this case the velocity with which each star is moving toward or away from the sun is known from spectroscopic measurements for more than half the entire number, and for the majority of them the parallax is known from individual measurements, several times repeated by more than one observer for a part of them. Other groups have been discovered of which the particulars are not yet fully worked out.

Dr. Hertzsprung has perfected our knowledge of the well-known Ursa Major group, first pointed out by the writer's father, the late Richard A. Proctor, more than thirty years ago. In his book, "Pleasant Ways in Science," he wrote with reference to the discovery of what he termed star-drift:

"In catalogs it is not easy to recognize any instance of community of motion which may exist among the stars, owing to the method in which the stars are arranged. What is wanted in this case is the adoption of a plan by which such relations may be rendered obvious to the eye. The plan I adopted was to attach to each star in my maps a small arrow, indicating the amount and direction of the star's apparent motion in 36,000 years (the time-interval being purposely lengthened, as otherwise most of the arrows would have been too small to be recognized). When this was done, several well-marked instances of community of motion could immediately be recognized

"Thus the stars in the constellation of

Ursa Major, and neighboring stars in Draco, exhibit two well-marked directions of drift. Then there are other instances of star-drift where, tho the two directions of motion are not intermixed, the drifting nature of the motion is not at once recognized, because of the various distances at which the associated stars lie from the eye. A case of this kind is to be met with in the stars forming the constellation Taurus. . . . Perhaps the most remarkable instance of star-drift is that observed in the constellations Gemini and Cancer. Here the stars seem to set bodily toward the neighboring part of the Milky Way. The general drift in that direction is too marked, and affects too many stars, to be regarded as by any possibility referable to accidental coincidence."

When these theories of star-drift were subjected to the crucial test of spectroscopic analysis by Huggins and others, they were amply confirmed. But the recent work of Professor Boss in the Department of Meridian Astrometry of the Carnegie Institution, with regard to two investigations completed in the year 1911, has added a chapter of deep and unusual interest, possessing as well an element of novelty, to our knowledge of the average velocity of the stars. He has found that the newest stars, as indicated by their spectra, in which the lines of helium (a degraded product of radio-activity) are strongly marked, move more slowly on the average than any other class of stars, all of which are supposed on good grounds to be older than this. Their average velocity is about seven and a half miles a second, and they might be termed as forming part of the kindergarten department of starland. The next older type of stars known as Class "A," whose spectra are rich in hydrogen lines, and of which Sirius is an example, move much faster, or at the rate of about twelve and one-half miles a second. As the stars reach a type approximating that of our sun in physical condition their velocities increase until they settle down to an average velocity of about twenty miles per second. From this point the average velocity does not seem to increase, as if those older bodies had reached a physical state on which the hidden force which had acted upon them thruout their earlier development had ceased to act. With advanced age, their enthusiasm, as it were, had subsided and they are apparently content to pursue their way without further acceleration of speed.

Fortunately, the workers with spectroscopes had accumulated measurements of the rates at which the stars in these several classes were moving, and Professor Frost of the Yerkes Observatory was the first to get a hint of the comparatively slow motion of the helium stars, nine years ago. Professor Campbell of the Lick Observatory had accumulated more measurements of the motions of the stars toward or away from the sun than the results obtained by all the other astronomers in the world put together.

Almost simultaneously with the researches of Professor Boss on the increase of velocity with the age of the star, Professor Campbell arranged in classes according to age his measures of "radial" velocities of over one thousand stars which he had accumulated during the past fifteen years. This also results in showing the accelerated speed of a star with age. They agree almost exactly with those obtained by Professor Boss in an entirely different way, that is, from an element of the proper motions. Accordingly, this wonderful fact, that up to a certain limit the older a star is the faster it moves, may be regarded as proved. The usual period of doubt and controversy, which is as a rule the fate of new discoveries of great importance, will not be necessary, because the fact has been detected and proved by two totally independent methods agreeing admirably in their results.

It will be a rather more difficult matter, however, to find the real explanation as to the physical cause which accounts for the astounding fact of the acceleration of stellar velocities according to the age of the respective classes of stars. According to the hypothesis of Professor Boss, when the stars are evolved from nebulous matter, vast electro-magnetic forces are at the same time generated, and these mutually act as repulsive forces dispersing the newly formed stars in all directions. Similar forces generated in the sun act in the same way in repelling matter contained in the tails of comets, and differently according to the probable molecular structure of the different types of the tails, as has been mathematically proved. There is every reason to believe that when the new stars are formed they are in a gaseous

condition, with the nebulous tendrils still clinging around them. The molecules contained in them are exceedingly minute, and upon such a body lines of magnetic force would act most powerfully, as has already been shown. As the body develops, it is quite certain that its molecular structure radically changes. The molecules will become larger, and in consequence, the lines of electro-magnetic force or something analogous, will become relatively more feeble. On a body like the sun it is probable that this action would become practically insensible.

At the Scientific Congress of the St. Louis Exposition in 1904, Professor Kapteyn propounded his well known hypothesis, that the universe of stars does not constitute a single system, but is composed of two giant streams of stars intermingling and drifting generally in opposite directions. About three years later Professor Schwarzschild, then of Göttingen, Germany, now director of the great astrophysical observatory at Potsdam, near Berlin, put forward his still little known hypothesis, that the appearances produced by Kapteyn's "two-stream" hypothesis might be equally accounted for by supposing that the proper motions of the stars could be graphically represented by football-like figures or ellipsoids, of which the long axis points toward the constellation Orion, and the shorter axes are only about one-half the length of the long one.

Professor Boss took up these questions last year with a view to putting the matter into more definite and acceptable shape. He found that he had first to study the acceleration of stellar motion before he could satisfactorily consider the problem regarding the tendency of stellar motions toward or away from a particular point in the sky. The outcome of his computations is that stars moving toward the constellation Orion are, on the average, moving faster than those moving at right angles to that direction, by a percentage of from 50 to 75. There is no doubt whatever as to the general fact, but further details must be worked out before research on this problem can be materially slackened. This phenomenon could be accounted for, if the universe is a gigantic magnet with its poles situated in Orion and the point opposite.

This phenomenon seems to be closely associated with that already described relative to the acceleration of stellar motions, and it can be explained in an entirely analogous way. According to Professor Boss, if we suppose that the stellar universe is a gigantic magnet like the earth and the sun, it will follow that the greatest effect upon the motions will be along the lines of force extending from one pole to another, always associated with a magnet. A close study of the possible effect of accumulated attraction of gravitation in the universe seems to fail, both because such attractions are too much dispersed, for they do not offer any evidence yet recognized of preponderant concentration of matter anywhere in the stellar universe sufficient to dominate the dispersed attractions; and next, because whatever force acts to produce accelerated motions in the stars it acts differently on bodies according to their respective physical conditions. Gravitation acts upon all matter alike, in proportion to mass; but the action of electro-magnetism is known theoretically and practically to vary according to the physical condition of matter acted upon.

For instance, it is the great law of gravitation pervading the universe which causes the double stars to swing around their common center of gravity, but as the action varies in inverse ratio to the square of the distance, it must necessarily be very feeble between stars separated by enormous distances from each other. The outcome of his computations convinces Professor Boss of the essential unity of the stellar universe, a representation consistent in its various parts. He finds that the hypothesis that the stellar universe consists of two streams comes from the fact that the stellar motion has a tendency from 50 to 75 per cent. greater when drifting toward the constellation Orion than when at right angles to that direction. There is now no doubt whatever as to the general fact; but a very much larger accumulation of observations, and much more labor on details, are required before this subject may be considered as fairly worked out.

To this end the project of the Department of Meridian Astrometry for extensive observations of stars in the southern hemisphere will prove useful. Such an expedition was sent out three

years ago from the Dudley Observatory, under the auspices of the Carnegie Institution of Washington, and under the direction of its Department of Meridian Astrometry. A branch observatory was established in San Luis in the Argentine Republic in 1908, and was ready to begin the required observations in March, 1909. For nearly two years a staff of from seven to ten observers turned night into day, and accumulated 87,000 meridian observations of precision, thus completing the program. This is by far the greatest *tour de force* in meridian observation ever accomplished, and it only became possible thru the great energy of

the observers, as well as the large number of clear nights in the Andean plateau upon which San Luis is situated. There proved to be 280 nights each year that were either absolutely clear or so nearly so as to permit of nearly uninterrupted measurements. Professor Boss says:

"When this vast accumulation of measurements shall have been run thru the department's computing mill at Albany, and the results appear in final form, as perfected measurements, the study of stellar motions and their meanings will have experienced an extremely important accession of new material in exact observations relating to that portion of the sky where such results are most needed."

NEW YORK CITY.

Ireland to Be Saved by Intellect

BY JOHN BUTLER YEATS, R. H. A.

[Our contributor is a well-known Irish painter, a member of the Royal Hibernian Academy, and father of the poet, W. B. Yeats. For three years he has been a resident of New York City, a quiet observer of life in the new metropolis, in which he takes a youthful joy, but not forgetful of his own country and its differences from the rest of the world. This essay, written by one who thinks it more important to consider how to live than to study how to make a living, will be read with especial interest at the moment when the Abbey Theater players, from Dublin, are presenting in America the plays of his son, Lady Gregory, the late John M. Synge and others.—EDITOR.]

IRELAND is to be rescued neither by Belfast nor by England, neither by priest nor by parson, but by its artists.

In my experience when Irishmen meet together to talk about the future of the Irish nation, they invariably, some time or other in the discussion, make allusion to the question of race. This is unphilosophical. Irish, English and Scotch are so closely akin that race is a very small circumstance—only one among a thousand others. I would say, however, that, as between England and Ireland, the quick abound among us, and among them the slow. If a young man is dissipated, or working for an examination in Ireland, he will go as hard as he can, working many hours a day, and his friends will ask him could he not go faster. In England his friends would ask was he not going too fast, and whether life lived at such a rate was worth living at all. In England the

pacemaker travels slowly, and for that reason, perhaps, it is always well to place an Irishman in command, with an Englishman subordinate, since he has more dash, more magnetism, a quicker initiative. On the other hand, the Englishman, both in his public and private life, has more good nature; he will forgive many times, while the Irishman will hardly forgive once. Edmund Burke, alluding to the English, spoke of the "good nature of that ancient people." With us, let a public leader fall out of favor and he is lost forever.

We Irish are a healthy people. We have not brought up generations of children in the awful conditions of the manufacturing towns of prosperous England—the weak hair, the bandy legs, the physical droop, that stamp so many poor Englishmen today, we have escaped. We are, of course, out at the elbows, and little regarded in the world's esteem, but our eyes are bright, our

limbs clean and straight, and our voices musical. Even as far back as 1770 Matthew Young was surprised to find the poor Irish children were healthier and better fed than the children of the English poor.

Besides all this, we are, or, at least, the best of us are, a peasant nation. I have long believed with Davitt that peasants are the true aristocracy. An old peasant sitting by his cabin door in the evening in the blaze of the setting sun and telling you of his life—can any duke of the land equal him in tenderness and humor, in wisdom and personal dignity? It is only great poets who can talk with such men on equal terms. An old peasant woman in Sligo said to my son: "I look at the mountain and think of the goodness of God."

The Scotch were a peasant nation and to this day their best men come from peasant stock, but Scotland chose ambition for her guide, producing professors, writers, teachers, travelers and statesmen—mighty men; and she has given lessons in thrift, economy of means to an end, earnest purpose and self-control. But, after all, she has only preached and practised "the gospel of getting on," regarding life very much as a huge competitive system in which she was resolved to take first prize.

I would reserve for Ireland a higher destiny: to solve the question how to make human life a sphere of happiness.

Consider the Irish home. Sir Horace Plunkett says that the Irish people have not the feeling for home that English people have. To any one who knows the facts these are idle, foolish and vaunting words. I find in the Irish home hospitality, good manners, delight in conversation, and a sense of equality between man and man such as is scarcely known in the highest social circles in England. I find that, altho there is little to eat and to drink, there is plenty to talk about. I find also that Irish imaginations are filled with a folk lore which has flowed to them from every mountain and stream and valley, to which the Catholic Church has added its own august folk lore and gracious imagery; all of which proves that tho these people may be out of date and very unfashionable indeed, yet they live, where artists and poets

have ever lived, on the high plane of intellectual happiness.

Contrast with this the home of the English workingman. Folk lore and the ballads of ancient times long abolished, and their place taken by the catechism, while the parent clothes himself in the terrors of the law so effectually that his children may have the greatest respect for the Protestant doctrine of truth-telling, that none of them have the courage to practise, when he himself, as Mill testified, is so scared with the conditions of life that he has become a confirmed liar. The Irish children may not have a very great respect for truth in the abstract, but when they lie it is out of the superfluity and naughtiness of their minds, not because they are afraid.

An Englishman once told me that the reason the English make such good colonists is that they never suffer from homesickness. How could they suffer from homesickness? Not allowed to enjoy himself, the Englishman puts his money into works of ostentation. The struggling clerk lives in a house where the rent is beyond his means, and the artisan adorns his front parlor with gaudy pictures, a cheap piano, and a well-swept carpet. The artisan's wife asks her friends to come and see her front parlor; her hospitality goes no further. Show is the only object of the room, or of the piano, which no one knows how to play. These people are vain of their home as a jailer might be. The Englishman is vain about his home, not fond of it. He is vain as a jailer might be of his well-swept, up-to-date dungeons, but this is not for one moment to be confused with the feelings which pursue the Irishman across the stormy seas and in all lands. Has it not been complained that the Irish exiles here in America have kept themselves poor and backward sending money to the home they are not supposed to value? This is the kind of fact absolutely hidden from the eyes of the Sir Horace Plunketts.

If the Englishman's idea is ostentation, and the Scotchman's idea is to win some sort of social pre-eminence, the Irishman, the true Irishman, does not want to get on and does not value well-being; he desires to save his soul, for he is an Adam who has not quite

forgotten his Eden. In the past he has not been allowed to "get on," and so perforce he has learned to suck out of life its inner sweetness. There is no man who lives in closer intimacy with nature and life.

Saving one's soul is an evil phrase and smells sourly of Nonconformist circles, but the Irishman would also save his soul, not by starving it, which is the Protestant idea, but by feeding it full and banqueting it on happiness—above all, on the happiness to be found in affection between human beings, wife and children and friends, and in all the fugitive delights of human intercourse.

My proposal, therefore, is this, that in Ireland we change nothing, only, whereas now men go about in rags, I would clothe them in purple and fine linen, and in place of smoky cabins I would give them palaces; these garments and these palaces to be made out of the cheapest material, to wit: the finest thoughts of the understanding and the finest feelings of the heart.

In prosperous and famous England I would alter everything—alter ideals, denounce hopes, and show Englishmen that they are worshipping evil where they think they are worshipping good. I would shut the factories and I would shut also the churches, the chapels and the schools. In short, I would pull down the whole edifice.

In Ireland I would change nothing, or almost nothing. These men and women in their stony fields, these people in rags with their beautiful dreamy eyes and their hands without purpose, as I myself have seen them in Galway and elsewhere; the villages spreading in the sunshine beside streams which commerce has not yet polluted. This nation indeed lies asleep and awaits the magician.

Sir Horace Plunkett and all those dignified statesmen and patriots say the magician which is to awaken the sleeper is the English capitalist. I say it must not be and cannot be the English capitalist for where he comes he sets up hell.

To stay in an English manufacturing town is to believe in hell, for here it is. To sit round the turf fire in an Irish cabin is to believe in heaven, since here is some shadow of it. The playwright Synge told me (and he tried it for

years) that he would rather live in an Irish cabin than in a well-appointed hotel.

America is a new country; this is a fact I never allow myself to forget. The thought of it is to me a continual refreshment. In Europe people look to the past for warning and precept and counsels of caution; you look to the future. There is here an intellectual hospitality beyond everything in my experience. In my country a man with new ideas is laughed at and insulted and the door is shut in his face. Here both the door and the windows are wide open, so that he may enter as a guest, or, if he prefers it, may climb in an innocent burglar. It is to you, therefore, I would bring this strange new doctrine that the ills of life are not to be cured by dividing up wealth, as the Socialist vainly imagines, but that all the poor Irish need is education.

Only bear in mind it must be true education.

My idea of education then is of something that will assist him in becoming more and more himself, and this would be to train him deeply in the philosophy and technique of happiness. Nor is this proposal as vague as it seems.

All over the land I would build colleges and schools, and in every college and school I would place good musicians, good painters, and to fire the men of action there should be good orators. Above all, there should be many teachers who would teach how to love and reverence the search for truth. In my colleges it would be a crime to let any human faculty go to waste, since the search for truth and happiness needs all our faculties and all our energies.

I have expressed my abhorrence of the Nonconformist conscience and of the kind of national success which it has built up, and it is my belief that that success and the eloquent people who have lived by praising it, both in prose and verse, will pass away and be forgotten—forgotten as we forget a bad dream—yet there is one period of English history that will keep alive forever the greatness of England and the glory of human nature: that was when Shakespeare and his contemporaries lived.

Now it will perhaps amuse you and

excite your incredulity if I say that the present period in Ireland seems to me to somewhat resemble that great age.

In the first place we are an idle people, much given to conversation, and you cannot read much in the literature and the plays which mirror that age without feeling that they also were an idle people much given to conversation.

In Shakespeare's time there was such an abundance of idleness that if there had not also been a great deal of love-making, and a great deal of quarreling, and much debating on the joy and pain and all the mystery of life in endless conversation, and much theater-going, time would have hung heavy on their hands.

These people gave themselves to amusement; that was the serious business of life, and it was sought in art for art's sake, and talk for talk's sake, and life for life's sake; therefore, if we leave out the avaricious and ambitious people of Belfast, I am entitled to say that we Irish in all our ranks and grades are very much as the English people were when England was called "Merrie England."

There is yet another resemblance—the Elizabethan intellect was trained by the Catholic Church. Shakespeare and his contemporaries, when they reason, reason with themselves, and we catch their meaning by a kind of attentive listening. The poets trained in Protestantism when they reason direct all their arguments away from themselves, in order to impress and influence other people. This to my mind is the very essence of prose, and prose in its most aggressive form, namely, preaching. Wordsworth, Browning, even Shelley, have their vice of preaching, and if Keats escapes it, it is because he has formed himself upon Elizabethan models. The English seriousness and solemnity is simply this vice of preaching exprest physiognomically, and in every move and gesture. An Irishman, even if he tried to preach, could not look the part; shame would overcome him. The Englishman can look the part to perfection, but that was not the kind of Englishman that crowded into Shakespeare's theater and went the pace when England was "Merrie England."

In these three particulars the Irish intellect stands shoulder to shoulder with the intellect of England when she was at her best—idleness, endless conversation, and a training by the Catholic Church.

Here the resemblance stops and a vast gulf separates us from them. Shakespeare and his contemporaries discussed all the problems of mysterious life with an intellect absolutely free, absolutely fearless, absolutely sincere. At times they would enter into the innermost shrine, and when they did so allowed no priest or magistrate to project his shadow. The idleness of these men was the idleness of Socrates and his contemporaries. It was like our idleness in that it was full of witty jests, while tending toward no definite or practical results; but thru it all the time there ran a thrill of intellectual enthusiasm and intellectual curiosity, and, if we may say so, a continual amusement.

For one short, blissful moment in her history the English intellect found for itself the intoxication of truth. The Renaissance touched her and all the springs were opened and the national mind became full and brimmed over in drama, and song, and gayety, and talk, and glorious speculation. Englishmen became poets and artists and England overtopped the world and her name was written in fire.

Ever since she has fallen into the slow death—Protestantism, commercialism and Puritanism—and for "Merrie England," for poetical England, we have imperial, dividend-devouring England, abroad "walloping niggers" and at home living the life we know.

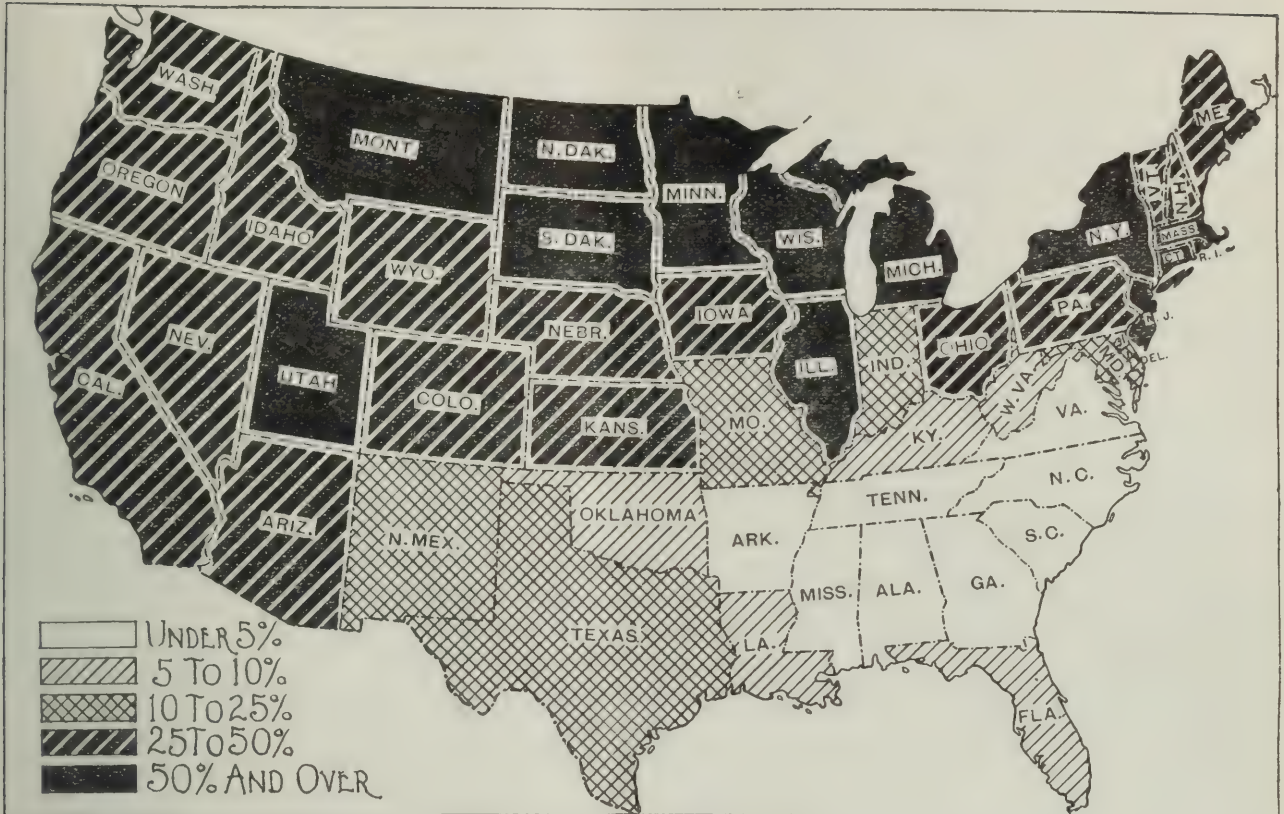

In Ireland we have got the idleness, and we have got the conversation, and we have learned from the Catholic Church how to make the intellect the instrument of its own happiness by all the arts of self-communion, self-examination and self-renunciation. But who will teach us to love truth for its own sake, who will infect us with the intoxication of truth?

My cure for "the woes" of Ireland is freedom of thought and the intoxication of truth, and my gift to her would be an unshackled intellect: as you have it here in America.

Our Foreign Stock

BY WILLIAM B. BAILEY, Ph.D.

ASSISTANT PROFESSOR OF POLITICAL ECONOMY IN YALE UNIVERSITY.

ONE of the somewhat startling facts disclosed by the present Census is that only 53.8 per cent. of our population are native whites of native parentage. Writing about seventy-five years ago concerning society in America, Harriet Martineau said: "The New England States may pride themselves on their population being homogeneous while that of other States is mongrel. It is well that stability should thus have been temporarily provided for in one part of the Union, which should, for the season, be the acknowledged superior over the rest; but, this purpose of the arrangement having been fulfilled, New England may perhaps hereafter admit, what some others see already, that, if she inherits many of the virtues of the Pilgrims, she requires fortifying in others; and that a larger reinforcement from other races would help her to throw off the burden of their inherited faults." Many New England families are justly proud of their colonial ancestry and yet at present in these same New England States less than 40 per cent. of

the population are of native stock. The accompanying map shows the proportion of the population of the different States which are of foreign stock. This term applies to those persons who were themselves or whose parents were born in a foreign country. There are eight States in which less than 5 per cent. of the population are of foreign stock and all of these are in the old South. There are thirteen States in which more than half of the population are of foreign stock, and all of these with the possible exception of Utah are Northern States. In fact all of the Northern States except Missouri and Indiana have more than one-fourth of their population of foreign extraction. In 1870 only about one-fourth of the population of the United States were of foreign stock, while in 1910 the proportion for the country as a whole had increased to over 35 per cent. The proportion of foreign born has increased from 9.7 per cent. in 1850 to 14.5 per cent. in 1910. Assimilation is still a problem in this country.

NEW HAVEN, CONN.

More Slavery at the South

BY A NEGRO NURSE

[The following thrilling story was obtained by a representative of THE INDEPENDENT specially commissioned to gather the facts. The reporting is, of course, our representative's, but the facts are those given by the nurse.—EDITOR.]

I AM a negro woman, and I was born and reared in the South. I am now past forty years of age and am the mother of three children. My husband died nearly fifteen years ago, after we had been married about five years. For more than thirty years—or since I was ten years old—I have been a servant in one capacity or another in white families in a thriving Southern city, which has at present a population of more than 50,000. In my early years I was at first what might be called a “house-girl,” or, better, a “house-boy.” I used to answer the doorbell, sweep the yard, go on errands and do odd jobs. Later on I became a chambermaid and performed the usual duties of such a servant in a home. Still later I was graduated into a cook, in which position I served at different times for nearly eight years in all. During the last ten years I have been a nurse. I have worked for only four different families during all these thirty years. But, belonging to the servant class, which is the majority class among my race at the South, and associating only with servants, I have been able to become intimately acquainted not only with the lives of hundreds of household servants, but also with the lives of their employers. I can, therefore, speak with authority on the so-called servant question; and what I say is said out of an experience which covers many years.

To begin with, then, I should say that more than two-thirds of the negroes of the town where I live are menial servants of one kind or another, and besides that more than two-thirds of the negro women here, whether married or single, are compelled to work for a living,—as nurses, cooks, washerwomen, chambermaids, seamstresses, hucksters, janitresses, and the like. I will say, also, that the condition of this vast host of poor colored people is just as bad as, if

not worse than, it was during the days of slavery. Tho today we are enjoying nominal freedom, we are literally slaves. And, not to generalize, I will give you a sketch of the work I have to do—and I'm only one of many.

I frequently work from fourteen to sixteen hours a day. I am compelled by my contract, which is oral only, to sleep in the house. I am allowed to go home to my own children, the oldest of whom is a girl of 18 years, only once in two weeks, every other Sunday afternoon—even then I'm not permitted to stay all night. I not only have to nurse a little white child, now eleven months old, but I have to act as playmate or “handy-andy,” not to say governess, to three other children in the home, the oldest of whom is only nine years of age. I wash and dress the baby two or three times each day; I give it its meals, mainly from a bottle; I have to put it to bed each night; and, in addition, I have to get up and attend to its every call between midnight and morning. If the baby falls to sleep during the day, as it has been trained to do every day about eleven o'clock, I am not permitted to rest. It's “Mammy, do this,” or “Mammy, do that,” or “Mammy, do the other,” from my mistress, all the time. So it is not strange to see “Mammy” watering the lawn in front with the garden hose, sweeping the sidewalk, mopping the porch and halls; dusting around the house, helping the cook, or darning stockings. Not only so, but I have to put the other three children to bed each night as well as the baby, and I have to wash them and dress them each morning. I don't know what it is to go to church; I don't know what it is to go to a lecture or entertainment or anything of the kind; I live a treadmill life; and I see my own children only when they happen to see me on the streets when I am out with the children, or

when my children come to the "yard" to see me, which isn't often, because my white folks don't like to see their servants' children hanging around their premises. You might as well say that I'm on duty all the time—from sunrise to sunrise, every day in the week. I am the slave, body and soul, of this family. And what do I get for this work—this lifetime bondage? The pitiful sum of ten dollars a month! And what am I expected to do with these ten dollars? With this money I'm expected to pay my house rent, which is four dollars per month, for a little house of two rooms, just big enough to turn round in; and I'm expected, also, to feed and clothe myself and three children. For two years my oldest child, it is true, has helped a little toward our support by taking in a little washing at home. She does the washing and ironing of two white families, with a total of five persons; one of these families pays her \$1.00 per week, and the other 75 cents per week, and my daughter has to furnish her own soap and starch and wood. For six months my youngest child, a girl about thirteen years old, has been nursing, and she receives \$1.50 per week but has no night work. When I think of the low rate of wages we poor colored people receive, and when I hear so much said about our unreliability, our untrustworthiness, and even our vices, I recall the story of the private soldier in a certain army who, once upon a time, being upbraided by the commanding officer because the heels of his shoes were not polished, is said to have replied: "Captain, do you expect all the virtues for \$13 per month?"

Of course, nothing is being done to increase our wages, and the way things are going at present it would seem that nothing could be done to cause an increase of wages. We have no labor unions or organizations of any kind that could demand for us a uniform scale of wages for cooks, washerwomen, nurses, and the like; and, for another thing, if some negroes did here and there refuse to work for seven and eight and ten dollars a month, there would be hundreds of other negroes right on the spot ready to take their places and do the same work, or more, for the low wages that

had been refused. So that, the truth is, we have to work for little or nothing or become vagrants! And that, of course, in this State would mean that we would be arrested, tried, and despatched to the "State Farm," where we would surely have to work for nothing or be beaten with many stripes!

Nor does this low rate of pay tend to make us efficient servants. The most that can be said of us negro household servants in the South—and I speak as one of them—is that we are to the extent of our ability willing and faithful slaves. We do not cook according to scientific principles because we do not know anything about scientific principles. Most of our cooking is done by guesswork or by memory. We cook well when our "hand" is in, as we say, and when anything about the dinner goes wrong, we simply say, "I lost my hand today!" We don't know anything about scientific food for babies, nor anything about what science says must be done for infants at certain periods of their growth or when certain symptoms of disease appear; but somehow we "raise" more of the children than we kill, and, for the most part, they are lusty chaps—all of them. But the point is, we do not go to cooking-schools nor to nurse-training schools, and so it cannot be expected that we should make as efficient servants without such training as we should make were such training provided. And yet with our cooking and nursing, such as it is, the white folks seem to be satisfied—perfectly satisfied. I sometimes wonder if this satisfaction is the outgrowth of the knowledge that more highly trained servants would be able to demand better pay!

Perhaps some might say, if the poor pay is the only thing about which we have to complain, then the slavery in which we daily toil and struggle is not so bad after all. But the poor pay isn't all—not by any means! I remember very well the first and last place from which I was dismissed. I lost my place because I refused to let the madam's husband kiss me. He must have been accustomed to undue familiarity with his servants, or else he took it as a matter of course, because without any love-making at all, soon after I was installed

as cook, he walked up to me, threw his arms around me, and was in the act of kissing me, when I demanded to know what he meant, and shoved him away. I was young then, and newly married, and didn't know then what has been a burden to my mind and heart ever since: that a colored woman's virtue in this part of the country has no protection. I at once went home, and told my husband about it. When my husband went to the man who had insulted me, the man cursed him, and slapped him, and—had him arrested! The police judge fined my husband \$25. I was present at the hearing, and testified on oath to the insult offered me. The white man, of course, denied the charge. The old judge looked up and said: "This court will never take the word of a nigger against the word of a white man." Many and many a time since I have heard similar stories repeated again and again by my friends. I believe nearly all white men take, and expect to take, undue liberties with their colored female servants—not only the fathers, but in many cases the sons also. Those servants who rebel against such familiarity must either leave or expect a mighty hard time; if they stay. By comparison, those who tamely submit to these improper relations live in clover. They always have a little "spending change," wear better clothes, and are able to get off from work at least once a week—and sometimes oftener. This moral debasement is not at all times unknown to the white women in these homes. I know of more than one colored woman who was openly importuned by white women to become the mistresses of their white husbands, on the ground that they, the white wives, were afraid that, if their husbands did not associate with colored women, they would certainly do so with outside white women, and the white wives, for reasons which ought to be perfectly obvious, preferred to have their husbands do wrong with colored women in order to keep their husbands *straight*! And again, I know at least fifty places in my small town where white men are positively raising two families—a white family in the "Big House" in front, and a colored family in a "Little House" in the backyard. In most cases, to be sure, the col-

ored women involved are the cooks or chambermaids or seamstresses, but it cannot be true that their real connection with the white men of the families is unknown to the white women of the families. The results of this concubinage can be seen in all of our colored churches and in all of our colored public schools in the South, for in most of our churches and schools the majority of the young men and women and boys and girls are light-skinned mulattoes. The real, Simon-pure, blue-gum, thick-lip, coal-black negro is passing away—certainly in the cities; and the fathers of the new generation of negroes are white men, while their mothers are unmarried colored women.

Another thing—it's a small indignity, it may be, but an indignity just the same. No white person, not even the little children just learning to talk, no white person at the South ever thinks of addressing any negro man or woman as *Mr.*, or *Mrs.*, or *Miss*. The women are called, "Cook," or "Nurse," or "Mammy," or "Mary Jane," or "Lou," or "Dilcey," as the case might be, and the men are called "Bob," or "Boy," or "Old Man," or "Uncle Bill," or "Pate." In many cases our white employers refer to us, and in our presence, too, as their "niggers." No matter what they call us—no matter what they teach their children to call us—we must tamely submit, and answer when we are called; we must enter no protest; if we did object, we should be driven out without the least ceremony, and, in applying for work at other places, we should find it very hard to procure another situation. In almost every case, when our intending employers would be looking up our record, the information would be given by telephone or otherwise that we were "impudent," "saucy," "dishonest," and "generally unreliable." In our town we have no such thing as an employment agency or intelligence bureau, and, therefore, when we want work, we have to get out on the street and go from place to place, always with hat in hand, hunting for it.

Another thing. Sometimes I have gone on the street cars or the railroad trains with the white children, and, so long as I was in charge of the children, I could sit anywhere I desired, front or

back. If a white man happened to ask some other white man, "What is that nigger doing in here?" and was told, "Oh, she's the nurse of those white children in front of her!" immediately there was the hush of peace. Everything was all right, so long as I was in the white man's part of the street car or in the white man's coach as a servant—a slave—but as soon as I did not present myself as a menial, and the relationship of master and servant was abolished by my not having the white children with me, I would be forthwith assigned to the "nigger" seats or the "colored people's coach." Then, too, any day in my city, and I understand that it is so in every town in the South, you can see some "great big black burly" negro coachman or carriage driver huddled up beside some aristocratic Southern white woman, and nothing is said about it, nothing is done about it, nobody resents the familiar contact. But let that same colored man take off his brass buttons and his high hat, and put on the plain livery of an average American citizen, and drive one block down any thoroughfare in any town in the South with that same white woman, as her equal or companion or friend, and he'd be shot on the spot!

You hear a good deal nowadays about the "service pan." The "service pan" is the general term applied to "left-over" food, which in many a Southern home is freely placed at the disposal of the cook, or, whether so placed or not, it is usually disposed of by the cook. In my town, I know, and I guess in many other towns also, every night when the cook starts for her home she takes with her a pan or a plate or cold victuals. The same thing is true on Sunday afternoons after dinner—and most cooks have nearly every Sunday afternoon off. Well, I'll be frank with you, if it were not for the service pan, I don't know what the majority of our Southern colored families would do. The service pan is the mainstay in many a home. Good cooks in the South receive on an average \$8 per month. Porters, butlers, coachmen, janitors, "office boys" and the like receive on an average \$16 per month. Few and far between are the colored men in the South who receive \$1

or more per day. Some mechanics do; as, for example, carpenters, brick masons, wheelwrights, blacksmiths, and the like. The vast majority of negroes in my town are serving in menial capacities in homes, stores and offices. Now taking it for granted, for the sake of illustration, that the husband receives, \$16 per month and the wife \$8. That would be \$24 between the two. The chances are that they will have anywhere from five to thirteen children between them. Now, how far will \$24 go toward housing and feeding and clothing ten or twelve persons for thirty days? And, I tell you, with all of us poor people the service pan is a great institution; it is a great help to us, as we wag along the weary way of life. And then most of the white folks expect their cooks to avail themselves of these perquisites; they allow it; they expect it. I do not deny that the cooks find opportunity to hide away at times, along with the cold "grub," a little sugar, a little flour, a little meal, or a little piece of soap; but I indignantly deny that we are thieves. We don't steal; we just "take" things—they are a part of the oral contract, exprest or implied. We understand it, and most of the white folks understand it. Others may denounce the service pan, and say that it is used only to support idle negroes, but many a time, when I was a cook, and had the responsibility of rearing my three children upon my lone shoulders, many a time I have had occasion to bless the Lord for the service pan!

I have already told you that my youngest girl was a nurse. With scores of other colored girls who are nurses, she can be seen almost any afternoon, when the weather is fair, rolling the baby carriage or lolling about on some one of the chief boulevards of our town. The very first week that she started out on her work she was insulted by a white man, and many times since has been improperly approached by other white men. It is a favorite practice of young white sports about town—and they are not always young, either—to stop some colored nurse, inquire the name of the "sweet little baby," talk baby talk to the child, fondle it, kiss it, make love to it, etc., etc., and in nine of ten cases every such white man will wind up by making

love to the colored nurse and seeking an appointment with her.

I confess that I believe it to be true that many of our colored girls are as eager as the white men are to encourage and maintain these improper relations; but where the girl is not willing, she has only herself to depend upon for protection. If their fathers, brothers or husbands seek to redress their wrongs, under our peculiar conditions, the guiltless negroes will be severely punished, if not killed, and the white blackleg will go scot-free!

Ah, we poor colored women wage-earners in the South are fighting a terrible battle, and because of our weakness, our ignorance, our poverty, and our temptations we deserve the sympathies of mankind. Perhaps a million of us are introduced daily to the privacy of a million chambers thruout the South, and hold in our arms a million white children, thousands of whom, as infants, are suckled at our breasts—during my lifetime I myself have served as “wet nurse” to more than a dozen white children. On the one hand, we are assailed by white

men, and, on the other hand, we are assailed by black men, who should be our natural protectors; and, whether in the cook kitchen, at the washtub, over the sewing machine, behind the baby carriage, or at the ironing board, we are but little more than pack horses, beasts of burden, slaves! In the distant future, it may be, centuries and centuries hence, a monument of brass or stone will be erected to the Old Black Mammies of the South, but what we need is present help, present sympathy, better wages, better hours, more protection, and a chance to breathe for once while alive as free women. If none others will help us, it would seem that the Southern white women themselves might do so in their own defense, because we are rearing their children—we feed them, we bathe them, we teach them to speak the English language, and in numberless instances we sleep with them—and it is inevitable that the lives of their children will in some measure be pure or impure according as they are affected by contact with their colored nurses.

GEORGIA.

Which?

BY WILLARD A. WATTLES

RICH and fat was the altar-feast
For the holy flame that day;
But there in the pool from the slain lamb's throat
A slender body lay,
While the Horror stiffened each lovely limb
And kissed the red lips gray.

Far o'er the desert a shadow flees
In the glare of the angry sun;
Is it man or ghost or hunted beast,
Or sand by the whirlwind spun,
And why does it run and look behind,
And look behind and run?

The yellow hair of the white boy-priest
Is damp with a ghastly dye;
Can he not raise those perfect hands
From his bosom where they lie,
And why does he stare at the noon-day sun
With such a fearless eye?

He does not smile, he does not stir,
But still the shadow flees;
It cannot be that sound is born
On such wan lips as these,
Yet surely shadows never sobbed
In such strange agonies.

Across the desert of the world
Still stumbles in his pain
The Man who killed; and yet, which is
The slayer, which the slain,
The delicate fingered Abel, or
The shamed and branded Cain?

AMHERST, MASS.

Literature

The Condition of Labor

WHEN Mrs. Russell Sage, five years ago, endowed a foundation with luscious millions for "the improvement of social and living conditions in the United States," the fast growing corps of professional social workers were fearful lest the foundation, by the weight of its money, would "pauperize" the societies that exist to prevent the "pauperizing" of individuals, would acquire dictatorial power over most philanthropic undertakings, would become a charity trust administered autocratically. Those fears have not in the least been realized. On the contrary, surprise is now expressed that so little direct work is done by the foundation, "for the improvement of social and living conditions in the United States." The trustees, realizing the ominous danger that their easy money might only replace the hard-won small gifts which, united, maintain multitudinous societies, early set stern faces against the indiscriminate relief of impecunious committees.

But another section of the foundation's program, "to investigate and study the causes of adverse social conditions, including ignorance, poverty and vice, and to suggest how these conditions can be remedied and ameliorated," has been well executed, as the volumes before us testify. Here there was no danger of "pauperizing," tho another danger was apparent. National, State and city governments were already busy, together putting out so many reports, statistical, legal, industrial, as to make the hard-driven reformer wonder whether the plague of print should not rather be abated than aggravated. That danger was ignored. So it has turned out that the Sage Foundation has become most famous for its output of bulky volumes, the result of painstaking, unbiased, thoroughly able investigations, all directed to discovering "the cause of ignorance, poverty and vice," in order that the suggestions as to how these ailments may

be cured may be based on full and exact knowledge.

Best known of these investigations is *The Pittsburg Survey*,* in six volumes. An earlier volume on "Work Accidents and the Law" has already been noticed in THE INDEPENDENT. The whole survey does for the American industrial inferno what Charles Booth's more statistical inquiry did for London. It exposes Pittsburgh in searchlight glare to itself and to the world, exposes it without exaggeration and without extenuation. Nobody who glances thru the exposure can help blushing with shame for American institutions. That conditions so revolting could have flourished at the heart of the United States is an impeachment of democracy. The reader sees tens of thousands of steel workers driven so ingeniously for twelve hours a day, seven days a week, that it is doubtful, as one editor of the survey has said, whether ever in the world's history either slave or free labor was before so successfully exploited. For niggardly wages these toilers, as well as railway and mine workers, were forced to run a risk to life and limb as great as the valorous soldiers incurred in the civil war. The toll of death, disease and mutilation was awful. In the districts outside the mills civic spirit was narcotized by Mammon. Consequently the steel towns displayed pretty well every possible civic vice—bad sanitation, evil saloons, overcrowding, dearth of parks, playgrounds, hospitals, sanatoria, poor schools, separation of rich and poor, irreligion and immorality.

Pittsburg was startled; outsiders were shocked. No mushroom brood of

*THE PITTSBURG SURVEY.—HOMESTEAD: THE HOUSEHOLDS OF A STEEL TOWN. By Margaret F. Byington. \$1.50. THE STEEL WORKERS. By John A. Fitch. \$1.50.

CORRECTION AND PREVENTION. Four volumes. \$10.00 SET.—PRISON REFORM. By Chas. R. Henderson. PENAL AND REFORMATORY INSTITUTIONS. By Sixteen Authorities. PREVENTIVE AGENCIES AND METHODS. By Chas. R. Richardson. PREVENTIVE TREATMENT OF NEGLECTED CHILDREN. By Hastings H. Hart.

WORKINGMEN'S INSURANCE IN EUROPE. By Lee K. Frankel and Miles M. Dawson. \$2.50.

New York: Charities Publication Committee.

millionaires could atone to the nation for such sacrifice of its blood and bone. Fortunately, there were enough righteous men left in the delinquent community to stir it to improvement; and Pittsburg people and Pittsburg industries have started to reform themselves. Churches and philanthropists have organized, the city government has been overhauled, chambers of commerce and the like have girded up their loins. An efficient campaign has been carried thru by the Steel Trust for the prevention of accidents, and a similar campaign for the improvement of the workmen's health has been inaugurated. The seven-day work week has been abolished for many workers. Improved health is justifying the drastic medicine which the Sage Foundation administered.

But work accidents were by no means confined to the Pittsburg district. Their numbers and the crude and barbarous law respecting compensation of injured workmen and their families are a national disgrace. To bring fresh light on this subject Messrs. Frankel and Dawson were sent to Enrope, and what more progressive peoples have done for workmen's insurance is here reported by them to the dilatory people of America in a volume which perhaps hardly reaches the excellence of *The Pittsburg Survey*.

When the International Prison Congress met for the first time in this country the Sage Foundation prepared four memorial volumes, describing in critical, not boastful fashion, for the enlightenment, primarily, of the visiting experts from all countries, the penal and reformatory institutions of the United States. So varied is our land in climate, industrial conditions and general enlightenment that this description shows hardly more uniformity than a crazy quilt. A modern reformatory here is balanced by a medieval chain gang there; in one place delinquent children are tenderly cared for, in another the methods of Mr. Bumble are still in vogue; one State may be distinguished for its private philanthropic societies, another be almost bare of these aids to official charity. If every region were as well provided with all the aids to reformation and correction which can

be found anywhere, and if the best public spirit of any county were universally diffused over the continent, then America would indeed lead the world.

All the volumes are well printed, adequately illustrated and issued at a reasonable price. Altogether, the Sage Foundation is justified by its published works.

•

The New Robert Elsmere

As we had a "Locksley Hall Sixty Years After," so now we have a "Robert Elsmere Twenty-two Years After."* But the sequel to the novel is not pessimistic and retrospectively scornful, as was the sequel to the poem. It is more enthusiastic and hopeful than the earlier romance. Mrs. Ward writes in the paulo-post-future tense, as tho what she wishes to come to pass were already accomplished and the Modernist movement triumphant in the Church of England. For what Robert Elsmere struggled for in vain, the mere right to remain in the Church while dissenting from its creeds, is nowadays not enough. Robert Meynell, his successor in the present generation, demands the right not only to remain in the Church, but to reform it in accordance with the needs of the times and the requirements of modern thought. The Modernist is an insurgent, not a rebel. He declines to be called a heretic. He claims to be the real heir to the Christian heritage, its historic buildings, its ecclesiastical machinery, its social service and its beautiful liturgy. He is determined, therefore, to stay in the Church so long as the authorities will let him; and strive to make it worthy of its name and position. It is a fight to save the Church, not to overthrow or supplant it. The personality of Meynell is attractive, except for a certain harshness in his attitude toward his ward, Hester Fox-Wilton. She is a beautiful, unsubdued creature, full of wild impulses, but responsive to affection, as she shows by being greatly attracted to Catherine Elsmere, and Richard Meynell makes the

*THE CASE OF RICHARD MEYNELL By Mrs. Humphry Ward. Garden City, N. Y.: Doubleday Page & Co. \$1.35.

fatal mistake, with such a wilful girl, of trying to coerce her. The story of Hester is the romance and the tragedy of the book, for Robert's sober affection for Mary Elsmere has no heights and depths of feeling, no vicissitudes of incident, to arouse the reader's interest. Catherine's faint prejudice against the Modernist thinker is soon dissipated, and there is no other obstacle to be overcome. The strength of the book lies in its presentment of the struggle between the established faith and the Modernist movement in the English Church. Mrs. Ward leaves the outcome of Meynell's personal struggle undecided. We do not know whether the Privy Council drove him from his parish or not. But she leaves no doubt in the mind of the reader of the ultimate triumph of Modernism. Richard's sermon, at the close, on "The Two Christianities," is an eloquent and moving plea for free speech, free thought, and a ritual purged of anachronisms and uncouth forms no longer to be believed in save by twisting the words to the verge of hypocrisy. The Modernist position may be briefly given in Meynell's own words:

"We see a Christ stripped of Jewish legend, and Greek speculation, and medieval scholasticism moving simply and divinely among the ways of his Jewish world, a man among men. . . . But that is only half the truth; only half of what history has to tell. On the one side we have to do with recovered fact; on the other with its working thru two thousand years upon the world. *There*, for the Modernist, lies revelation; in the unfolding of the Christian idea, thru the successive stages of human thought and imagination, it has traversed, down to the burst of revelation in the present time. Yet we are only now at the beginning of an immense development. The content of the Christian idea of love—love, self-renouncing, self-fulfilling—is infinite, inexhaustible, like that of beauty, or of truth. . . . But even so you have not exhausted the wealth of Christianity. For to the potency of the Christian idea is added the magic of an incomparable embodiment in human life. The story of Jesus bears the idea which it enshrines eternally thru the world. It is to the idea as the vessel of the Grail."

Ancient, Curious and Famous Wills. By Virgil M. Harris. Boston: Little, Brown & Co. \$4.

Some are ancient, for among them are the wills of Noah, Job and Jacob; of Plato, Virgil and Aristotle; of Saladin, Petrarch and Edward I; of Colum-

bus, Luther and Rabelais; of Katherine of Arragon and Mary of Scotland. Others are curious, for here are found the will of the sailor giving his wife a shilling to buy hazlenuts, as she preferred cracking them to mending his stockings; that of the gentleman who left his steward nothing, as it would reflect on the steward's shrewdness to suppose he had not enriched himself; and that of the New Yorker who left seventy-one pairs of trousers to be sold at auction, no buyer to secure more than one pair, and each, on being examined, found to contain \$1,000. Then there are several in favor of pet animals and for more eccentric trusts. Scores are famous, for among many entitled to that classification, the collection contains the wills of Burke, Swift, Turner, Florence Nightingale, Shakespeare and Walton; of Napoleon, Wellington, Rhodes, Richelieu, Rousseau; of Agassiz, Barnum, Beecher, Booth, Mark Twain, Mrs. Stanford and Mrs. Eddy; of Emerson, Franklin, Hamilton, Jefferson, Washington, Webster, Burr and Brigham Young. These lists sound formidable, and even at that, they are only by way of sample. Whether Mr. Harris aimed to produce a book of substantial reference value or one for entertainment and instruction is a puzzle, for he hit both birds. He is a lecturer on wills and a lawyer of experience—and a lover of literature, of the quaint and humorous. He fully appreciates the significance of a will, its solemnity, and all the wealth of human interests and human nature in and about wills. The author has, without being prosy, given many good hints and rules that the testator and lawyer will appreciate and perhaps the beneficiary will thank him for.

The Writing of News. A handbook with chapters on newspaper correspondence and copy reading. By Charles E. Ross. New York: Henry Holt & Co. \$1.50.

This volume by a professor in the School of Journalism in the University of Missouri is especially intended and well suited for a textbook in such schools, but it has a much wider field. Any one who writes for the press—and this nowadays includes almost every one

—will find its injunctions and explanations very helpful. To the student of literature it is also of interest, for the author shows how the exigencies of the printing office are developing a new and distinct style of writing, in which clearness, simplicity, conciseness, impersonality and directness are the characteristic features. The discussion of such topics as the news story, the feature story, the interview and the lead are illustrated with examples from the best dailies and exercises are added for student practice.

The Arctic Prairies. A canoe journey of two thousand miles in search of the caribou; being the account of a voyage to the region north of Aylmer Lake. By Ernest Thompson Seton. 12mo, pp. xvi, 415. New York: Charles Scribner's Sons. \$2.50.

No one who has known the lure of the wild life and the mountains and forests of the West and North will fail to welcome a new volume by Mr. Seton, the author of "Wild Animals I Have Known" and other delightful volumes. The present book tells the story of a naturalist's search in the regions to which the caribou and the lynx have retreated in the Far Northwest of British America. There the wild life—we have driven out of our prairies and forests abounds. There the scattered Indians know no white man except the agent of the Hudson Bay Company who gathers their furs. The author left the railroad at Edmonton, and for a few days with *voyageurs*, and later with but a single scientific companion, past northward, crossing the wheat belt, the barley belt, the potato belt and finally the tree belt, all of which swerve strongly to the northward as we approach the Pacific Coast. All his shooting, except one lynx, was with a camera, and with a single Indian guide he was able to take a snapshot at a herd of a dozen buffalos. By boat or on foot they traveled, finding the occasional camps of Indians and hunters, but finding an abundance of animal and bird life, all of which is charmingly described, in such a way as ought to tempt others who can to repeat the experience in a hard and happy summer. The volume is dotted over with little pen sketches by the author, and over fifty larger illustra-

tions; and the last quarter is definitely for naturalists, giving the facts about the disappearing buffalo, the adaptability of Far North for the reindeer and the Asiatic yak, both of which have been introduced; and there follow lists of insects, birds and quadrupeds. With what delight the boys will read this book written for grown-ups!

Literary Notes

....Hugh Pendexter writes in *The Young Gem-Hunters, or The Mystery of the Haunted Camp* (Small, Maynard; \$1.20) a sequel to "The Young Timber-Cruisers." Boys will enjoy this narrative of the wilds.

....The commendable practice of issuing brief biographies of favorite authors has been adopted by Little, Brown & Co., Boston, which has produced for free distribution a sketch of E. Phillips Oppenheim with some unconventional photographs and a list of his novels, thirty-one of them with more to follow.

....To The Art and Life Series Bishop Charles H. Brent contributes a wholesome and reassuring study of *The Sixth Sense* (Huebsch; 50 cents), or mystic sense, by which he means the power of perceiving and appropriating the spiritual and ideal qualities that accompany the various phases of experience.

....Those who enjoyed the inspiring addresses and sermons of the Rev. J. D. Jones, of Bournemouth, when he was visiting this country a year ago, and desire to extend their acquaintance to his written work, will find a good opportunity of so doing in perusing his new volume of sermons entitled *The Hope of the Gospel* (Doran; \$1.50).

....The ten volumes of Michael L. Rodkinson's translation of the Talmud, the first edition of which was issued by The Talmud Publishing Company, of Boston, are now published in a second edition by the Williams Book Store, 347 Washington Street, Boston, Mass. These ten volumes have been translated from the original text and the new edition has been reduced to \$27.50.

....The new *Poetry Review*, launched this month by the London Poetry Society, contains many features of interest in its first number. The contents are headed by a preface; and four general articles "On Criticism"; "The Sevenfold Need in Literature," by William Sharp; "The Future Poetry," by Mr. Harold Monro; and "The Poetry of W. W. Gibson," by Mr. Maurice Browne follow. The reviews deal with the verse of the day, and recent commentaries on poetry are noticed.

....A three-sided conflict in which Episcopalianism, Christian Science and chemistry struggle for the soul of the hero and chemistry comes out triumphant, forms the theme of Anna Chapin Ray's new novel *The Brentons* (Little, Brown; \$1.25).

....An American woman, Miss Jeannette Marks, author of "The End of a Song," but no relation to Mrs. Marks (Josephine Preston Peabody), has won a prize offered by Lord Howard de Walden for Welsh drama. This award was made for her two short plays, "The Merry Cuckoo" and "The Welsh Honey-moon."

....The Connecticut Storrs Agricultural Station has issued a very valuable document of 275 pages, which gives photographic reproductions of the trunks, bark, fruit, leaves etc., of 111 New England trees as they appear in winter. No such complete account has before appeared, and nature-lovers ought to possess it.

....From Sherman, French & Co., the Boston publishers, we receive a press-notice more than ordinarily ambitious. "The modern world has its loveliness and wonder, too; the elements of the human heart and soul, with which poetry deals, remain the same thru all ages." This by way of introduction. To continue: "It is only necessary, as Shelley has it, 'to strip off the veil of familiarity' and the ancient marvel is there. Whitman, without fulfilling it, outlined this possibility." And his publishers put forward as a younger poet who attempts the same high task Mr. John Hall Wheelock, Harvard class poet in 1908. His volume entitled *The Human Fantasy* (\$1.25), while notably and perhaps wilfully wanting in melody, is more vigorous and more vital than most "first" books of verse; we confine ourselves, for the present, to quoting his poem entitled "The City":

The gigantic bosom suckling at the breast,
Her myriad souls and moaning still aloud,
Wind, sun and shadow lighten and overcloud.
Sun, moon and stars circle from east to west.

Her million wires hiss like living snakes,
Earth's elemental forces in disdain
Moan thru her streets in sullen wrath of pain,
Nor twilight lulls her, nor the dawn awakes,

Lying forever with slumbering breath—
The latter world's Prometheus chained and bound
For the new theft from heaven of fire new-found,
Knowledge of good and evil, life and death

....From London we receive the initial number of a new liberal review of politics, commerce, the arts, and the sciences, entitled *Hispania*, and published weekly. Tho the entire review is printed in Spanish, there are several contributions by Englishmen: Messrs. R. H. Cunninghame Graham and Norman Holden, for example. The "redaccion" especially invites contributions from the mother

country and from the American republics. The philosophy of the Republicans of Spain is discussed by Miguel de Unamino, while Mr. Holden's article treats of the credit of the Spanish-American republics. The editorial leader is a long discussion of Mr. Roosevelt's action in regard to Colombia and the revolution in Panama; it closes with the statement that the former President is by his own boasts proved guilty of the aggressions charged by his enemies.

....The reviewer has a serious complaint to file against "W. R. B.," the compiler of the little volume entitled, *Joys of the Road: A Little Anthology in Praise of Walking*, and printed at the Merrymount Press for Browne's Bookstore, Chicago (\$1). Briefly, it is that the reviewer had meant to make this book for himself, and resents being forestalled. But it is a very charming little volume in typography and in all else that counts in book-making; and the choice of verse and prose that Mr. Browne has made is excellent. The verse consists of Mr. Carman's "Joys of the Road," Stevenson's "Vagabond," C. Fox Smith's "Afoot," Mr. Symons's "On the Road," and William Morris's "Night and the Inn." In prose we have offered us Hazlitt's famous essay "On Going a Journey" and Stevenson's scarcely less famous "Walking Tours," together with Mr. Burroughs's "Exhilarations of the Road" and Thoreau's "Walking." Except for Mr. Smith's verses there is nothing in this slim volume that we would not wish to put into our own book: and they, too, make pleasant reading.

....The Arthur H. Clark Company of Cleveland, Ohio, have just published *The Indian Tribes of the Upper Mississippi Valley and Region of the Great Lakes*, as described by Nicholas Perrot, French commandant in the Northwest, Bacqueville de la Potherie, French royal commissioner to Canada, Morrell Marston, American army officer, and Thomas Forsyth, United States agent at Fort Armstrong, the translations, editing, bibliography and index being the work of Emma Helen Blair. The whole is printed in caslon type on hand-made paper, in two large octavo volumes, with portraits, maps, and other illustrations, and costs ten dollars the set. Perrot and La Potherie describe the Indian tribes as they found them early in the eighteenth century; and Marston and Forsyth, as they found the same peoples a hundred years later. These documents contain information furnished by men who had spent the best part of their lives among those Indians, and whose natural ability, personal character and official position render their accounts valuable sources, now for the first time made readily accessible.

....In the excellent composite article on "Communion with Deity" in the third volume of Hasting's *Encyclopedia of Religion and Ethics*, the part devoted to Christianity was contributed by Principal Darwell Stone and Prof. David C. Simpson. At the conclusion of their discussion they state that the

"Christian life is thus the highest form of communion with God which is attainable in the present stage of being, and the closest means of approach to that complete communion which is the true destiny of the human race."

This section from the *Encyclopedia* article now appears as part three of a book by these two writers on *Communion with God, The Preparation Before Christ and the Realization in Him* (imported by Scribners; \$1.50). In the first two parts of the volume the authors show how the preparation for the final consummation in Christianity is found in other religions, more especially of course in that of the Hebrews. The book is carefully written and forms a good sketch of man's attempt to establish conscious personal relationship with God.

....That the results of Old Testament criticism are more generally recognized than those of the New Testament, and so far are more fruitful in creating a lively interest in Biblical literature, is well shown in the recent volumes of *The Bible for Home and School* issued by Macmillan under the general editorship of Prof. Shailer Mathews. *Deuteronomy* (75 cents) edited by Prof. W. G. Jordan, *Isaiah* (90 cents) edited by Prof. J. E. McFadyen, and *Job* (90 cents) edited by Prof. George A. Barton, are almost ideal for the purpose they were designed to fill. They embody the results of the latest and best scholarship in their introductions and notes, and each book is accorded such freedom of treatment, and supplied with such historical settings that the reader quickly feels the literary power and the historical as well as the religious significance of the original. All three are worthy of high commendation and will prove valuable to teachers and students alike. Of the two new volumes on New Testament books, the *St. Matthew* (60 cents) edited by Prof. A. T. Robertson is the larger and better. The dependence of the first Gospel upon Mark and the Logia is accepted, but the theological bias of the author is not fully recognized, while many of the historical and religious difficulties in the Gospel are either left unnoticed, or treated inadequately. The work of Professor Robertson shows, however, an acquaintance with the latest investigations of the Gospel problems, which is more than can be said for the volume on *Colossians and Ephesians* (50 cents) edited by Dr. Gross Alexander, whose introductions and notes are both hackneyed and dull

....The third volume of Dr. Hastings's great *Encyclopedia of Religion and Ethics* (Scribners; \$7) maintains the same high standard as its predecessors. It is equally rich in the abundance and variety of its materials. The nine hundred two-column pages are devoted to topics ranging alphabetically from Burial to Confessions, the latter being discussed in one of the longest articles of this volume. Where there is so much of the highest value it is difficult to single out any part for special praise, but if one were obliged to make a selection, he would be justified in naming Prof. Garvie's comprehensive and penetrating article on Christianity, or the composite discussion of Charms and Amulets. It would seem that less space might have been given to the subject of the Calendar (more than seventy-five pages) and such articles as those on Climate and Catacombs somewhat extended. The important subjects of Casuistry, Chastity, Circumcision and Communion with Deity are treated with fulness and a wide range of knowledge. It is safe to say that no work of equal breadth and merit has before been projected in the field of religion and ethics.

....A certain dramatist, having perused Mr. Walkeley's criticisms in the *London Times*, found them too autobiographical. It seemed to him that the subjective was to the objective in the inordinate proportion of sack to bread in Falstaff's tavern bill. Mr. Walkeley defends himself, this time in the *Speaker*, by asserting that *all* criticism is autobiography. What is the use, he says, of substituting for capital I's "nouns of multitude signifying many"? How futile the pretense that the critic is not a man but a corporation! Has not M. Anatole France said that the good critic is he who narrates the adventures of his soul among masterpieces? The hitch is, as the English critic fails not to point out, that the dramatic critic, at least, does not encounter masterpieces as often as he would. But that it is not his fault if, like Mr. Walkeley, he supplies the soul, and the adventures; or misadventures. "It is time that we heard the last of this stale complaint," says he, "against people for talking about themselves. After all, there is no subject they can treat better, for there is none which interests them so much. The worthy souls who were so angry with George Eliot for declaring that her favorite book was Rousseau's 'Confessions' must have been egregious dullards. I can fancy some one objecting that the value of autobiography depends upon the autobiographer. Who was the sage who said that if any plain citizen, the man in the street, were to set down, day by day with absolute sincerity, his thoughts and actions he would produce the most fascinating book ever written?"

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Woodrow Wilson and the Two Colonels

THE past week has been enlivened by two of Governor Wilson's foremost supporters, who have forsaken him much as Mr. Bryan had forsaken him before. Mr. Bryan had been quite patronizing toward him, and had supported him as the best way to head off Governor Harmon, until that unfortunate old letter was printed in which Governor Wilson expressed the wish that some way might be found to extinguish the perpetual candidate. Since then the Nebraskan has been silent or cold.

Now Governor Wilson has lost the enthusiastic support of the two colonels who had most largely boomed him. Indeed, Colonel Harvey has been credited with having introduced, if not discovered, him as a Presidential possibility. He certainly owed a great deal to Colonel Harvey's enthusiastic support in *Harper's Weekly*, where his name was put as candidate at the head of the editorial pages.

That Colonel Harvey's support of Woodrow Wilson was as honest as it was earnest there can be no doubt; but

was that support which was so emphatic and impressive as to make *Harper's Weekly* in a way his premier representative likely to be helpful to its candidate? Such a thing may be so overdone as to call attention to the speaker rather than to his cause. Governor Wilson was represented as the progressive candidate, who maintained the advanced cause of the common people as against the moneyed interests. But it was generally known that *Harper's Weekly*, and the firm that controls it, are financed from the very center of the money trusts of the country. People began to ask, and would ask more and more, what it meant that a journal so owned should so speak. Was it a case of Orator Puff, who had two tones to his voice, "one squeaking thus, the other down so"? Colonel Waterson, a friend of Governor Wilson, was one who was concerned and so told the Governor, and the three men had a private conference and talked the matter over. After some approaches Colonel Harvey asked Governor Wilson the direct question whether he believed the support the *Weekly* had thus given to his candidacy was doing him an injury, and Governor Wilson frankly told him that he thought it was. Thereupon Colonel Harvey was much hurt, and took down the name over the editorial columns, and had not a further word to say in favor of the Governor of New Jersey. Of course this made much remark, and Colonel Harvey printed a statement in his columns to the effect that he had done this at the desire of Woodrow Wilson.

So far, and as thus told, there is nothing in the tale to the discredit of Governor Wilson. He had been asked the question by his impulsive, but perhaps indiscreet advocate, and had told him the truth. What else as an honest man could he do? It was, however, a severe rebuff to his ardent supporter, who had not been controlled by the orders of his financial backers, who had honestly tried to take the lead in guiding public sentiment and making his journal a power for good, but who had found his motives misconceived by the public and his eager aid not desired. His first impulse was to say that he must pipe more softly, but as he meditated over it he concluded to

withdraw his voice entirely from support of the man who had grieved and offended him. Thus far there was no blame to be charged against the Governor, and only that of an excess of zeal against the editor.

Now comes in the third member of the conference, Colonel Watterson. After the public had been gossiping over the matter a while, and some had begun to charge Governor Wilson with ingratitude, Colonel Watterson comes out with his statement. He is a man of age and great experience in politics, and sure to be listened to. He tells the same story as does Colonel Harvey, but he adds color to it. He did not like Governor Wilson's manner. He was distant, cold. He did not have the cordial geniality necessary for a successful politician, but the dictatorial manner of a "schoolmaster." He did not seem to appreciate the service Colonel Harvey had meant to do for him and had really done; and the inference is that he was lacking in that gratitude as well as familiar confidence that should exist between gentlemen and politicians. He says:

"From the first there was a certain constraint in Governor Wilson's manner, the absence of the cordiality and candor which should mark hearts' confidential intercourse, intimating the existence of some adverse influence. His manner was autocratic, if not tyrannous."

And yet he says that not a discourteous word was uttered during the interview. He thus sums up his conclusion:

"That Governor Wilson, without the least show of compunction, should express or yield to such an opinion, and permit Colonel Harvey to consider himself discharged from the position of trusted intimacy he had up to this moment held, left me little room to doubt that Governor Wilson is not a man who makes common cause with his political associates or is deeply sensible of his political obligations: because it is but true and fair to say that, except for Colonel Harvey, he would not be in the running at all.

"Colonel Harvey was grievously wounded. He had been fighting Governor Wilson's battle for many years, and had idealized his chief."

It is plainly ingratitude and unfitness which Colonel Watterson charges against Governor Wilson.

All this the country has heard, and we do not doubt that it will be a serious damage to Governor Wilson's chances, which had previously seemed so bright.

We are unwilling to judge him so harshly. It is easy to see a lack of tact, as well as of political experience. Such an interview might have been managed in a way to gain its object while showing sympathy and consideration. Governor Wilson's public addresses, his appeals to the people, have been admirable and strong. We have seen no better candidate for his party. It is much to be regretted if mere temperament has alienated some of his ardent friends and has injured his chances for a nomination which might have given him the Presidency.

The Warning to Cuba

AT the end of the Spanish War the United States would have been fully justified in taking Cuba under our protection and control, as we took Porto Rico. We went to Cuba to save it from chaos under the rule of Spain. At the end of the war we could not restore it to Spain. We had two alternatives before us, one to take and hold it ourselves; the other to make a republic of it. To our own loss, and not to the advantage of the people, we chose the latter course. It was a very generous act of self-sacrifice on our part, an act of overmuch credulous altruism. We ought to hold the entire West Indies, or the principal islands. They are geographically appendaged to the United States. Havana is but a hundred miles from Key West, about the distance from New York to Albany. We resigned the island to the chances of its people in a republic, simply out of sentiment, that we should not be thought too greedy of conquest.

But we very properly kept Cuba under our tutelage. We agreed with the new republic of Cuba to which we had passed over the government that we would not interfere with its control so long as it would keep the peace, suppress insurrection and pillage, and not repudiate its debts. It was plainly agreed that we should have the right to intervene in protection of peace and of our own interests there if there should be a seditious uprising; and it was perfectly understood that in such a case we should be at liberty to hold the island permanently, as we hold Porto Rico. Once there was

such an uprising, and we had to enter the island and put it down. We might then have annexed the island, but we were generous and gave it a second chance. That was not after the custom of nations, was perhaps overindulgent, but we preferred to err on the side of self-sacrifice.

Now there has come another threat of sedition amounting to armed revolution, and President Taft, not wishing to intervene again and occupy the island with the army, has sent a warning to President Gomez that peace must be kept, on pain of intervention. That was sufficient. Peace will be kept, for ready as the Veterans' Association which was stirring up the trouble was to seize the offices by force, they could see no help in their purpose coming from the intervention of the United States. Indeed that would shut them out permanently. So they submit, and Cuba will have more space to continue the attempts at peaceful self-government.

President Taft intimates that intervention now might not mean annexation; but he has long patience. We think our people would hold that patience had had its sufficient exercise. Not all our people. Some who raise sugar crops or oranges and pineapples might object if the tariff were taken off from Cuban products, but the people as a whole, most of whom are consumers, would not see any objection here. Some might object because the population is so largely Catholic, or of mixt blood, but our country is hospitable to both. We can imagine that the mixt population of Cuba might fear annexation and the increase of the American influence which tends to put such a population into an inferior class. There is weight in this reason from the Cuban side, and we can believe that it has influence for peace among the veteran soldiers, so many of whom are of the colored race. Indeed, it is from the Cuban side that we should expect the loudest, but yet unavailing, objection to annexation. Let them, therefore, keep the peace. There would be much more hope of their good will if they could be assured of such rights of self-government as our country has allowed to its Territories. Just now Porto Rico, thru its legislature, is saying that it does not

want empty citizenship without the rights of self-government, and we agree with it in this demand. Give Porto Rico a Territorial form of government, and Statehood five years later.

•

Recognition of the Chinese Republic

THREE full months have passed since the birth of the youngest of republics, and still the oldest of her sisters gives her no word of welcome. Every day since has shown more clearly the strength of the democratic movement and the impotency of the ruling dynasty. Even the monarchical Powers that most dread the advent of another republic on the earth have now almost given up hope of maintaining the Manchus, but we, the people of the United States, who have for more than a century stood forth as the apostles of free government, have not yet indicated in any official way that we sympathize with the Chinese people in their efforts to overthrow an age-long tyranny. Worse than that, our silence and our co-operation with the monarchical Powers in bringing pressure to bear upon China in this crisis have given the impression that we are on the side of the Emperor.

The collective note which the representatives of all the Powers handed to the leaders of the imperialists and republicans when they met in conference at Shanghai to decide the fate of their country was harmless enough in its wording, merely expressing a pious hope that they should come to a speedy agreement, but its meaning was recognized to be that foreign influence was being exerted against the republicans. If it did not mean that it meant nothing, and was a piece of superfluous impertinence. It was reported at the time that certain of the Powers had notified China that they would never consent to recognize a republic and that the adoption of that form of government would lead to the dismemberment of the empire. That is what they did when Norway declared its independence of Sweden, and so they forced a royal figurehead upon one of the most democratic of European peoples. The note which conveyed the

opinion and wishes of President Taft on this occasion was identical in its wording with that conveying the opinion and wishes of the Czar Nicholas. What reason had the Chinese for thinking that there was any difference in their attitude?

The fires of revolution were prematurely lighted by American financiers. The plans for the movement had been worked out years in advance. The organization had been effected by means of those secret societies in which the Chinese are adepts. If time had allowed the revolution might have been accomplished swiftly and without bloodshed, as indeed it was in most of the southern cities. But when the people of the province of Sze-chuan learned that the railroad which they had planned, capitalized and begun to construct was to be taken from them by the Peking Government and given to American capitalists, they rose in revolt, and this precipitated the revolution thruout the country.

In another and more creditable way America is responsible for the revolution. Its leaders are largely young men educated in the United States or in the American mission schools. They have imbibed from us the spirit of freedom. They have been inspired by our example to put their ideals into effect. They had a right to expect from us sympathy and encouragement, if not that more tangible aid which we have often extended to insurgents who had far less reason for revolt. Now these young Chinese republicans are frankly expressing their distress and disappointment at the cold silence of our Government and the common indifference of the American people. Printed words are cheap and good wishes cost nothing, but the Chinese patriots have not always even got that. The newspapers of America have shown themselves in some instances decidedly hostile, in other instances critical or contemptuous. As a mere matter of policy it is unwise so to alienate the rising generation of Chinese statesmen. That the United States lagged behind other republics in recognizing the republic of Portugal was disgraceful, but it did no harm except to lead the world to believe that we had lost faith in our own institutions.

In the days of Monroe, when we numbered 10,000,000 instead of 100,000,000, we were not so timid. We recognized the republics south of us, which had thrown off the yoke of Spain, as free and independent states, notwithstanding the fact that the leading Powers of the European continent had united in a Holy Alliance for the restoration of Spanish rule. They held that the independence of the American republics "tended to encourage that revolutionary spirit it had been found so difficult to control in Europe." They were right. It did. It does. There is an irrepressible conflict between republicanism and monarchism which will never cease until the last king is wiped off the face of the earth.

Even in recent years we have not always been reluctant about the recognition of new governments. We early discerned and actively supported the republican aspirations in Cuba. The republic of Panama had stood alone among the nations of the world for a period of only three days when it was officially recognized by the United States as free and independent.

It is not desirable that we should extend the Monroe doctrine to Asia, nor that we should enter upon a crusade for republicanism thruout the globe. It may be that the time has not yet come for the formal recognition of the Chinese republic, even as belligerent. That might do more harm than good to the cause. Doubtless it was necessary to send troops to police our section of the railroad from Peking to the sea, and our delay in sending them may serve to indicate our reluctance to take such action. But there is no reason for further delay in expressing collectively our good wishes in some such form as the resolution introduced by Congressman Sulzer of New York into the House of Representatives, which says that:

"It is meet and proper to extend our sympathy to all people in their struggle for those rights which we maintain to be inalienable," and "that we, as a nation, congratulate the patriotic people of China on the success which has thus far attended their efforts; that we extend to them our sympathy in their endeavor to construct a republic upon the ruins of a despotism, and that we offer our assurance of favoring, at the earliest possible moment, the recognition of the republic of China as a member of the family of nations."

These words merely express what all true Americans believe, and we hope that the Sulzer resolution will be speedily reported back to the House by the Foreign Affairs Committee and passed unanimously. Full and formal recognition should follow as soon as this is desired. Our Government should at any rate see to it that we are ahead of any other Power in taking such action.

Wasting Good Men

Not long before his too early death, Gen. Francis A. Walker, then president of the Massachusetts Institute of Technology, made earnest remonstrance against the merciless exploitation of useful intellectual men by an unthinking public. This was before Dr. Osler discovered that men of genius cease to be productive at middle life, and should be humanely disposed of by sixty. General Walker's protest probably contained a truer explanation of the unproductivity of great men in the latter half of life than did Dr. Osler's more sensational theory of congenital limitation.

Too much of the best intellectual work has been put forth by men of fifty or over to permit us to accept the Oslerian view, without subjecting it to a more rigorous examination than it has yet received. What would political economy have been without "The Wealth of Nations"? What would biology have been without "The Origin of Species" and "The Descent of Man"? And what would the theory of evolution have been without the "Synthetic Philosophy"? Yet all of these works were the product of those years which Oslerism regards as without creative value. If it be said that these works were but the finished formulation of ideas conceived in earlier life, the sufficient rejoinder is that ideas which live and attain a universal vogue are those which are so exprest as to arrest the attention of mankind, and the literary achievement is an essential part of the whole performance. Or, if it be said that scientific literature is exceptional, the mind at once reverts to the fiction of Scott and of George Eliot, to say nothing of the strong and even productiveness of Goethe into the years of so-called old age.

Circumstances offer a true explanation of much exceptional productivity in the later years of life. Adam Smith, by no means a recluse, was not subjected to those demands which the public would now make upon a man of similar fame, under the pretext that he ought to render a large share of "social service." Darwin, after his return from the voyage of the "Beagle," lived quietly in a country home, following a monotonous routine of daily labor, and with tireless devotion shielded by his wife and children from all avoidable interruptions. Spencer, without family responsibilities, made his imperfect health the adequate excuse for standing off a public that would, if it could have done so, overwhelmed him with demands for lectures, popular articles and service on public or semi-public commissions. The genial Huxley, on the other hand, never able to say "no" to any call that appealed to his sense of duty, wore himself out in services that other men could have performed.

In America the fatuous exploitation of men that have given evidence of productive power has become intolerable. The American public shows no more sense in this matter than it has exhibited in the destruction of its forests. From the days of Adam Smith down to those of Darwin, or, in America, from the days of Hamilton, Jefferson and Adams down to those of Lincoln, social life was relatively simple. It has become difficult for us to picture the day's work before the telephone and the typewriter. With the multiplication of more or less diabolical "conveniences" we have multiplied also the most ingeniously complicated organizations for doing things, ostensibly ameliorative. Half of them in reality are organizations to bring commonplace people into public notice or to provide secretarial or "administrative" employment for men and women too fine-grained to raise corn or to handle hot ingots in the steel mills. All of these organizations, some more shamelessly than others, are mendicants, not only holding up the public for financial contributions, but, also in particular, holding up the intellectually productive group—scientific men, authors, professors, lecturers and what not—for addresses, let-

ters of commendation, service on committees and whatever other activities a perverted ingenuity can invent. Add to these exactions the legitimate efforts in behalf of really important public activities and reforms that have much excuse for requesting gratuitous services, add further the importunities of legitimate enterprises that are in a position to offer relatively large money rewards to tempt underpaid intellectual workers from their best activity; do we then need to resort to Oslerian hypotheses to account for the present unproductivity of American intellectual men over forty years of age?

The highest service that American universities could render to the public at the present time would be to watch over men that have shown themselves capable of exceptional creative work and surround them in the years after forty with conditions like those which insured the maximum productivity of the Adam Smiths and the Darwins of a bygone age. The work that our intellectual men would give to the world under such conditions would be of incalculable value by comparison with any service they could render on commissions, committees or lecture platforms. The public in general is not intelligent enough to see this. The universities must see it or be responsible for an unpardonable waste.

Admission of Immigrants

Two propositions as to the admission and treatment of alien immigrants are before Congress and the people, based on principles diametrically opposed. One considers the immigrant as a ward of the nation, to be welcomed and guarded, while the other considers him as an intruder to be suspected and deported. One of these is presented in a bill offered to the Senate, on behalf of the Committee on Immigration, by Senator Dillingham; the other is embodied in resolutions adopted by the directors of the Legal Aid Society of New York.

The latter body declares that immigrants are wards of the nation, to be protected and prepared for naturalization and good citizenship. It would have no hard and fast rules for the deportation of

immigrants, but would have such sentence suspended in doubtful cases, and enforced only if such persons became a public charge. There are many cases of mild physical or mental defects or temporary ailment that would submit to medical treatment if a little time were given. We have seen a family divided because a member has some eye disease that could be cured. This works cruelly and should be corrected. Any immigrant of fair health is an asset of value to the country, as much so as gold or silver. Such cases of curable defect should be treated, tho not necessarily at Government expense. Of course criminal aliens should be deported, and without limit of time. The Legal Aid Society further urges that no literary test be imposed, inasmuch as illiterates are capable of doing valuable labor and can learn to read and become good citizens. Once more it is urged that at consular agencies in Europe there be provided for distribution maps, charts and full reports as to climate, soil and products in this country, in regions needing labor for development of farms, irrigation, railroads, etc., for the information of prospective immigrants. And, finally, it is urged that provision be made for evening schools and other methods for teaching the English language and the nature of our institutions, so as to fit for citizenship. Of course the vicious or feeble in body or mind likely to become a public charge should be excluded. It is clear that the entire purpose is to benefit those who desire to make their home with us.

Senator Dillingham's bill has an entirely different purpose. It is in its attitude hostile and not kindly. It expands the provision against the admission of Chinese by including them in a general class of undesirables not qualified for naturalization. This could include the brown men of India or even the Japanese. The present law, which forbids the admission of those who have been promised work, is enlarged and strengthened. Not only are those excluded who thus have work promised them, but any sort of solicitation or invitation by a steamship company or other agency is forbidden and made severely punishable. Those who come to this country induced by handbills distributed in their countries

advertising positions are excluded. What the Legal Aid Society would supply by our consulates the Dillingham bill forbids.

Here are two theories as to immigration adverse to each other. One believes immigration to be a benefit to immigrants and to us, while the other dreads it as an injury to our own people and would discourage and limit it. One of these theories is patriotic, benevolent and Christian; the other is shortsighted, selfish and wrong. Our country has been built up by immigration. In most of our States from a quarter to more than half of our population consists of immigrants and their children. The wealth of Senator Dillingham's own State of New Hampshire depends on the strong hands of such men. It is to be hoped that his bill will be given a long sleep.

"The Old Princeton Tradition"

The first address made by President Hibben, of Princeton University, since his election, is conservative rather than radical, and should displease none but those who would hasten changes of administration. His first duty, he finds, is "to conserve the old Princeton traditions." Some of these President Wilson had tried to overthrow, regarding them as too aristocratic. But President Hibben defines conservation as not "standing still," but "going forward." It means, he says, keeping old values when they are good and discarding them when they are bad, which is a safe enough definition to satisfy the most progressive. Particularly President Hibben would conserve "the democratic spirit of Princeton," which judges a man by his character and not his birth or wealth. He believes Princeton democratic, and he desires "to preserve the simplicity of our campus life." There may be dangers in the social life of the upper class clubs, but "their defects have not as yet grown into serious evils." He strongly commends the honor system of student government, the preceptorial system of teaching and the development of the graduate school, the quarrel over which is a thing of the past. He finally will feel it his duty to hold Princeton to its tradition of "the Christian religion in-

terpreted in a broad and tolerant sense." And he ends thus epigrammatically:

"I would close with the confession of my faith in what I believe to be the Princeton idea, to which the Princeton spirit renders its loyal allegiance, and devotion: No pedantry in scholarship; no affectation in manners; no hypocrisy in morals; no dissimulation in friendship, and no cant in religion."

Thus the Princeton tradition is the traditional aim of all good high education everywhere as we take it.

Now that Colonel Watter-
son has thrown overboard
Colonel Wilson because
the latter has dismissed the trusty
Colonel Harvey, we respectfully submit that Colonel Harvey himself is the logical candidate to wear the mantle of Colonel Bryan and lead the Democratic hosts in 1912. Ever since Colonel Roosevelt abandoned the Presidential for the editorial chair, it has been only a question of time when the American people would send some journalist to the White House to restore the balance of power between statesmanship and letters. Colonel Harvey is conspicuously the editor for the job. He is more dependable than Colonel Watterson, he has a keener sense of humor than Colonel Hearst, he has no Southern affiliations like Colonel Graves, and he is not so shopworn as Colonel Bryan. Should Colonel Roosevelt wave aside all personal inclinations and consent to accept a Republican nomination, he and Colonel Harvey would run a very pretty and close race. Colonel Roosevelt would unquestionably poll the anti-race suicide vote, while Colonel Harvey would carry all the suffrage States. Both have honorable military records. Both edit leading weekly magazines. The only difference is that Colonel Harvey is already a member of the Ananias Club, whereas Colonel Roosevelt never told a lie. To make certain that Colonel Harvey will be elected, however, it will be necessary to get Colonel Roosevelt out of the way. We suggest that the peace societies, which have so much influence with Colonel Roosevelt, following out the "exchange of professors" idea already so successfully inaugurated between Germany and the United States, arrange an exchange between Colonel Roosevelt and

Emperor William, colonel-in-chief of the First Dragoons of England. It would particularly appeal to Colonel Roosevelt, we opine, to go over to Berlin and run the Fatherland by "divine right," and Colonel Ridder would undoubtedly welcome Colonel-in-Chief William to New York as the contributing editor of *The Staats Zeitung*.

Since the coming of the Irish **Hissing** Players from the Abbey Theater, Dublin, the American public has heard earnest hissing—a new experience so far as the rising generation is concerned. In American theaters, hissing is ordinarily reserved for crying down ill-timed applause, and such manifestation is only hissing *à rebours*. One of the plays of the Irish theater has, however, evoked hissing of the real sort: tho only from a small minority of the public. Now, the unstaled poetry of many of the plays brought here from Ireland, and the charming freshness of the action of these Abbey Players, is so patent that there is no profit in discussing it, but the feeble revival of hissing which has been one of the unconsidered by-products of this sincere art, moves us to reflection. Is the American theater to be pitied or envied for the politeness of its audiences? If hissing could be counted upon to discourage insipidity in drama, or plays which, insidiously or otherwise, corrupt the public mind or morals, then we should welcome the *sss-booo-bah*. But, as a matter of fact, that is not what hissing generally does. It prevents—or postpones—the hearing of a play. Granted that the actors and managers have courage, it cannot do more, however, than delay. The final result is either deserved failure or doubly earned success. The "critics" of Synge's "Playboy of the Western World" managed to make the Abbey Theater raucous during weeks on end when the play was first put on at Dublin. When their voices gave out they resorted to tin horns. But the play won out. We hope that the triumph of the Irish players—a triumph of simplicity over sophistication, gained in presenting the unique plays of Synge, the poetic mysteries of Yeats, and the delightful interludes of Lady Gregory,

will quicken the inspiration of other dramatists: for Synge, their greatest dramatic genius, is now dead, and another poet of realism would do wonders toward spreading the news of Ireland's regeneration as a leader in art. Yet those who hissed Synge did so because they hoped thereby to prevent him from gaining the audience he deserves: their real objection being that he does not uniformly flatter and sentimentalize Ireland as earlier playwrights have. Professor Baker, of Harvard University, has recommended to the Drama Leaguers that they hiss new plays from their orchestra seats when they find plays below their standards of art and morality. But would the big, careless public, would the sapient and virtuous leaguers themselves, hiss the right plays? A brutal demonstration of hostility kindles the manhood of players and the partisanship of their friends. Also, it makes for publicity—as the Clan-na-Gael now knows. It is chilly silence, such as Boston and Cambridge audiences not infrequently accord, that is the deadliest weapon against drama too futile or too vicious.

Peabody College In 1875 there was not in all the South a single normal school for the special training of teachers of white schools. In that year the Peabody College was established in Nashville by the trustees of the Peabody Education Fund, and by means of scholarships students were brought there from all the South. Ten years ago its students, scattered over the South to the number of ten thousand, had developed the interest which led to the establishment of normal schools in all the Southern States. But these were training teachers of elementary schools, and it was determined to make Peabody College an institution of a higher class, a real teachers' college. The trustees of the Peabody Fund have already given it a million dollars, and \$550,000 has been given by the State of Tennessee and the city of Nashville; and the trustees propose to close up the Peabody Fund by giving another half million on condition of a million more being given, so as to raise the fund to three million dollars. Already by a deal with

Vanderbilt University Peabody College has secured a fine site, and, while independent, it will from its very proximity, have much the same relation to Vanderbilt University that the Teachers' College in New York has to Columbia University. Thus there will be established a magnificent and permanent monument to George Peabody, the first great benefactor to the education of Southern white youths. With these two institutions, and with Fisk University for the negroes, altho as yet poorly endowed, Nashville is made the great educational center of the South.

The Turbulent Republics We absolutely agree with Secretary Knox that it is the duty of the Senate and the country to approve the conventions formulated with Honduras and Nicaragua, by which our Government shall do for those States what we have so successfully done for Santo Domingo. We agreed to collect its revenues and fund its usurious debt, the non-payment of which was likely to bring in intervention by foreign powers. Now the revenues of Santo Domingo have been nearly doubled in seven years, and its foreign trade nearly trebled, with a reduction by nearly one-half of the import duties. Now two turbulent states, close by our Panama Canal, ask us to do as much for them. It will insure for them peace at home, and for us the avoidance of complications due to our responsibility under the Monroe Doctrine. While peace in these smaller states lightens our responsibilities, at the same time commerce is increased to our own advantage as well as that of the people there.

Soil Fertility The present census has nothing more important for us to study than the relative increase and decrease of fertility in our farm soils. It is doing a good deal to get rid of the idea that land must deteriorate in value by usage. Only a few have, until very recently, dared to deny the old time statement that soils wear out. It begins to be determined and probable that soils need never wear out; that with proper usage, such as

plowing under legumes, a plot may grow richer and richer as the centuries go by. During the decade ending in 1905 the production per acre of corn increased over 7 per cent.; of wheat, over 6 per cent.; of oats, 15 per cent.; of barley, 11 per cent.; of buckwheat, 23 per cent.; of hay, 22 per cent.; of potatoes, 15 per cent.; while even cotton gained 3 per cent, and tobacco 5. This was not due to specially favorable years, for the preceding ten years averaged more favorable for good crops. The secret of this whole matter lies in the discovery that the whole body of legumes can take nitrogen directly from the air, and that, if plowed under, they add not only a vast amount of humus to the soil, but nitrogen in large quantities. As one consequence farming has rolled backward somewhat onto the older States, and the bumper crops of corn are now reported from outside the corn belt altogether. We can congratulate ourselves that, multiply our population as much as we may, we shall be able to feed the millions; and that very soil which had been deserted as worn out is going to do the best part of the work. We shall yet see every acre in the United States producing a fair return to the cultivator. Our lakes and streams are also going to do their share, when restocked by the Government. Conservation does not mean withdrawing valuable land from cultivation, but putting it to its very highest value. Corn production increases per acre at a rate which about equals the increase of population—that is in the corn States. Twenty-two States report an increased production of wheat and fifteen States are holding the same relation to potatoes. The mean production per acre of wheat is increasing in a greater degree than the normal increase of population, that is, in twenty-eight States, while the increased production of corn has exceeded the normal increase of population in fourteen States. This counts well on the optimistic side, and compensates for the cost and trouble of taking the census.

In South Carolina white women teach negroes in the public schools, and some of them actually get to love the children they teach. Governor Blease saw a

handsome white woman walking on the school grounds with one arm about a negro boy and the other about a negro girl. He was shocked, and in his message to the legislature reported this awful sight, and urged the passage of a law forbidding white teachers in colored schools. Such a law was enacted in Florida years ago and annulled as unconstitutional. Governor Blease makes no secret of his belief in lynching certain black (not white) criminals, and he goes so far as to ask the enactment of a law forbidding secret societies among negroes. He will find difficulty in getting such a law past any Federal court.

America contains a long poem by a Jesuit Father with the title "To His Eminence, Cardinal Farley," of which it may be worth while to quote the last stanza:

"Then laud him, ye angelic choirs,
Laud him on paradisaal lyres.

O Earth! O Sky!

Lend us your tongue to sing his praise;

That all may love and laud his days;

That all may chant his glory high;

Such strength the song may gain

That those in Heaven may hear our strain,

And by commingling prayer obtain,

The blessings of the new-born year,

For him, this Prince of God we welcome
here;—

That all may swell the thousand-throated
song

That thrills our goodly land; that all the
throng

Of mortal men may bid oppression cease,
And praise thee in a world of universal peace."

We have expected somewhat of a disintegration of the Christian Science Church following the death of Mrs. Eddy, not so much because of the loss of her personal authority as because of the autocratic rule of the Boston society. Already some local societies have seceded and made changes in their ways of worship; and now we have the sharp criticism by Mrs. Stetson, who was so long the leader in this city, but who was excommunicated by the Boston rulers. She tells them that they have been guilty of reversing Mrs. Eddy's teaching in that they have aided the so-called League for Medical Freedom, and she fully proves her point.

In the city of Lawrence, Mass., business has been held up for over a week, the great factories closed, and all done—we do not say by laborers, but by mad miscreants who attempted to destroy property and who have been kept in check only by the Governor of the State, who has coerced them by a regiment of soldiers. Once more the attempt has been made to murder men with dynamite. Submission to threats and violence is impossible, and Governor Foss is to be commended for his action. After peace let there be conference and arbitration.

We take this from the *London Spectator*:

"The prevalent idea of the rebels is that the Chinese provinces should be federated and should resemble the United States of America. We cannot believe for a moment that China is politically educated for what is a noble but also a very complicated form of democracy."

"Complicated"! It is simplicity itself if compared with a British monarchy, aristocracy and republicanism fused in one.

According to the figures given there were in this country 8,272 homicides in 1911, with 74 legal and 71 illegal executions. It is a very bad showing, whether of the numerous lynchings or the few legal hangings. No wonder we have many murders when there is only one chance in 112 that one who kills his man will be executed by law.

In his *Commoner* Mr. Bryan congratulates Governor Vardaman on the report of an investigating committee of the Mississippi Legislature exonerating him of alleged irregularities, and gives him the following inclusive endorsement:

"Mr. Vardaman is a faithful friend of the public interests and he will be a power for good in the United States Senate."

Norway calls "*Dirigo*" to the nations of Europe. The Storting has enacted a law giving the suffrage to women and admitting them to all public offices in the gift of the state, except diplomatic, ecclesiastic and military. Thus justice moves a step forward.

Insurance

State Insurance in New Zealand

DURING the last few years, the New Zealand State Insurance Department has made some progress in the volume of business written: less, however, than its friends would like to see recorded. The sums stated below are in English pounds:

Year.	New sum assured.	Policies in force.	Sums assured in force (excluding bonuses).
1904	694,556	44,194	10,259,562
1905	716,021	45,137	10,468,316
1906	729,105	45,981	10,667,591
1907	752,065	46,945	10,855,153
1908	780,597	47,033	10,955,749
1909	795,339	48,016	11,151,094
1910	820,179	48,932	11,360,796

Since 1904 the new business has, then, increased by less than \$700,000, and the business in force by 4,738 policies, and five and a half million dollars assured. Considering expenditures for the year just closed—£71,534, or about \$350,000—we find the ratio of expenses to premiums 20.2 per cent., and to total income, 12.7 per cent. For a state department of insurance that has been at work for thirty years the figures are not convincing. And this 20.2 per cent. is a reduction on the ratio for previous years. Professor le Rossignol and Mr. W. D. Stewart reported, some time ago:

"The fact that it has behind it all the prestige of the State, that its contracts are guaranteed by the State, that all the new entrants into the Civil Service must insure with it and that its agents have the same monetary incentive to exertion as the agents of private companies, should be sufficient, one would think, to keep the office in the front rank. But its bonuses are outclassed by several competitors, its lapse rate is abnormally high, and it is not getting its proper share of new business."

We give space to these remarks and figures because of the large role which projects for state insurance play in the news of the much nearer parts of the world than far-away New Zealand.

ELBRIDGE G. SNOW, president of the Home Insurance Company, contributes to the *New York Times* a review of the fire insurance year. He describes 1911 as presenting "an average experience."

There is, however, one matter for especial congratulation: evidence of "some slight progression" toward enlightenment on "the appalling annual ash heap or fire waste." Thus:

"Fire insurance engineering is becoming a recognized department of industrial science; repeated reference to the wide disparity between the per capita fire loss in this country and that of European countries, occasioning a direct waste of our created resources averaging a quarter of a billion dollars a year and an undetermined further amount of indirect or consequential damage, has awakened public consciousness to some realization of the fact that a fire is a matter of public concern, and not merely the private affair of an individual to be adjusted by payment from the coffers of some insurance company."

THE American Fire Insurance Company, which leads in point of assets, is the first to publish its annual statement. The Home Insurance Company of New York begins 1912 with assets of \$32,146,564.95, and surplus (as regards policyholders) of \$18,615,440.71. This shows an increase of \$1,705,750.66 on assets and of over \$3,000,000 in policyholders' surplus, in a year that was not a thriving one in the fire insurance business. The company carries on its roll of directors, among other names, those of Elbert H. Gary, Levi P. Morton, John H. Flagler and John Claflin.

THE John Hancock Mutual enters its fiftieth year with largely increased benefits in its industrial policies. The scale averages 10 per cent. over that now in use. Among the liberal features added is one providing for full benefits in case of death by accident during the first six months after the issue of the policy.

A WELCOME book for our desk is the 1910-1911 volume of *Hayden's Annual Cyclopedia of Insurance in the United States* (Hartford: Insurance Journal Co.). The volume now exceeds 650 pages. To one who has to do at all with insurance in any of its various lines it is a valuable reference book.

Reserve Association Control

IN its plan for the election of directors of the proposed National Reserve Association, the Monetary Commission earnestly seeks to prevent possible control of that association by "Wall Street" or any sectional group of capitalists or banks. We referred two weeks ago to certain preliminary estimates of the relation between the voting power and the actual banking power of the proposed districts. The commission's report has since been laid before Congress. Its figures and comparisons are more impressive than those to which we directed attention. The commission says:

"In the provisions of the bill for the election of directors of the National Reserve Association we provide for thirty-nine directors, two to be elected by each of the fifteen districts defined in the bill, and nine additional directors to be elected by representatives of stock holdings in the association. We propose to limit the representation of any one district to three out of the thirty-nine directors elected, and under this plan every district will have two and none can have more than three directors. The New York district, under these provisions, with 29 per cent. of the banking resources of the country, would have 8 per cent. of the representation on the board; New England, with 12 per cent. of the resources, would have 8 per cent. of the representation; the Eastern States, as defined in the bill [New York, New Jersey, Pennsylvania and Delaware] with 41 per cent. of resources, would have 15 per cent. of representation; the Middle West, with 24 per cent. of resources, would have 31 per cent. of representation; the Southern States, with 11 per cent. of resources, would have 23 per cent. of representation; and the Western and Pacific States, with 12 per cent. of resources, would have 23 per cent. of representation."

We put these figures in a little table:

	Banking Resources.	Voting Power.
New York	29	8
New England	12	8
Eastern States (including N. Y.) ..	41	15
Middle West	24	31
Southern States	11	23
Far West	12	23

It is also provided that two or more banks under identical control by ownership of more than 40 per cent. of their stock shall, together, have only one bank's vote. The apportionment set forth above, the commission says, "would

prevent beyond question the possibility of control [of the association] by any corporation or combination of corporations, banks or otherwise, or by any individual or combination of individuals for selfish or sinister purposes." Any majority combination of East and Middle West with other interests must include more than 80 per cent. of the country's banking power. Probably New York's banking interests will not protest against the discrimination which our table shows, but we are inclined to think that in attempting to meet sectional opposition the commission has gone too far, and that the discrimination against the Eastern States and in favor of the South and the Far West is too severe.

....The number of partners in the firm of J. P. Morgan & Co. has been increased to eleven by the addition of Horatio G. Lloyd, of Philadelphia, for the last two years a general partner in Drexel & Co. of that city, where for about eight years he was president of the Commercial Trust Company.

....Richard Delafield, president of the National Park Bank of New York, has been elected a trustee of the Union Trust Company, of which Edwin G. Merrill is president. The capital of the Union Trust Company is \$1,000,000 (earned) and the surplus is \$8,000,000 (earned). The Union Trust Company recently absorbed the Plaza Bank. The Plaza Branch of the company is at Fifth avenue and Sixtieth street.

....James Speyer, head of the banking firm of James Speyer & Co., has just been decorated by the German Emperor with the Second Class of the Order of the Red Eagle. The only other Americans to receive this honor are J. P. Morgan and Nicholas Murray Butler. Mr. Speyer is the founder of the Theodore Roosevelt professorship in the University of Berlin, which brought about the exchange of professors between Germany and the United States, and has always been interested in German-American relations.

The Independent

VOL. LXXII NEW YORK, THURSDAY, FEBRUARY 1, 1912 No. 3296

Survey of the World

Governor Wilson and His Friends

A surprising amount of attention has been given by the press and the public to such details of the relations of Governor Woodrow Wilson and Editor George Harvey as are known or rumored. We discussed the subject editorially last week. To recapitulate: Henry Watterson, editor of the *Louisville Courier-Journal*, has published an account of the "break." It seems that Messrs. Wilson, Harvey and Watterson held a conference in New York City to consider the former's campaign plans. Mr. Watterson was greatly disappointed to find the Governor ungrateful to the New York editor, and "a schoolmaster rather than a statesman." Apparently, Colonel Harvey asked Governor Wilson whether his (the editor's) advocacy of the Governor's cause was helping or hurting his candidacy. Governor Wilson frankly stated it to be his belief that it was injuring him. This, friends of Colonel Harvey confess, may be true in so far as the fact that financial interests are supposed to own bonds of Colonel Harvey's publishing company would give the impression (especially thruout the Middle West) that "the interests" have made Governor Wilson their candidate. But—to quote Mr. Watterson—"Colonel Harvey was grievously wounded. He had been fighting Governor Wilson's battle for many years and had idealized his chief." Governor Wilson has refused to discuss Colonel Watterson's statement, only saying that the latter is "a nice old gentleman." Senator Gore (Oklahoma, Democrat) comments: "The whole Wilson-Harvey-Watterson episode is a bubble, not a billow. . . . The head and the

heart of the Governor's offending is that he told the truth." One version of the affair is that Colonel Harvey tried to persuade Governor Wilson to accept financial aid in his candidacy from Thomas F. Ryan, the New York financier, and that the Governor declined; it was then, the story runs, that Colonel Harvey put his question and was answered so frankly. The Watterson version differs from this account, stating that the Kentucky editor busied himself, at Governor Wilson's instance, in raising funds for the latter's boom. In a letter addressed to Senator Tillman, who had exprest himself as "greatly imprest by Governor Wilson," whom he regarded as stronger than ever, Colonel Watterson said:

"As the business proceeded, the name of Thomas F. Ryan not unnaturally came into my mind. He is a Democrat. He is a Virginian. He is my friend. Knowing him to be a disinterested man, having no axe to grind, I hoped that I might induce him to help out what I believed a worthy cause. Gov. Wilson's managers were delighted with the suggestion. Col. Harvey had nothing whatever to do with it, and as far as I am aware knew nothing whatever about it.

"Thruout this unhappy affair I have been an unwilling witness . . . having been up to the hour of the Harvey incident, a sincere believer in Gov. Wilson. He is a man of ability. In some ways he might prove a candidate of availability, but I fear that if he became our President we might discover all too late that he possesses personal peculiarities which would prove disastrous."

Colonel Watterson would like to have the controversy arbitrated, and urges the selection of a "court of honor." for Governor Wilson brands as "absolutely untrue" the statement that he ever authorized Colonel Watterson to collect money for his campaign. Major William F.

McCombs, who is in charge of the Woodrow Wilson Press Bureau in New York, says that Colonel Watterson suggested Mr. Ryan as a contributor to the Wilson fund, but adds that he himself refused to solicit or accept Mr. Ryan's money.—Somewhat earlier Mr. Bryan discussed the Wilson-Harvey break in his *Commoner*, saying in part:

"The recent break between Gov. Wilson and Col. Harvey illustrates the impossibility of co-operation between men who look at public questions from different points of view. Col. Harvey became a supporter of Mr. Wilson when he was selected as the Democratic candidate for Governor of New Jersey, and he continued his support when Gov. Wilson began to be discussed as a candidate for the Presidency. Of course, it is absurd for Col. Harvey's friends to talk about his 'bringing Gov. Wilson out.' . . . His conspicuous support was not only of no advantage, but it became actually a disadvantage; it did not bring to Gov. Wilson the class for which Col. Harvey speaks, but it alienated men just as honest as Col. Harvey's friends, who could not understand why Col. Harvey praised Gov. Wilson personally without endorsing the things for which Gov. Wilson stands. It naturally aroused suspicion as to the sincerity of one or the other."

—Governor Wilson told reporters last week that he would probably send a special message to the New Jersey legislature urging the ratification of the amendment to the Federal Constitution providing for the imposition of an income tax.

Lawrence and Indianapolis

The strike of some 22,000 textile workers of Lawrence, Mass., is now in its third week. On January 27 representatives of the mills issued a statement that they would have no further negotiations with Joseph H. Ettor, of New York, the strike leader, and that demands for an increase of 15 per cent. in wages, the abolition of the premium system and double pay for overtime, cannot be granted. "An increasing number of operatives have returned to work," the statement continues. The strikers, on the other hand, voted to put off further conferences and to call upon Governor Foss for an investigation of conditions in the mills. The strikers are in want now and are hungry. An earlier statement of the American Woolen Company rehearses the fact that the strike results from the passage of the fifty-four hour bill, in the interests of women and minors:

"The close competition between the mills all over the country would not allow such a reduction in hours to go into effect without a corresponding reduction in wages.

"Comparison of the wages paid in the mills of Lawrence with the wages paid in other mill centres as shown by tables already published, proves conclusively that the range of wages in the Lawrence mills is higher than that in any other textile centers in the country producing the same grade of goods."

The rate of wages paid in the mills is stated to exceed \$9 a week except in the case of minors.—Governor Foss sent a special message to the Massachusetts Legislature on January 25 urging prompt investigation by a legislative committee or an appointed commission of the causes of the strike. The reduction in wages as a result of the fifty-four hour law is not, perhaps, the only grievance, the Governor says. The strikers believe

"That for years the employers have pursued the policy of bringing into their mills the cheapest grade of labor obtainable in this or in foreign countries, and by fines and other methods have reduced wages far below that decent standard which American citizens should enjoy. If these things are true, their truth should be established by public investigation and the fact should be given the widest publicity. If not true, their effective denial is equally important. . . .

"The industry in which the strike originated is one that has been especially favored by tariff laws designed, and only justified, on the ground that they protect and elevate American labor."

William D. Haywood, acquitted with Moyer and Pettibone of the charge of assassinating Governor Steunenberg, of Idaho, with a dynamite bomb, and denounced by the Denver Trades and Labor Assembly on January 28, as an enemy of organized labor, reached Lawrence on January 24 and was greeted by several thousand strikers and their friends, accompanied by three bands and a drum corps. A parade of some 5,000 persons followed. At a mass meeting held on Sunday in City Hall, under the auspices of a Socialist club, Organizer Ettor said:

"The strike is not settled. I am not giving away my plans, but this town will not be very happy in two days from now. There will be no dynamite used, but something is going to happen. Nobody will be killed.

"If the mill men intend to use the wolf of hunger as an argument, it may break the limitations of men, women, and children, and destroy lives. It may be necessary that they go back to work in the mills, but we will cripple their machinery. God pity their looms. God

put their cloth. They won't be able to make any suits.

"They will need 5,000,000 militiamen to keep track of our pickets. We may use dynamite that has been planted, the dynamite of class solidarity, the fuse of working class rebellion. We are going to do nothing tomorrow. We are going to put our hands in our pockets and keep them there."

Executing Ettor's threats, 7,000 rioters threw the city of Lawrence into a state of terror on Monday, beginning the destruction of property before daylight. The mob sang the "Marseillaise," threw chunks of ice and other missiles, beat passersby, wrecked street cars, and smashed window glass at the mills. Martial law was besought by the citizens.

—On January 22, John Mitchell, formerly president of the United Mine Workers of America; Frank Hayes, vice-president; John Walker and W. B. Wilson, who as delegates to the last convention of the American Federation of Labor, were accused of not following out the directions of the mine workers in supporting a resolution condemning the National Civic Federation, were exonerated by the convention. The exoneration of the accused labor leaders took the form of a favorable vote in accepting the report of the American Federation of Labor delegates that was submitted to the convention by Vice-President Hayes. On the same day it was voted as a constitutional amendment that children under sixteen years of age should not be employed in the mines. An open joint conference of representatives of the miners and mine operators is now in progress. The demands of the anthracite district, in brief, are:

A one-year contract; a workday of not more than eight hours; a demand for a 20 per cent. increase of wages over those awarded in 1903; a minimum scale of \$3.50 a day for miners, and \$2.75 a day for laborers engaged in construction work, and a demand that coal be mined and paid for by the ton of 2,240 pounds, wherever practicable.

The bituminous wage demands include the provision that all coal be weighed before being screened and be paid for on the mine run basis, that a flat 10 cents a ton increase at the basing point be granted, etc. The miners' demands will not be granted; they never are. A joint scale commission will fight it out between operators and operatives. A strike is unlikely.

The Panama Controversy

Representative Rainey, of Illinois, made an argument before the House Committee on Foreign Affairs last week in support of his resolution for an investigation as to the secession of Panama and our acquisition of the Canal Zone. He could prove, he said, that the State Department was a party to an agreement designed to cause the revolution. He has published a statement in which he asserts that Dr. Amador (who afterward was Panama's first President) came to New York several weeks before the revolution of November 3, 1903, that he conferred with William Nelson Cromwell and Bunau-Varilla, and that on October 18, two days before he sailed for home, he sent to his son, a surgeon of the United States Army, then stationed in Massachusetts, a letter, a photographic copy of which will be laid before the committee. Mr. Rainey publishes the letter, a part of which is as follows:

"The plan seems to be good. A portion of the isthmus declares itself independent, and that portion the United States will not allow any Colombian forces to attack. An Assembly is called, and this gives authority to a Minister to be appointed by the new Government in order to make a treaty without need of ratification by that Assembly. The treaty being approved by both parties, the new republic remains under the protection of the United States, and to it are added the other districts of the isthmus which do not already form part of the new republic, and these also remain under the protection of the United States. The movement will be delayed a few weeks. We want to have here the Minister who is going to be named, so that, once the movement is made, he can be appointed by cable and take up the treaty. In thirty days all will be concluded. As soon as everything is arranged I will ask B. V. to look out for you. He says if you do not wish to go he will look out for a position for you in New York. He is a man of great influence."

Mr. Rainey protests against the refusal of our Government to submit the dispute with Colombia for arbitration at The Hague.—Panama's Supreme Court has given an opinion that President Arosemena may be a candidate at this year's election if he takes a vacation of six months, thus satisfying the requirements of the law which says no one shall be a candidate for President who has held the office during the six months immediately preceding an election.

Various Items A series of decisions by the Supreme Court, made public last month,

lays down the principle that shippers suffering from civil injuries from railroads must go to the Interstate Commerce Commission before going to the courts for relief. Also, a decision of the Supreme Court of North Carolina that a State law requiring common carriers to accept for transportation freight offered at any regular station of the carrier and to transport it was overruled. The North Carolina statute provides a penalty for each day that the carrier holds the goods after receiving them and before forwarding them. Justice McKenna points out in his decision that, under Federal law, before a common carrier may accept freight for transportation, it must publish its rates and regulations. The State was thereby precluded from legislating on the subject of conditions under which freight should be accepted for interstate transportation. The North Carolina case is found by critics to be parallel with the Minnesota 2-cent rate case, upon which an opinion has not yet been rendered.

—Wisconsin's income tax law, enacted by the last legislature, was held constitutional by the Supreme Court of the State in a decision published January 9.—

It is now ten days since the Moss committee of the House of Representatives reported in the Wiley-McCabe investigation, unanimously exonerating Dr. Wiley and his associates, while criticising the former's conception of his duties.—

The Duke of Connaught, Governor-General of Canada, also the Duchess and the Princess Patricia, visited New York last week as guests of Mr. Whitelaw Reid, Ambassador to Great Britain. The Duke proceeded to Washington, where he called upon the President and dined at the British Embassy.—On January 24 Justice Kalisch of the Supreme Court of New Jersey sentenced for a year's imprisonment Louis Kuehnle, late Republican boss of Atlantic City. Kuehnle must also pay a fine of \$1,000. Other grafters were sentenced to terms of from three months to one year each.—

Senator Culberson of Texas, in demanding an investigation into campaign expenses in 1904 and 1908, on January 24, made sweeping charges of corruption against

the Republican committees for those and other years. Indirectly he charged that foreign ambassadorships were bestowed as a reward for campaign contributions, and he intimated that in the 1904 campaign the Republicans raised \$11,000,000. The Senator's speech was made in anticipation of an unfavorable report by the committee on contingent expenses on his resolution providing for an investigation. Stating that his resolution did not go back of 1904, Mr. Culberson said this was due to the necessity of fixing a limit, and was not because of the fact that money had not been corruptly used prior to that time, for, he said:

"Men high in party councils, one of them afterward attaining the vice-presidency and then the presidency, laughed and rejoiced in 1880 around the banquet board that 'soap' was potential in elections. It is well remembered how James B. Foster, president of the Republican League in 1888, would have fried the fat out of special and protected interests to force campaign contributions."

—Six Republican Governors are now working for the Roosevelt candidacy, and in constant communication: Aldrich (Neb.), Bass (N. H.), Hadley (Missouri), Glasscock (W. Va.), Osborn (Mich.) and Stubbs (Kas.). Headquarters of what is styled the Roosevelt National Committee have been opened in Chicago, in the Congress Hotel, Michigan Boulevard.—On the evening of January 22 Senator La Follette of Wisconsin addressed a large audience at Carnegie Hall, New York, this being his first appearance in the city. The Progressive Senator spoke for almost two hours, following Reginald Post, formerly Governor of Porto Rico, and Gifford Pinchot. In the course of the evening no speaker named either ex-President Roosevelt or President Taft. Mr. La Follette was very hoarse, but received generous applause when he made a complimentary reference to the woman's suffrage agitation and declared for an unlimited application of the recall—even to Justices of the United States Supreme Court.

South America's Civil Wars

Ecuador's revolution has been suppressed. On the 22d, when the rebels had nothing left but Guayaquil, their commander, General Montero (who was fighting in the interest of Flavio

Copyright, American Press Association, N. Y.

THE DUKE OF CONNAUGHT ARRIVES AT WASHINGTON

Ambassador Bryce, the elderly figure at the left, is welcoming the Duke, on whose right stands Major A. W. Butt, President Taft's military aide. Chandler Hale, Third Assistant Secretary of State, stands at the extreme left

Alfaro), surrendered to General Plaza, who had brought the Government's army from Quito down to the coast. Whereupon the people of Guayaquil attacked the revolutionist troops in barracks, and 80 were killed or wounded. A peace agreement was signed on the following day, when Plaza's troops entered the city. Ex-President Eloy Alfaro, General Montero and General Paez were found in hiding places, and they narrowly escaped death at the hands of the people. General Montero was promptly tried by court martial and sentenced to be imprisoned for sixteen years. The people of Guayaquil had clamored for a death sentence, and when the judgment of the court was announced by General Plaza, the presiding officer, they broke into the court room, shot Montero to death, dragged his body to the street, hacked off the head, built a fire and burned both head and trunk. Alfaro and Paez were then sent to Quito for trial. There, on the 28th, a mob broke into the penitentiary and lynched them, together with

General Flavio Alfaro, Medardo Aliaro and Manuel Serrano.—The captain of our gunboat "Yorktown," Commander Bertolette, died of yellow fever on the 24th. The ship was ordered north, and the "Maryland," on her way to Guayaquil from Honolulu, was intercepted by wireless message. A seaman also died and six more are ill. The dead officer's young wife had been waiting for him in San Francisco. Her bereavement recalls a romantic courtship and marriage. When our battleship fleet was going around the world she followed it from San Francisco to Yokohama, where the marriage took place.—There is anarchy in the Brazilian city of Bahia, and similar conditions prevail in Fortaleza, the capital of Ceara. It is asserted that the disorder in Bahia is due to Federal troops. The Governor has taken refuge in the French Consulate, and his successor, recently elected, declines to take the office.—In Paraguay, President Rojas has returned to the capital. His brother was killed in battle with the

rebels on the 26th. Owing to the demands of merchants and of Argentine and Brazilian naval officers, negotiations for peace are in progress. Diplomatic relations with Argentina have been discontinued, because of Paraguay's failure to pay for losses suffered when the rebels fired upon Argentine ships.—In Argentina trade is still checked by the railroad strike. The Government is applying pressure to compel the companies to take back the strikers.

Cuba and Central America

In Cuba, General Nuñez and other leaders of the veterans say that if President Gomez fails, before February 24, to oust all Spanish officeholders who fought against Cuban independence, they will appeal to our Government at Washington. The Supreme Court says the act suspending the civil service law is unconstitutional. This clears the way for Gomez's decree making the law effective. He has dissolved the so-called decapitation commission, and is about to issue a decree against the Veterans' Association. Our Government desired to acquire a tract of land for the enlargement of the Guantanamo naval station. Cuba's Congress seems unwilling to pass the needed legislation, and speculators have intervened by purchasing the land. There were rumors that influence in favor of Germany's interests had been exerted. A member of the Cuban Cabinet says: "Cuba will not cede an inch to Germany or jeopardize the supremacy of the United States in the New World."—Since the reciprocity agreement with Cuba became effective, in 1903, our annual imports from the island have been doubled, and our exports to it multiplied by three.—General Mena, Nicaragua's Minister of War, who was elected president by Congress in October, has resigned, owing to the protest of our chargé d'affaires, Mr. Gunther, who pointed out that the agreement signed at Managua in 1910 by our special commissioner, Mr. Dawson, and by General Mena and other ministers, provides that Presidents must be elected by popular vote.—It is reported that Haytian exiles in Jamaica are planning an attack upon the Leconte Government.

—Salvador's Government has caused the arrest of two generals and eighteen other exiles from Honduras who were plotting against the Government of that country.

Mexico President Madero, in a letter to a Texas newspaper, says he thinks General Reyes will be sentenced to be imprisoned six or eight years.—Owners of factories in the textile industry thruout the country held a conference last week and reached an agreement with the strikers, granting a wage increase of 10 per cent. There is to be a permanent commission to settle industrial disputes, and its work will be done in connection with that of a Government labor bureau.—The Government has gained some small victories in engagements with Zapata's bandits. A battle was fought last week only twelve miles from Cuernavaca. The Zapatist prisoners taken will probably be shot, as the constitutional guarantees have been suspended in that part of the country. The people of Morelos complain to Madero that the conduct of the soldiers of Figueroa, a former governor, is worse than that of Zapata's robbers.

Socialist Gains in Germany

The second ballotings in districts where no candidate received a majority took place on January 22 and 25, and resulted in giving the Social Democratic party more than twice the representation in the new Reichstag that it had in the old. It is now stronger in that body than any other single party, as it holds 110 seats. In the last Reichstag the support of the Government was the Conservative-Clerical coalition, popularly known as the "Blue-Black Bloc." In the new Reichstag this group will be composed of 93 Clericals or Centrists and 66 Conservatives, who, with the aid of the 18 Poles and other allies of conservative tendencies, cannot muster more than 193 votes. Since this does not constitute a majority of the total membership of 397, the balance of power is held by the National Liberals (47), the Radicals (44), and other non-Socialist progressives, numbering about 95. Under the leadership of Ernst Bas-

sermann, as successor to Dr. Barth, this group will have a greater influence than formerly, notwithstanding the reduction in membership. All parties except the Socialist will support the Government in its army and naval bills, so the test of strength will come on some later issue, probably taxation or the tariff. The most exciting contests took place in the "Kaiser districts" of Berlin and Potsdam, for the Emperor had intimated that he would desert his city or his suburban palace rather than suffer the humiliation of being represented by an avowed enemy of the monarchy. Since the removal of the court would naturally have a serious effect upon the prosperity of the neighborhood, it was expected that this would cut down the Socialist vote, but apparently it had little influence. Potsdam elected Karl Liebknecht, the son of one of the founders of the Socialist party, in preference to its own burgomaster, a Conservative. Dr. Liebknecht, who recently served an eighteen-month sentence for anti-militarist propaganda, declares that the success of the Socialists in Germany insures the peace of the world. The Socialists would also have captured the palace precinct in Berlin if the Imperial Chancellor, the other ministers and the civil servants had not turned out and voted for the Radical candidate, Dr. Kaempf, who was returned by a majority of only 7 votes. The city of Cologne, the Catholic stronghold of Germany, went Socialist for the first time.

The Turco-Italian War

The new French Premier, M. Raymond Poincaré, won his first success and received applause from all parties of the Chamber of Deputies by his announcement that France had insisted upon the surrender by Italy of the twenty-nine Turks seized upon the French steamship "Manouba" and taken to Cagliari. The prisoners were turned over to the French Consul at that port and conveyed by a French steamship to Trioul, the quarantine station of Marseilles, there to be examined by the French physicians to see if they are all bona fide members of the Turkish Red Crescent Society. It is said that the Italian authorities, after testing their

medical knowledge, became convinced that they were really doctors and nurses, and not, as the Italian detectives at Marseilles reported, Turkish officers in disguise. The French Government assumes the responsibility of preventing any such combatants from entering Tripoli by way of Tunis. The Italians have received satisfactory assurances that the aeroplanes seized on the "Carthage" on the way to Tunis will not be used against them. The importance of the air power in modern warfare is shown by the recent engagement at the oasis of Ghirgarish on the coast ten miles west of Tripoli. The Italian column was stopped and outflanked by a large force of Turks and Arabs and was in danger of annihilation when an aeroplane which was trying out its motor appeared upon the scene and frightened the enemy so that the Italians were able to hold them off until nightfall.—The Turkish Parliament has been dissolved and the cabinet is being reorganized by the Grand Vizier, Said Pasha. Apparently the Ottoman Government is no nearer than three months ago toward consenting to the alienation of Tripoli. The court martial at Istib, Macedonia, investigating the disorders resulting from the bomb throwing which caused the death of twelve persons in a mosque last December, has condemned nineteen persons to death for complicity in the outrage, eight of them Bulgarians, two Jews, three gypsies and six Turks.—The Cretans have seized upon the present time as auspicious for renewing their effort to sever completely the connection with Turkey and the Cretan Assembly will elect delegates to the Greek Chamber of Deputies.

The Chinese Revolution

The anticipated edict of abdication has not appeared, and the situation is more confusing than ever. The armistice, several times extended, was finally allowed to lapse on January 20, but neither party seems anxious to resort to arms, tho the republicans are said to be preparing an army of 100,000 for the conquest of the three provinces, Honan, Shan-tung and Pe-chi-li, which are still ostensibly loyal, altho the revolutionary cause is strongly represented

even there. The forty-seven generals of the imperial army united in a telegram to the Government demanding abdication and accusing the younger Manchu princes of imperiling the country thru their obstinacy. It appears that the Empress Dowager and the court are now dominated by the younger princes of the clan, who insist upon resistance. The princes from Inner Mongolia are the most warlike. The Mongolian prince, Kung, has offered to raise 50,000 troops to maintain the dynasty, provided the money could be raised by selling the gold and silver in the imperial palaces at Mukden, which is estimated to be worth six or seven million dollars. Much of the porcelain and other objects of art from the Manchu treasuries is now being privately sold. Now that the reactionaries are in control at the court, Yuan Shi-kai is presumably out of favor on account of having advocated abdication. But the Empress Dowager has conferred upon him the title of Marquis, the highest rank of nobility in China, which is only held now by the descendants of Confucius and the three men who were foremost in suppressing the Tai-ping rebellion. Yuan has, in accordance with Chinese etiquette, repeatedly declined the honor. He is evading responsibility at this critical moment by a resort to sick leave. He has apparently entirely lost the confidence of the southern republicans. When Dr Sun Yat-sen assumed the presidency of the republic it was with the understanding that he would resign in favor of Yuan Shi-kai in case the latter would come out openly in favor of the republic. Now, however, Sun denounces the Premier as protector of the Manchus and declares that he will not give way until the Emperor abdicates and the Powers recognize the republic. Even if Sun were willing to retire the Republican National Assembly at Nanking would refuse to recognize Yuan. The obstinacy of the Manchus has caused the more urgent of the republicans to resort to violence. Gen. Liang Pi, the most able of the Manchu officers and formerly commandant of the imperial guards, was severely wounded by a bomb thrown at midnight by a Chinaman just as the general was alighting from his carriage at his home in Peking. Both his legs were

broken and he suffered internal injuries. On the following noon two bombs were thrown at Gen. Chang Huai-tze, commandant of the Tien-tsin imperial troops, as he was alighting from the Peking train at that station. The carriage was wrecked, but the general was unhurt. So long as the country remains in this state of anarchy the danger of riots and anti-foreign outrages is daily increasing, and the missionaries have been officially advised by their governments to withdraw from the interior. They are, however, unwilling to leave their posts at a time when they are most needed in caring for the famine sufferers and wounded with which the hospitals are overcrowded. The American missionaries in the south are decidedly in favor of the republic and some have gone so far as to telegraph to the Empress Dowager urging abdication. The American Legation has on that account issued a warning against the missionaries taking sides in Chinese politics. The American contingent of troops from the Philippines has now assumed charge of a section of the railroad from the capital to the sea. This railroad transports imperial troops, but will not be open to the republicans. Twenty thousand rifles and 5,000,000 cartridges have been shipped from Germany by the Trans-Siberian Railroad to Peking for the use of the Imperial Government. The attitude of Japan has apparently changed and it is even reported that Minister Ijuin has been recalled from Peking because of his officious support of the monarchy. At first Japan and Great Britain, thru their representatives in Peking, expressed the hope that a limited monarchy instead of a republic would be established by China, and both parties were given to understand that Russia, France, Germany and the United States took the same view. When the Japanese Government was interpellated on the subject in the House of Representatives Viscount Uchida, Minister of Foreign Affairs and formerly Ambassador at Washington, made the following enigmatical reply:

"The offer of benevolent assistance was made to China after an understanding had been reached with Great Britain on the subject, and we are ready to put it into actual operation at the moment an opportunity should arise, but so far there has been no occasion."

The Right and Wrong of the Tariff Question

BY OSCAR W. UNDERWOOD

[No man, aside from Wilson, Harmon and Clark, is being more closely watched today by the Democratic party than Oscar W. Underwood, of Alabama, chairman of the powerful Ways and Means Committee of the House of Representatives. He has unquestionably made a fine record in Congress and is already accounted good "Presidential timber" thruout the South. Two weeks ago a character sketch of him appeared in THE INDEPENDENT.—EDITOR.]

THE American people realize perfectly that the great industries of this country are no longer infant industries in swaddling clothes, but giants in both development and power.

They know that most of them are already paying the cost of transporting their goods across the seas and competing on equal terms with foreign rivals in the markets of the Orient, in South America, and in many cases even in the European markets against the importation of whose products to this country they are protected by high tariff duties — shutting off much of the reasonable and necessary revenue of our Government while it enables the protected industries to force American citizens to pay them unreasonable profits.

To Americans who understand this—and the realization is spreading far and wide—there is no possible reason which can be given to sustain a protective tariff written along prohibitive lines. The justification for a tariff in this country, today, is for the purpose of raising

money to support the Government. When we unite upon this standard the tariff will cease to be a political issue. But as long as it is maintained to encourage and protect monopoly and to pay

political debts it will continue to be a sore in the life of the nation.

I represent a great manufacturing district in the House of Representatives, but I was nominated and elected on a platform declaring in favor of tariff for revenue only. That was my own firm conviction at the time and it has been ever since.

Every tariff discussion brings before us all of the lights and shadows of varying intensity involved in the taxation of imported commodities, from the position of the extreme prohibitive protectionist to that

of the free trader. But in my judgment, with a deficit in the Treasury, the most important question to be considered is the raising of revenue to support the Government. Duties levied on imports of foreign merchandise are the system of taxation which I believe is favored by a large majority of the peo-

OSCAR W. UNDERWOOD, M.C.

ple of the United States and the country desires that the Congress shall continue this method of raising revenue. But it is obvious to all that the present tariff laws are not satisfactory. The differences which exist between the two great parties are not the issue of protection against free trade, by any means. The true difference is simply this: that one party desires to write a protective tariff which leans as far as possible toward the prohibition of imports to the detriment of the revenue of the Government and to the increased cost to the consumer, while the other seeks a tariff for revenue only, which favors fair competition. We may occasionally find a free trader in the ranks of the Democratic party, but the great majority do not favor free trade. There has never been a platform of a national convention since the organization of the Democratic party that has advocated free trade theories. They have always maintained that the true position of the party was in favor of a tariff for revenue only. There has never been a tariff bill enacted into law by the Democratic party that has not favored the doctrine of tariff for revenue as opposed to a tariff levied along free trade lines, such as the revenue laws of Great Britain.

The most distinctive tariff bill which was ever written by the Democrats on the statute books of this country was the Walker tariff of 1846, where the duties, which did not exceed 30 per cent. ad valorem, were levied on competitive articles—wool, cotton, iron, etc., while sugar, coffee, non-competitive articles, were on the free list.

To my mind the true distinction between the two great parties of this country is the difference between a prohibitive and a competitive tariff bill. The Republican party has sought a tariff which would prohibit the importation of as much foreign merchandise from coming into the country as is possible and raise any revenue at all, a tariff bill primarily to protect the profits of the large manufacturer.

It is true that any tariff taxes which are levied which allow some imports to enter the country would, in a sense, be a tariff for revenue. But as I understand the meaning of the declaration of

the Democratic party in favor of a tariff for revenue it is a competitive tariff—that is, a tariff which allows a sufficient amount of every product of the United States to be imported from abroad to bring about fair and honest competition, thereby producing revenue and at the same time preventing the home producer from hiding behind a tariff wall that will enable him to establish monopolies and unduly increase the burdens of taxation resting upon the American people without their receiving any benefit in return, either in the shape of revenue for the Government, reasonable cost of living, or the honest development of the great industrial interests of the country. For it is an axiom which cannot be disputed that the moment that any industry is enabled to create a monopoly, that moment its development along the lines of best endeavor and best results has ceased.

If there was a more general understanding that the tariff is really a tax in which private interests share the proceeds with the Government, there would be a more rigorous questioning of the various duties imposed. Professor Taussig says:

"If an infant industry cannot be strong and lusty in a reasonable time, it shows it is developed by artificial means and is not justified, and the props should be taken away. Statistics conclusively show that most of our industries are now able to stand alone.

"Our natural advantages, improved machinery, efficiency of American labor, and ocean freight rates in many instances overcome the difference in cost of labor at home and abroad."

There is no possible doubt that the present tariff rates are many of them far in excess of the difference of the cost of production at home and abroad, and when they exceed that difference they are, of necessity, levied not for the purpose of raising revenue but for the sole purpose of protecting the profits of the manufacturer in the home market. To my mind this cannot be justified under any circumstances; for when the manufacturer has a fair field on equal terms he should be made to rely upon his own resources, energy and business judgment to meet competitors successfully. The true and valuable development of our industries will result from the latter course. The moment you agree to the doctrine

that an industry is entitled to a tariff wall to prevent competition, that moment you lay the foundation for monopoly that will unjustly place burdens upon the consuming masses of the people.

To maintain the stilted condition which obtained after the war of 1812, Congress was called upon to enact a tariff law which would protect a lot of infant industries against foreign competition, and from that day to this the great industries of the country have demanded protection which in many cases has been prohibitive of any importation. And as the infant industry grew and developed strength and influence the tariff rates increased instead of diminished, till we find, today, that the duties fail to produce sufficient revenue for running the Government; while our citizens often pay much higher rates than any reasonable profit could justify for home productions.

We may relieve the revenues of the nation by levying additional taxes to those already imposed, but it will be in order that the present tariff duties assessed in the interest of the manufacturer may remain prohibitive, thus doubling the burden already borne by the consumer for the benefit of the manufacturer. Or we may reduce all duties to a competitive basis, where they will produce sufficient revenue to meet the demands of the Government and at the same time reduce the cost of living by just so much as the profits have been unjust.

The protective sentiment in this country has been cherished and fostered so long by the Republican party that the great manufacturing interests look upon it as a vested right and seem to believe that, regardless of consequences, they are entitled to the absolute and entire control of the American market—tho they deprive the Government of revenue and the people of the benefits of just competition. No one can carefully consider this matter and say that it is a healthy condition.

It is self-evident that we cannot continue to raise the revenues of the Government through duties on imported products if a prohibitive tariff wall is maintained, and equally evident that the consumer is more and more deprived of

the right to a reasonable competition to regulate prices; while accepting the public conviction concerning the raising of revenues by tariff, it is also obvious that there is but one just and honest way by which the evils into which we have fallen can be cured. We must reduce the rates on particular commodities to a point where a reasonable amount of importation is encouraged, creating a fair competition. This is not such a serious threat that the honest producer need prepare to go out of business. An importation of ten per cent. from foreign countries of all the products of American consumption covered by the tariff schedules would produce all of the revenue which the Government requires, and with ninety per cent. of the American market assured to the American producer there is little danger of the industry in which he is engaged languishing or of his being driven out of business. But there is the certainty that it would prevent the great corporations of America from forming combinations behind a tariff wall which now produces monopolies.

The popular and telling argument which has been so often made in favor of prohibitive duties is that it protects American labor. But there is not a protected industry where the amount of protection afforded has not been far in excess of the difference between the cost of labor at home and abroad.

I am very far from being in favor of any course which will reduce the wages of the American workman. In fact, I know that his condition would be improved by a reduction of the tariff to a competitive basis. It would put the industries of the country in such a healthy condition that when hard times came the foreign goods would suffer while the American workman held his place. Behind this high protective wall the American people are obliged to purchase alone from the American manufacturer. This expands conditions and develops business to such an extent that when hard times come there is no place for retrenchment, no place for surplus production, and the home factories have to shut down. If we build our great industries along conservative lines, always recognizing fair competition and rates of duty for revenue only, while we may not build them so

rapidly as under the forcing of the hot-house process, we shall overbalance it by preventing the downfall and disaster of over-production which so often throws the American workman out of employment altogether.

It is the inordinate greed for gain which has driven the advocates of protection up to the very limits of a prohibitive tariff, in spite of the fact that there is not a great American industry, today, which is not exporting its surplus products and competing—at lower prices than are obtained at home—in the open markets of the world. Our agricultural implements supply the farmers' wants beyond the seas. Our boots and shoes are worn by people treading the highways of the Occident and Orient. The looms of our factories clothe the inhabitants of many lands. The freight of our foreign rivals is carried to market on American rails, drawn by American engines, over American-built bridges. The harvests of our farmers feed the toiling masses of Europe. We should be the unrivaled masters of production and industry in every land where free competition can be obtained if we would but strike off the shackles which bind us to the dead and wholly unnecessary economic system maintained by the Republican party, creating false standards and wasteful conditions at home.

We cannot strike them off all in an hour, or a day, without serious danger. But we can turn our faces away from them, and gradually and carefully adjust our laws to meet the new conditions which face us, without injury either to labor or capital. The Democratic party does not intend to abandon the custom houses, but it favors a policy of customs duties for revenue purposes only—the reduction of tariff taxes to a point where fair competition will bring about reasonable prices and destroy monopolistic tendencies. It holds that no tariff law is either warranted or just which protects the profits of the producer and destroys honest competition.

I have never been able to see why the great manufacturer should have his profits protected any more than the farmer, the grocer, the lawyer; and whenever we enter the realm of protection we are in the zone of protecting profits. A tariff bill high enough to protect a man's profits is a tariff levied, not for revenue, but for the purpose of enriching a private interest at the expense of the people and of the Government. The sooner the people of the United States realize this fact the sooner they will cast off the theories of protection, which they can do, without injury to either the commerce or the labor of the country.

WASHINGTON, D. C.

Touch

BY MELANCHTHON WOOLSEY STRYKER

He is not "*here*," He is not "*there*,"
Who always is and everywhere!
In earth and sea and deaths of air,
Above, beneath, about, within,
Is God. There's nothing can begin
Or move or be, or e'er has been
Or e'er will come, and He outside.
Sunset and morning, storm and tide,
Enrobe His presence. All abide
His will who is the soul of all.
The cyclone's shock, the sparrow's fall,
The orphan's tear, the nation's call.
He knows and feels. His life is light
Of stars that march the fields of night

And of the eye where love is bright.
The heart of man His heart begat.
Man's thought—He enters in thereat.
By every cradle-side He sat,
Swathing the new-born in His grace,
Its birthright portion His embrace.
And tho we have not seen His face—
We speak, He hears. He prompts the cry
Which seeks to find Him; He is nigh,
Because Most Lowly the Most High.
If poor and blind, in naked fear,
The doubt saith "*Nowhere!*" take good cheer.
For the child-spirit spells: "*Now, here!*"

CLINTON, N. Y.

The Windsor Club Stories

BY ELIZABETH STUART PHELPS

WITH AN INTRODUCTION BY HERBERT D. WARD.

THREE men were of paramount influence in the life of Mrs. Ward.

Of these the most spiritual was Phillips Brooks. It is no exaggeration to say that Mr. Brooks was Mrs. Ward's hero. He reinforced her work among the drinking fishermen of Gloucester. When her courage was faltering his was the strength that exalted her power.

In the winter of 1889 there was given a luncheon in the home of Mrs. James T. Fields that had a more lasting influence on Mrs. Ward's life than any other function she ever attended. There were present Dr. Oliver Wendell Holmes, Phillips Brooks, Sarah Orne Jewett, Mrs. Ward, Mrs. Fields and the present writer. Within two years Mr. Brooks was to be made Bishop of Massachusetts and in less than two years more to pass away. Dr. Holmes had six years to live in the fulness of his unique ability. In June, 1909, Sarah Orne Jewett, one of the loveliest characters in American literature, breathed her last in her father's home.

As the luncheon progressed, spark struck spark, and the two great men conversed as the gods converse in Olympus. Soon the talk deepened, and, as could not help but happen when Mr. Brooks was present, the subjects were winnowed out until the only great topic in life was left—religion. Mr. Brooks was strangely grave and moved that afternoon. Dr. Holmes was no less reverent as he regarded Mr. Brooks with an expression of devout trust.

Then Mr. Brooks, feeling himself among those who believed, "raised himself and us," as Mrs. Ward expressed it, "to one of those rare altitudes of which one always says afterward, 'It was good to be there.'"

I cannot better show the effect upon Mrs. Ward, of one of the most remarkable conversations which we ever heard, than by quoting from her "Chapters From a Life":

"He began to talk about the duties of the upper to the lower classes of society, and of

the Christian to the irreligious. He spoke rapidly, then earnestly, then eagerly, hotly, without fear and without reproach, like the Christian Bayard that he was. At the last, he pushed on into monolog—a thing I never heard him do before; and no one, not even the king of Boston conversers, cared to interrupt him. . . .

"To my surprise, he spoke of the Salvation Army in language of deep respect. He honored its work. He prophesied heartily for its future. He spoke contemptuously of the nervousness of people of ease about infection in clothing brought from the sweat-shops, and from homes whose horrors few of us troubled a heart-throb to alleviate. With sacred indignation he rebuked the heathen of the West End, who cared neither for their own souls nor for those of other men. He scored worldliness of heart and life in a lofty denunciation, to which it was impossible to offer a protesting word.

"He mentioned, by name, a certain fashionable men's club on the Back Bay."

The "Prelude" which follows tells the startling personal suggestion made by Dr. Holmes and its effect on the preacher.

In Mrs. Ward's "Though Life Do Us Part" she dramatized Mr. Brooks's spiritual power thru the medium of Sterling Hart. For to her his was the most sterling heart she had ever known.

But the immediate effect of that luncheon was to crystallize her imagination upon the regeneration of club life. This thought haunted her day and night. How often have we talked the matter over! Phillips Brooks was gone, the only man who could have or would have dared. She felt as if the mantle of his lost opportunity for this special service had fallen upon her. So for years she planned a series of Club stories, of which Sterling Hart, the real hero of that other book, should be the regenerating influence in this.

Another man had a temporary influence over Mrs. Ward's spiritual imagination in her later years. He was the pastor of the church which she attended whenever she could. This man was full of anecdote, and his sermons teemed with illustrations gathered by personal observation of the poor and the tempted. Sev-

MRS. WARD'S SUMMER HOME IN EAST GLOUCESTER, MASSACHUSETTS

eral of his stories she saved for her Club series—stories that I had forgotten, but which she never did—for she had a mind etched by indelible memories of sufferings and pathos.

It may be interesting, in the premise of the "Prelude," to read her own brief outline, as it lies before me, of what I believe promised to be the most powerful stories of her career.

Club Stories.

I.

1st. Scene at Mrs. Field's table when Dr. Holmes said to Phillips Brooks—"It seems to me *you* are the man to go to the _____ Club," etc., etc.

II.

The Reverend Sterling Hart at the Windsor Club. This story gives the tale of the clergyman, a friend of Dr. Hart's, who had been paid a \$100 fee. Stories are told at dinner about wedding fees. He says: "The largest I ever received was \$100." Business man present follows him home and challenges the statement. "Two years ago you married me. I sent you a fee of \$500."

"I received but \$100."

"Will you come with me to _____?" He named a prominent attorney. They go. The attorney acknowledges the deed. "Thought \$100 was enough for a minister's fee. Was hard up. Pocketed the difference."

Dr. Hart afterward seeks the humiliated lawyer; wins his confidence; learns that the fall was the result of poker at the club. Scores the game and the players—but reinstates the erring man in his pitying friendship."

III.

Story of the widow who had buried her only child, and "having nothing to lose and nothing to fear," offered her services to pastor to relieve misery of others. Unwedded mother—untouched, unsoftened, her baby dies. Nothing moves her. The widow, determined to melt her heart, dresses the dead child in the baby clothes of her own baby.

Then the woman breaks and brings the little corpse to the widow's door. "Can she stay here? That room ain't fit for her."

Sterling Hart tells this story at the club to draw the men into sympathy with real and wretched life

Afterward a clubman calls on him, and inquires about the wretched woman. It proves that in her youth he had ruined her. He is now married. There is nothing to be done. He supplies her necessities thru Sterling Hart.

IV.

Society woman calls at Mr. Hart's house with a confession involving the name (which she withholds, but the minister guesses) of a member of the club. Mr. Hart induces the man to let her alone forever.

V.

Bell-boy is found drunk in hall or pantry. Sterling Hart brings him to the dinner table. The men put down their glasses untouched.

The minister takes the boy home in a cab to his mother.

VI.

Story founded on "The Langley Club." City club man (thru Mr. Hart's influence) is induced to interest himself in forming a club of workingmen in his own suburb. Becomes so absorbed in it that he neglects his own club and forgets half his own old frivolous interests. Gets Sterling Hart to come out and speak to the boys.

How often in the exquisite greens of the gloaming, sitting on our study porch, we talked over this work! It was seething in her soul for years. How the

situations eluded her! Even those she had in this brief outline might not have been reserved for the final setting.

This last story from her pen—complete and yet only one of the many tor-
sos of literature—only emphasizes the secret of Mrs. Ward's power. She wrought for the spirit, not for the flesh. She was an irresistible force, because her writings, like her life, recognized that aspiration is the finest if not the final struggle of humanity.

HERBERT D. WARD.

Windsor Club Stories

No. 1—The Prelude

BY ELIZABETH STUART PHELPS

Like many another matter, it was not so much what it stood for in itself, as what came out of it, that made it memorable—to me poignantly so. It must be now as much as twenty years since the luncheon occurred. I say occurred, advisedly, for it had the proportions of an event. Altho at the time I could not have estimated its importance, I must have felt it in a measure; for the echo of the hour—strictly speaking, it was two hours and a half, scarcely more—has resounded thru me like a piece of music so greatly played that one is not able to distinguish whether the composition or the execution has moved him the more.

It was an ordinary mid-winter luncheon, excepting for the circumstance that no invitation to that house could be regarded as less than a command; and that few, if any, ordinary entertainments took place beneath that quiet and unpretending roof—so eminent in the name, so opulent in the resources of its hospitality, that one scarcely ventures to identify it with any approach to fidelity.

In fact, this narrator cherishes the obligations of a guest for so many and so happy memories of one of the most remarkable homes in America, that I find it impossible to separate it from a certain personal glamour. It radiated joy, yet I see it through a mist of years and tears. It gave out inspiration, as a lesser entertainer may give a dance, or a bridge

party. It dealt with the realities, never with the shams of life. For the toilers of the brain, for the priests of the imagination, it proved a respite from overwork and underdiversion, which easily took on the character of rest. To this day, after so many years, I think of that library with a sensation of acute physical relief such as I had when I sank into the corner of the deep green couch—are there such pillows anywhere else?—and looked for the blue of the river beyond the long windows, shaded with soft tints of drapery if the sun smote, or wide and clear-cut when the light lay low.

The great head of Tennyson from a dim pedestal regarded the bust of Keats within the alcove. A portrait of the young Charles Dickens overlooked us with eager, vital eye. Books stood like ranks of heroes from floor to ceiling—and *such* books! No other library in the land could claim treasures so choice as these. Gifts from the great dead, inscribed by hands now still, filled sacred spaces on the shelves. Autograph copies of classics—Thackeray, Dickens, George Eliot, Shelley, Lamb—always awaiting the leisure of the frequent guest, blended into the consciousness as spirits of the vanished do that one has never seen, but goes half persuaded that one may see at any time. As nearly as I can distinguish now between the outlines in a mist of beautiful impressions, nothing has lasted so long or so distinctly as Severn's

sketch of the dying Keats. To this day, I feel the thrill with which reverent fingers hovered over the lock of the poet's hair that was preserved with the picture.

Among these great ghosts, stimulated by splendid memories, and quieted by ennobling reverence, we sat and chose our words, as those must who are in the presence of the high gods.

There were six of us—I have often thought the perfect number for a table talk. For the most part, we were well known to one another, but not too well. We met just about seldom enough to preserve the zest of our souls. We met with that intellectual delight which has never been exhaled by intimacy, and we preserved to the last moment the sense of expecting that the next would be finer than the present, which is the attitude of the highest and best society.

As I say, we were six—the Hostess, the Writer of Stories (let me call her the Portrait of a Lady; it is a prettier name); the Poet, the Preacher, a contributor to the magazines, and myself. Of these six, but three are living now. The Poet was approaching a strong and gracious age. The Preacher had reached a rich middle life. The rest of us varied in years, as we did in temperament or equipment; we were, in fact, as responsive as the strings of an instrument which, played upon by a great hostess, may or may not create a chord, but are sure not to result in a discord.

We spoke lightly, and more or less merrily, I remember, in the little space before luncheon was served, none of us venturing below the foam of the moment which precedes the wave of thought in any house where conversation is known to be possible. In the persiflage of the passing mood, no one, I am sure, was more adept than the Preacher, Sterling Hart. His sense of humor was as flashing swift as his seriousness was fixt and imperturbable when he listed, so to speak, toward the essential gravity of his nature. No man could tell a better story in a better way. Half our smiles were of his bringing; while yet we had the consciousness, all along, that something finer than a smile was in reserve for us, at his behest.

Partly because of the smaller area of the room, and partly because its only light came from the sun-struck river and the sky of that, the dining-room seemed, as we entered it, to unfold an unexpected brightness. It remains to me as if a brilliant haze had invested it that day; a gleam that palpitated about us as we talked. Did I see it as the ultra violet ray perceives the thing it photographs?—changing the lights or transposing the shadows? Or is our higher condition itself the ultra ray, in which the only true perception of things is possible? At all events, I remember, and am glad to remember the quiet mid-day scene, as if a glow that was neither of the sun nor of the river, not of electricity, nor of candle-light had been turned upon it from unseen sources by unseen hands. In that soft illumination, whether real or fancied, we sat and responded to the fine wires that interrune between minds and hearts united only by their power to think or feel, but personally unrelated.

We were seated in this way, if I am correct: The Hostess and the Portrait of a Lady occupied the head and foot of the board; at the right of the Hostess, and by right of his eminence and his years, the Poet. The Preacher towered beside the gentle novelist. The magazine writer and I filled in the midway spaces on the map of the table. One less or one more would have spoiled the happy election. We had not been afloat for ten minutes upon the current of our talk, before we had almost the sense of a tête-à-tête—so concentrated, so responsive can conversation become if it has the opportunity. Expression took such electric charges from thought, that it was to my fancy as if we six persons had become two, and flung our words like the sending and receiving currents, back and forth, from one to the other.

In a sense, this was literally the case; for, as I recall it, the Poet and the Preacher did most of the talking. The Poet was accustomed to his monolog; it was always expected of him as delightedly as it was received. The word conversationalist is a cheaper one, which does not fit the instance. I called him, on the whole, the greatest converser whom I have ever met. But that day we

MRS. ELIZABETH STUART PHELPS WARD

could see that he held himself in leash; he paused, he suggested, he stimulated, he deferred. It was quite plain that he wished to listen and to elicit.

The Hostess, perceiving this, as she does all things that concern a guest, delicately drew her trained bow across the strings. She sat with the firm light full upon her, in her black dress, with her strong, sweet face; her remarkable eyes now advancing upon us, now retreating in a fashion peculiar to themselves; those who knew her well will recognize it as her seeress look; her fine voice, capable of a deep contralto, broke here and there into a soprano laugh so youthful

and so care-free that it might have rippled from the lips of a girl, rather than from the heart of a woman acquainted with life.

But, as the talk progressed, she did not laugh; nor, in fact, did any of us. I cannot recall how soon it became evident to us all that we were embarked upon a grave discussion, but, I think, very early in the luncheon. What we ate, or if we ate, I do not know. I only know that we thought and felt, and that it was given to us in a measure to express what we thought and felt in such a way as may come to the most fortunate seldom in a lifetime.

With her back to the light, her fair face in a soft shadow, the Portrait of a Lady sat as quiet as one of her own stories, and with much of their inalienable charm. Upon the rapid interplay between the two great men, she did not intrude; but when she spoke, she said the needed thing, in the perfect way; her gentle voice, finished to its last accent, yet without an artificial note in it, never attacked, but always stole upon the thought that marched or countermarched about the table.

The Poet, alert, scintillant—something shrewd, for a poet, in the lines of his experienced face—gave and took merrily. It was always natural to him to see the humor of a thing first; but soon, as I said, he, like the rest, perceived that we had drifted past laughing, and his features solidified and turned grave. Once he had said to me—not at that, but at another time: "Outside I laugh. Inside, I never laugh. The world is too sad."

Was it the Preacher, or the Hostess? It is impossible to say now which of them did it, but I am sure it was one of the two who introduced to our talk the problem of the poor. The Preacher's eyelids lifted heavily as if he felt them weighed by the force of a set of facts with which he might be more concerned than the nature of his fashionable church would lead one to expect him to be.

The sufferings of what we call the lower classes—the indifference of their social superiors to these unpleasant circumstances—rose upon our lighter table talk with a soberness and an earnestness which engulfed us all like an indomitable tide. The conversation swerved abruptly to sweat-shops. Not long before that time, a well-known man of fortune had contracted diphtheria from a coat sent to his luxurious house. Investigation showed that the coat had been finished in a tenement where some wretched woman's children lay ill with the disorder. The gentleman assumed his share of relation to human society in this unfortunate way, and, as a consequence, he died.

"And now," said the Hostess, with beautiful scorn in her curving lips, "they are starting a crusade against the sweat-shops—for *that*!"

The Preacher's eyes met her with a high look in which it was as if his soul took fire.

"Yes, *yes!*" he cried; "but not until it reached themselves."

The Poet had been sitting silent—loudly silent, one might say; for it was not his habit to abstain from any stimulating conversation long. He had assumed, as I said, the novel attitude of a listener. His glance darted from the Preacher to the Hostess, and back again with a curious intentness. His face underwent a score of subtle changes as fine as perfect meters—criticism, admiration, perhaps a certain measure of astonishment; then tender feeling, sympathy so human and warm that it might have graced the heart of one who professed more of what is technically called religion than he did. Yet, as I write the words, I remember how he spoke to me once of a country parish in the village where he made his summer home; a plain church of a faith alien to his own, and of a mental outlook narrow to his broad intellect and rich experience.

"I go to hear the sermon every Sunday. I have my pew and go. It keeps alive a little flower called reverence that I like to water in my heart."

The "little flower called reverence" began to blossom in the Poet's look and manner as we talked. The conversation had now veered distinctly to the luxurious habits of the rich in the city which we represented and loved, and for the faults of which we felt that mingling of shame and forgiveness, of the call to rebuke, and the instinct to defend which constitutes the patriotic impulse.

Some one—I think the Poet—started the talk in the direction of clubs. Especially, I remember, we spoke of the gentlemen's clubs of that town; of their luxurious habits, their lowered ideals; their lack of the moral sense in its stricter definition, and their questionable influence upon young men. The Preacher warmed to the subject visibly.

"Look at the Windsor Club!" he exclaimed. He and the Poet exchanged a sober glance. The ladies of the group now fell out of the conversation, as being necessarily aliens to it, and the others carried it on for some time with an earnestness in which there was a curious

MRS. WARD'S HOME IN NEWTON CENTER, MASSACHUSETTS

distinction—the man of song, it seemed, assuming for the occasion a gravity which to the man of prayer was a habit of the life.

The midwinter light lay on the river, and, as we talked, we turned our faces to it, now and then. In particular I recall that the Preacher looked out of the shimmering window frequently. In fact, his thoughts that day all seemed to me to have wings to them and to be about to fly from us. His Roman head and face stood upon his massive shoulders with a solidity and poise peculiar, I believe, to himself. But his mind and heart worked by a swiftness and intensity with which his magnificent physique appeared to be half at war. Abruptly lifting his chin, with a splendid motion that he had, he said:

"Those men! They need missionaries. Why, the Salvation Army ought to be sent to that club, and to every other like it."

Some one of us ventured to say:

"The Salvation Army? The *Windsor* Club? Why, they would not be admitted beyond the vestibule! Or, if they were introduced as a curiosity—like any

faker, for an evening's entertainment—who would listen to them, *there?*"

Up went the Preacher's scornful chin again. "But, why not? Why not?" he cried. "That is the thing they need. They should be made to hear the truth from some one."

The Poet had been sitting in unwonted silence, keenly following the Preacher's words and motions; into his emotional eyes started the tears which often preceded his words when he was deeply moved. Suddenly he shot out this challenge:

"Dr. Hart! Dr. Hart! The Salvation Army is not the missionary for that field." His voice deepened and rang. "No, sir. You are mistaken. It is *you*, sir, who should carry the Christian religion there. It is *you*, Dr. Hart, who should preach the truth as you believe it to the Windsor Club."

These words fell upon the most solemn silence that I ever witnessed in any dining-room in my life. The Preacher made no attempt at a reply. His dark eyes sought the river; it was as if he appealed to it to answer for him; or as if he felt that in Nature only could he hope

to be understood either for his silence, or for any words that he might determine to speak. In point of fact, he spoke none.

"They would listen to *you*, sir," continued the Poet, still with that reverberating voice which gave to his appeal the character of an adjuration. We could see that he was profoundly moved.

But the Preacher was more so. His emotion became so manifest that some one started another topic—a lighter, safer one that should give him the protection of the silence which he elected. In it he remained sheltered for what seems to me, as I recall it, an impressive time. His gaze rested upon the river.

The afternoon light was beginning to soften and descend. A gentle glow possessed the scene. The sky was low and kind. Roselit markings crossed it, like the outlines of feathers fallen from a passed and unseen mighty wing. The Preacher observed the clouds solemnly. His large face was pale. He did not resume his natural place in the conversation, and it was but a very short time before he slipped out of it entirely. With the privilege of an eminent and over-busied guest, he soon excused himself—I think, before we had gone upstairs—and we sat in the chasm that was always left in any human society by the passing of his memorable presence. His expression as he left us was remote, sad and almost stern. I know it seemed to me at the moment like the look of a man who was about to die. Since, I have thought it rather the look of a man about to live—tensely, tremendously, in a method so unaccustomed to him that it might be called one of the new births which are always experienced by great souls in the action and counteraction of a strong and complex life.

I can remember little more about that

afternoon. It passed as luncheons do, and we drifted apart and away—the aged Poet, brilliant and gracious till the last, and whether conscious or unconscious of the thing that he had wrought, who could say? We chatted quietly and parted soon, and we blessed the Hostess and the Portrait of a Lady as we left their beautiful presence, and passed out from the dream into the facts and confusions of life.

The busts and pictures in the library observed us as we separated, but somewhat perplexedly, I thought. Shelley? And Tennyson? And Keats? And the soul of Charles Dickens? What would these have said to us in the matters of which we had communed? The Salvation Army? And the Windsor Club? What note would the great literary shades have struck in the chord of rushing music that sweeps the modern world?

The Preacher went home thoughtfully. In his own still study he would have sought the leisure of his soul—but leisure there is little for the ordinary man of the pulpit, and for the extraordinary one there is none at all. It was in fact not until the following Monday—the "minister's Monday," upon which clergymen perform most of the extraneous duties of life—that Mr. Hart sat down at his desk and wrote:

"To Alfred Thornton, Esq.

"MY DEAR THORNTON—You have sometimes asked me to become a member of the Windsor Club. Partly because I belong already to as many clubs as I can give any attention to, and for some other reasons, I felt compelled to decline. I now reverse my decision, and ask you to propose me for membership. You might have Babcock second the application. In doing this at your earliest convenience, you would confer an obligation upon me.

"Faithfully yours,

"STERLING HART."

Panics and Poverty

BY JOHN V. FARWELL

[Mr. Farwell is a leading Chicago merchant, financier and philanthropist. He is treasurer and manager of the John V. Farwell Company, director of the Chicago & Northwestern Railroad, president of the board of trustees of the Y. M. C. A., a member of the executive committee of the Municipal Voters' League and now president of the National Citizens' League, whose purposes are set forth in the following article.—EDITOR.]

ELIMINATING the certainties of death and old age, there are four great causes of poverty in this country, which can be, to some extent, removed by proper effort: 1, sickness; 2, drink; 3, bad industrial conditions; 4, panics.

Ever since the race emerged from barbarism into civilization, there have been individual or organized efforts to relieve sickness. Since the dawn of Christianity these agencies have included religious societies and orders, hospitals, trained nurses and charity societies.

As the subject was investigated more deeply, social students have bent more of their energies toward prevention rather than alleviation.

As a result, bad sanitary conditions have been brought to light and modern methods have been substituted. Overcrowded tenements have been abolished, and small parks and playgrounds have been established.

Millions of dollars and untold time and energy have been put into these reforms, and thru this effort one cause of pov-

erty has been to that extent removed. So, too, many organizations, like the W. C. T. U., both inside and outside of the churches, have been studying the problem of drink, spending millions to help in eradicating this great cause of poverty.

Only in the last fifty years or more, during what has been called the industrial revolution, have social settlements, labor unions, civic federations and similar societies realized the enervating influences of bad industrial conditions, brought about by child labor, long hours of woman labor, sweatshops, grinding competitive conditions and unhealthy shop conditions. Thousands of people with love for humanity have gone into this work and given their lives to help mitigate this

JOHN V. FARWELL

great cause of poverty.

No great body of men and women, however, seems ever to have realized with sufficient intensity that panics must be considered a similar great cause of poverty. No large organization has ever been formed to inquire into the rea-

sons for their terrible periodic financial disturbances, which bring such distress to the poor of the country, first, because, I suppose, there was no realization of the effects, and, second, because there would have been and has been no agreement as to the remedy.

In order to show some exact facts, I procured the accompanying chart, which was worked out by Sherman C. Kingsley, formerly secretary of the Chicago Relief and Aid Society, which is now, thru consolidation, called the "United Charities."

The Relief and Aid Society was spending in 1890, 1891 and 1892 from \$40,000 to \$45,000 a year, and was handling 8,000 or 9,000 cases. In the panic year, it jumped up to \$125,000, with more than double the number of cases, the situation in Chicago being a little more aggravated than that of any other large city for the

reason that a large number of people were stranded in Chicago after the World's Fair. In addition to this, to meet the situation, the Central Relief Association was organized, which spent a large sum of money, I think about the same amount as the Relief and Aid Society.

As Mr. Kingsley says, quoting from a letter sent me on this subject, in reply to my inquiry:

"The chart not only illustrated the situation in Chicago, but was fairly typical of the conditions in the large cities of the country. In 1894 I began this work, and I happened to be with the Brooklyn Bureau of Charities. The work there more than doubled. We resorted to all kinds of methods in an effort to give employment to people who were self-respecting, who had never before been obliged to ask for aid. The same kind of conditions prevailed in Boston, in New York, Philadelphia and other cities. Here are the figures from the Association for Improving the Condition of the Poor in New York: In 1892, \$47,957, with 8,589 families; in 1893, \$61,000; in 1894, \$120,506; in 1895, \$87,000. In Philadelphia, \$20,962 in 1890, \$19,875 in 1891, \$19,320 in 1892, but \$42,331 in 1894. In Baltimore, \$7,320 with 7,769 applications in 1892, \$9,278 in 1894 with 18,845 applications. In Boston, 8,020 cases in 1890, but 11,710 cases in 1894, with a similar increase in the amount expended.

"In Chicago, in 1906 and 1907, the Relief and Aid Society was giving about the same amounts that it had given back in 1890, and dealing with about the same number of families. In 1908, after the sharp panic arrived, applications doubled; the amount spent on relief more than doubled. A citizens' committee was appointed to canvass the town in an effort more adequately to meet the demands. Again we resorted to all kinds of expedients to create work for people who were thrown out of employment, and who, as in 1893, had never before sought help—strong, willing, able-bodied men begging for a chance to do something, and accepting make-shift work, cleaning streets, shoveling snow, sawing wood, doing anything that we could get to do and accepting a wage of about \$1 or \$1.25 a day, just enough to meet emergent demands. The municipal lodging house in 1908 became inadequate to take care of the men out of employment and annexes had to be created. Men lodged on police station floors—men who were self-respecting and anxious to work but for whom work could not be found. This all because something went wrong in the financial world. There are certain effects resulting from these paroxysms in industry which are lasting. Men go from day to day seeking employment and finding none. They come home at night and see the wretchedness of their families. They feel themselves a burden. They go elsewhere looking for employment. They become de-

moralized. They drink, they fall into evil habits, they desert their families. There is an undue amount of sickness incident to unusual kinds of exposure—standing on street corners, waiting in line for jobs—hundreds of them when only a few are taken—all kinds of demoralization both of morals and health.

"The normal balance has been struck quicker after the panic of 1908 than after that of 1894. If one should draw a line thru this chart, striking about a medium line of average causes of poverty, one would throw into bold relief a big section of distress due to panics."

This is no overdrawn picture as to the effects of panics. When we come to the other side of the question, the remedies, in which we are today interested, bankers have, at different times, taken up the subject from a purely financial standpoint, but up to the present there have been almost as many plans of reform as there are bankers. Business men have done some thinking and from their standpoint tentative plans have been made, but their name, too, was legion.

Since the panic of 1907, however, this subject has been regarded as one of the most important before the American people. This terrible and needless suffering, resulting from these panics, has been more fully understood. Banking systems in other countries, where they do not occur in such great intensity, have been studied, and a monetary commission has been appointed by Congress, whose unanimous report has just been made to the Government.

Bankers and business men and economists, whose advice was sought in working out the plan in the report, believe in the idea of a National Reserve Association, and also agree as to other main features of a sound banking and currency system. For the first time in our history such men are willing to state that they have found the means thru which this great cause of poverty can be practically abolished.

The National Citizens' League is an organization of business men with headquarters in Chicago, but extending now to thirty-two States, which will carry on a campaign of education on this subject, so that every one who wishes can know how the idea of a National Reserve Association will affect him, his city and his State.

The League originally adopted seven

fundamental principles, on which a sound banking system should be formed:

1. Co-operation, not dominant centralization, of all banks by an evolution out of our Clearing House experience.

2. Protection of the credit system of the country from the domination of any group of financial or political interests.

3. Independence of the individual banks, national or State, and uniform treatment in discounts and rates to all, large or small.

4. Provision for making liquid the sound commercial paper of all the banks, either in the form of credits or bank notes redeemable in gold or lawful money.

5. Elasticity of currency and credit in times of seasonable demands and stringencies, with full protection against over-expansion.

6. Legislation of acceptances of time bills of exchange in order to create a discount market at home and abroad.

7. The organization of better banking facilities with other countries, to aid in the extension of our foreign trade.

This report of the Monetary Commission seems to agree in the main with these principles and to offer a reasonable basis for argument.

We have now a system of centralization of bank balances, in the three central reserve cities—New York, Chicago and St. Louis, and a still further concentration in New York, where the final surplus reserves of these two other cities go.

This has come about not by design but by the play of natural economic causes. It has forced New York banks to lend out large amounts on stock exchange collateral, because that was the only quick collateral furnished by our credit system. This has resulted in the basing of our final bank reserves to a large extent on the narrow and uncertain foundation of stock exchange values, when such reserves should be based on a foundation as broad and as sure as national commerce—in other words, on dependable commercial paper, representing the exchange of daily necessities on their way to use or consumption. The credits made from this source must expand and contract in natural and automatic response to the expansion and contraction of commerce, and must be practically limited to the amount of trade done in such commodities. The result would be a decentralization of credit and a natural and proper limit to expansion, whereas stock exchange loans may have no limit but that of satiated speculation, or a

bursting corner, or the overturning of Wall Street pyramids.

It is almost beyond belief that a sane and intelligent people should have retained our present lack of system so long, with its constant tendency toward greater combination and centralization and its consequent increasing dangers to all—dangers which are, perhaps, the greatest to those in whose hands the power is being concentrated.

For that reason, if for no other, they are in favor of a change. It surely is coming—the only question is, Will it come at this session of Congress, or before the next panic brings with it its train of disasters?

The League wants it done now, and believes a law somewhat like that proposed by the Monetary Commission would give us a sound banking and currency system.

There will naturally be much disagreement on minor points, but it is right on fundamentals and should be taken up and considered and discussed by men in Congress and out of Congress. No makeshifts will do. Better have no legislation than patchwork. If this proposed plan, however, is not perfect in all its details (and it would be a miracle if it were) discussion now will bring out some of the weak spots and experience will disclose the rest. I am not in a position to state now or in this article what will be the position of the League on the details of the proposed bill. I will, however, say that we have no bill of our own, and will offer none. We believe in the

principles herein enunciated and in the idea of a National Reserve Association managed and controlled by the bankers, the business men and the Government, and with the general functions and limitations mentioned in the report.

This article is not written, however, for the purpose of argument on the details of the bill, but to show how there is now a chance for agreement on a plan which will benefit the wage-earning classes and will surely help to remove this last great cause of poverty by preventing panics.

These people who suffer most cannot easily comprehend the intricate workings of such a system. They will have to rely on men whom they can trust to guide them.

As I look at it, all who are interested in preventing suffering should lend a hand—clergymen, settlement workers, charity organizations, civic societies, all have a special responsibility. If they are not already informed, they should go to men who understand this subject, hear their arguments, and get their judgment, and with that information do their part in leading in the right direction the great mass of people who look to them for guidance and who will be so much benefited.

Such leaders are doing more than their share in decreasing sickness and drink, and in ameliorating industrial conditions. They can and should help in something practical to prevent the terrible suffering, distress, poverty and resulting vice and crime due to panics.

Wayfarers

BY RALPH M. THOMSON

BEWARE, O heart, if indiscreet,
How you bestow the all you own!
The bee, a-drunken with the sweet,
Will leave the ravished rose alone.

Reflect, O soul, when you would pine
About the bitter and the strife!
An ant will dare the sharpest spine
That he may gain the meed of Life.

Somewhere, O lonely waifs a-roam,
Is happiness, which Truth adorns!
The humble spider builds his home
Between the petals and the thorns!

SAVANNAH, GA.

Charles Dickens in the United States

BY GEN. JAMES GRANT WILSON

[The centennial of Dickens's birth falls on the 7th of February. Our readers recall many contributions from General Wilson on literary and historical themes.—EDITOR.]

BORN seven months after William M. Thackeray, Charles Dickens outlived him for a period of six years. Both made two visits to this country for the purpose of increasing the provision they each desired to bequeath to their families. Both died suddenly in their own happy homes, leaving unfinished novels — "Dennis Duval" and "Edwin Drood." They rank as writers with Sir Walter Scott, and, with him, the literary world ranks them as the three greatest English novelists of the nineteenth century. With the latter's great-granddaughter, Mrs. Maxwell Scott, the present possessor of Abbotsford, I am well acquainted, and also cherish the pleasant recollection that my maternal grandfather was Sir Walter's friend and neighbor near the banks of the Tweed. I am also happy in remembering that I knew Thackeray and Dickens, and enjoyed the pleasure of hearing both in public on their second visits to the United States.

Charles Dickens came to this country in 1842, chiefly with a view to bring about an international copyright law between the Motherland and America. In this he was bitterly disappointed, for it was many decades before this very

just and proper bill was passed by the lawmaking powers of the two nations. Sad to say, Dickens did not survive to receive its benefits, which would have more than doubled his income, for the sale of his writings in the United States

exceeded that of Great Britain and continues to do so, four decades after his death. While with us, Dickens brooded over the perverseness of our people on the copyright question, and in his "Notes," as well as in "Martin Chuzzlewit," his next novel, he availed himself of the opportunity of uttering some impressions concerning the objectionable features of American democracy, the result being, in the language of Carlyle, "that all Yankee-doodle-dom blazed up like one universal soda bottle."

It is doubtful if any European visitor to our country, with the possible exception of Lafayette, was ever received with such warmth and enthusiasm as the young author of "Pickwick," who was then but thirty years of age. This inimitable work in its peculiar vein has perhaps never been equaled in the English language, and it at once placed its youthful author in the highest rank among the popular writers of England. In New York many more hospitalities of every charac-

ter were proffered to him than he could possibly accept. As Fitz-Greene Halleck said: "Our people went *daft* over Dickens." Bryant, Halleck, Irving, Paulding, Verplanck and Willis, with many other Knickerbocker authors and prominent professional men and merchants, numbering 230, invited Dickens to a public dinner at the City Hotel, then the leading hostelry of New York, which stood on Broadway, but a short distance above Trinity Church. Much against his expressed wish, Washington Irving was selected to preside at the banquet.

On Halleck's last visit but one to New York in June, 1867, I asked the poet about the Dickens dinner, when he gave a pleasant description of the entertainment, including an amusing account of Irving's speech, which was going off finely until their mutual friend, Charles Augustus Davis, *alias* Major Jack Downing, who sat near Irving, most unfortunately interrupted him with "admirable!" "excellent!" and other exclamations of approbation, which so disconcerted the timid speaker that he completely broke down, and, after uttering some incohe-

rent words, ended with the toast "Charles Dickens, the guest of the nation." "There," said Irving, as he resumed his seat, "I told you I should break down and I've done it!" "He reminded me," added Halleck, "of a certain Connecticut orator, who, while addressing a public assembly, unfortunately lost the thread of his discourse, and, hesitating to recover his lost ideas, was addressed from the gallery by a country lad: 'I say, mister, I guess you're stuck!'"

Writing to Mrs. Rush, of Philadelphia, March 8, 1842, Halleck says:

"You ask me about Mr. Boz. I am quite delighted with him. He is a thoro good fellow, with nothing of the author about him but the reputation, and goes thru his task as lion with exemplary grace, patience and good nature. He has the brilliant face of a man of genius, and a pretty Scottish lassie for a wife, with roses on her cheeks, and 'een sae bonny blue.' His writings you know. I wish you could have listened to his eloquence at the dinner here. It was the only specimen of eloquence I have ever witnessed. Its charm was not in its words, but in the manner of saying them."

The renowned novelist and the genial poet became warm friends, often meeting at social entertainments and exchanging courtesies. The following is one of several notes received by Halleck from Dickens during his sojourn of several weeks in New York:

"CARLETON HOUSE,

"Fourteenth February, 1842.

"MY DEAR SIR—Will you come and breakfast with me on Tuesday, the twenty-second at half past ten? Say yes. I should have been truly delighted to have a talk with you to-night (being quite alone), but the doctor says

that if I talk to man, woman, or child, this evening, I shall be dumb tomorrow. Believe me, with true regard,

"Faithfully your friend,

"CHARLES DICKENS.

"Fitz-Greene Halleck, Esq."

Halleck's reply to an invitation to meet Boz at a private dinner given by Louis Gaylord Clark, editor of the *Knickerbocker Magazine*, at which Bryant, Irving and many lesser literary lights

were to be present, was characteristically felicitous. It began:

"The bridegroom may forget the bride

Was made his wedded wife yestereen,

The monarch may forget the crown

Which on his head an hour hath been,

but I'll not forget that I am to have the pleasure of dining with you on Thursday evening, to meet that rare painter of human character, Mr. Dickens."

Prof. C. C. Felton, afterward president of Harvard College, passed some weeks in New York at the time Dickens was there. He had known the Eng-

lish novelist during his prolonged visit to Boston and Cambridge. He writes:

"I renewed my acquaintance with Mr. Dickens, often meeting him in the brilliant society which then made New York a most agreeable resort. Halleck, Bryant, Washington Irving, Davis and others scarcely less attractive by their genius, wit and social graces, constituted a circle not to be surpassed anywhere in the world."*

Only a fortnight before Dickens arrived in Boston in the Cunard steamer on his second visit to the United States Halleck spoke with pleasure of the great

A LETTER OF THE PICKWICK PERIOD

Addressed to an English author and editor and recently sold for seventy-five dollars

T. Tuckerman at the Athenæum Club, and I was, if possible, to secure front seats for one of his readings, in order that the poet might hear distinctly. That Mr. Dickens entertained an equal desire to meet Halleck is shown in the following note to the author of this short centennial article, who had sent Dickens a

kindness in sending me the enclosed note. I have read it with the greatest interest, and have always retained a delightful recollection of its amiable and accomplished writer.

"I, too, had hopes to see him! My dear Irving being dead, there was scarcely any one in America whom I so looked forward to seeing again as our old friend often thought of."

It was melancholy to contemplate the number of eminent authors who since the first visit of Charles Dickens, only a quarter of a century previous, had gone hence to be no more seen of men. The stalwart and sturdy Cooper; the genial and gentle Irving; his friend and patriotic kinsman, Paulding; Prescott, the charming historian, and Percival, the poet; the eloquent Everett; Nathaniel Hawthorne; Edgar A. Poe; the brilliant N. P. Willis, and, lastly, the gifted and genial Halleck—nearly all the great names of our early American literature—had passed away in twenty-five short years, leaving a new generation to extend the hand of friendship to him on his second coming to the New World in 1867. And many lesser literary lights had also gone over to the great majority.

Among the survivors of those Dickens knew on his first visit, or had met abroad before his second coming, were George Bancroft, William Cullen Bryant, George H. Boker and Bayard Taylor, and he expressed much pleasure in seeing them photographed in a group accompanied by facsimiles of their signatures. In a little note of thanks, unfortunately lost or stolen, Mr. Dickens requests my acceptance of the original of the picture that appears on another page, taken by the well-known photographer, Gurney, of New York, in December, 1867. It was in this month that the "Inimitable Boz" appeared before overcrowded audiences in Steinway Hall as a public interpreter and reader of selections from his own writings. As a reader he had no superior, and possibly no equal. Miss Dickens, alluding to her father's readings, writes:

"Into their performances and preparations he threw the best energy of his heart and soul, practising and rehearsing at all times and in all places. The meadow near our home [Gad's Hill] was a favorite place and people passing thru the lane, not knowing who he was or what doing, must have thought him a madman, from his reciting and gesticulation."

Many years later, in comparing the readings of Dickens and Thackeray, George William Curtis remarked:

"The style of 'Boz' was that of the perfectly trained actor: of 'Titmarsh' that of the accomplished gentleman amateur."

Late in April, 1868, a public dinner was given at Delmonico's to the distinguished author before his departure, by

more than 200 hosts, Horace Greeley presiding. Dickens again delighted an American audience with his eloquence. He availed himself of the occasion to bear testimony to the wonderful changes of a quarter of a century, the growth of vast cities, the advance in the graces and amenities of life, as well as the changes in himself leading to opinions more deliberately formed. He promised us that no copy of his "American Notes" or "Martin Chuzzlewit" should thereafter be issued without the accompanying statement concerning the changes to which he had alluded that evening: of the consideration, hospitality and politeness in many ways for which he was happy to thank us, and of his heartfelt gratitude for the respect shown, during all his second visit, to the privacy enforced upon him by the nature of his work and the condition of his health. A few days later Dickens sailed in a Cunarder, enjoying a ten days' passage over a calm sea and arriving safely at Gad's Hill during the first week in May, repeating what he

A RARE TITLE-PAGE—REPRODUCED FROM OCTAVO SIZE

wrote on returning from his first expedition in 1842—"Oh, home—home—home—home—HOME!!!!!"

The last three months of the novelist's life were devoted to "The Mystery of Edwin Drood," which did not promise to become a masterpiece, as did his rival Thackeray's unfinished novel, "Denis Duval." After writing for several hours in the chalet, where he habitually did his literary work, and answering two letters bearing the superscription Gad's Hill Place, Higham by Rochester, Kent, dated June 8, 1870, Dickens suddenly collapsed at the dinner table. His sister-in-law, Miss Hogarth, asked if he was ill. He said, "Yes, very ill," but added he would finish his dinner. She entreated him to lie down. "Yes, in the ground," he answered, very distinctly. These were his last words, when he fell upon the floor. The great author died on Friday, June 9, and was buried privately in Poets' Corner, Westminster Abbey, in the early morning of the 14th, the grave having been dug in secret the night before. He rests under the bust of Thackeray, by the side of Sheridan and Garrick, and near the monuments to Chaucer, Shakespeare and Dryden.

The greatest of English literary authorities said:

"Statesmen, men of science, philanthropists, the acknowledged benefactors of mankind, might pass away, and yet not leave the void which will be caused by the death of Charles Dickens."

In his will he charged his friends to erect no monument to his memory and directed only his name to be inscribed on his tomb, adding the proud provision: "I rest my claim to the remembrance of my countrymen on my published works."

Dickens said of himself: "I have always felt that I must, please God, die in harness." This presentiment was shared by Thackeray, and the third of the triumvirate, stout Sir Walter, also hastened his death by overwork, that a long line of

Scotts of Abbotsford might succeed him. The modest house in which Charles Dickens was born is now, and has been for the past seven years, known as a Dickens museum.

"'Foster's Life of Dickens,' " said Carlyle to me in the summer of 1875, "stands second only to Boswell's 'Johnson.'" Expressing some surprise that he should give the first mentioned biography precedence over Scott's life by his son-in-law, Carlyle made answer:

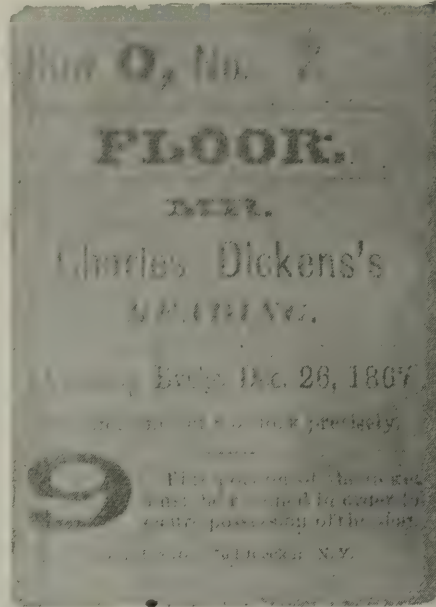

"Weel, Lockhart's is certainly a *braw* book, about as *grund* a man as was ever born on Scottish soil." He then launched forth in praise of Sir Walter's and the novels of Charles Dickens, but cared less for those of Thackeray, except "Henry Esmond," remarking that the Irish ballads were much the best things he ever wrote, and quoting with great gusto and strong brogue, accompanied by laughter,

'Twould binifit your sowl
To see the butther'd rowls.

Describing the three novelists, the Chelsea philosopher remarked that "the giant Titmarsh was six feet three, Sir Walter six feet—my hight—and Boz five feet nine inches."

Returning half a century ago from my first visit to Scotland, I was the bearer of a rose sent by Isabella, the youngest sister of Robert Burns, to Fitz-Greene Halleck, who, as the venerable lady said, was the author of the finest lines ever written about her brother. In the summer of 1906 I carried three roses across the sea grown in a Hudson River garden and given to me by the gentle and gracious owner of the garden for a certain purpose, which was faithfully executed. One was placed on the tomb of Dickens in Westminster, another on the ivy-covered grave of Thackeray in Kensal-Green Cemetery, London, while the third was dropped on Scott's last resting-place in the ruins of Dryburgh Abbey.

NEW YORK CITY.

The PASSING of the NEW THEATRE

RANDOM REFLECTIONS UPON THE REPERTORY & THE SPECTACULAR STAGE & UPON AUDIENCES

BY WARREN BARTON BLAKE

CBK:JR

1911

THE New Theatre, hailed on its birth as the American equivalent of the Comédie Française, is today a dead thing. And the fine playhouse on Central Park West has been surrendered to a "commercial" manager presenting, for the present season, a spectacle—the dramatised "Garden of Allah."

At first there was talk of a newer "New Theatre": with a playhouse on a smaller scale near Times Square. Now, even that project has been abandoned. Perhaps it is not dead, but sleeping. Rumor has it that when Mr. Augustus Thomas, the playwright, was invited to take charge of the new house, as yet unbuilt, a fifty thousand dollar salary was only one of his exacting conditions. In any case, New York's first New Theatre has passed into history; and its former director, Mr. Winthrop Ames, has cut loose from his millionaire founders and undertaken theatrical management on his own account. Besides presenting the Reinhardt pantomime, "Sumurun," one of the most striking spectacles in a season distinguished by the spectacular and the Oriental, he will, in a few weeks, open in West Forty-fourth street what he calls The Little Theatre: well named "Little," since it will lack both balcony and boxes, and seat only some 300 persons.¹ The construction of New York's

smallest playhouse (though it is more than twice the size of Boston's new "Toy Theatre") marks a reaction against the methods, and, up to a certain point, the ideals of the original New Theatre enterprise. The extent of the reaction has been exaggerated by those who have written letters on the subject to New York newspapers: letters assuming that the director "intends serving caviare to the very select few who can afford to be fastidious, who are satiated, and need *outré* food for their mental diet, and also who are able to pay \$2 or more for a seat." It is not true that Mr. Ames has given up his championship of the repertory idea; and though a newspaper has stated that he believes "special engagements" to be best for managers and actors alike, I fancy that "expedient" is the adjective he would use, and not "best."

"The stock company as a rival to the highest class of producing theatre must now be recognized as an institution of the past," the New York *Sun* tells us, in discussing Mr. Ames's experiments; "such institutions will exist, in all probability, just as they do now in various cities of the country, but they are in nearly every city cheaper and of secondary importance."² Such a statement as this takes no account of what the future may bring forth. Indeed, it ignores the highly respectable beginning made by the company somewhat redundantly dubbed the "Drama Players," of Chicago, just as it ignores Mr. Morosco's work in California. (But more of Oliver Morosco at another time.) And then there is the example of the Abbey Theatre players from Dublin, who have a double right

¹The Little Theatre will be completed about March 1, standing in Forty-fourth street, west of Broadway: a building of sandstone and red brick, in the Colonial style. Inside there will be fifteen rows of seats—all orchestra chairs. Below the auditorium a large lounge will be available during intermissions. The repertory of the Little Theater, as announced, includes "The Pigeon," by John Galsworthy; "The Terrible Meek," by C. Rann Kennedy; "Anatol," by Arthur Schnitzler; "Electra," by Euripides, with Edith Wynne Matthison in the leading part; "One-Two-Three, and Out-Goes-She," by John T. Hayes—a "first play" by an American author, said to be a satirical comedy of New York life, and a bill of three short plays by Maurice Maeterlinck. A novelty will be a play for children, given only at matinees: a dramatisation of Grimm's fairy tale, "Snow White," by an American playwright. Not all of these plays will be mounted during the present season.

²Compare "Scheme and Estimates for a National Theatre," by William Archer and Granville Barker, pp. xi, xiii: where the opinion is expressed that a provincial center like Manchester or Birmingham is more favorable to the development of the repertory theatre than "monstrous and inarticulate London." This was Mr. Barker's opinion in 1907.

MR. WINTHROP AMES

Director of the late New Theatre; owner and manager of the Little Theatre and American producer of the Reinhardt pantomime "Sumurun"

to their triumphs at home and abroad, since they have won those triumphs in the face of hostile demonstrations. Yet the success of the Dublin repertory theatre has, it seems to me, great significance for every one of us. As an American critic has observed, whenever artistry becomes too cleverly adjusted, whenever art succumbs to the vanity of self-consciousness, it is well that seekers after truth should return to nature.³ When "dramatists care more for artistry than they care for life," and managers care more for realism than for either poetry or character in plays, "it is time to break away."

In part, at least, the failure of New York's New Theatre was a failure due to the cult of the elaborate, a failure due to Alexandrianism, to wrong emphasis;

in fine, a failure at once artistic and financial. Artistically, the institution may be said to have scored a success of esteem. Its costliness in rents, equipment, running expenses and actors' salaries was a stupendous millstone round the neck of the director: a weight too heavy for any director at all to have supported very long. How far those expenses were superfluous is another question, and one too difficult for resolution here. Certainly the costliness of maintaining a repertory theatre of the highest grade must inevitably prove excessive in the American metropolis. Admirable though the co-operative system of the Dublin's Abbey Theatre is, by which all the players share in the profits, and are thus interested in the success of the enterprise, the difficulties involved in carrying out that system here would be considerable. In a repertory theatre, several members of the company will be, at any given moment, idle at the management's expense, and actors look for bigger rewards in New York than in Dublin. Furthermore, the public insists upon a higher realism than did the public made up of our grandfathers and grandmothers. The ingénue must not be a forty-year-old; old man and leading juvenile cannot, at a pinch, trade parts. One of the evils of the star system is that verism has come to be regarded as a requisite; and though verism is not truth, necessarily, it costs enough to be true. Let us add the fact that too many clever actors and actresses of today are "spoiled" in that their qualities and defects have been too tenderly respected by authors and managers alike; they want flexibility much as a mill operative does who for ten years has confined himself to a single operation in the manufacture of pin-heads. The practical problem which confronts the would-be manager of a repertory theatre is well-nigh insurmountable. To a great extent it is a problem of dollars and cents: but that is not all of it.

Yet why despair? Some of the New Theatre's mistakes, at any rate, will be avoided, both by the Chicago players, whose early work has promise, and by Mr. Ames in his new private venture. It will be remembered that Mr. Ames was not the original choice of the found-

³Clayton Hamilton in the January, 1912, *Bookman*.

ers of that gilded institution. Mr. Granville Barker, London playwright and producer, was invited to take charge of the house on Central Park West, in whose construction the late Herr Direktor Conried, of the Metropolitan Opera, had altogether too great a say. Mr. Barker crossed the ocean, inspected the beautiful playhouse with its seats for 2,300 persons,⁴ and booked for Liverpool by the next steamer. "The New Theatre is too hopelessly large," he said, in effect. "It is wholly unadapted to its purposes, as I understand them."

Mr. Ames's latest adventure has been termed reactionary: but the real reaction was that of the Founders' enterprise. In an age when serious drama is increasingly psychological—depending much more upon facial expression than upon the pyrotechnics of earlier generations, the New Theatre undertook to ignore the tendency of the times. It was a bad case of jumboism: an American disease virulent (and fatal) north of Mexico.

Now, Mr. Ames's playhouse, instead of resembling that which he directed for the Nabob-Founders, will go to the other

extreme. It will suggest superficial parallels, not with the Français, but with Professor Reinhardt's *Kammerspiele* in Berlin, the *Théâtres de l'Œuvre* and des Arts in Paris, and the Little Theatre in London—now in its second season. As its sole manager, Mr. Ames will take ample time to make its productions, will bind himself to no subscription nights, and will give up the repertory idea to the extent that he will let pieces run for a considerable time: provided, always, that the success they attain justifies him in continuing them. In the New Theatre, where acoustics were a question of debate during the first season, splendor of pageantry had to be counted upon rather than artistic naturalism, or intimacy of feeling between players and audience. In the Little Theatre, on the contrary, sympathy between those on the two sides of the footlights must stimulate players to high excellence and the audience to keen appreciation. On the stage as well as "in front," the Little Theatre should prove an educative force no less than a house of entertainment.

Professor Phelps wrote in *THE INDEPENDENT* of September 29, 1910: "The founding of the New Theatre is the best

⁴Even the *Comédie Française* seats but 1,200. The Glasgow Repertory Theatre seats 1,314 persons, the Abbey Theatre, Dublin, only 562.

THE STREET OF THE OULED NAILS IN BENI-MORA

The dramatization of Robert Hichens's novel, "The Garden of Allah," has been playing at the Century Theatre (formerly the New Theatre) ever since the opening of the theatrical season, last autumn.

thing that has happened in American dramatic history." It was thus that he terminated his anticipatory account of the second season at that transitory home of Thespis. But, when all is said and

when the New Theatre was still in prospect, that "if any preference is shown, it will be to the native product, the American play, depicting our own national and social life." And the production of "The

THE BEAUTIFUL SLAVE OF FATAL ENCHANTMENT, THE SHEIK'S SON, AND THE HUNCHBACK: A SCENE FROM "SUMURUN"

The piece is, as melodrama, of no great significance, tho incontestably skillful. Chiefly remarkable is the acting—above all, that of the Beautiful Slave of Fatal Enchantment (Fraulein Leopoldine Konstantin) and the Hunchback (Herr Emil Lind). Once the piece is under way, the want of words is felt by no one. The staging of the play is the more admirable in that high effectiveness is reached by means relatively simple. Any one who agrees with Edmund Burke that "vice loses half its evil by losing all its grossness" will find the performance of "Sumurun" at the New York Casino faultless. Yet the decadence of the wordless play is not to be lost sight of thru the good taste of its management and acting.

done, what did the New Theatre accomplish? Beyond several lavish revivals, and the successful performance of Maeterlinck's "Sister Beatrice" and "Blue Bird" (the latter soon transferred to a "commercial" theatre) there were acted there only three new plays of power or charm or significance: Galsworthy's "Strife," Besier's "Don," and Mrs. Marks's "Piper." Only the last of these three pieces was of American authorship, though Mr. Ames declared, at a time

"Piper"—marred as it was by the fact that Miss Mattheson played the hero part—was made only after the play's performance at Stratford-on-Avon by Mr. Benson's company as a prize play. "I don't believe the New Theatre was dreadfully keen to have 'The Piper' until after its English success," confessed the author, with a humorous grimace.⁵

⁵"The tendency to be guarded against in America," wrote Mr. William Archer, of the London *Nation*, some four or five years since, "is a too great hospitality towards foreign works, and a lack of reasonable discrimination in favor of native authors."

A little Irish company that has for a few years carried out the repertory idea in Dublin is at the present time touring the States with a number of its plays. In New York the Abbey Theatre players were discovered by astute critics to be amateurs. But, as Mr. Eaton has inquired, "where could we find an American company and a repertory of American plays to send abroad to represent us as worthily?" There are neither the American authors nor the American repertory. The American audience is, moreover, either hopelessly antediluvian in its tastes, or insistent that it receive work of so inferior quality that no well conducted repertory theatre is capable of satisfying it. Indeed, it is here that one finds the crux of the situation. The New Theatre seems to have been founded on logic somewhat like the following: Give the Public good Plays acted by competent Players in a fine Playhouse, and you will confer a benefit upon mankind equal to that conferred by the millionaire philanthropist, the millionaire art collector, and the millionaire peace advocate. Incidentally, you will succeed; and success is the American watchword. But the New Theatre did not succeed; principally, it seems to me, because the logic just cited is faulty to a degree. The formula must be reversed. Give the public a playhouse; provide competent players, acting

good plays; but make sure, first of all—and place all your emphasis here—of your public. The audience is not the least important, but the primary and ultimate element in theatrical success. Most Broadway triumphs *are* triumphs not because they are what they are, but because the public is what *it* is. The Puritan habit endures; the best people in the community do not with any regularity attend the theatre or interest themselves in its concerns. Still, there are a forlorn few of us who do go; also, the immature go there to be amused—and shaped; and in the great mass of the immature the children of your complacent "best" people are included. What influence is, when all is said and done, more potent than that of the stage? It is all the greater because unsuspected; unsuspected even by those who attend stage performances. When we are more completely civilized, we will realize this.

The problem of the ambitious stage manager today is the development of his public. Apart from the ladies, his actual public is made up, to a shocking extent, of aliens, bounders, children and drummers. He must, then, teach the a, b, c's; yes, and even the d's. Now, education is a difficult task. It is doubly difficult if your audience suspects that it is being educated. Yet it is, above all, education of which

MISS SARA ALGOOD

In America, Miss Algood has played the leading female rôles in the Abbey Theatre Company's repertory of Irish plays. She is shown here as the Scarlet Woman ("Feemy Evans") in Mr. Shaw's "sermon in crude melodrama": "The Showing-up of Blanco Posnet." The same evening she plays the Cathleen of Mr. Yeats's "Cathleen na Hoolihan," or, it may be, the aged and bereft mother of Synge's "Riders to the Sea." Her range is wide, but she is, perhaps at her best in comedy. Playing the Widow Quinn in Synge's "Playboy" her one fault is too great an attractiveness for the part; in other plays, however, she mercifully disguises charms and youthfulness.

the small theatre is capable. Shakespearean revivals are all well enough; Mr. Sothern and Miss Marlowe are well enough: but of what consequence is their work from any except the pictorial and elocutionary standpoints? They do, to be sure, bring poetry—none too well read—before their large audiences: but how many persons in their audiences would know it for poetry if they did not know it was Shakespeare? Only half the New York audiences realized that the plays of John M. Synge, as acted by the Abbey Theatre players, were poetry—poetry in spirit, that is; the other half gig-

gled whenever a word unfamiliar to Broadway was spoken with the melody of Irish accent. It is a wonder that any New York manager has the courage to put on any plays with a higher appeal than that conferred by rag-time or farcical actuality. Indeed, they do put on few such plays—if we count out spectacles.

The Chicago experiment, all the same, and the experiment of the Little Theatre, may serve to encourage us to hope for better things. These theatres, at least, address intelligence, imagination.

NEW YORK CITY.

The Heart's Colloquy

BY WILLIAM R. BENÉT

LOVE said to Worship, "How saw you our lady,
At our meeting yester-evening, that home you came so slow?"
Worship raised his eyes, and rapt and yearning said he:
"Hey, my heart is heavy with the loss that I know!
I saw her like a light as pure as starshine flaming
And my sin, that thought to win that light, as dark again!
Her beauty smote my heart with pain beyond all naming.
Sing to my despair how 'twas you saw her then!"

And Love said, "I saw her in choicest sweet attire,
With greeting calm and kindly, as careless I were near.
She dreamed with quiet brows, crooning tunes beside the fire,—
But she smiled thru her dreaming. I know she holds me dear!"

Love said to Worship, "How left you our lady,
At the end of yester-evening, that home you came so sad?"
Worship drooped his eyes, and soft and slowly said he:
"I bore a heavy burden, for the hope that I had.
I left her as a star set high beyond all hailing,
So pure none may endure her beams. of mortal men!
I left her thronged with angels, before her throne vailing!
Sing to my despair of how you left her then!"

And Love said, "I left her with thoughts that sought to flee me,
With hands withheld demurely, and low-voiced 'Come again!'
I left her turned aside, with eyes that would not see me,—
But when I passed the window she watched me from the pane!"

NEW YORK CITY.

The Power Behind Our Silk Mills

BY SCOTT NEARING

THE northeast wind drove the sleet and snow with stinging force thru the Lackawanna Valley, near Scranton, Pa. The mill whistle sounded shrilly. It was half past six, and still quite dark on a bitter February morning.

A tiny figure, with a shawl wrapped tightly around its head, crept over the railroad track and down toward the mill.

Time passed slowly. It was half past

"And you are how old?"

"Me? Fourteen."

"How long have you worked in this mill?"

"Goin' on four years."

"How old were you when you started to work?"

"T'irteen."

"Ah, yes, I see the law has raised the age limit one year in the meantime."

A TINY FIGURE WITH A SHAWL ROUND ITS HEAD

six and more, but the night shift was not yet thru "getting up the ends," so the small figure waited in the slush by the mill door. First she stood on one chilled foot and then on another.

"Do you work here?"

"Yes, ma'am."

"Yes, ma'am. Ah, but it makes cold this morning."

"Yes, it is very cold for you to stand out there. How long do you work in the mill?"

"In there we work every day eleven hours."

"Eleven hours? For how much a day?"

"We are paid not by the day, we get paid every two weeks, I have five dollars. Some of them have less than five dollars, but I have five dollars every two weeks."

"That is four cents an hour, and you stand up eleven hours a day for four cents an hour?"

"Yes, I reel, but some girls have only four dollars every two weeks—I have learned, I have five dollars every two weeks."

"Do you not get tired with such work?"

"Tired? No, I am not tired. It is my sister what is tired. She works here—she is on night shift. Night shift works twelve hours. The light been very bad. My sister come out in the

morning from the mill, and she see threads, threads, threads. She go home and sleep and then jump up and say 'Oh! my eyes, my eyes is all threads.' Her back hurt too. She stand, and stand and stand all night. Doctor say, leave the mill, do not work, but me mudder say, 'go to work' and sister have to go. The night shift it is terrible. The men are very bad."

"Can you read and write?"

"Read and write? I read my name; I write my name, but I write only that. Once I was in school, then I read and write, but it is so long, and I have forgot. See, there is the sister, the night shift off. They got up their ends. Now I go to work."

When she was gone the footprints in the snow measured less than eight inches.

PHILADELPHIA, PA.

St. Patrick and King Darry

BY DENIS A. McCARTHY

SAINT PATHRICK was bitter enough

With thim ould pagan dhruids an' princes;
An' faith, if they gave him much guff,

He could soon bring thim lads to their
sinses.

But Pathrick was kind to the poor—

He'd go hungry an' dhry for their sakes—
Och, he loved every crature, I'm sure,
Always barrin' the snakes!

Yes, he ioved every one, young an' ould,—

The hares an' the deer an' the rabbits,—
An' he'd love even serpents, I'm tould,
If they hadn't such horrible habits.

The birds an' the bastes of the wood,
No matter how timid an' wild,
Faith, they didn't fear Pathrick the Good
Any more nor a child.

One day, by King Darry, the Saint

A fine piece of counthry was granted,
An' along with the monarch he went,
To look at the land so much wanted.
When what should they see but a doe
Lyin' there in the midst of the bawn,
Her eyes with affection aglow
Lookin' down on her fawn.

With that the hot blood of the King

Boiled up with the deer-hunter's passion;
His javelin he lifted to fling,

In the most approved blood-letting fashion;
But the Saint laid a grip on his hand,
And boldly commanded him: "No.
Your Majesty, this is my land,
And deer-hunting don't go!"

Then he tenderly raised the young deer,

An' coaxed back the shiverin' mother,
Whose dark eyes, dilated with fear,
Were lookin' from one to the other,
An' thin to King Darry he said:

"For an abbey you gave me this place;
I'll make it a shelter instead
For all deer from the chase!"

Thus Pathrick outwitted the King,

The chief of thim ould pagan princes,
An' faith, 'tis himself that could bring
With his curse thim same lads to their
sinses.

The King whin he found he was sould

Was so mad his fri'nds thought he would
burst,

But he kept very quiet I'm tould,
For he feared he'd be curst!

Literature

Liszt

THE whirligig of time has brought the centenary of Franz Liszt, who was born on October 22d, 1811, and with it many and divers celebrations in the world's musical capitals and a mass of printed matter about the Great Comet among pianists, who appears now to have evolved into a fixed star of the first magnitude among composers. The celebrations serve to delight many souls with much glorious music which might not otherwise be heard at this time, and some of which certainly has not been heard as often as it deserves—as, for example, the “Tasso” symphonic poem with which Josef Stransky achieved a veritable triumph on the occasion of his first appearance as conductor of the New York Philharmonic Orchestra, and the “Dante” symphony, which Weingartner places at the very summit of Liszt's creative power, and which New York hears for the first time this winter. Among the mass of printed matter about Liszt, Mr. Huneker's study¹ is the most interesting, the most readable, the most illuminating, altogether the best book in the English tongue that has yet appeared on the life and work of this master musician. But we must add also that to those who looked to Mr. Huneker to deal adequately with the character and career of the mighty man of music who was one of the most fascinating of artists, and to produce the definitive and satisfying life and works of Liszt, his book is a disappointment. No other living writer, probably, is so well qualified and equipped for that task. Mr. Huneker has a large and intimate acquaintance with Liszt's music, and is himself musician enough to be able to play even the most difficult of the piano pieces. He has known many of Liszt's pupils, and has received instruction from some of them. For a quarter of a century he has collected story, legend and anecdote,

written and unwritten, until the bulk of his materials appalled him. He says that to write the exhaustive biography he had projected, “a man must be plentifully endowed with time and patience.” Not being so endowed, Mr. Huneker has been content to write a series of essays on the real and legendary Liszt, on certain aspects of his art and character, on his works and his influence.

Most of these essays are absorbingly interesting. The critic is as brilliant, as witty, trenchant, paradoxical as in his earlier books, which are a lasting joy to thoughtful readers. Yet these papers on Liszt appear to have been gathered into a book without sufficiently careful editorial revision. On one of his earlier title pages Mr. Huneker put for motto Whitman's jibe at the consistency of small minds: “Do I contradict myself? Well, then, I contradict myself.” In this Liszt book he contradicts himself rather too often. It is not at all a big, clear, definite and finished portrait of the great Hungarian master that he has given us, but a series of “snap-shots” of the very varied phases and aspects of an amazingly volatile and versatile human being—taken at various times, and not always easily recognizable as photographs of the same man. The author himself, while no adulator and no hero worshipper, has been much puzzled by the volatility and versatility of his subject, for he says: “The various personalities of Liszt are so mystifying that they would require the professional services of a half dozen psychologists to untangle their complex web.” The effect of contradictoriness is further heightened by 126 pages of quotations from Liszt's contemporaries—which is nevertheless a valuable part of the book.

There are excellent expositions of many (tho not all) of the best of Liszt's works, and there is ungrudging praise for his greatest achievement in music—the creation of the symphonic poem. The enormous debt to Liszt of all the moderns, from Wagner to Debussy, is

¹FRANZ LISZT. By James Huneker. New York: Charles Scribner's Sons. \$2.

LISZT AND HIS FRIENDS (1881)
From Mr. Huneker's "Franz Liszt" (Scribner's)

dwelt upon repeatedly. While Liszt the man and artist remains as enigmatic a figure as before (what lofty and puissant genius is not an enigma to the rest of mankind?), and while "the true history of Liszt as composer has yet to be written," Mr. Huneker's book is decidedly worth having for its vividly impressionistic glimpses of a brilliant and many-sided musical genius, a commanding figure in the life of the nineteenth century and a great-hearted man.

Compared with Mr. Huneker's study, Mr. Hervey's little book on Liszt² appears very thin and inconsequential. But it will serve its purpose of telling beginners something about the man and his music.

As a song writer Liszt is not as yet as widely known or as fully appreciated as he deserves to be. "The King of Thule" and "Lorely," says Mr. Huneker, "are masterpieces and contain in essence all the dramatic lyricism of modern writers, Strauss included." These and many other beautiful songs are published anew in the latest volume of "The Musician's Library," devoted

to Liszt's songs,³ a good collection, which is not enhanced in value, however, by the lucubrations of its editor.

✻ Health

IN his two volumes on *Public Hygiene*¹ Dr. Thomas S. Blair has gathered together a series of papers by physicians in many parts of the country and by officials of various corporations who are interested in the health of their employees and the health of the public. Among these non-medical contributors are a manager of the Standard Oil Company, a past president of the American Heating and Ventilating Engineers, the general manager of the Interborough Rapid Transit Company, the engineer of the United Gas Improvement Company, Philadelphia; the superintendent of the Washington Terminal Company, the management of the Red Star Line, the chemical manager of H. J. Heinz Company, the management

²THIRTY SONGS BY FRANZ LISZT. Edited by Carl Armbruster (for High Voice). Boston: Oliver Ditson Co. Cloth, \$2.50; paper, \$1.50

¹PUBLIC HYGIENE. By Thomas S. Blair, M.D., Neurologist, Harrisburg, Pa., Hospital. In two volumes. Boston: Richard G. Badger, The Gorham Press. \$10.

²FRANZ LISZT AND HIS MUSIC. By Arthur Hervey. New York: John Lane Co. \$1.50.

of the Waldorf-Astoria Hotel, the Wanamaker store, the Hershey Chocolate Company, and of the Larkin Company. Quite needless to say, then, the two volumes contain an immense amount of information. It is likely to be especially valuable to public health officials and those interested in the problems of the health of large groups of workers. As including the twenty-page index there are only 644 pages in the two volumes, it seems too bad that they were not bound in a single volume, for as a rule the men who need such information as is here contained have but little shelf room to spare.

In his two small volumes, *Exercise and Health* and *Handbook of Health*,² Dr. Woods Hutchinson has, with his usual charming facility, solved the problems that are presented in these subjects with the fine common sense that characterizes all his writing. The book on exercise is particularly valuable, because it contradicts so many long accepted notions. The fetish of cutting out fluids in order to reduce weight is properly characterized. The limitation of diet for the training of young athletes, with the consequent nervous irritability and excitability, "so that they begin to believe in hoodoos of various sorts, will break down and cry like children after a defeat, or if criticised too severely by the coach will literally go off in the corner and sulk like a five-year-old," Dr. Hutchinson thinks is responsible for much of that spirit of bitterness and hysterical determination to win at any price, which, now fortunately disappearing, was one of the most serious blots upon college athletics.

The prevention of disease is now the most interesting topic in the matter of health. As our cities have grown the problems of plumbing and household sanitation as important factors in the prophylaxis of disease have come to be recognized. Mr. Putnam's book,³ then, which is a course of lectures delivered before the plumbing school of the North

End Union, of Boston, will prove of special interest to all those who want to know just what can be accomplished for household sanitation. It is very well illustrated, and this saves many a detailed explanation. It is surprising how much that we are likely to think of as distinctly modern is to be found in the long ago. Mr. Putnam knows his subject well and has provided the information with regard to it in a form that can be understood by any one.

Intimately connected with the problem of health in the house is the construction of hospitals and sanatoria for tuberculosis, and Dr. Thomas Spees Carrington, assistant secretary of the National Association for the Study and Prevention of Tuberculosis, has written a book on this subject⁴ that gives pictures and ground plans of all our institutions of this kind in this country. For those who are planning to build the book is invaluable.

Closely allied to other problems of tuberculosis is that of *District Nursing*,⁵ a handbook for which has been written by Miss Mabel Jacques, graduate of the Hospital of the University of Pennsylvania. It is easy to understand how many difficult problems there are connected with nursing the poor in large or even small cities. Valuable hints for the solution of these problems are contained in this little book.

Royal Romances of Today. By Kellogg Durland. New York: Duffield & Co. Pp. 278. \$2.50.

Of the three rulers whose biographies are presented here by a writer who was, up to his recent death at the age of only thirty years, a contributor to *THE INDEPENDENT*, that of the Queen of Spain is the longest, tho she is the youngest of the three. Mr. Durland is altogether sympathetic in his account of the Princess Victoria Eugénie Julia Ena, daughter of Prince Henry of Battenberg and granddaughter of Queen Victoria. To-day this princess is herself "Queen Vic-

⁵DISTRICT NURSING. By Mabel Jacques, Graduate of the Hospital of the University of Pennsylvania, with an Introduction by John H. Pryor, M.D. New York: The Macmillan Co. \$1.

"THE FIVE CHILDREN OF THE TSARITSA"
From Durland's "Royal Romances of Today" (Duffield)

toria." King Alfonso's marriage is described here as "a marriage of affection, reasons of state happily harmonizing," and that makes the story a happy one. For the writer emphatically denies the reports that the children of this royal marriage are "deaf and dumb" or otherwise deficient. Also:

"Queen Victoria Eugenie is one of the most devoted of mothers. As it has been the policy in Spain for Queens-consort to hold aloof from politics, she has been able to devote more of her time than would ordinarily be the case to her children, without at the same time neglecting other duties of queenship."

The other "royal romances" of this volume have for their heroines the Empress Alexandra Feodorovna of Russia and Queen Elena of Italy. The former was called "the most beautiful queen on any throne" when she first became a ruler—she who had been a poor little German princess. Even now she is only thirty-nine years old. But she is not loved as an empress. For one thing, she has had the hostility of the popular Dowager

Empress against her. And she is not even known to the people of her empire. It is not a cheerful romance, this one. As for Queen Elena, the Montenegrin princess, Mr. Durland pays a tribute to her high spirit, her queenly bearing, and the simplicity of life which marks the royal household. Also he makes an interesting story of her childhood. Her biographer represented the Associated Press at Messina after the terrible earthquake of 1909, and describes her courage on the occasion, when she served as a nurse; bandaging the bleeding, and assisting at operations. This is not the only opportunity which Elena has had of proving herself every inch a queen. But Mr. Durland tells us that she is "one of the most unpopular queens in Europe"—talked of with disrespect and disapproval by her own court. "Rightly or wrongly, Queen Elena has the reputation among her own people of being the stingiest queen in Europe." She is not, he adds, a patron-

FORBES-ROBERTSON AS HAMLET
From William Winter's "Shakespeare on
the Stage" (Moffat, Yard)

ess of the arts. Hers is a "selfish nature." She does not, on ordinary occasions, "dress the part." Obviously, it is not an easy task, this being a queen!

Shakespeare on the Stage. By William Winter. Illustrated from Rare Prints and Photographs. New York: Moffat, Yard & Co. \$3.

Last winter we were denied the privilege of reading in one of the New York newspapers the articles which for so many years Mr. William Winter contributed to the page facing its editorials, for Mr. Winter's old-fashioned morality and somewhat reactionary ideals are too high for the newspaper press of progressive today. He none the less contributed articles upon the current drama to one of the weekly newspapers; and to the *Century* he gave a series of studies of *Shakespeare on the Stage*, which reappear (with accretions) in the stout volume before us. The introductory essay,

"Shakespeare Spells Ruin" (the quotation marks are Mr. Winter's), is followed by a discussion of six plays, as interpreted by actors greater or lesser, from Garrick's day to Sothorn's. Mr. Winter writes that, during fifty years' study and criticism of the stage, he has learned "that sound judgment as to Acting in the Present imperatively requires to be informed and aided by precise knowledge of Acting in the Past," and he, above all living men, is the best equipped informant where the English and American stages are concerned. As for the objection that used to be made in this country, that theatrical discussions are "unprofitable and absurd," it is out of date:

"Today, almost, every publication or magazine, devotes to those subjects a considerable section of every issue, and there is no home or social circle in the land that does not, either directly or indirectly, feel and respond to the influence of the theater."

As for the parrot-cry, "Shakespeare spells ruin," Mr. Winter denies its justice; tho "incessant representation of Shakespeare's plays . . . never will be either financially advantageous or in any way desirable." There are in this volume 564 pages of text, and not one, so far as we have observed, but is marked with scholarship and grace of expression.

Literary Notes

....The story of Savonarola is retold with slight fictional embellishments in *The Prophet of Florence*, by Miss Mary Putnam Denny (Boston: Badger; \$1)

....Of interest to mothers is a new magazine brought out by Houghton Mifflin & Co. at 25 cents a copy, entitled *Home Progress*, published monthly as part of the *Home Progress Reading Courses*, and full of valuable articles on the up-bringing of children, preventive medical care, children's books and kindred subjects.

....From the Clarendon Press, Oxford, comes a compact *Shakespeare Glossary*, by C. T. Onions, Master of Arts of London University, and a collaborator of the Oxford English Dictionary. Tho "a book of slender dimensions," as its author states, there are "close upon ten thousand separate articles." (Pp. 259; 2s. 6d.)

....Beatrice Grimshaw has written in *The New New Guinea* (pp. 322; Lippincott; \$3.50) an exceedingly interesting account of an island of which most of us are shockingly ignorant. Her manner is lively, and her book is illustrated with many half-tones.

....Mr. James Allen discourses with force and enthusiasm on *The Eight Pillars of Prosperity* (Crowell; \$1), which are eight moral principles or qualities upon which the whole social structure as well as individual success depends. The book contains much sensible advice on the importance and the practice of the common virtues.

....Baedeker's *Austria-Hungary* (with excursions to Cetinje, Belgrade and Bucharest) has now gone into its eleventh edition, revised and augmented. This volume extends to 600 pages, and contains 71 maps, 77 plans and 2 panoramas. It would be quite superfluous for us to lay before our readers the merits of this series of handbooks, and of this particular volume, for they, like us, have tested them. (Scribner; \$3.)

....Readers not familiar with the work of foreign missionaries will be surprised to find out the vast amount of social work done by them either directly or in connection with their other labors. An interesting account of this phase of missionary effort is given by Prof. Alva W. Taylor in *Social Work of Christian Missions* (Cincinnati: The Foreign Christian Missionary Society; 50 cents). It is an excellent and informing book.

....A recognition of the need for more complete and authentic information on Russian affairs by English-speaking peoples is shown by the starting of a quarterly periodical devoted to Russian history, politics, economics and literature. It is entitled *The Russian Review* and published by the School of Russian Studies in the University of Liverpool. (Ten shillings a year. London and New York: Thomas Nelson & Sons.)

....The chief importance of the report of the New York Lake Champlain Tercentenary Commission, prepared by Dr. Henry Wayland Hill and entitled *The Champlain Tercentenary* (Albany: J. B. Lyon Co., State Printers; pp. 534) will lie in its hints to other States, communities and organizations that plan to give pageants, etc., of one kind and another. As a record, too, the plump volume has its value. The report is enriched with many half-tone illustrations and plans.

....Some of England's most worthy and noted preachers have done the better part of their work in otherwise obscure country places

Without making any extended or thoro study of their significance in either literature or religion, Professor Ezra S. Tipple, of Drew Theological Seminary, in *Some Famous Country Parishes* (Eaton & Mains; \$1.50) has discussed in an interesting but somewhat rambling way a half dozen of these men and given entertaining descriptions of the churches, parish houses and localities connected with their lives. The names of Keble, Herbert, Fletcher, Baxter, Tennyson and Kingsley suggest the rich fields into which the author makes his excursions. Many good pictures adorn the volume and the narrative is generally pleasing and appropriate, but occasional long and involved sentences mar the style, and the frequent references to a traveling companion are weak attempts at using a questionable literary device.

....Some books are to be praised—and some books used. The annual biographical dictionary published by the Macmillan Company under the title *Who's Who* is both to be used and praised. The 1912 edition (\$2.50) is the sixty-fourth. It has 2,364 pages of brief biographies, against 2,246 pages in 1911. Invaluable as a reference book where English names are concerned, it must be confessed that American names are few and capriciously chosen. Thus in the Obituary list of the year we find neither Clemens, S. M., Gilder, R. W., James, William, Moody, W. V., nor Porter, Sidney ("O. Henry"). Among the quick we find not such leaders of the Democratic party in the United States as Champ Clark, Speaker of the House of Representatives, Oscar W. Underwood, Chairman of the Ways and Means Committee, and Governor Harmon. Of American authors and journalists neither Arthur Brisbane, Madison Cawein, Theodore Dreiser, Mortague Glass—to name a few of the notable omissions. On the other hand, the editors list more French names than formerly. And, for British subjects, this biographical dictionary remains irreproachable. No journalist or man of affairs can do without it—and no library.

....From Henry Holt & Co. we receive a number of volumes newly added to the Home University Library—upon which we have already commented as a series of new and readable volumes upon subjects of actuality. The price of the series is fifty cents per volume. Volumes just published include *The Civil War*, by Professor F. L. Paxson; *History of Our Time (1885-1911)*, by J. P. Gooch; *The Evolution of Industry*, by Professor D. H. Macgregor; *The Civilization of China*, by Professor H. A. Giles; *Psychical Research*, by W. F. Barrett, F. R. S.; *The Dawn of History*, by

Professor J. L. Myres; *Elements of English Law*, by Professor W. M. Geldart; *Astronomy*, by A. R. Hinks; *Introduction to Science*, by Professor J. A. Thomson, and *The Papacy and Modern Times*, by Rev. William Barry.

Another volume in the series is G. H. Mair's *English Literature: Modern*, to be followed by *English Literature: Medieval*, by Professor W. P. Ker. The former volume (pp. 249) studies our literature from the English Renaissance. Its emphasis lies rather on tendencies and ideas than on facts such as make up historical outlines. There are few dates to annoy one, and the "biographical approach" is avoided. The tenth and final chapter is devoted to "The Present Age." The most remarkable fact about this age is, we learn, "its inattention to poetry"—in spite of Kipling's teaching that "romance is in the present"—in steam-engines and telegraph lines and aeroplanes.

"It is in a territory poles apart from Mr. Kipling's that the main stream of romantic poetry flows. Apart from the gravely delicate and scholarly work of Mr. Bridges, . . . English romantic poetry has concentrated itself into one chief school—the school of the 'Celtic Revival' of which the leader is Mr. W. B. Yeats. . . . In its inception, it arose out of a group of young poets who worked in a conscious imitation of the methods of the French decadents: chiefly of Baudelaire and Verlaine. . . . Ernest Dowson and Lionel Johnson, who are both now dead, and others who are still living, produced enough to show that they had at their command a vein of poetry that might have deepened and proved more rich had they gone on working it. One of them, Mr. W. B. Yeats, by his birth and his reading in Irish legend and folklore, became possessed of a subject-matter denied to his fellows, and it is from the combination of the mood of the decadents with the dreaminess and mystery of Celtic tradition and romance—a combination which came to pass in his poetry—that the Celtic school has sprung."

... But the literary characteristic of the present age which is most likely to differentiate it is, after all, Mr. Mair continues, the revival of the drama. Again, a foreign influence revived British—and Irish—art. The plays of Ibsen came to England in the nineties. Misunderstood at first by their worshippers and their enemies alike, "they taught men a new and freer approach to moral questions, and a new and freer dramatic technic." Among those thus instructed was Mr. Shaw. But the comedies of Oscar Wilde, more immediately successful than Shaw's, are "not traceable to any obvious influence, English or foreign." If they are to be traced anywhere, it would be, perhaps, to Congreve. But if he owed less to the world he lived in than Mr. Shaw owes, Wilde did not, like Shaw, "give a start," not to the bourgeoisie alone, but to Mr. Galsworthy and other "minor dramatists." Referring to the plays of a third Irishman of the present generation, J. M. Synge, Mr. Mair writes: "Probably in no single case amongst our contemporaries could a high and permanent place in literature be prophesied with more confidence than in his."

Pebbles

"LIVE within your income," was a maxim uttered by Mr. Carnegie on his seventy-sixth birthday. This is easy; the difficulty is to live without it.—*Satire*.

How many apples were eaten by Adam and Eve? We know that Eve 81, and that Adam 812, total 893. But Adam 8,142 please his wife, and Eve 81,242 please Adam, total 89,384. Then again Eve 814240fy herself, and Adam also 8124240fy himself, total, 9,938,480.—*Fun*.

AFTER THE OPERATION.

My appendix is carefully bottled—

The third on the right, that's the one!

It's growing, you see, a bit mottled,

Exposed to the rays of the sun.

I keep it out there for inspection,

Since otherwise people might doubt it.

It gives me elation and makes conversation—

But I try to be modest about it.

MATSU NAGAL.

THE latest batch of British examination answers reported to the *University Correspondent* contains the following examples of unconscious humor:

The young Pretender was so called because it was pretended that he was born in a frying-pan.

A verb is a word which is used in order to make an exertion.

Lord Raleigh was the first man to see the invisible Armada.

The South of the U. S. A. grows oranges, figs, melons and a great quantity of preserved fruits, especially tinned meats.

Milton married a young girl who ran back to her parents, so he wrote a sonnet on Divorce.

The Petition of Right said that no bills were to be made or laws passed in the House of Commons without the consent of Parliament.

A Passive Verb is when the subject is the sufferer, e. g., I am loved.

The American war was started because the people would persist in sending their parcels thru the post without stamps.

Prince William was drowned in a butt of Malmsey wine; he never laughed again.

Richard II. is said to have been murdered by some historians; his real fate is uncertain.

A bishop without a diocese is called a suffragette.

Artificial perspiration is the way to make a person alive when they are only just dead.

An armadillo is used to soften the *c* in French.

You rut *c'est* before a noun when you do not know its gender.

A night watchman is a man employed to sleep in the open air.

The tides are caused by the sun drawing the water out and the moon drawing it in again.

A circle is a line which meets its other end without ending.

Triangles are of three kinds, the equilateral or three-sided, the quadrilateral or four-sided, and the multilateral or polyglot.

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

A Dangerous Bill

THERE is one provision in the Dillingham bill, reported to the Senate by the Committee on Immigration, which has dynamite in it. It will bitterly offend a friendly nation, and might lead to war. It looks as innocent as a paper box that hides dynamite; but it may explode.

The dangerous paragraph is this:

"Sec. 3. The following classes of aliens shall be excluded from admission into the United States: All idiots, imbeciles . . . prostitutes . . . contract laborers . . . persons who are not eligible to become citizens of the United States by naturalization."

Exceptions follow for professional men, travelers, etc.

The important thing is that instead of excluding Chinese by name it widens the exclusion by saying "persons not eligible to become *citizens by naturalization*." Now, who are these not eligible to become citizens by naturalization?

They are Chinese, as every one knows, but they are also Japanese, Hindus and Malays. By the law of 1869, as amended in 1875, only these aliens can be naturalized:

"The provisions of this title shall apply to aliens being free *white* persons and to per-

sons of *African* nativity and of *African* descent."

By a decision of the courts Syrians and Armenians are white, but Japanese, Chinese, Hindus and Malays are not white. They are not allowed naturalization in this country nor in Hawaii. Only their children born in this country can become citizens. Under the existing law Japanese are thus excluded from naturalization, like Chinese, but they are not excluded as immigrants. Under this bill, if enacted, they cannot be allowed even admission to this country, unless they belong to the excepted and favored classes.

How will Japan take this new slap in the face? Can it be that the Committee on Immigration knew what they were about when they made this change? It is bad enough to insult China. China has been weak and humiliated and unable to defend her honor; but Japan is strong and proud. Japan has ever been most desirous of harmonious relations with the United States, and has faithfully tried to prevent her laboring people from coming to this country. She has diverted them to Formosa and Manchuria, so that the Japanese population in this country has absolutely declined of late years. Japan has felt at times very much hurt by local or State discrimination against her citizens in this country, but she has been patient and has tried to believe that our National Government does not mean to do her wrong.

And yet there have been too many pin-pricks, and they have not been pleasant. There was the Californian law segregating the Japanese in the schools, as if they were not fit to associate with white children. That stirred up Japan to strong protest, and it ended in the Japanese Government's stopping all emigration to this country, so that even students find it difficult to gain permission to come here, so ready was Japan to avoid trouble with us. Indeed, when President Roosevelt sent the American fleet around the world Japan spent a million dollars to entertain it and show her good will. She has shown similar hospitality to our delegations of merchants and others who have visited the islands. But the pin-pricks have continued. There was the current report that Japan

had a secret treaty with Mexico against us, and was to be allowed a Pacific port. There were the repeated speeches of a member of Congress, formerly in the navy, declaring that Japan was waiting the near time to declare war and seize Hawaii and the Philippines. Then came Secretary Knox's proposal for the neutralization of the Manchurian Railroads, which appeared to her to seek to deprive Japan of rights she had gained by the treaty of Portsmouth, and to destroy her preponderant influence in the border state which faced her Korean frontier. Then came the extraordinary proposal from bankers, originating here, that four Powers, the United States, Great Britain, France and Germany, should loan China \$50,000,000; the interest guaranteed by all the unhypothecated resources of Manchuria, and the provision added that China shall go to these four nations for any future loans, thus dethroning Japan from her primacy in Manchuria and all China. It is not strange that the Knox plan of neutralization and the proposed four Power loan should have much offended Japan. It seemed to her as if we, who have only a commercial interest in Manchuria, were trying to drive her out from where her interests are also political and vital. Much more will she be offended if we are not satisfied with her faithful consent to restrict emigration to this country, but mean definitely by law to exclude her citizens. She will have the right to take it as a national affront, for such it will be, and we might fear a repetition of the bitter experience of 1906 and 1907 following the Californian school legislation; for this will not be a pinprick, but a blow in the face of a friend. We cannot imagine how such a provision could have been intentionally introduced, and we trust it will be eliminated.

Congressman Hobson has been for years predicting war with Japan. He has done much to provoke it. We might have looked for some such a provocative affront from him, or from some other belligerents of the army and navy; but do not Senators know that with no nation is it more important that we should be on good terms than with Japan? Do they not know that the Pacific Ocean is to be the arena of trade,

of peace or of war during this century, and that at present the arbiters of peace or war are the United States and Japan? Let the provision in the Dillingham bill, to which we hereby call the attention of the country, be eliminated, in the interest of peace.

There are other objectionable provisions in the bill, but this involves international hatred and endangers peace, and its character should be immediately exposed.

Republican Presidential Candidates

For the Republican Presidential nomination there are three candidates as to whose attitude there is no room for doubt. These are President Taft, Senator La Follette and Senator Cummins. Some days ago, possibly because he had learned of opposition which had been concealed or disguised, Mr. Taft remarked that "nothing but death" could keep him "out of the fight." Is Mr. Roosevelt a candidate? Let us look at a part of the evidence which may answer this question. For some time past, men of experience and some prominence in politics have been working in many places to promote his nomination. So far as we can learn, he has not sought to restrain them. Roosevelt clubs and associations have been formed. The Governors of six States have publicly announced that he is their candidate. In a carefully prepared statement, Governor Hadley, of Missouri, has explained why he thinks Mr. Roosevelt should be nominated. After a conference with the ex-President, Governor Glasscock, of West Virginia, said he was going home to resume his labors in Mr. Roosevelt's interest, because he believed the latter would accept a nomination. Governor Stubbs, of Kansas, after repeatedly and emphatically expressing, at home, his preference for Mr. Roosevelt, came to New York, talked with the ex-President for three hours, and then published a long statement, in which he predicted Mr. Roosevelt's nomination and election, altho, the Governor said, he was not and would not be a candidate:

"But Colonel Roosevelt has never said to me, or to any other living human being to

my knowledge, that he would refuse the nomination if it came to him as the result of a genuine demand on the part of the American people. There is such a demand at this time. There is a vast difference between a man stating that he is not a candidate for and does not want a certain public office, and a statement that he would refuse to accept that office when the public welfare was at stake and there was a widespread general demand for him to serve his country."

The remarks of ex-Governor Fort of New Jersey, Mr. Flinn of Pittsburgh, and others, after conferences with Mr. Roosevelt might also be quoted. They indicate a receptive attitude on the part of the ex-President. He does not discourage these gentlemen and others who are working for him. For the present we must regard him as a candidate for the nomination.

Nothing but the candidacy of Mr. Roosevelt, passive or active, can prevent the nomination of Mr. Taft. The party will not nominate either Senator La Follette or Senator Cummins. Some of Mr. Roosevelt's friends have given support to the Wisconsin Senator. It is predicted by politicians that a majority of his delegates in the convention will eventually vote for Mr. Roosevelt.

Mr. Taft is fairly entitled to a renomination. He deserves it. He has been a good President. He is not a stand-patter, but a reasonable Progressive. To his high office he came with an exceptional equipment in executive and judicial experience, and if legislative service had been added he would, probably, have avoided some things that were unfortunate. At the beginning of his term he and his party suffered by reason of the memorable tariff revision blunder, but it must be admitted that his record with respect to the sham revision of 1909 was better than that of the controlling Republican majority in Congress. He sought to improve the bill, and accomplished something. But he began the work at a time when very little could be done, when the field for improvement was limited to the disagreements which a conference committee was considering. He had not been a member of Congress. Probably he had not been a student of tariffs and tariff legislation. For twelve years there had been no revision to attract his attention. He did not realize

how sensitive public opinion was with respect to legislation affecting the cost of living. At the present time, however, he stands for a downward revision that shall be determined by facts carefully ascertained in accordance with a plan designed to prevent logrolling and bargaining and favoritism in the making of tariffs.

His policy in other fields has been marked by projects of broad statesmanship. We may point to his memorable peace treaties, his recommendations for a great extension of the merit system in the civil service, and his reciprocity agreement with Canada. He has enforced the Sherman act, suggested the appointment of a commission for the regulation of great manufacturing corporations, and sought diligently to promote economy and efficiency in the public service. He deserves to be commended for his appointments to the bench and his defense of the courts. His patience and sense of justice were exhibited in his admirable treatment of the Mexican problem. He has not always been well served by his Cabinet, certain members of which have occasionally erred. The Ballinger incident was an unfortunate one. But, as we have said, he has been a good President, a just and competent Chief Magistrate, striving earnestly to serve the people.

From a partisan point of view, a failure to renominate him would be unfortunate because it would involve a virtual repudiation of his administration. In its convention, the party will make, of course, a platform reviewing and commending what the Government has done in four years. It will enumerate the achievements of the President. Upon the record of his term it goes into the campaign. To withhold a renomination from the President whose acts and recommendations it supports would be to stultify itself. Upon what reasonable ground can Mr. Taft be rejected and laid aside this year by those who nominated and elected him in 1908? Will they say that he has been unfaithful or incompetent?

Some Republicans have been saying that Mr. Taft could not be re-elected. Is there any other candidate for whom the

party could get more votes? It must be admitted that Republican prospects have been brighter at times in the past than they are this year. The Aldrich-Payne tariff revision was so heavy a load that it has almost broken the party's back. The revolution at the polls in November, 1910, was foreshadowed by the elections in the Taunton district of Massachusetts and the Rochester district of New York. In the first of these a Republican majority of 14,250 (in 1908) was displaced by a Democratic majority of 5,640. In the second (which had been represented by a Republican for twenty years) a Republican majority of 10,160 gave way to a Democratic majority of 5,440. In the general Congressional elections the same drift was seen. The voters sent a Democratic majority of 66 to the House, where the Republicans had had a majority of more than 40. At the elections in November last there was little change where the tariff issue was made prominent. Two or three Congressional district contests then, as well as the recent election in a Kansas district, show that the sham revision has not been forgotten. Many suffer on account of the high cost of living. Many believe that this cost is due, in part at least, to the Republican tariff revision of 1909. They have been misled by such false statements as the one made by Governor Dix, of New York, in his letter, or speech, of acceptance, when he asserted that in this revision the Republicans had "increased the duties on all the necessities of life."

Republican prospects are not distinctly encouraging, but how could they be improved by rejecting Mr. Taft and thus indirectly discrediting the party's White House record for the current term? By nominating Mr. Roosevelt? We think not.

He also was a good President, and he would serve the people well if he should be elected again. But his nomination can be made only after an acrimonious contest in the convention with the friends of Mr. Taft, a contest that could not fail to affect injuriously the party's vote at the polls. The party would also suffer some loss on account of its rejection of a President whom, in its platform, it had praised, and whose policy and acts it had commended. Moreover, on November 8,

1904, immediately after his election, Mr. Roosevelt said to the American people:

"On the 4th of March next I shall have served three and a half years, and these three and a half years constitute my first term. The wise custom which limits the President to two terms regards the substance and not the form, and *under no circumstances* will I be a candidate for or accept another nomination."

Three years later, on December 11, 1907, he said: "I have not changed and shall not change that decision thus announced." Speaking at Indianapolis on the 25th inst., Senator Brown, of Nebraska, referred to Mr. Roosevelt's declaration of November 8, 1904, as follows:

"Every man who doubts that statement now impeaches his integrity. I have honored and trusted him too many years to insult him now with the thought that he says one thing and means another."

Now, we do not say that if Mr. Roosevelt should be nominated this year it would be for a third term, in the original and correct interpretation of the phrase. It would be for his second elective term, and another term of four years (Mr. Taft's) would have intervened between that term and his first service. Nor do we think that the institutions and liberties of the American people would be endangered in the least if he should go to the White House again. But in the campaign the "third term" cry would be raised against him. There are shrewd politicians who assert that this issue would overshadow all others. For example, ex-Senator William E. Chandler, a veteran in politics (whose candidate appears to be not Mr. Taft, but Justice Hughes), says:

"If Mr. Roosevelt is nominated he will draw some Democratic votes, but all other issues may soon disappear, and the only visible and operative one will be that of a third term."

It is generally believed that Mr. Roosevelt regards Mr. Taft's service in the office of President with a feeling of disappointment. He is deeply interested in the welfare of his party, and we guess he thinks he could win while Mr. Taft probably would lose. If this be his opinion we are inclined to believe that it is incorrect, and for the reasons we have briefly mentioned. If Mr. Taft did not desire a renomination, and if the decla-

ration of November 8, 1904, and the third term tradition were not in the way, there would be another and a very different situation.

"Pomp and Splendor"

No words fitter than these taken from a Catholic paper can be chosen to express the character of the reception given to Cardinal Farley here at New York on his return from Rome. All that pomp and splendor could supply was arranged to impress the people with the importance of the Church he represented, and to teach its members the glory bestowed upon it by the Head of the Church at Rome. The splendor and magnificence of the ceremonials, from the moment Cardinal Farley stepped out of the steamboat decked with American and Papal colors at the Battery until the day when in the Cathedral he led in scarlet the processional solemnity, followed by his Eminence, the elder Cardinal of Baltimore, and archbishops and bishops, while at night his Cathedral was a blaze of electric beauty, surpassed anything hitherto known and done in this country. The popular reception given to Mr. Roosevelt on his return from his triumphal march thru Europe was nothing to it, for it had been most elaborately and expensively arranged, and the Cardinal had delayed his return to give time for his priests and people to elaborate the pomp and splendor.

Only those who are familiar with high ecclesiastical ceremonials could understand and fitly describe those which have here been displayed in honor of the Cardinalate come to New York, the largest Catholic city in the world, and the most loyal; but we can ask what it all means.

It means this, first of all, not the tolerance, but the sympathy, the honor, which the American people give to the Christian faith in any of its forms. For two or three hours busy Broadway and Fifth avenue were closed to trolley and carriage traffic, and for five miles the sidewalks were crowded with people, that the grand procession of equipages bearing the Cardinal in his scarlet robes and followed by his *entourage*, might pass by. Can we imagine such a thing in Lisbon

or Madrid or Paris or Rome? It would be forbidden there, and if attempted the celebrants driven from the streets by a howling mob. Nowhere else does the Roman Catholic Church receive such protection and honor as in these United States, altho its members count not one-sixth of the population. It is to the credit of the Catholic Church, and quite as much to the credit of our predominant non-Catholic Christian citizens, that they give welcome as well as tolerance to such a demonstration; and the daily journals are filled with pages of pictures and description. It was not so here always. We observe that *Harper's Weekly* cuts out its space given to the booming of a Presidential candidate, and devotes three pages to pictures of the great function; and we recall that a generation ago Thomas Nast represented the invasion of Catholicism under the form of bishops figured as crocodiles, landing from the sea, their divided miters made to resemble the open jaws of the beasts. We hear nothing of the A. P. A. in these days.

All this is good. Protestants are not as afraid of Catholics as they were. They would rather make friends with them, seek their help against a common foe, and recognize their value in conserving morality and religion with their own classes of citizens.

Yet not wholly does such a display meet the approved taste of those of a simpler faith. There is about it a certain barbarity of splendor, not wholly voluntary, but contrived and designed to make an exaggerated impression. We are informed that not a few prominent Catholics disapproved of so much expense and show, and even complained that the electrical decorating of the Cathedral was not supended on the Sabbath Day. It would never have occurred to any other denomination of Christians in the country to make such a show. To be sure, they could not. Their worship is more simple, less sensuous. They have no archbishops and Cardinals. The most they would attempt is to hold a big meeting in a big hall, where addresses or sermons would be delivered by speakers in the ordinary citizens' dress. Only cer-

tain degenerative university functions would show a mild polychrome procession. It is our impression that simplicity is a mark of good taste, at least of republican civilization. The magnificence of the display of the last week was a hundred times more showily elaborated than any to be seen at the inauguration of the President of the United States. While this labored and costly function, prolonged for a week, impresses and greatly pleases a certain class of our people, we are not convinced that the more sober-minded people quite approve. They want their religion more of the spirit, *sine strepitu*. They think of the way Jesus went thru Palestine. They remember the New York priest who wished he might see the Pope walking along Broadway in a frock coat and a silk hat. They have read that when the Church dropped its primitive simplicity and put on pomp, and its plain bishops became purple princes, it became paganized and corrupt. They wonder if the Son of God, were he to appear again here in New York, would consent to be the scarlet center of such display of worship. Somehow it does not seem congruous.

Tainted Democratic Money

THE split between Governor Woodrow Wilson and two of his warmest friends, of which we spoke last week, has developed very curiously. The supporters of Governor Wilson have the wit to claim it a fine asset in his favor. They insist that he withdrew from Colonel Harvey and Colonel Watterson because they proposed to seek large financial support from a millionaire, and the Governor would have no tainted money for his campaign, in the spirit, if not the words, of Vespasian to his son, the Emperor Titus, "*Pecunia non olet*." Colonel Watterson replied, or is said to have replied, to the effect that in politics one does not scrutinize closely the source of money, that "money, not patriotism, counts in a Presidential campaign." So long as there appears to be a question of veracity between the Governor and the Colonel, and the latter holds his evidence in reserve and calls for a court of honor to settle the matter *in camera*, Heaven for-

bid that we should express a judgment between them. We wait for the proofs. It is only clear that it was Colonel Watterson and not Colonel Harvey who offered to ask the contribution from Thomas F. Ryan.

If the two colonels have forsaken the Governor he does not lack other friends, and two of his most active defenders are Senator Tillman and a third colonel, William J. Bryan. Mr. Tillman declares that the two colonels were trying to fasten the Governor with a golden chain to the chariot wheels of plutocracy in the person of Millionaire Ryan, but that Governor Wilson saw thru their trick and nobly threw them off, and that this his independence will endear him to the people. As to Colonel Watterson, what is he? A poor Democrat, says Mr. Tillman; did he not bolt Bryan and free silver in 1896? So the Senator from South Carolina likes the Governor of New Jersey, who has been "tried in the fire and come out with his wings unsinged," for Mr. Tillman does not want the Democratic party to nominate a candidate who is a Republican in disguise.

But this is just what Colonel Bryan fears. It is a joke, he observes, to speak of Governor Harmon and Underwood as progressives, and if they are progressives, he asks who then are the conservative candidates of the Democratic party. He seems to incline to Wilson, for Wilson, he thinks, has had a conversion to progressive ideas in politics since the time five years ago when he wanted Bryan shelved. Mr. Bryan will have it that Harvey and Watterson took up Wilson when they thought he was a conservative; but when they discovered that he was a true blue progressive they left him. Governor Wilson is converted, but "Colonel Harvey shows no signs of conversion"; if he consorts with the Democratic party it is with no such consciousness of blindness as Paul felt when he went to the house of Ananias in Damascus.

It is a very pretty squabble as it is, and likely to call for much generous forgetfulness when the Democratic convention shall have chosen its man and all good Democrats must line up, whether it be for the conservative Harmon, the liberal Underwood or Clark, or the pro-

gressive Wilson. We are not sure that there is any genuine, simon-pure Democratic progressive except Mr. Bryan himself. The South is all clouded, we fear, with subserviency to the money power. For the present, until Colonel Watterson brings on his proofs, we may hold our faith in Governor Wilson; if he fails us there yet remains Mr. Bryan, who can surely be trusted.

An All-Star French Cabinet

FRENCH ministries follow one another in such quick succession that they tire our eyes, like motion pictures, and we cease to watch them. We come to feel that it is not worth while getting acquainted with a lot of new men if they are soon to be replaced by another lot. But the new ministry compels attention by reason of the eminence of those composing it. It contains, in fact, about all the names of French statesmen known to the average American reader, except Clemenceau, who is responsible for the overthrow of the former cabinet and came near heading this. All of the twelve, with the exception of David, have held office in previous ministries; two of them, Briand and Bourgeois, have been premiers. It is possible that the present ministry may not last longer than its predecessors. In fact, it is said that a ministry containing several exceptionally strong personalities is usually short-lived. But the mere fact that it is possible to induce so many men of ability and experience to unite at a moment's notice to give France a strong government in this crisis speaks well for the republic.

M. Poincaré was called upon by President Fallières at 10 o'clock on Saturday morning, January 13, to construct a new cabinet, and by midnight he had accomplished it. On Tuesday Premier Poincaré presented to the Chamber of Deputies a comprehensive statement of the policy of the new Government, and it was approved by a vote of 440 to 6. The men who can inspire such unanimity of confidence in the numerous and discordant groups composing the French parliament are worth knowing. On another page of this issue we publish portraits of the five statesmen characterized below.

The downfall of the Caillaux ministry was due to its foreign policy. The Morocco-Kongo deal, altho disappointing, might have been accepted as the best that could have been got from Germany, but when it was discovered that, while the Foreign Minister, M. de Selves, was carrying on the official negotiations with Berlin, the Premier was bargaining behind his back with colonial concessionaires of both countries. France was shocked and England shaken in her friendship. Recognizing the importance of the foreign portfolio the Premier has taken charge of it himself. M. Raymond Poincaré is now fifty-two years old and has been in public life ever since he was elected to the Chamber at the age of twenty-seven. He is as distinguished in letters as in economics. Like his cousin, Henri Poincaré, the mathematician and astronomer, he is a member of the French Academy, the only Premier of the Third Republic to hold that honor. He served as Minister of Public Instruction in 1893 and 1899, and as Minister of Finance in 1894 and 1906.

M. Léon Bourgeois, now in his sixty-first year, has had a long and honorable career, which he is likely to close some day as President of the Republic. He has been at the head of many departments—Interior, Public Instruction, Justice and Foreign Affairs—and was Premier in 1895-96. He is best known abroad as a leader in the peace movement. He headed the French delegation to The Hague Conference of 1907, and is now a member of the Permanent Court of International Arbitration. It is significant of the importance now attached to industrial questions that an ex-Premier and international publicist should be willing to accept the Ministry of Labor in another man's cabinet.

M. Théophile Delcassé is a picturesque and puzzling character. Little, homely, lively and ambitious, beginning as a poor professor in a provincial college, he became the controlling force in the French foreign policy for seven years and nearly occasioned a war between Germany and France. Several stories are told of how he got his start. According to the best of them, when Gambetta, then at the height of his power, visited the College of Pamier, Delcassé was chosen by the faculty to present to the distinguished

guest a basket of the haricot beans for which the Province of Ariège is famous. Gambetta invited him to luncheon, and was so struck with his conversation that he took him to Paris to assist in the editing of *La République Française*, and afterward got him a position as secretary to a wealthy deputy from Ariège. After the latter's death Delcassé married the widow, and with the immense fortune at his disposal he was enabled to play a prominent part in cosmopolitan society. He entertained Edward VII at Paris and later enjoyed the hospitality of the King at St. James's Palace in London. This personal acquaintance enabled him to establish the agreement between Great Britain and France in regard to Morocco and Egypt. Germany tried to upset this arrangement by forcing his dismissal from the office of Foreign Affairs, but now France has a free hand in Morocco and he is back in the cabinet again, this time in charge of the Marine Office. He is now sixty years old.

M. Aristide Briand has risen even more rapidly and altogether thru his own exertions. He was born in 1862 and did not appear in the Chamber until 1902, but there he took charge of the bill for the separation of Church and State when he accomplished the delicate task with such tact and efficiency that he was called to the cabinet as Minister of Public Worship in 1905 to take charge of the enforcement of the law, and in 1909 became Premier for a year and a half. By his vigorous and even-handed administration he won the respect of all parties, altho when he used the troops to put down labor riots his opponents were fond of quoting from his violent socialistic speeches in earlier years to show that he was a traitor to the cause of the people. In the new cabinet he is second only to M. Poincaré, and is likely to be the dominant force in the administration if he is not disabled by his poor health. He is one of the most eloquent of French statesmen, easily mastering the turbulent Chamber by his powerful voice, imperturbable temper and command of information.

M. Alexandre Millerand is also a Socialist, tho of course the Socialists would not allow him to remain in the party after he took office as Minister of

Commerce under Waldeck-Rousseau. The German Emperor is said to have been so favorably impressed by reading one of his speeches that he wrote on the margin "Oh, that we had such Socialists here!" M. Millerand has an immense law practice in addition to his public duties. But he seems capable of handling any amount of work, and altho he is now fifty-two he sometimes puts in twelve or fifteen hours at his desk.

We have no space here to discuss of the other members of "the national ministry," altho they are many of them noteworthy. M. Dupuy, of Public Works, is proprietor of the *Petit Parisien*, a daily with an enormous circulation; M. Pams, of Agriculture, is a wealthy landowner and vinegrower from the Eastern Pyrenees; M. David, of Commerce, a new man, is a lawyer and landowner; M. Lebrun, of the Colonies, is a mining engineer; M. Guist'hau, of Public Instruction, is a Socialist-Radical from Nantes; M. Klotz, who retains the portfolio of Finance, used to edit the journal *Voltaire*; M. Steeg, now in the Interior, is a Radical Socialist, forty-four years old, formerly a professor. All the Ministers belong to the radical and socialistic Left of the Chamber with the exception of Poincaré and Dupuy, who are classed as Moderate Republicans, and there seems no reason why they should not harmonize sufficiently to give France a stable and progressive government.

Our Unusual Generosity

The advantage which THE INDEPENDENT has over the monthly magazines is that it happens four times as often. Not only that, but four times a year, in a generous mood, we throw in an extra issue, making five for the month. We may truthfully say that we have never neglected an opportunity to do this. But in February we have rarely found time so to indulge our generous impulses. In fact, only once in the sixty-four years of our existence have we given our readers five numbers in February, and that was in 1872. But 1912 is a lucky year, not only to unmarried ladies who are able now to take the initiative, leaving the referendum to the opposite sex without recourse to recall, but it is lucky for all our subscribers, whatever their age, sex,

race or previous condition of matrimony, because they will on the 29th of February get an extra number of THE INDEPENDENT. We feel sure that few if any of our weekly rivals will do as much for their readers this year. We are able also to announce our intention to repeat this almost unprecedented favor just as soon as possible, which will be in 1940. In order to make sure of taking advantage of this offer our readers should send in their paid-up subscriptions for twenty-eight years in advance. Special rates of discount for this period furnished on application. We have a great many subscribers who can remember our last five-issue February, and we hope that a great many of our present subscribers will be on our list for the next.

Mr. Morgan's Treasures

That Mr. J. Pierpont Morgan should bring back his artistic treasures from London and the Continent to this country gives a shock to the British press, and the papers begin to guess at the reasons for it. Was it, they ask, because they were not properly appreciated, or not properly installed in the South Kensington Museum, or because his generosity in lending them for these years to the British public had gained him no honorific recognition? We do not believe that any one of these supposed reasons has any validity. He is not the man to feel sore because he has not received some decoration. The reasons are much simpler. He is an American, not a Briton. He is president of the Metropolitan Museum in New York, not an officer of the South Kensington Museum. Doubtless he has always intended that they should come here. One reason why he has delayed is because of the absurd law which would have put an enormous duty on their importation. That law has been changed lately, and art objects of over a hundred years old can now come in free. It is greatly to Mr. Morgan's honor that he takes quite as much interest in gathering for his own country noble objects of art to enrich public museums as he does in gathering dollars for himself. He went to Europe on this visit in large part to arrange for the transfer of his European collections. He is now in Egypt—is it that he may secure other manuscripts

lately dug from the sands? His gem of a private museum, attached to his residence, is crowded with treasures of the highest value, which for the present he is keeping under his own eye, but where scholars can have free access to them. He is over seventy years old, and it is not strange that he desires to bring his dearest treasures together in his own country, particularly as the death duties would be enormous if they were left abroad. It is a happy fact that so many American men of great wealth recognize great duties to the public.

International Co-operation in Agriculture

Our Govern-
ment makes
its crop re-

ports by way of the bulletins sent out from the International Institute at Rome. These bulletins are published monthly on the Saturday nearest to the 20th of each month; and are printed in five languages—English, French, German, Spanish and Italian. This institute, under the helping patronage of the King of Italy, has become a permanent institution. It represents at present forty-eight governments. Its bulletins publish statistical, technical, or economic information concerning farming, both vegetable and animal products, defining the commerce in agricultural products, with the prices prevailing in the various markets. The wages paid for farm work are also indicated regularly. Questions concerning agricultural co-operation, insurance and credit in all their aspects are carefully summed up, to give information helpful for the organization of works connected with agriculture in the different countries. New diseases of vegetables are announced, showing the territories infected, and so far as possible the remedies which are effective. Measures for the protection of the common interests of farmers, and for the improvement of their condition, especially as expressed by international congresses, are published. These bulletins will be made to reach as far as possible all interested parties, in all countries engaged in the cooperative movement. It seems rational that agriculture should get the leading advantage of the growth of internationalism, for civilization rests upon land culture. However, the benefit to commerce is hardly secondary. Best of all is the

growth of fellowship and good will that begat the institute, and the friendly co-operation that it fosters.

It is in part the "*Tu quoque*" answer, as THE INDEPENDENT anticipated, which Russia makes to our abrogation of the treaty with Russia. Premier Kokovtsoff replies to questions by *Collier's* that in excluding Jews as undesirables she exercises the right which every nation does, the United States included, to decide who are undesirables. America has immigration acts which exclude whole races of people, and why should not Russia? he asks. Our country, he tells us, excludes classes of undesirable aliens "determined by qualifications of an economic, sanitary, moral, social, and even religious character." As to religious discrimination he refers to our exclusion of those whose religion allows them to practise polygamy, while Russia sees no reason for excluding Mohammedan polygamists. Again, he says that we prohibit Asiatics, because we think it a protection to our own people, and that is one reason why they prohibit Jews. To us it seems a very poor reason for Russia and a very poor reason for the United States. Because it is a poor reason we have a right to complain, just as the pot calls the kettle black.

In a sound and admirable article in the *Educational Review* ex-President Eliot discusses the duties of the American university president. We question whether he is quite correct on one point. He had spoken of conditions in the eighteenth century when a chief purpose was to educate clergymen and the president was a clergyman and the course of instruction directed to that end. Then he takes up the conditions in the first half of the nineteenth century, when, he says, it became necessary to teach the new sciences:

"Even the denominational colleges, intended for young men from eighteen to twenty-one or twenty-two years of age, were forced to teach many new subjects in addition to the traditional subjects tributary to the vocational training of a minister."

We doubt if they were "forced" to it. Indeed, when we recall the pioneers of science in those days, such as Professor Sil-

liman at Yale and President Hitchcock at Amherst, to take geology as an example, it would seem that their colleges, still under clerical control, led the way rather than were forced to follow.

The British Baconians now declare that their hero wrote the Bible in the King James version. For ready reference we append a list of Francis Bacon's works, as we now understand them to stand:

"Advancement of Learning."

"Apophthegms."

"Essays."

"Novum Organum."

The plays misattributed to Shakespeare.

Spenser's "Faery Queen."

Milton's "Paradise Lost."

Pope's "Essay on Man" (Pope found the ms. written on blank pages of a second-hand copy of Bacon's "*Sylva Sylvarum*," and published it as his own).

Scott's "Lay of the Last Minstrel" (misappropriated in much the same manner).

Addison and Steele's "Spectator" (or, rather, notes for the same—developed by Addison and Steele).

Fitzgerald's paraphrase of the "Rubáiyat."

Gray's "Elegy Written in a Country Churchyard."

We do not claim completeness for this rude essay toward a Baconian bibliography.

We cannot see how the Unionist tactics in Belfast can commend them to the British people. We should think the effect would be to help the home rule sentiment in England. Two statesmen had engaged to speak at a public meeting in support of home rule, and the Orangemen declared they should not be allowed to speak, that blood would flow first. Then Mr. Churchill graciously offered to give up the large hall in a Unionist part of the city and go elsewhere, whereupon these Unionists engaged every hall in the city. It is an unfair and indecent attempt to suppress freedom of speech and in a region where the parties are nearly equally divided. Nevertheless, we think the meeting will somehow be held on February 8.

We are glad that the American millionaires who were appealed to refused to pay out their money to complete the subscriptions which would make the campaign to raise \$500,000 for the Lon-

don Young Men's Christian Association a success. It fell short of the amount by \$150,000. England is not a foreign mission country. It is rich enough to provide its own religious privileges. Very probably the narrowness of the policy of the association in England explains in part the failure of this twelve days' whirlwind campaign. Similar campaigns are a success in this country.

An anecdote published in the "Life and Memoirs of John Churton Collins" has a moral for all book reviewers. Collins, replying in the *Athenæum* to an author who took a review of his works as a personal affront, remarked that he had attacked Swinburne's prose with great severity, and that he and Swinburne were still as good friends as ever. Swinburne, who had never seen the attack by his friend, straightway hunted it down, and once he had read it he broke off his intimacy with the critic. For reviewers, at least, the stand-pat attitude would sometimes seem the best.

The success of the Socialists in the German elections, giving them almost a majority in the Reichsrath, with the spectacular capture of the Emperor's own electoral district in Potsdam and their very narrow failure to capture his district in Berlin, must give Emperor William very serious misgivings as to the future. But it is to be considered that Socialist success does not mean that Germany favors communism, but that it demands popular rights and the curtailment of military expenditure. Thus far it is not in politics a very dangerous sort of Socialism.

The British papers seem to think that the American people have gone wild over the visit of the Duke of Connaught. Not at all. What excitement there was was confined to the anxieties of a small social circle, and the newspapers found it a good subject with which to expand their columns of gossip. We do not see that the visit had any political influence. We are well disposed toward Great Britain and are glad to welcome courteously any representative. As to toadying after titles, doubtless there is some of it in flunky circles, but they don't count.

The dissatisfaction of the British public with the support which the Government is giving to Russia's action in Persia is waxing very serious, and public meetings are making protest. Mr. Shuster speaks in London this week too late for us to report the result, but nothing else has occurred which so much discredits the Liberal administration. It is Britain's business to ask if it is too late to save Persia from dismemberment. In this matter Christendom has not commended her faith to Islam.

Sometimes a calamity is so extensive that it paralyzes efforts for relief. Such may be, but should not be, the case now in China, where 3,500,000 people face starvation from flood and famine, aggravated by war. The Red Cross makes appeals for aid, and so do missionary societies; and we trust that aid will be given by the compassionate to either of these agencies of relief.

The leaders of the Lawrence strikers, Ettor and Hayward, are making very ugly threats. Hayward is the man who escaped conviction as the murderer of Governor Steunenberg, and his present language supports the charge then made against him. Mr. Ettor says that the men, if forced to go back to work, will ruin the machinery and the cloth. Is it lawful to make such threats, which incite to violence and crime?

On two successive evenings President Taft lately held conferences with a number of negro officeholders and listened sympathetically to very plain talk as to the disabilities under which negroes labor, and the impression in the South that the President does not want to appoint negro officials there. Such a conference is a sign looking to a better understanding.

Now that it has been proved that the "Maine" was blown up from without, it will not be necessary to return to Spain, Cuba, Porto Rico and the Philippines.

"Tammany will live on Boats at Baltimore," runs the headline; but this does not mean that Tammany will live on water.

Swindling by Mail

WHEN the Burr brothers were arrested and indicted in New York, a little more than a year ago, for robbing the ignorant by means of alluring circulars sent in the mails, the Post Office Department, which caused the prosecution of these swindlers, said that during the year 1910 it had attacked seventy-eight similar groups of dishonest "promoters," who in five years had taken more than \$100,000,000 from the people of the United States. Shelton J. Burr, Eugene H. Burr and two men associated with them pleaded guilty a few weeks ago and were sent to the penitentiary for one year. They had sold stock in thirty-two mining, oil and transportation companies capitalized at \$42,250,000.

Chief Post Office Inspector Sharp said, last week, in his annual report that the promoters of fraudulent schemes who were driven out of business in the last fiscal year by the Post Office Department had "obtained approximately \$77,000,000 from the public." This great sum was the receipts of those who were exposed and prosecuted, and it does not include the gains of others who have thus far escaped. During the year 522 men were indicted for a fraudulent use of the mails and 184 convicted; 177 are awaiting trial. Inspector Sharp's description of the projects which these rascals laid before the unwary should be widely published.

Many of these swindlers have taken offices in New York, and in the downtown banking district. Thus it comes about that honest banking and finance in New York suffers unjustly in the estimation of people in remote parts of the country who are not well informed. Some who have been robbed by such scoundrels have been accustomed to explain that they lost their money in "Wall Street." That has also frequently been the assertion of those who lost money in bucket shops by what they called speculation in stocks or grain, and the New York Stock Exchange has been held responsible, by the ignorant, for swindling

operations of which it had no knowledge whatever. These confidence games and bucket shop exchanges so mislead many people far from New York that they are ready to believe that a few capitalists in that city manufactured the panic of 1907 for their own profit. New York bankers should assist the Post Office Department and the Department of Justice in exposing and punishing all swindling promoters and bucket shop operators.

The Stock Market

THE Chicago, Milwaukee & St. Paul Railroad Company reduced its dividend rate, on Thursday of last week, from 7 per cent (which had been paid since 1902) to 5 per cent. There was but little change in the prices of stocks until Saturday, when the market declined. But St. Paul's net loss for the week was only $1\frac{3}{4}$, while the losses of the three leading active stocks, whose sales were 52 per cent. of the total, were as follows: Reading, $4\frac{1}{8}$; Union Pacific, $4\frac{1}{4}$; Steel, $2\frac{7}{8}$. The reason given by St. Paul officers was that net earnings had been reduced by a failure of crops in the Dakotas and Minnesota, and by a general depression of business. Others said that the addition of \$125,000,000 of stock for the extension to the Pacific Coast had not been supported by the business on the new line.

....A handsome and finely printed book, illustrated by portraits, pictures of buildings, interiors, etc., sets forth the history and work of the Pennsylvania Company for Insurances on Lives and Granting Annuities, which was founded in 1809, and which now transacts a general banking, trust and safe deposit business, at 517 Chestnut street, Philadelphia. The company's capital is \$2,000,000 and its surplus \$4,000,000. Its resources are \$28,000,000. Its deposits exceed \$21,000,000 and it holds \$197,991,000 in individual and corporate trusts. C. S. W. Packard is president, Thomas S. Gates vice-president, and A. V. Morton treasurer.

A New Bank Building

THE Mutual Bank, of New York City, will move in a few days into its new building, at 49-61 West Thirty-third street. This beautiful new structure, of Indiana limestone, cannot fail to attract attention. The Mutual Bank was established twenty-one years ago. It has a capital of \$200,000; surplus and undivided profits of \$385,954, and deposits of \$4,434,687. It has total resources of \$5,020,641. Former presidents of the

bank were David Stevenson and James McClenahan. The officers now are Charles A. Sackett, president; John C. Van Cleef, vice-president; Hugh N. Kirkland, vice-president and cashier. The chairman of the board of directors is Richard Delafield, president of the National Park Bank of New York. Other directors include Charles P. Taft and Cornelius Vanderbilt.

....Owing to the higher wages paid since the compromise which ended the great strike, English railroad companies are now increasing excursionist, tourist and week-end fares, adding from 2½ to 10 per cent.

....The Nitedals Match Company, of Norway, has bought 250 acres of land, including nearly a mile of water front, on the Hudson River, at Verplanck's Point, near Peekskill, and will erect there one of the largest match factories in the world, with dwelling houses for 5,000 employees.

....New York City's debt at the beginning of 1912 was \$1,037,811,718, or about \$20,000,000 more than the public debt of the United States Government, but bonds held in the sinking fund reduce this total by \$449,535,882.

....Altho the surplus of all the national banks amounts to 65 per cent. of the entire capital, there are 1,284 banks, each of which has a surplus of less than 20 per cent. of its capital, and 250 (recently organized) which have no surplus.

Therefore Comptroller Murray will urge those organizing banks hereafter to pay in a surplus equal to at least 10 per cent. of the capital stock.

.... Mergers or incorporated combinations in Canada last year involved \$113,131,350 of capitalization, against \$135,000,000 in 1910, and \$136,000,000 in 1909. The interests recently combined include those of breweries, flour mills, canneries, steamship companies and companies man-

ufacturing cement, cars, paints and iron and steel.

....December's output of pig iron was 2,043,270 tons. The year's output was 23,311,711 tons, which may be compared with 26,855,511 in 1910, 25,795,471 in 1909, and only 15,936,018 in 1908.

....Alaska's products last year had a value of \$38,000,000, against \$32,000,000 in 1910. The mine output was \$20,400,000, and \$16,500,000 was added for sea products, including \$14,125,000 for canned salmon.

NEW BUILDING OF THE MUTUAL BANK.

Insurance

The Cost of Insurance

IN a circular issued last week by Superintendent Hotchkiss, of the New York Insurance Department, that official raises the question, which he characterizes as fundamental,

"whether the amount now paid for insurance—particularly in the fire and casualty fields—is not, in its expense factors, greater than the service performed by home office and field representatives is economically worth."

He adds that it is impossible to find anywhere a scientific discussion of this question.

It will be recalled that in his annual message to the Legislature this year Governor Dix, of New York, adverted to this matter, observing:

"The time has perhaps come when, in fire, casualty, employers' liability and similar lines of insurance, means should be devised—as was done with life insurance six years ago—whereby expenses and commissions should be limited by law and the cost of insurance thus properly reduced."

Superintendent Hotchkiss suggests that the way is not long from the asking of the question to the conclusion that government, "now growing yearly more and more paternal," can perform the service better and more economically than is now done by the insurance companies. That is a debatable proposition. There is no evidence extant that government has done anything of the sort in any line which it has monopolized. The New Zealand experiment in insurance is not convincing.

Fire and casualty underwriters freely admit that the expense element incident to the operation of their respective lines is greater than it should be—than they wish it to be—but that the cause is as fundamental as the result. It is inherent in our social-economic constitution. Many of the laws governing insurance are inescapable sources of expense. From 2 per cent. to 2½ per cent. of the fire insurance premiums, yearly, go to government in the form of State, county and municipal taxes, licenses and fees.

Again, how many persons desiring or needing fire or casualty insurance procure it for themselves directly from the companies? In our large cities each insurant shifts all the labor and responsibility incident to getting his property, life and limbs protected by insurance to the shoulders of a broker. In country places, towns and villages the work is done by agents appointed by the insurance companies. As a matter of fact, the American people do not deal with the companies at all. They seem to prefer to do this business thru friends or acquaintances who have set up as middlemen in response to an existing demand. Here lies the main expense of writing fire and casualty insurance.

Speaking of the necessity of reducing the cost, Superintendent Hotchkiss observes that it is "but part of a general movement toward the lowering of prices as to all commodities of public necessity, thru the reduction of profits, salaries and commissions," adding that the insurance companies "should be the first to recognize these conditions and the danger they run if they are longer allowed to continue." To this the underwriter replies that, altho the cost of living has increased 30 or 40 per cent. in the last ten years, the commissions and salaries of insurance company servants have virtually remained stationary, and that insurance protection itself is one of the few things used by the people the average cost of which has not increased.

FROM Albany comes to our desk a volume of almost 700 pages entitled "List of Securities Held by Insurance Companies," with valuations fixt as of December 31, 1911. The list was contracted for and adopted for use by the committee on valuation of securities of the National Convention of Insurance Commissioners (J. B. Lyon Company, State Printers).

FORGERY losses in the United States during 1911 are said to have cost insurance companies \$15,000,000.

The Independent

VOL. LXXII

NEW YORK, THURSDAY, FEBRUARY 8, 1912. No. 3297

Survey of the World

The Republican Candidates

Senator La Follette, suffering from "over-work" and a nervous breakdown, will take a two weeks' "rest cure." Coming hard upon the incident of the Senator's speech before the Periodical Publishers' Association at Philadelphia, this announcement may well be Mr. La Follette's way of taking himself out of the contest, where his chances were more than ever hopeless. The Wisconsin man's Philadelphia speech, which, with its numerous repetitions, consumed over two hours, was concluded long after midnight, February 2-3, and had a most depressing effect upon the diners, most of whom withdrew from the banquet hall. The Senator repeated his familiar assault upon the "money trust," and, this time, the press as well; the latter for a lack of independence and sincerity. The toastmaster, Mr. Seitz of the *New York World*, said upon the conclusion of the Senator's diatribe that he would not try to defend American newspapers against a "foolish, wicked and untruthful" attack. Mr. La Follette's repetitious denunciation of the newspaper press was coupled with praise for the free magazines, and followed much shorter addresses by Mayor Blankenburg of Philadelphia and by Governor Wilson, both of whom received enthusiastic welcome. —Even before the Philadelphia débâcle, Mr. La Follette's cause was losing ground. Mr. Roosevelt has been gathering in the insurgent's friends. According to Alexander H. Revell, chairman of the Roosevelt National Committee: "the exigencies of the country will ultimately so appeal to the patriotism of Colonel Roosevelt that all considerations will be swept aside."

James L. Slayden, of Texas, introduced in Congress on January 29 a resolution, which was recognized three days later as a facsimile of the resolution adopted by the House in 1874, when General Grant was a candidate for a third Presidential term. The resolution affirms the opinion that the third term is contrary to our republican tradition, and that

"any departure from this time-honored custom [of retiring the President after a second term] will be unwise, unpatriotic, and fraught with peril to our free institutions."

The resolution has been referred to the House Committee on Election of President, Vice-President and Representatives. In 1874 the corresponding resolution was passed by a vote of 144 to 14. If voted again it would have no legal value, but only such force as belongs to an expression of Congressional opinion.

—Speaking in Columbus on January 30, Mr. Taft expressed confidence in Republican victory in November. There were three reasons why the party should be returned to power. The administration had "done reasonably and fairly well" and deserved a vote of confidence; the administration was "progressing and would put in operation all the necessary legislation that is progressive"; finally, the administration "was not chasing chimeras and unsettling the foundations of government." His administration was attacked because it had enforced the trust laws, and thereby "forfeited the support of business." At Akron and elsewhere the President, who was recovering from a severe cold, repeated his optimistic declarations and aggressive defense of his policies. Charles D. Hilles, on February 1, issued an author-

ized statement to the effect that "President Taft's nomination in June is as certain as anything can be," and his re-election equally certain. Mr. Taft's friends assert that as time goes on he gains strength with the country, and that it would be suicidal for the President's party to go before the country on any other issue than that of the Taft administration. They are cheered also by the vote of the New York County Republican organization (582 against 8) to support the President for re-election. At the meeting of the New York committee Mr. Roosevelt's praises of Mr. Taft in 1908, when he considered him the best fitted man in the country for the Presidency, were quoted amid cheers and laughter. At St. Louis the Republican city committee has rescinded its vote in favor of Mr. Roosevelt. It is said that the President means to abandon his policy of neutrality as to the Roosevelt candidacy.

The Wilson-Harvey Correspondence

On January 30 a New York newspaper published the letters exchanged by Governor Wilson and Colonel Harvey, editor of *Harper's Weekly*, after the latter learned from Dr. Wilson that in his opinion the *Weekly's* support was damaging. Col. Henry Watterson said of the Governor that if he had "one spark of honorable sensibility" he would require the publication of these "abject letters." The letters signed by Governor Wilson have not impressed most readers as they seem to have impressed the Louisville editor, and in some quarters it is declared that the candidate's position is improved by the whole controversy. On December 21 Governor Wilson wrote to say that his mind is "a one-track road, and can run only one train of thoughts at a time." He had answered the question put to him by Colonel Harvey as to the effect of his editorial support "simply as a matter of fact and of business," without expressing his "sincere gratitude" for the editor's "generous support." "Forgive me and forget my manners," the letter concludes. Colonel Harvey wrote, in reply, that "whatever little hurt" he felt in consequence of the Governor's "unexpected peremptoriness of attitude" was wholly

eliminated by the "gracious words" of this letter.

"The real point at the time of our interview was, as you aptly put it, one simply 'of fact and of business,' and when you stated the fact to be that my support was hurting your candidacy and that you were experiencing difficulty in finding a way to counteract its harmful effect, the only thing possible for me to do, in simple fairness 'to you no less than in consideration of my own self-respect, was to relieve you of your embarrassment, so far as it lay within my power to do so, by ceasing to advocate your nomination.

"That, I think, was fully understood between us at the time, and, acting accordingly, I took down your name from the head of the *Weekly's* editorial page some days before your letter was written. That seems to be all there is of it."

Governor Wilson's next letter added expressions of regret at the manner in which he expressed his attitude, saying: "I am very much ashamed of myself, for there is nothing I am more ashamed of than of hurting a true friend, however unintentional the hurt." Replying, Colonel Harvey assured the Governor that there was left in him "no particle of personal rancor or resentment."—In reply to Colonel Watterson's strictures and charges Governor Wilson declared last week that neither he nor any one at his request asked the Kentuckian to raise money for his campaign. "I am only sorry to have to regret a friendship, which, while it lasted, I found interesting and enjoyable." In reply to an inquiry Governor Wilson said he preferred to have this statement stand as above, rather than "to regret *the loss* of a friendship," etc. The manager of Governor Wilson's campaign asked "what became of the money which Colonel Watterson admits he collected" for the campaign fund. "Certainly I never received any of it," he continued.—Colonel Watterson himself, on his way to Florida, expressed disgust at the spectacle of "Wilson and Harvey weeping upon one another's bosom."

The disorder at Lawrence, Mass., discussed in a contributed article published in this issue, and also (in this department) in THE INDEPENDENT of last week, brought to the city on January 29 troop trains and trolleys carrying twelve more companies

of infantry and two troops of cavalry. This reinforcement followed a day of rioting, in the course of which an Italian woman was shot to death in somewhat mysterious circumstances. Part of the Lawrence disorder may be laid to the fact that the saloons are running full blast, in spite of the gravity of the situation. On February 2 four inmates of a Syrian lodging house were murdered and their bodies mutilated, two of the victims being women. Apparently the murders have no connection with the strike, but at first it was reported that these persons were French-Canadian operatives who had returned to work, and there was great indignation in the French-Canadian quarter, and threats of retaliation, for race feeling has developed among the workers, the Franco-Belgian, Canadian and English-speaking strikers having weakened, while the Syrians, Armenians, Poles, Russians, Italians and Lithuanians have refused to return to the mills. It is said that exorbitant rents, charged by the American Woolen Company for lodging in tenements which they themselves control, provoked the strike.—Charged with being an accessory to the murder of the Italian woman, Ettor, the strike leader, and Octuro M. Giovanniti, also of New York, and Ettor's right-hand man, were arrested last week by the State Police. They are held without bail for a hearing on February 9.—A striker named Rami was mortally wounded, apparently with a bayonet, in a scuffle in the Syrian quarter, January 30. Next night a visitor from a nearby town was mortally wounded in the same manner.—Charged with conspiracy in connection with the alleged "planting" of dynamite in the homes of strikers, John J. Breen, an undertaker and a member of the Lawrence School Committee, was bound over to the grand jury, February 2, under bail of \$2,000 each on two counts. Six Syrians arrested in the case have been set at liberty.—It was asserted at Los Angeles on January 30 that Bert H. Franklin, the detective employed by Darrow, indicted counsel for the McNamaras, and accused of bribing jurors, would make a clean breast. Franklin tells newspaper men that he will never go to the penitentiary. Darrow, mean-

while, has been arraigned, and has pleaded not guilty of bribery. Numerous subpoenas have been issued in the Indianapolis investigation of the dynamiting cases. Thirty or more indictments were voted last week, and more will be returned this week.—The United Mine Workers, meeting at Indianapolis, voted, on January 31, to condemn the action of Judge A. B. Anderson, of the Federal Court, in ordering Detective W. J. Burns released while under kidnapping charges, and to ask Congress to investigate and to remove the judge from office. Only three of the 1,100 delegates opposed the resolution. The national convention of miners adjourned *sine die* February 2, after receiving a report from the scale committee showing that the operators refuse all demands for increased wages and improved mining conditions. The committee is directed to continue negotiations. A compromise is hoped for.

Various Items The President sent to Congress on February 2 a message on Alaska and the public domain. He urges the establishment of a Bureau of National Parks, and for Alaska the construction of a Government railroad and the establishment of a commission form of government. Mr. Taft would have one-half the commission elected and the other half appointed by the President. A leasing system is proposed for Government coal and phosphate lands in Alaska, and in the United States, and the President would modify the reclamation laws in favor of the genuine homesteader. Following a suggestion of Secretary of the Interior Fisher, the President declares that the control of water power sites should remain in the Federal Government.—Mr. Taft urges, in his message, an inquiry by a Federal commission, into the high cost of living, and also an international conference on the subject. He urges, no less, the establishment of a Federal commission on industrial relations, and "a re-examination of our laws bearing upon the relations of employer and employee," with a scrutiny of State laws and foreign laws looking toward regulation and amelioration.

--The Interstate Commerce Commission is about to prosecute express companies for overcharging shippers. The State Railroad Commission of Indiana is cutting down the gross earnings of the express companies on intrastate business by 15 per cent.

Panama and the Canal President Arosemana, of Panama, has begun the six months' vacation which, the Supreme Court says, will enable him to be a candidate for re-election. Federico Boyd, second Vice-President, declined to be the head of the Government during his absence, and the place has been taken by Third Vice-President Chiari.—It is said at Washington that the House committee which has been taking testimony concerning the Panama Canal will ask for a passage rate of \$1 a ton and is opposed to any discrimination in favor of American ships. Senator Bristow has introduced a bill providing that the charges shall be \$1 a ton for foreign ships, 50 cents for American ships (not in the coastwise trade), which shall consent to be used by the Government as auxiliary cruisers in time of war, and 25 cents for American coastwise ships. A committee of the New York Chamber of Commerce has reported resolutions asking for a charge of \$1 per ton and declaring that discrimination in favor of American ships is forbidden by existing treaties.—A prominent citizen of Panama replied in a local newspaper to an article, attacking Panama, which was recently published in the capital of Colombia. Whereupon Colombia's confidential agent in Panama prepared and circulated, last week, a printed statement highly offensive to the people of Panama. A mob assembled in front of his residence and hooted him and his country. He was protected by the police.—President Gomez, of Cuba, has been advised to ignore the claims of Great Britain, France and Germany for damages on account of property losses while the island was held by Spain. Señor Bustamante, chairman of the Senate Committee on Foreign Relations and a student of international law, asserts that the claims are absurd and that Cuba will neither pay what is demanded nor sub-

mit the dispute to arbitration.—The after section of the battleship "Maine," which was not injured by the explosion, has been floated. In March it will be towed out to sea and buried there, with appropriate ceremonies. The after turret has been given to Havana. It will be set up as a monument in a public park.

Revolts in Mexico The Maderist garrison of Juarez, about 300 men, mutinied on the 31st ult. and took possession of the city in the name of Emilio Vasquez Gomez, formerly a member of De la Barra's Cabinet and a candidate for the Presidency. These men imprisoned their commander, Colonel Estrada, and the chief of police, looted the shops, and destroyed the railroad tracks south of the city. During the riots eight persons were killed. Three of these were Americans. Many of the residents fled across the river boundary to El Paso. The mutineers issued a long proclamation, denouncing Madero and nominating Gomez for Provisional President. Madero, they say, has not kept his promises. The immediate cause of the revolt in Juarez is said to have been the discharge of seventy of the Maderist soldiers, and the failure to pay any of them more than half the wages due. On the 2d inst., in the city of Chihuahua, ninety rurales, about one-third of the garrison, revolted and forced the authorities to release from prison Antonio Rojas, a supporter of Emilio Gomez. General Orozco commanded those who remained loyal. In a three hours' fight fourteen men were killed, and one of them was Orozco's cousin. Rojas and the mutineers went to the hills. Orozco did not lead a force of soldiers to Juarez, but went with four or five companions to seek a compromise. The negotiations in Juarez consumed half a day, and a settlement was reached. The Juarez mutineers left the city on a special train, on the 4th, and the authority of the Madero Government was restored. But the garrison at Casas Grandes revolted, in the interest of Gomez, and there was evidence of dangerous unrest thruout the State of Chihuahua. On this account, and because Madero was unable to subdue the Zapatists, our Government prepared to assem-

ble 15,000 men on the border. The Zapatists had captured an American named Robinson, the manager of a mine in the south, and Madero, it was said, had told the American Ambassador that he could not protect Americans. All the cavalymen in Texas, about 4,000, were ordered to the border. There had been plenty of fighting in Morelos. At least 200 Zapatists had been killed, but the bandit army could not be restrained. Nearly 2,000 of Zapata's men menaced the city of Cuernavaca, which, at the end of last week, was still in danger. Zapata said he was fighting for control of the whole country, and would not be satisfied with the State of Morelos. Madero had repeatedly fooled him, he added, and he desired to overthrow the Madero Government. The Zapatists captured and looted railway trains. On the 2d they fired upon a White Cross automobile, and killed a physician who was in it. It was thought in Washington that the Madero Government, unable to cope with Zapata in the south, was menaced in the north by great discontent which might cause a new revolution.

✱

South America Details have been added to the first brief report of the lynching of ex-President Eloy Alfaro and other revolutionist leaders at Quito, on the 28th ult. The ex-President, with General Flavio Alfaro, General Paez, General Serrano and Medardo Alfaro, had been taken from Guayaquil, to save them from the mob that had killed General Montero. They arrived at Quito at 4 a. m. on the 28th and were placed in the penitentiary. The same day a mob of 5,000 attacked the prison. The soldiers on guard defended it for a time and killed several of the assailants, but at last they were compelled to yield. The mob tore down the prison walls, dragged out the prisoners, killed them, and burned the bodies in the street. In addition to those already named, several other prisoners were lynched, one of these being Colonel Coral, the editor of a radical newspaper. General Leonidas Plaza, commander of the Government's forces, has been stricken down with yellow fever, and a great epidemic of this disease appears to be at hand in Guayaquil.

Ulster and Lancashire

There is still danger of a conflict between Orangemen and Home Rulers on February 8, when Winston Churchill, First Lord of the Admiralty, is to speak at Belfast, but the tension was somewhat relieved when Mr. Churchill, in a letter to the Marquis of Londonderry, chairman of the Belfast Unionist Council, agreed not to speak in Ulster Hall, the Unionist headquarters. He added, however, that he would speak elsewhere in Belfast on that date and if there was any rioting the responsibility for it would rest on Lord Londonderry. In reply Lord Londonderry acknowledged that the main objection of the Unionist Council was removed by the determination "to hold your meeting outside the district which passionately resents your action. . . . At the same time, having regard for the intense state of feeling created by your proposed action, the Ulster Unionist Council cannot accept any responsibility with reference to your visit to Belfast, and they do not desire to give any assurance they might be unable to fulfill." Lord Londonderry's letter also alluded to Winston Churchill's father, Lord Randolph Churchill, who in this same Ulster Hall denounced Gladstone's Home Rule bill and declared "Ulster will fight and Ulster will be right." Mr. Churchill, in replying to Lord Londonderry, says on this point:

"Your Lordship has claim, to which I bow, to remind me of the memory of Lord Randolph Churchill. You were his friend thru evil as well as good days. The Unionist party, which within a few months of the very speech which is now on its lips pursued him with harsh ingratitude, has no such right."

The Orangemen tried to shut out Churchill from Belfast altogether by hiring every hall in the city for February 8, but the Liberals have arranged for a tent meeting in Celtic Park. There will be 5,000 troops on duty in Belfast to check rioting.—A forecast of the Home Rule bill has been published, according to which Ireland is to receive an annual subsidy of \$10,000,000 for fifteen years, after which she will contribute a portion of her revenue to the imperial expenditure. The Irish Parliament will have full control of customs and excise, but complete free trade with England must be continued. The Irish Parliament will

consist of two houses—a legislative council of about 50 members and a legislative assembly of 103 members. The council will have a suspensory veto on legislation. In the event of a disagreement between the two houses, after the second rejection of a bill by the council, it will be submitted to the two houses, deliberating and voting together, and adopted or rejected according to the decision of the majority. Ireland will continue to be represented in the Imperial Parliament, but in greatly diminished numbers. The Irish Parliament is to have no control with respect to the navy, army, militia, foreign policy, coinage, military camps and coast lighting, and will be forbidden to establish or endow any religion or deal with any religious matter.—The operatives in the cotton mills went back to work on the understanding that the question of the open shop should remain open, but outbreaks occurred again in the mills over the three non-union employees who were the occasion of the great strike. Joe Riley and his wife were stationed at neighboring looms and the rest of the weavers waited for them to start their machines. As soon as they did this the others gathered around them with shouts of "Scabs" and "Blacklegs!" and they were compelled to leave. Miss Margaret Bury, at another mill, had a similar experience, and had to be escorted out of town by a dozen policemen. All three have since given up their fight for independence and joined the union.

Disorders in Portugal The embarrassments of the republic are becoming more serious than ever. The Government is denounced from the pulpits on account of the separation law and the expulsion of the Patriarch of Lisbon, strikes and riots are rife in city and country, and a new conspiracy for the restoration of the monarchy has been formed in England. The present disorders arose from a strike of the agricultural laborers in the province of Alemtejo, who invaded the city of Evora and there came into conflict with the military. Seven persons were killed and many more wounded by the sabers and shots of the cavalry which patrolled the streets.

The district was placed in a state of siege for two days and the strikers quelled, but the Federation of Trade Unions at Lisbon took up their cause and demanded, under threat of a general strike, the dismissal of the Governor of Evora, the reopening of the union offices and the release of the strikers arrested. The Government offered some concessions, but not enough to satisfy the federation. The strikers boasted that they had 20,000 bombs on hand, and they began promptly to use them in attacks on the troops and in blowing up street cars. The newspapers suspended publication and the theaters closed. The Government took vigorous measures to maintain order. The Lisbon district was put under martial law, with General Carvalhaes in command. Troops to the number of 8,000 were placed at strategic points and crowds on the streets dispersed. Hundreds of suspected persons were arrested and confined on the warships in the harbor, and the Government introduced into the Chamber of Deputies an urgent bill authorizing the trial of the rioters and agitators by court martial in batches of twenty-five. It is claimed that the strikes were instigated and financed by the monarchists and that an attempt was to have been made to cross the eastern instead of the northern border, as formerly, at the time of the rising in Evora, but this was frustrated by the massing of troops at the frontier. The ex-King Manuel had a conference at a Dover hotel with Dom Miguel of Braganza, at which the latter agreed to resign his claims to the throne and to use all his efforts to restore Manuel. Dom Miguel's son married Miss Anita Stewart, of New York, and it is supposed that the millions she inherited from her stepfather, James Henry Smith, will be used to overthrow the Portuguese republic. It is expected that Manuel will marry one of Miguel's seven daughters and so unite the two branches of the House of Braganza. The Spanish Government if it does not actually intervene in Portugal will doubtless afford an opportunity for the preparation of the expedition to be sent across the border. It did in the former case, because the presence of the Portuguese republic is a constant menace to the monarchy of Spain.

Persia W. Morgan Shuster, on his arrival in London, delivered an address at a dinner given in his honor by the Persian committee at the Savoy Hotel. His plainspoken and unexaggerated statement of his case created a very favorable impression. He stated that 99 per cent. of the disturbances in Persia were imported by Russia as an excuse for intervention. He had been accused, he said, of lacking finesse and pleaded guilty to the charge of not having enough finesse to recognize that the words in the Anglo-Russian agreement did not mean what they said. He had been blamed for giving his views publicity in the newspapers, but he said he had asked the Persians "whether they preferred their country slain in a dark alley or that the crime should be committed in the public square." He condemned the joint Russo-British ultimatum because it forced Persia to pledge herself to satisfy all the claims that Russia had made or might make. He concluded:

"I am not bitter about our experience, but I would be a hypocrite did I pretend not to sympathize with the bitterness of a Mohammedan people who have so forcibly learned the lesson that the Ten Commandments do not apply in international politics."

At the dinner, J. R. Macdonald, leader of the Labor party, said:

"After listening to Mr. Shuster's account of the happenings we are deprived of the merest shadow of excuse for our conduct. I had been hoping for something, somewhere, which would excuse us for acting as we have done, but after listening to Mr. Shuster's convincing recital of the facts, I think the best thing he can do is to go away from this meeting tonight as quickly as possible and put down on paper that most damning and damnable indictment against modern diplomacy that he has given us, so that we can study it."

—Teheran and other cities of Persia are threatened with famine because, since Mr. Shuster's departure, the regular deliveries of grain from the provinces which he arranged for have been discontinued and the food supply has been monopolized to secure extortionate prices. Great Britain and Russia have agreed to make an additional loan of \$2,000,000 to relieve the necessities of the Government. It was one of the points of Mr. Shuster's indictment that Persia was compelled to get all her loans from these two Powers instead of obtaining cheaper money elsewhere.

Chinese Revolution The atmosphere has been somewhat cleared by the report that the Empress Dowager has issued an edict instructing Premier Yuan Shi-kai to co-operate with the revolutionists in establishing a republic. The edict has not been formally published, but will give Yuan power to conduct negotiations. Altho many of the republicans regard Yuan as ambitious and untrustworthy, they are likely to consent that he be made President, with Sun Yat-sen as Premier and Tang Shao-yi as Foreign Minister. The chief point of controversy at present between the parties is the location of the capital, for the revolutionists desire Nanking and are strongly opposed to the maintenance of the central government at Peking. There is still some talk of dividing the empire, at least provisionally, between a southern republic and a northern constitutional monarchy or republic. In any case it is expected that the Emperor will be retired to Jehul and may retain some official or sacerdotal dignity somewhat like the Mikado when the Shogunate was the ruling power in Japan. The republicans are said to have been able to secure a loan of \$6,000,000, pledging as security the ships of the China Merchants' Steamship Company and a loan of \$3,000,000 secured by the Han-Yang Iron Works. There have been no important military movements during this week, but much rioting and bomb throwing. Manchuria is likely to attempt to withdraw from China in case a republic is decided upon. The authorities at Mukden are rigorous in putting down all revolutionary outbreaks, and many persons suspected of republican proclivities have been seized and beheaded. According to various reports from Chinese Turkestan some of the inhabitants have appealed to Russia for protection and others to Great Britain. Taking advantage of the period of procrastination during which the Manchus were trying to make up their minds to abdication Yuan Shi-kai has been massing Chinese troops in Peking so that he would be able to dominate the situation in case the Manchu troops took up arms in defense of their privileges. There are now more than 11,000 Chinese troops under his command in the vicinity of the capital.

"HOUSEWIFE BODOLPHE"

BY FRANZ HALS

One may correctly enough prefer Rembrandt, but one does not dispose of Rembrandt's fellow Hollander by calling him "superficial." The wonderful flesh tints and humor of Hals are not all; for his people are real people, today as much as ever in the seventeenth century.

"NICOLAS RUTS"

BY REMBRANDT

Another Rembrandt portrait for America: this time from Mr. Morgan's London collection, divided between the South Kensington Museum and the collector's house at Prince's Gate, London. It remains a question whether Mr. Morgan's pictures, statues, carvings, and Egyptian collection, stored in Paris, are to come to America.

"ANNE OF AUSTRIA"

BY PETER PAUL RUBENS

Rubens is not a favorite today, but his technique still commands admiration. Here he represents the daughter of Philip III of Spain: the mother of Louis XIV of France. We commented editorially in our last issue upon America's gaining of these great London collections.

"INFANTA MARIA THERESA"

BY VELASQUEZ

One of the treasures of Mr. J. P. Morgan's art collection; a painting by the great Spanish court painter, which will be transferred to the Metropolitan Museum of Art, New York, where it will probably be necessary to build a new wing to house all the new accessions.

Two O'Clock Sunday Morning

BY SCOTT NEARING

[The writer is a professor of economics in the Wharton School of the University of Pennsylvania. He has published during the year 1911, three volumes: "Social Adjustment," "Wages in the United States" and "The Solution of the Child Labor Problem." His book, "Super-Race," is announced for publication this spring.—EDITOR.]

THRU the mist of a bleak February night the clock in City Hall tower sounded twice. Only a few belated pedestrians remained on the street, and sometimes minutes elapsed between the passage of two cars. A boy of thirteen stood on the corner selling

just as quick as we could hand 'em out. We'd be there now, only a big feller chased us."

"How long have you been selling, Tom?"

"Me? Ever since I was six. Started in up at Twelfth street with the night

"I'VE SOLD PAPERS EVER SINCE I WAS SIX."

papers. Already he had stood there for three hours.

"Hello, Tom! how are you tonight?"

"Oh, I'm good enough; how are you?"

"Pretty well; how is business?"

"Fine; they went like hot cakes tonight. See, I ain't got only five left. This here's a first-rate corner—pretty near as good as the one I used to have at Eighth street—and that was a daisy. Me and me brudder sold papers there

extrys, then I was up at the station, then a couple of big fellers kicked us out o' there and we went to Eighth street, and when we got chased out o' there we come here. Once in a while I go up to Chinatown. You get good tips up there, but the people is awful bad, and there's lots of big fellers what boots us little kids out. My, but haint I seen lots up there!"

"Do the newsboys around here gamble much?"

"Do we? Go up by Dempsey's any day and see. Why, two kids won thirty-three dollars up there Sunday."

"Do you ever win?"

"Nit; I won three or four times and lost about a thousand. That ain't no way to make money. If you want to make money easy, watch fer drunks. There's lots of 'em Sat'days. Last Sat'day one of our kids see a lady what had been hittin' it up some. She was scared to cross the street and the kid he says, 'Here, let me help ye,' so he grabs her right arm with 'is left and slips his right into 'er pocket, and out comes 'er pocketbook. She never knowed a thing about it."

"Don't you think it's wrong to rob?"

"Oh, I don't know. There's one of our kids what'll get pinched tonight if

he don't watch out. He's jest out of 'Ref' (House of Refuge). He lost his job and got down on his luck; an' he ain't got no money, so he's goin' down on Ninth street to snatch a bundle (steal a bundle of fifty Sunday papers). That's two dollars and a half if he gits it."

"You had better tell him not to do it, Tom. In the first place it is wrong; and in the second place there have been some bundles snatched from there lately and the police are on the watch."

"Well, we're like other folks; we got to live and we got to take our chances."

In the papers which Tom was selling was the story of a great captain of finance who had "taken his chances" and lost. What could one say to Tom?

PHILADELPHIA, PA.

Caprice

BY RALPH M. THOMSON

I SIGHED for fame—

A soul aweary of my humble lot;

And suddenly I heard my prattling tot

Lisping my name.

I yearned to ape

The rich, and cursed the fate that made me poor;

Anon I saw upon my neighbor's door

A piece of crape.

Unsatisfied,

I prayed for love, the comforter in life:

When I glanced up, behold, a faithful wife

Stood at my side!

Perturbed of mind,

Ashamed at heart, my eyes with tears abrim,

In penitence I cried aloud to Him—

"Oh, Lord, how blind!"

SAVANNAH, GA.

The Great Arbitration Treaties

BY ISIDOR RAYNER

[There is some delay in the consideration of the arbitration treaties. We are therefore glad to present the following article which follows the general lines of the arguments in favor of the arbitration treaties made by Senator Rayner, of Maryland, in the Senate.—
EDITOR.]

I CHEERFULLY respond to the request of THE INDEPENDENT for a brief abstract of my arguments in favor of ratifying, without change, the great arbitration treaties now before the Senate because, tho my views conflict with some of the opinions held by the majority of the Committee on Foreign Relations, of which I am a member, I am perfectly satisfied that the treaties constitute a valid exercise of the treaty-making power. I do not believe that there is the slightest legal difficulty in the way of their adoption without amendment or elimination. If the interpretation were left to the Supreme Court, I feel sure that this tribunal would unquestionably hold that the instruments as they stand are in strict accordance with the requirements of the Constitution. And feeling as I do that they are supremely in the interest of humanity and civilization, it is with intense satisfaction that I give them my zealous support.

I would state at the outset—and I do so frankly—that I am not infatuated with the wording of the treaties. With profound respect and admiration for our great Secretary of State, who occupies a foremost place in the field of law and diplomacy, I am not fascinated with the phraseology of the instruments. It is surely somewhat ambiguous, making possible the several interpretations which have appeared and possibly affording ground for some of the opposition. Here they are, however, before us, and the question is, What shall we do with them? Personally, I earnestly commend them as worthy of acceptance. Their transcendent purpose is the peace of the world, and no mere technical impediment should be allowed to obstruct its pathway to realization.

It is bound to come. Nothing can prevent its final consummation. We may

delay it, we may retard it, we may obstruct it, but we cannot suppress it, we cannot stifle it. And when it comes by universal concession it will be the greatest achievement of all the records of civilization. All hail the hour! It has been the dream of my earlier days and is the fervent hope and expectation of my maturer years—the end of human sacrifice, when man's inhumanity to man will cease; when the earth will no longer rock beneath the tread of battling legions, and naval armaments will no longer patrol the waters of the world in search of the possessions of unconquered races; and when the dove of peace will build its nest in the cannon's mouth.

I am in favor of the exercise of any lawful power under the treaty-making clause of the Constitution that will tend to bring about the peace of the world, and I consider the great arbitration treaty with England, and the treaty with France, which are together under consideration, and which follow precisely the same phraseology, as the greatest step in that direction which can at present be formulated. If we can succeed in ending war between the civilized nations of the earth it will be as great an accomplishment as any that was ever achieved upon the pages of history or on the field of progress. I have not the slightest fear of any danger that may result to our institutions from the adoption of these treaties, nor do I believe for a moment that any of the great governmental principles that lie at the foundation of the republic will be imperiled. On the contrary, I am buoyant with the hope that when the treaties once go into effect they will inaugurate the beginning of universal peace, and will relegate the art and practice of war to the barbarous deeds of the past.

This matter involves as serious and important a question as has been before

the Senate for many years, demanding most conscientious consideration, and as the reasons which influence me differ somewhat from the views generally advanced, I shall endeavor as briefly and clearly as possible to discuss these reasons, presenting the matter as I see it, in opposition to the objections which have been raised. If I succeed in shedding a little favorable light on the intricacies of the complex problem I shall be well satisfied.

The legal and constitutional objections which have been raised are: First, that, in presenting questions to the Joint High Commission, to decide whether differences which may arise are justiciable, according to the principles of law and equity, we confer upon it the power to refer to arbitration great governmental and constitutional questions which we should be unwilling to arbitrate with any nation on the earth; and, second, that the Senate, in giving this power to the commission, is delegating a constitutional function of which it has no right to divest itself.

Let us take up the first proposition and look at the conditions as to what differences between the nations shall be referred to arbitration. It is extremely important that they should be understood.

First. It must be an international matter about which the parties are individually concerned.

Second. There must be a *claim of right* made by one party against the other.

Third. The difference *must be justiciable*.

Fourth. It must be susceptible of decision *by the application of the principles of law and equity*.

There seems to be great fear of this word "equity." In England and the United States the words "law and equity" have an exact and technical significance, while it is true that this does not exist in France or in any of the continental countries of Europe, they having no separate system known as "equity." The fear is exprest in the statement that "there is little or no limit to the questions which might be brought within this article," etc. As a matter of fact, if a controversy should arise with France, France having no separate sys-

tem known as "equity," and the treaty reading questions "in law or equity," it must in my judgment be construed to mean any difference that is justiciable by the principles of law that prevail in France—the principles of law necessarily embrace the principles of equity in France, altho there is no separate system so designated. I do not, therefore, believe that the word "equity" can have the wide interpretation accorded it. If nothing else, the words "claim of right" in the treaty would settle this question.

"Wherever there is a right there is a remedy" is a familiar maxim of the profession, and it means that whenever the common law does not give the remedy equity will provide it. The framers of the treaty had no intention of using the word "equity" in the broad sense which the opposition to the treaty claim. Besides, following the world-wide custom with treaties, this identical construction having been first used in the treaty with England, it would mean in France precisely what it meant in the English treaty—that is, it would embrace the whole civil jurisprudence of France and nothing more.

But I am perfectly willing to accord the broadest meaning which can be given to the word, and can still find nothing to fear in it. If the Joint High Commission could by any possibility declare a question justiciable which does not and cannot come under any definition of the word, it would surely be overstepping the limits of its authority and its decision would be void. The two instances given, which are surely the most pertinent, are an infringement of the Monroe Doctrine and a question pertaining to our restriction of immigration. Take the question of immigration, for example. Is there any "claim of right" here? Who could possibly contend for such a proposition? The whole subject of immigration is as much an inherent power with every sovereign nation as the right of eminent domain. How could such a subject, which belongs to us, and to England, and to France—to each alone—ever constitute a "claim of right" of one against another, justiciable according to law and equity, no matter how much latitude is given to the definition of the word or to the power of the commission?

Then they say that the treaty might

involve us in a liability for State debts, when the very words of the treaty declare that it must be a *claim of right* that one of the contracting parties has against another. Is the United States obligated to pay the debts of the States? Where is there anything in the Constitution which permits us to assume the obligations of the States? Where is there any principle of international law or treaty stipulation which gives a foreign nation the right to look to the United States for the payment of State debts? Where is the "claim of right" by which such a question could be referred to arbitration? There could be no possible question to arbitrate.

Then take the Monroe Doctrine. The grave fear is expressed that if something arose to which we objected under the Monroe Doctrine, that the Monroe Doctrine itself would come up for arbitration. Think of it! The Monroe Doctrine has stood now for nearly a hundred years, and is as firmly imbedded as the Declaration of Independence, recognized and conceded by the civilized world. How could it possibly involve a claim of right, to be adjudicated by principles of equity, no matter what equity may mean? In considering this great question do not let us be frightened by specters and phantoms which fade into a dream the moment the light of analysis is thrown upon the scene.

In order fully to appreciate this it is necessary to understand precisely what the procedure is, according to the treaty. It is this: If the President concludes that a difference is justiciable, then, with the Senate, an agreement can be made to submit it to the permanent court of arbitration at The Hague, or to some other tribunal. Otherwise it is referred to the Joint High Commission. Now, ask yourself in all candor, do you believe, does any one believe, that a President or the Senate would ever submit the Monroe Doctrine, or the immigration question, or the indebtedness of States, or any constitutional matter, or any question affecting the integrity of our institutions, to an arbitral tribunal?

Very well; then let us take up the second part of the proposition advanced by the majority in opposition to ratifying the treaties as they stand. In the lan-

guage of the treaty, if the parties disagree as to whether the question is subject to arbitration, it shall be submitted to the Joint High Commission. Does any one believe for a moment that commissioners appointed on behalf of the United States could hold that any of these great subjects is susceptible of decision according to the principles of law and equity? But, they say, suppose that two of the commissioners appointed by the United States should so far humiliate themselves before their countrymen and should so far forget the functions of the places to which they have been assigned, and, utterly unmindful of their jurisdiction, should agree to refer to arbitration a question that is not justiciable, which is not a claim of right, which is not susceptible of decision by the application of the principles of law or equity, what is our situation then?

The case is *utterly imaginary and impossible*; but in such a case the Government of the United States and the legislative body and the treaty-making power would simply ignore the decision and reject and repudiate it. The claim is made that the Senate would have no right, under the treaty, to repudiate—and this has given rise to a great degree of anxiety on the floor of the Senate, and doubtless among many patriotic citizens who are earnestly watching the progress of the treaties from outside. To it I reply that in the first place the contingency can never occur; that no commission could ever, by any possibility, undertake to assume jurisdiction over questions like these; that no American commissioner that would ever be appointed by any President would ever dare to participate in such a decision. And even suppose that such a decision were rendered—a purely hypothetical case which in my judgment is beyond the realms of reason altogether—the President and the Congress of the United States would peremptorily decline to be bound by the judgment on the simple ground that the commission had overstepped the limits of the jurisdiction given to it in the treaty establishing it.

Suppose, for example, that the commission should send to arbitration the question whether the United States had the right to enact immigration laws for

self-protection, thus attempting to sap and undermine the foundations of sovereignty, and that our American commissioners, acting under some hallucination, should acquiesce. The President, the Senate and the House of Representatives would immediately say to the commission: "You have gone beyond the limits of your jurisdiction." If any court of arbitration ever undertook to decide a question of that sort—which is also an utter impossibility; not improbability, but impossibility—with perfect legal right the entire Congress, under its constitutional power, would, to the last degree, resist the enforcement of its authority.

I have dwelt upon these points because I want to demonstrate beyond a doubt that from any standpoint of law, or equity, or reason, or common sense, there is not the remotest chance in the world that these obstacles which are held up by those opposed to the treaties can ever be brought to the point of practical execution. I cannot conceive how it is possible to arrive at a conclusion that questions like these, embodying as they do the historical and traditional doctrines, governmental policies and constitutional principles upon which the preservation of the republic depends, could by any intendment or by the widest latitude be held for a moment to be within the jurisdiction granted to the commission in its creation, nor have I the slightest apprehension that the commission would ever assume such jurisdiction.

Then there remains only the last objection—that the Senate, in giving the commission the power with which it is invested, is delegating to it its own constitutional functions. If this were true, there would be the end of our right to make the treaties. The Senate cannot delegate its constitutional functions to any one. But the Senate could certainly consent to an arbitration treaty providing that before an award was rendered the arbitrators should have the right to determine whether the subject is justiciable. No one believes that this would constitute a delegation of the treaty-making power. Does it not follow with irresistible logic that, if we have the right to give to the arbitrators themselves the power to determine whether a

controversy is justiciable, we have the right to give it to an independent tribunal? If we gave the commission the right to make a treaty for us the Senate would be delegating its power and the proceeding would be unconstitutional; but in empowering this commission we are simply incorporating in the treaty we are making a provision against which there can be no constitutional objection. We are giving the commission a standard and a rule, and directing it to act in accordance with that rule—the application of the question: "Can this difference be decided according to the principles of law and equity?"

It is precisely the same power which the Senate conferred upon the Interstate Commerce Commission, and the Supreme Court has just decided that the act was constitutional. If the Senate had given the Interstate Commerce Commission the general power to fix railroad rates, without giving it a rule, it would have been delegating its legislative power. These treaties do precisely the same in creating the commission. The Senate lays down a rule by which the commission must be governed—the rule that the question must be justiciable according to the principles of law and equity. That alone would render void any attempt of the commission to submit to arbitration a question which was not justiciable within these limits. It absolutely declares and confines the extent of its jurisdiction.

I might go a little farther and assert that if the Senate is divesting itself of constitutional power in adopting this treaty, it has divested itself in the adoption of every arbitration treaty that has ever taken place between this country and any other country. If we have a right to make an arbitration treaty at all, we have a right to incorporate in the treaty a provision that a tribunal shall decide whether the question is justiciable.

If the suggestions are followed that an agreement shall be added to the treaties by which the Senate shall be given the unlimited right to review the findings of the Joint High Commission and to set aside its decisions, it would be infinitely better that the treaties be rewritten, taking away the power of decision from the Joint High Commission altogether. It

seems to me a mockery and a farce, if the Senate is to be the final judge and interpreter, to have any intermediary process to assist it—an anomaly in law that never to my knowledge has appeared upon the pages of any civilized code of jurisprudence.

I believe in the prerogatives of the Senate, and, so far as its constitutional power is concerned, no one has ever stood more steadfast and unwavering than I. In every public utterance I have ever made I have abided close to the limitations of the Constitution. I would not permit a step which I thought invaded in the remotest degree the prerogatives of the Senate, as announced in

our organic charter. Moreover, if I thought that this treaty meant an alliance with any foreign country, I would rather see it torn into shreds than accept it. But my opinion is that the treaty, if accepted practically as it is, will become the pioneer of universal peace, and that, however reluctant the German Government may now appear to enter into the compact, the situation will change and she will also become a party to the proceeding. And when the United States and Great Britain and France and Germany have signed and sealed this covenant, the era of universal peace will dawn upon the world.

WASHINGTON, D. C.

Southern Literature

BY E. S. NADAL

I LIVED as a boy in the South for some time just before the outbreak of the Civil War, and from what I saw my belief is that one cause of secession was the fear which the Southern individual had of the opinion of the rest of the community. It seems to me that this fear was also the ultimate cause of the inferiority of Southern ante-bellum literature.

Most of the literature of any value produced in this country up to the time of the war had come from the North. The literature of the South, of course with certain exceptions, had been feeble, imitative, exaggerated, affected and sentimental. First, regarding their books descriptive of their own society, I mean their novels, these books did not describe society truly. They could not do so. The reason of this inability of Southern literature was that there was one institution regarding which it dared not speak the truth. That institution was one of vast importance and one which touched society closely at every point. Its necessary facts were abhorrent to the sentiments of the civilized world. The Southern people were themselves part and parcel of modern civili-

zation, and they could not bear a representation of their system which should show how irreconcilable it was with the civilization to which they belonged. In other societies in which slavery has existed writers have been free enough to describe it. There is in Juvenal a description of a cruel woman, who sends for the slave beater, and who is represented as pursuing her ordinary household employments while he beats the slaves. Says the poet: "While he beats, she is employed in enameling her face. She listens to her friends' chat, or she examines the broad gold of an embroidered robe. Still he lashes. She pores over the items in her long diary of household expenses. Still he lashes," etc. A Roman poet could so speak. But in those ancient days there was no great mass of Christian sentiment such as in our own time espoused the slave's cause and accused the conscience of the master. They had no Exeter Hall in those days and no Faneuil Hall, and no great and growing Republican party. I doubt if you will find so candid a passage as this from Juvenal in the whole range of Southern literature. Such freedom of description was out of the

question. The Southern writers who touched upon slavery could only describe the amiable side of it. They had to represent the relation between master and slave as a patriarchal one. There was no doubt a great deal of truth in that view. A humane master did stand in a patriarchal relation to his slaves. But it was not the whole truth or indeed more than half the truth. There was, no doubt, a great deal of cruelty. Upon this the Southern writers were, of course, silent. But they did not dare to describe such unpleasant facts as were necessary to and quite inseparable from the system. One morning I was riding northward along the macadamized road that traversed the Valley of Virginia when I met an old negro woman picking blackberries by the side of the road. I said: "Where are you going, auntie?" She answered: "God knows, massa; I don't." I looked ahead and saw that she belonged to a drove of negroes who were being taken south. There was a pretty thick drove, perhaps one hundred of them, so that I had to ride down into a little stream that ran by the side of the road to let them pass. They came on walking at a brisk pace. Following the drove there was a rather smart carriage drawn by two horses, a black man driving on the front seat, which was separated by glass from the two seats inside, on which were two well-dressed white men, the owners or overseers of the lot, and with them two mulatto women, no doubt also slaves, a mulatto woman seated by each man. The men were laughing and talking with the women, the women also laughing, and the men seemed to be treating them with a certain respect.

Such an incident as that of the old woman was a necessary result of the system. Of course, the good masters did not like to sell their slaves and would not do it if they could help it. But they could not always help it. Then there had to be some bad masters. The South had to have its proportion of bad people like the rest of the world. They could not all be patriarchs. Slaves would thus be sold. If there were slaves to be bought, there would, of course, be vile fellows who would make a business of dealing in them, and would buy them

in large numbers. (These men were known as "nigger traders" and were held in great contempt by the Southern people.) Like any other merchandise, the slaves would be transferred from the cheapest to the dearest market, and the least expensive way to do this was to take them on foot. Thus you have the incident of the roadside to which I have just referred, and nobody in particular to blame. Yet you would not see an incident of this sort in a novel descriptive of Southern life.

The obligation of the Southern writers to make a representation which should accord with the theory of patriarchal ownership was destructive of all vigor. They were under some such enfeebling limitation as Landseer would have suffered from had he been compelled to represent in every picture a theory of patriarchal government of dogs. Suppose Landseer had never been permitted to paint a dog that was not happy. Suppose he had never been able to paint a mournful or an unfortunate dog. What a restraint it would have been upon the liberty of the artist. The Southern writers were just as much impeded by the necessity they were under never to paint a negro who was not laughing. The other arts, I dare say, suffered from the same limitation. A painter, for instance, might only represent some very happy darkies in a prodigiously rich cotton field, bearing, say, 400 pounds to the acre, such a picture as you now see hanging in the cotton exchanges of the Southern States. I happen, indeed, to know a case from which it would seem that it was difficult for a painter at the South to represent a negro at all. The late Mr. Healy, the American portrait painter, living in Paris, told me that on one occasion he was employed at Washington by Daniel Webster to paint a portrait of an old negro woman, who had been for many years a servant in Webster's family and to whom he was greatly attached. Webster was much pleased with the picture, and the artist himself thought that he had succeeded with it. It was accordingly placed for exhibition in the rotunda of the Capitol. But some of the members objected to this; they said that it was not proper that the portrait of a

negro woman should be hung up in the rotunda of the Capitol. "But," said the artist, "suppose it was a cat or a dog, you would not mind, would you? Why, then, can't I paint a negro?" But they would not hear of it, and it was removed.

But the Southern writers, from being unable to be veracious upon one subject, seemed to lose the power of veracity regarding all subjects. They became imitative, exaggerated and sentimental. Their society they Europeanized. The Southern planter was an English squire. They made him a feeble Sir Roger de Coverley, and his farm or plantation a rather shabby English manor house. They imitated, among other characteristics of the classic describers of English rural life, their mildness of temper. But this good nature became, in the pages of Southern writers, excessive. The calm catholicity of Addison and the gentle optimism of the intelligent and the ever delightful Irving degenerated in such works as Kennedy's "Swallow Barn" into an amiability decidedly cloying. That book is a pretty picture of departed happiness and sociality, a charming record of the bright laughter, the friendship so sincere and cordial, the manners so simple and well bred, of those long forgotten mornings of 1820. But it is kind almost to the point of absurdity. The foibles of the comic hero are chaffed so affectionately; such a gentle ridicule is administered to the fop; and the sentimentality and affectation of the spinster are so very tenderly treated. Imitative in everything, the Southern writers were imitative even in their jokes, which were, as a rule, pretty bad. Here is a joke from the pages of Mr. Gilmore Simms, of South Carolina. A master calls to his slave: "Here, Cuffee, you thrice blackened baby of Beelzebub; come here, you imp of darkness." This is the sort of joke for which a precedent might have been cited out of Sir Walter Scott and would therefore do very well.

Everything was exaggerated. All their geese became swans. This is a tendency greatly to be regretted, for it is a sad day for literature when it becomes too good for the facts. The truth is that geese are the more poetical of the

two. But the Southern writers did not think this. A soldier was a cavalier; a house was a hall. They kept up this high-flown phraseology during the period of the war. You would have thought that the flag which they carried with such bravery upon so many bloody fields was poetical enough in itself, but they called that an "oriflamme." They represented everything as different from what it was. They did not seem to be able to describe even natural objects correctly. I should have expected this. If you and I, when we met, had something in common on our minds of which we dared not speak, we could hardly talk truthfully about the weather. So the Southern writers could not describe a bird, a flower or a star as it was. One of their poets, I remember, addresses the mocking-bird as "Yorick" and "Abbot of Misrule." But in truth they made very little account of natural objects. It is curious to observe how little they had to say about them. The natural facts of the South were very peculiar and most unlike those of other parts of the world, but they had never been heard of in rural England or in Provence of the troubadours, and the Southern writers would not recognize them.

One characteristic of Southern antebellum literature, I should like to remark, is that it was rarely vulgar, a claim which can scarcely be made for the literature of the North during that period. It is strange that this should be so, for there is, of course, a relation between affectation and vulgarity. In general, the surest way to be vulgar is to pretend to be something you are not, and that is what the Southern writers were always doing. And yet they were not vulgar. I fancy the explanation of this is that, underneath their apparent affectation, there was a deep-seated simplicity.

The characteristics of antebellum literature are very noticeable in a book I have been lately trying to read, a book which I had not seen since I was a boy, "Flush Times of Alabama and Mississippi." I remember it well as it stood on a shelf in my father's library, in two volumes, with some gay lettering running down the back. I was very fond of it at that time. I particularly remem-

ber the dedication, "To the Old Folks at Home in the Valley of the Shenandoah," which I thought pretty as coming from the Augusta County lad who had gone to seek his fortune among those wild fellows in the Southwest. Lincoln, by the way, was an admirer of this book. It was to Baldwin, the author, who was in Washington during the war and who wanted to get thru the lines to his family in Staunton, that he said one of his best things: "That he had very little influence with this Administration." The book, however, is very disappointing. It ought to have been a good book. The author could hardly have had a better subject. As I have heard that Southwestern society described in my youth by elderly men who had known it, it must have been highly interesting. They told me that it was composed of nothing but young men, who were full of animal spirits and in the pink of condition, and who, as there were negroes for the hard manual labor, had little to do but to amuse themselves, and that they did amuse themselves with a vengeance. Now, if the author had only contented himself with describing this society as it was, what a good book he might have made, for he is not at all wanting in humor and in powers of perception and expression. But he is so dreadfully literary. Where he will condescend to give the facts he is interesting, but for the most part he is so bent on being like Scott or Addison that one finds him very tiresome.

There was one book of those days, however, which was quite without the faults above indicated. This was Longstreet's "Georgia Scenes," a book written with a great deal of freedom and truthfulness. It was about contemporaneous with "Swallow Barn." Longstreet was a Georgia judge and lawyer, noted particularly as an advocate in criminal cases. On account of the death of a child, he grew interested in religious subjects and became a Methodist minister. He was a member of the Methodist General Conference of 1844, at which the Southern Methodists separated from their Northern brethren. Longstreet taking an active part in bringing about the separation. He lived until after the war and was late in life the

president of a Southern university. He seems to have been in character not very unlike other Southern politicians. I don't know why he should have written a book which differed from those of other Southern writers. But I am very sure that he did. His book has a truthfulness which makes you think of the early ages of literature, of a day before periodicals, and books, and printers, and editors, when men of genius, from no other motives than the desire of fame and the strong need of expression, engraved their intense thoughts upon tablets of clay.

While speaking of exceptions, I might mention one very important exception to the remark made at the beginning of this paper, concerning the general inferiority of Southern antebellum literature. Poe had received a Southern education and was very Southern. Like other Southern writers he was European and imitative. He wrote of nothing that he saw except with his mind's eye. Surely nothing that could suggest his "radiant palace" existed near Baltimore or Richmond, the Southern towns in which he had lived. His Guy de Veres and Ulalumes and Annabel Lees were of foreign origin, so far as they had any origin save in his own head. But, whether European and imitative or not, Poe succeeds by the right of genius, and fame, which cares little for the whys and the wherefores, so long as the genius is real and effective, will always follow him. Critics dilate upon the contrast between a personality apparently so uninteresting, or at any rate so devoid of salient characteristics, and his success as a poetical performer. A hundred years hence, no doubt, they will still be dilating upon this contrast—and reading his poems.

I did think that the impediment to good literature above mentioned, namely, the want of truth resulting from fear, would disappear with slavery. I have been compelled to modify that expectation. For one thing, characteristics do not disappear with the disappearance of the causes which produced them. But the causes still remain in the continued existence of the African race. Opinions regarding that race which differ from those of the mass are not tolerated in

the South. Or if they can be said to be tolerated, it is only toleration which is allowed them. But literature cannot exist upon toleration. It must have liberty. Without liberty there cannot be that alert and nimble way of looking about and that fidelity in recording what is seen which are necessary to literature. If the writer feels that what he says will be received with disapprobation, he will be silent. But it is not only regarding the negro that liberty of speech is discouraged in the South. You see the same want of freedom in the discussion of other subjects as well.

It seems odd that the South can be said to be deficient in that encouraging sympathy which is essential to the production of good literature, for if there is a quality with which the Southern people are specially gifted, it is sympathy. They have this quality to a greater degree than any people I have ever met with. The quality, indeed, is a characteristic of Americans in general, in part possibly due to democracy, in part possibly also an inheritance from our colonial life, colonial societies being, one would expect, receptive and sympathetic. But among no other Americans does the quality exist so strongly as among the Southern people, and it is the especial characteristic of their gentlemen. I have in mind as I write an individual, lately dead, a man who, with a great deal of learning and scholarship, and a fine literary discernment and discrimination, had an unselfish sympathy and generosity of mind, such as you are not likely to find in quite the same degree among men other than Americans of

Southern birth. There is no reason why I should not mention his name; I mean the late Prof. Thomas Price. This quality of an individual I believe to be that of the Southern people in general. It ought, one would think, to be an encouraging cause of literary performance.

I cannot claim to be as well read as I should be in the literature of the South that has appeared since the war. But from poems and sketches which I have read from time to time, it is evident that the general want of literary truth, which has been attributed to Southern antebellum literature, does not characterize the more recent literature of the South. It seems to me that some of these things are good enough to form part of the permanent literature of the country and language. Among them I might mention some very delicate poems by the late Father Tabb, which I have seen in the magazines, and some sketches by Mr. Thomas Nelson Page. These are, however, either poems mostly descriptive of natural scenery or sketches representing limited phases of Southern life. But have the Southern writers been equally successful in depicting Southern life as a whole? It has seemed to me significant that some of these writers prefer historical subjects. In their books the young ladies who, I am told, are usually the authors of them, are very free with "Odd zooks" and "Marry come up," and other such safe and remote forms of expression, but the books, of course, have little that bears upon the present Southern life. Is it that these young writers are afraid to tackle this subject?

LEWISBURG, W. VA.

The Lawrence Textile Strike

BY REV. DE MONT GOODYEAR

I. *The Scene of the Conflict.*—Lawrence, a mill city of 90,000 people, in northeastern Massachusetts, on the Merrimac River, is the battleground of a great industrial conflict. Visiting the scene after reading the daily papers, one is at first surprised to find everything open and running as usual except the saloons and the mills. The business is dull, one mingles with the throngs without reason for fear. He soon discovers evidences, however, that something unusual is going on. Looking down a cross street leading over the canal toward the mills we see a squad of young men in khaki lazily leaning upon rifles with bayonets. Soldiers, both mounted and on foot, are scattered throughout the business section. Here and there we come across newspaper reporters, magazine writers, novelists, students and clergymen: seeking and giving information.

Soon band music is heard. Turning, we see in the distance that the hundred foot wide street is choked with humanity. Detectives begin to pass us upon the sidewalks. Then a motley throng filling the street from curb to curb passes by. There is no arrangement in ranks, just a solid mass of humans. There are men, women and children of many nationalities. They are respectably dressed and orderly. In many languages they sing the International Workingmen's Song. At certain points they turn their faces eastward and mildly jeer. Thus pass fifteen thousand enlisted troops of the industrial army. They assemble on the common and listen to their leaders, who with skilful speech urge them to remain firm in refusing to work, exhort them to avoid making disturbances, encourage them with promises of assistance and higher wages.

Hundreds of these people know only "Lawrence, United States," as their adopted country. They are assembled with one accord in one place from every nation under the sun. "The Melting-pot" has made of them one brotherhood. Such were daily scenes till the authorities, realizing the gravity of the situa-

tion, placed the ban upon parades and mass meetings. What has been written up as "mobs," "violence" and "riots" has for the most part been the product of enterprising imaginations.

Irresponsible individuals with dangerous weapons concealed about them, however, are dangerous enough and numerous enough to warrant the presence of soldiers. One woman striker, ten days ago, was killed by a bullet from some unknown source. The city marshal, in plain clothes, interfered with a conversation among the men and was struck, tho not seriously injured. A policeman was cut in a mix-up, and others have received injuries. But there have been no raids upon bakeshops, clothing stores, or coal cars.

Of the 22,000 strikers idle during the third week of the strike, several thousand belong to no labor union, but voluntarily joined their fellow workers. They are apparently as firm as the union men, of whom some 2,000 speak English.

2. The Generals.—The leader for the mill owners is William M. Wood, president of the American Woolen Mills Company. He came to this country a poor boy from Portugal. By his energy, business ability and a fortunate marriage he has reached this commanding position. Apparently he is simply playing a waiting game. He has made no serious denial of the claims of the strikers, and no serious attempt to employ strike-breakers. He evidently expects that starvation will win his victory.

Joseph J. Ettor is the central figure in the strife. An Italian by blood, an American by birth, an ironworker by trade, a Socialist politically, arriving after the strike was inaugurated, he is the idol of the 22,000 strikers. He was born in New York City, where he passed thru seven grades of the public school. Now, at the age of twenty-seven, he is national organizer of the "Industrial Workers of the World." Short in stature, stocky in frame, with his bushy black hair, dark brown eyes and irrepressible smile, he is rather attractive. He is a master of speech and an inde-

fatigable worker. His busy conferences with Colonel Sweetser, Mayor Scanlon, Governor Foss, and his constant labors with strike committees, not only leave time and strength for several daily addresses to the men, but also for addressing mass meetings in neighboring cities.

His power of control over the strikers is remarkable. A wave of his hand sets them in motion or calls a halt. They listen intently to his remarks, tho many of them cannot understand a word of what he is saying. He sends them to their homes, or to halls or parades at will. He orders them to go quietly and they obey. The great question is, How much longer will they obey him when he tells them not to go to work?

When dynamite was discovered in a dangerous place he promptly declared that it was "planted" there by the enemy, who sought to discredit the strikers. Strangely enough, a number of the Lawrence school committee is now under indictment for the "planting" with intent to cause a riot.

When soldiers appeared Ettor said they were there merely to exasperate the men to violence. This is one of his blunders. The soldiers, whose presence tend to restore confidence in the public safety and to restrain irresponsible thugs from violence, are decidedly beneficial to the strikers. So much the better if they have little to do. Ettor has made some other unfortunate mistakes. For example, he informed the men that it is very easy to mix emery with oil, that if they got hungry they knew what to do, and if the strike is not settled soon the people of Lawrence would have reason for regret. Yet he has exercised a powerful influence against disorder.

When he was arrested on Tuesday, charged with being accessory to the murder of Anna Lopizzo, whose death was caused by a bullet from an unknown source, the strikers claimed that there was no evidence that they would kill one of their own number, and that the arrest was made simply to deprive them of their leader at a critical moment when his presence was of vital importance to them.

3. *The Causes.*—Twenty-five thousand operatives, including overseers and foremen, have been receiving a total wage

of \$150,000, six dollars each if all were paid alike. Machines are "speeded up," and those who turn out a certain amount of cloth are given a "premium," and in addition to the premium a "bonus." When wages are so low the small premiums become a powerful incentive to overexertion and result in early exhaustion. This endangers the health of the women and children especially.

When recent Massachusetts legislation forbidding the employment of operatives more than fifty-four hours per week became operative, the low wages were reduced still lower. The workers claim that they sought a conference with the mill owners when this legislation was pending, only to be contemptuously turned away. They then wrote an inquiry concerning the effect of it to Mr. Wood, and it was never answered. When, without previous notice, they received pay envelopes containing the reduced wages, they immediately left the mills.

The foreign strikers claim that they were lured from their homes abroad by the exhibition of pictures of the mills and workingmen leaving them with money to carry to the bank, only now to find themselves unable to pay the necessary expenses of mere existence. They demand the abolition of the premium system and an increase of fifteen per cent. upon the old wage scale.

The facts that the mill owners pay such low wages, receive such large dividends, close the mills so frequently to curtail the output, advance the prices of fabrics so sharply, and find money to be used in the erection of large new plants so readily, conspire to generate sympathy for the strikers. Holders of the Pacific Mills stock, par value \$1,000 per share, do not sell when offered \$3,500 for it.

The situation, whatever the outcome, will probably aid Governor Foss, who has urged the appointment by the legislature now in session of a "Minimum Wage Commission," also an investigation of the industrial conditions at Lawrence by a committee from the legislature. The threatened strike of the street car employees and the stationary firemen, who can shut off light and power, would bring about a grave situation.

HAVERHILL, MASS.

What Is the Matter with Our Army?

I. It Lacks Concentration

BY MAJOR GENERAL LEONARD WOOD

[This paper by Major General Wood, Chief of Staff, is the first of a series of articles written for THE INDEPENDENT by leading officers of the United States Army, frankly discussing the weakness, the unavailability, the unnecessary extravagance of our present military organization, and suggesting methods of reform and reorganization, making for economy and efficiency. It will be followed by articles written by General Edwards, Chief of the Insular Bureau; General Evans, Chief of the Militia; General Wotherspoon, president of the Army War College, and others; all, in various ways, answering the question, "What is the matter with our Army?"—EDITOR.]

IN dealing with army matters we are confronted with a condition of ignorance concerning the military needs of the country which is simply appalling.

A sound military policy demands the concentration of larger tactical units in strategic areas as an urgent necessity; as a measure tending not only to the economical administration of the army, but to a great increase in its efficiency. It demands also the organization of a reserve and thoro instruction of the organized militia, and the utilization of the army for the instruction of as many men as possible, in order that we may have instructed men enough to fill up our regular army and militia to war strength, and furnish a reserve to supply the losses incident to the first months of a war.

We are spending much money for the army and we receive far less in return than would be the case if the concentration recently recommended by the Secretary of War to Congress were brought about. The fault is not with the officers or with the men. They are excellent. It is the system under which we are serving which is at fault.

The needs of the situation, so far as concentration is concerned; and the steps necessary to bring it about, are now before Congress in the form of the reply by the Secretary of War to the Bulkley resolution.

The principal reasons for the maintenance of the regular army are: To prevent foreign invasion, to enforce our international obligations, to maintain the rights of our country and its citizens, and to aid the constituted authorities in maintaining internal peace. In former times, prior to the settlement of the Indian

question, the principal of these functions was that of maintaining internal peace; in other words, maintaining control of the Indian situation, insuring peace upon our frontier, and the safe passage thru the Indian country of individuals, mails, etc. Due to the predominance of this feature of army work, there arose a condition which resulted in the construction of military posts scattered over the central and western portions of our country, and also along a large section of the southern frontier and the northern border. These stations, established to meet a temporary necessity, served as nuclei for small settlements, which were gradually enlarged; simple cantonments were changed into modestly built posts or forts, as they were called. These developed, at a later date, into many of our modern military establishments in the areas referred to. The upbuilding of these small military stations followed for a long time the natural lines of influence, not necessarily political, influences incident to the existence of an established military station at these various places, and the local and oftentimes territorial interest in their maintenance. They became centers, and upon them depended to a considerable extent the prosperity of many individuals outside the military establishment: traders, dealers, etc. Communities came to regard them as essential to their well being and as contributing to the maintenance and even to the upbuilding of many settlements. The construction of most of these posts was never justified by strategical or tactical considerations, and the military necessity which compelled their construction no longer exists. The army and the policy

governing it were in a transitory stage; it was performing the last portion of that great service which was of such enormous value to the country, namely, the opening up of the great West, the maintenance of order and the protection of life and property in that region. There was, however, a growing conviction that a new policy must be adopted; a policy which would permit a more economical administration of the army and its better tactical instruction. Officers were anxious to serve in larger commands and under conditions permitting broader professional training. This was the general condition when our difficulty with Spain arose. Out of the war with Spain and the subsequent acquisition of foreign possessions, followed by an enormous extension of our zone of influence and a great increase in our points of contact with foreign influences and interests, came an entirely new set of conditions, quickly recognized by the more progressive officers of the army, who perceived that with them new responsibilities were added to our national life, new work was thrown upon the army, and the question came gradually to the front as to how the army should be organized and stationed to meet these requirements. The necessity for change compelled the gradual abandonment of many of the smaller posts and the adoption of a larger type of military post or station. Incident to our added responsibilities, the army was greatly increased. Eventually the maximum strength was fixed at 100,000, as against 25,000 before the war. Many of the old and unnecessary posts still existed and were needed for the shelter of troops. Unfortunately, some were enlarged and rebuilt, and the location of new posts was fixed without regard to military necessity. All this was an incident of the existing system (or lack of system) of administration of our military establishment. Once the conditions in the Philippine Islands were in hand, attention was turned to a better system of administration of the army serving in the United States. Fortunately, there was at this time at the head of the War Department a man of administrative ability of the highest order—Mr. Root, who, in 1901, took up the matter of the distribution of the mobile army with a

view to concentration. The rather limited results obtained from the board appointed were due to various causes, among which most apparent was a lack of appreciation of the necessity for concentration on the part of officers grown old under the system of small stations employed in Indian times. The board recommended fifty-two of the sixty-five army posts for permanent occupation, thirteen for temporary occupation, and the establishment of seven new posts. Proper tactical instruction of the three arms in conjunction was given little consideration. There was no general staff to consider the needs of the army as a whole, and as a natural result there was no efficient co-ordination. Domestic comfort in the form of large quarters and grounds was given undue importance, resulting in maintenance charges out of all proportion to the needs of the military situation. Posts at remote points, unwarranted by military necessity, where the cost of transportation and materials was at a maximum, were retained, enlarged and rebuilt. No class can be charged with the entire responsibility; local communities wanted the posts kept up and demanded more troops; it meant increased expenditures and increased business. Lack of military policy made these influences potent and effective, in the continuance of this expensive and entirely unmilitary policy. Mr. Root recognized that the responsibility for these conditions rested to a considerable extent upon a lack of policy and saw with clearness that the lack of policy was due to the lack of any continuing body, possessed of sound military ideas, and qualified to establish and maintain such a policy, and lent his great administrative genius to the creation of the General Staff, a body representing the line and staff of the army, ever renewing itself by the infusion of new blood just from the line and from duty with troops.

Mr. Root also urged upon Congress the establishment of the detail system—that is, the system under which the line officers are detailed to the various staff corps for a period of years, usually four, and then return to the line. This insures the infusion of fresh blood into the staff corps and keeps them in touch

with the real needs of the fighting line, the maintenance of which, in an efficient condition, is the reason for the existence of the staff corps. It was not applied as fully as he wished, but has, nevertheless, resulted in very greatly improving the efficiency of the present staff corps. It should extend to all officers in these corps, including the heads.

Since the establishment of the General Staff there has been a gradual but sure crystallization of sentiment and ideas, and the policy of concentration of military forces for tactical and strategical purposes has been urged with increasing force from year to year, and is now the accepted policy of the War Department and the General Staff.

In determining the stations of the mobile army, the following conditions should govern:

1. The distribution must be favorable for the tactical training of the three arms combined (Infantry, Cavalry, and Field Artillery).
2. It must be favorable for the rapid concentration of the army upon our northern or southern frontier, or upon our eastern or western seaboard.
3. It must favor the best use of the army as a model for the general military training of the National Guard.
4. It must favor the use of the regular army as a nucleus for the war organization of the National Guard and such volunteer forces as Congress may authorize to meet any possible military emergency.
5. It must favor economical administration with the view of developing the maximum return for the money appropriated.
6. It must permit a peace organization which will also be effective in war; that is, an organization which will permit a prompt expansion in time of war by means of a system of reserves.

To meet these requirements, it will be necessary to correct the present distribution of the regular army. The army should be so assembled that tactical training of the three arms working together can be had with a minimum of expense.

The policy now urged by the Secretary of War is based upon a study of the subject by the General Staff, and upon the recommendations of that body, and contemplates that the army be concentrated in strategic areas, and that the posts which do not fulfill the requirements above indicated be sold and the proceeds made available, with the approval of Congress, for such new construction as may be necessary for

the assembly of the army in two, or possibly three, strategic groups on the Pacific coast between Puget Sound and Los Angeles; at least two groups between the Great Lakes and the Rio Grande, and three on the Atlantic and Gulf coasts.

The number of groups to be organized is primarily restricted by the total strength of the mobile army. No group should contain less than a brigade of infantry, with a proper proportion of cavalry, field artillery and special troops, and at least one group should contain a full tactical division. Proper tactical training demands the combined use of the three arms, and this can be secured only by massing the troops of each group in a single post or in several posts within marching distance of a common center. Without such concentration, joint training can not be secured except at heavy expense for transportation. In addition to these detachments of all arms there should be at least two independent cavalry brigades. A study of the question indicates that the stationing of our present mobile army in more than eight, or possibly nine, such groups would be inconsistent with the demands of maximum economy and tactical efficiency.

This means the giving up of many stations dear to local communities, and doubtless much opposition will follow; but if true economy and real efficiency are to be our guide, this eventually must be done. Peace rules, conservatively, nine out of ten years, and troops must be kept in posts at points where the requirements above referred to can best be fulfilled, and where men and supplies can be most economically assembled during the relatively long periods of peace. Several large posts have been built up in areas outside those indicated for ultimate concentration. These posts present many desirable features. The cost of their establishment has been met, and it will undoubtedly be necessary to retain them for a long time. In fact, they will naturally be the last to go if the scheme of concentration is followed out to the end. We now have in the General Staff an organization which insures the establishment, and will be a potent influence for the continuance of a definite policy in army matters, but the strong support of

Congress is needed to bring about the great concentration measure proposed, which will, conservatively, result in a saving of from \$5,500,000 to \$6,000,000 annually, an amount which, if devoted to military purposes, would support ten regiments of infantry at a strength of 900 each, or 100,000 reservists at \$55 per year. In addition to this saving it

will add greatly to the effectiveness of the army and consequently to its value to the country.

Concentration is being rapidly effected in the Philippine Islands and the new construction in Hawaii, and the Panama Canal Zone will follow the policy herein outlined.

WASHINGTON, D. C.

Popular Delusions About Immigration

BY W. F. WILLCOX, LL.D.

[One of the most interesting discussions at the meeting of the American Association for the Advancement of Science, held in Washington the last of December, was that devoted to the question of the restriction of immigration, and the sensation of the session was the statistical *exposé* of certain common fallacies by Professor Willcox, of Cornell University, which we have procured for our readers. A very important immigration bill is now before Congress, and this article gives light as to what action Congress shall take upon it.—EDITOR.]

A T a recent meeting of economists in Washington a paper was presented advocating more drastic restrictions upon immigration. At the start it summarized the leading objections to the present situation under eight heads. (1) Numbers—"A million immigrants a year is more than this country can look after." (2) Defective assimilation of immigrants. (3) Immigration increases the amount of pauperism and crime. (4) Imperfect distribution of immigrants. (5) Immigration is a menace to American standards of wages and living. (6) Unhealthy stimulation of immigration by interested parties. (7) Illegal entry of many contract laborers. (8) Immigration does not benefit the country of origin.

Of these eight objections the last four are not susceptible of proof or disproof by conclusive evidence. The first four can be shown, I think, to be popular delusions.

I. Are we now receiving a million immigrants a year?

In only four years of our history down to 1910 did the number of immigrants exceed that round total. To be sure, all four were in the decade 1900-1910, but the ten-year total was less than 8,800,000, or an annual average of seven-eighths of a million. And this does not exclude

those leaving our shores. For the last three years of the decade the number of departing aliens was ascertained, and by deducting them from the alien arrivals the Bureau of Immigration found the net annual increase due to immigration. That net increase was only 61 per cent. of the gross immigration. If we assume that the net increase from immigration during the whole decade, 1900 to 1910, bore the same relation to the number of immigrants, then the net additions during the decade would be 5,365,000, instead of 10,000,000, or about 536,000 a year.

The net addition due to ten years of immigration may also be estimated in another way from the results of the last two censuses. In 1900 there were ten and one-third million residents of the United States who had been born in foreign countries, of whom nearly 99 per cent. were white. The death rate in 1900 of about two-thirds of these, that is, the foreign-born whites residing in the registration area, is known. It was 19.4 per 1,000. If the number of foreign-born in the United States in 1900 be multiplied by this death-rate, the estimated deaths subtracted and the same process repeated nine times, the final result, eight and one-half million (8,501,447), is the estimated number of survivors in 1910 of those immigrants who were here

in 1900. We need to know also the total foreign-born in the United States in 1910. We know the number of foreign-born whites and can easily estimate the few foreign-born colored from the total which is known. The total foreign-born in 1910 was very close to 13,500,000. On subtracting from this number the 8,500,000 survivors of the foreign-born who were in this country in 1900, the difference (5,000,000) represents the survivors in 1910 of the immigrants of 1900-1910. But they too have suffered losses from death. If we assume that they have been in the country on the average five years and that their death rate has been 19.4, the number of immigrants requisite to leave 5,000,000 survivors at the end of five years would be 5,516,000, or 552,000 a year. Thus one method of estimating the net annual increase from immigration, 1900-1910, yields 536,000 and the other method 552,000. It seems safe to say that our immigration is not over 600,000 a year net and consequently that the estimate of "a million a year" exceeds the probable number by at least two-thirds.

But a country of 92,000,000 can absorb many more immigrants than a country with one-quarter of that population, which was all the United States had in 1850. It is fair, therefore, to compare the immigration in any decade with the population of the country at the beginning of the same period. The results since 1840 are as follows:

Decade.	Immigrants to 1,000 initial population.
1841-1850	100
1851-1860	110
1861-1870	73
1871-1880	73
1881-1890	104
1891-1900	61
1901-1910 (gross)	116
1901-1910 (net)	72

It is probable that in the earlier decades there were very few "birds of passage," and gross immigration and net immigration were almost the same. If so, the net immigration 1901-1910 was less than the net immigration 1841-50 or 1851-60 and about the same as net immigration in the decades of the Civil War and of the hard times following the panic of 1873. It was also probably less than the net immigration of the decade 1881-90.

This objection to immigration is probably the fundamental one and certainly is the only one which can be tested by the results of the census of 1910 so far published.

II. The second objection is that "the immigrants are poorly assimilated or not assimilated at all." Here we must ask for the evidence. But, not content with that, let me offer one or two opposing considerations. In 1890 among the foreign-born whites at least ten years of age 15.6 per cent. were reported as unable to speak English; in 1900 the proportion had fallen to 12.2 per cent. Perhaps the quality of our English is being debased, but in that decade at least we were not becoming a more polyglot people as the result of immigration.

There were nearly six and one-half million persons of foreign birth in the United States in 1900 who had come from countries where English was not spoken. Of these more than four-fifths (81.2 per cent.) were reported as able to speak English. The number unable to speak English was about equal apparently to the number who had come from a country where English was not spoken and had been in the United States less than eight years. In other words, it takes an immigrant who cannot speak English when he arrives apparently about eight years on the average to learn enough of the language to claim that he speaks it. In the second generation the process is practically completed, for nearly 99 per cent. of the children born in this country of immigrants from countries where English is not spoken and at least ten years old in 1900 claimed to speak English.

Of the foreign-born whites at least ten years of age living in New York State in 1900 about one-eighth, or exactly 119 in 1,000, were reported as unable to speak English, but of their children born in this country and at least ten years of age in 1900, the proportion unable to speak English was less than 2 in 1,000.

Much fear has been expressed lest our immigrants should permanently lower the level of general education. This fear has led many to favor excluding illiterate immigrants. The illiteracy of most such immigrants is a characteristic of the country from which they come and not

primarily of the persons. So far as census figures tell, the class with the smallest proportion of illiterates is the children of our immigrants. Thus among the children ten to fourteen years of age born of our native white stock 44 in 1,000 cannot write; among the children of our immigrants of the same age only 9 in 1,000 cannot write. No doubt this is due largely to the fact that both immigrants and schools are more abundant in the North than in the South and in the cities than in the country. But who shall say that the immigrants do not avoid the South and the country districts largely because they desire for themselves and, above all, for their children the educational advantages and other opportunities which are still found mainly in our cities and our Northern States? I do not believe that our immigrants as a class need the help or the interference of government. Many of them have come to this country to escape a well meant but fretting and harmful control on the part of those in power.

III. The third objection is that "immigration seriously increases the amount of pauperism and crime in the United States." I grant that the 13,000,000 foreign born add to the *amount* of pauperism and crime. To make an effective argument the word *amount* should be changed to *proportion* and no doubt this is meant. Do the foreign-born population contribute disproportionately to the crime and pauperism of the country?

I have found nothing to prove that the foreign born contribute more largely to the almshouse population or the prison population than do the native whites of the same sex and age residing in the *same part* of the country. In the Northern States paupers in almshouses are twice as numerous relative to population as they are in the Southern States, and this because the almshouse system of caring for paupers is far more developed in the North than in the South. The foreign born have a proportion of paupers in almshouses larger than the native for much the same reason that the negroes have a smaller proportion than either of the other classes, namely, the negroes live where almshouses are few, the immigrants where they are many. This fact and an allowance for

the lower average income of the foreign born would sufficiently explain the fact that the proportion of foreign born in the almshouse population is somewhat larger than in the population outside. But when we consider that more than nineteen-twentieths of the foreign born in almshouses have been in the United States longer than ten years it cannot be claimed that recent immigrants are contributing disproportionately to the burden of pauperism.

As to crime, when attention is confined to major, or serious, offenses, the proportion of foreign-born whites committed to prison is almost exactly the same as the proportion of native whites of the same age. For example, among 100,000 native whites thirty to thirty-four years of age, 49 were committed to prison for serious offenses in 1904, and among the same number of foreign-born whites, 48.

IV. Lastly, a word regarding the objection that the immigrants are poorly distributed. The results of the preceding census I examined in an article on "The Distribution of Immigrants."* the main conclusions of which still seem to me sound. Doubtless they will not apply without considerable modification to the widely different conditions of the following decade. The distribution of the foreign born, like that of the native population, is determined by the interplay of motives, largely economic, inviting to a change of residence and other motives, among which human inertia is important, leading to a retention of the present abode. The foreign-born population is probably more migratory within the country than the native population and responds more quickly to the suggestions of economic or other advantage. On the other hand, this class probably has fewer and less trustworthy sources of information. I see little objection to the Government's gathering reports and disseminating news for the purpose of aiding in the wise distribution of our population, whether native or of foreign birth, but I do not anticipate much effect from such governmental activities. What is the evidence that it is not to the advantage of our recent immigrants to stay as long as

**Quarterly Journal of Economics*, xx, 523-546, August, 1906.

they do in our Northeastern States and our large cities, where people of their own kind are congregated and can help, far more effectively than the Government, their first steps toward American citizenship?

The one serious objection to present immigration is its menace to American standards of wages and of living. This is the objection emphasized by the Immigration Commission. The cost of rearing children in the United States is rapidly rising. In many, perhaps in most, cases it is simpler, speedier and cheaper to import labor than to breed it. The argu-

ments in favor of more drastic restriction for this reason are strengthening with the increasing cost of living and of rearing children. The time may have come for more radical methods of restriction. In that case a heavy increase of the head tax so as to make the cost of producing laborers in other countries and importing them more nearly equal to what it now costs to rear children for the labor market in the United States seems to me the simplest and best method of protecting our wage-earning class from debasing competition.

ITHACA, N. Y.

The Supernatural Policing of Women

BY ELSIE CLEWS PARSONS

AUTHOR OF "THE FAMILY," ETC.

IN primitive society bugaboos are not confined to the nursery. Women, like children, are scared into being "good." Again and again the men invent spirits to aid them in their mastery of the women. The ceremonial bull-roarer or rattle of Australia, New Guinea, and the West Coast of Africa is believed by the women to be the voice of a terrifying spirit. Among the African Yorubans women are compelled on pain of death to act up to this belief by flying indoors when the bull-roarer or the voice of Oro resounds in the streets. On Kiwai Island, in the Fly Estuary, and in the Elema District of New Guinea the women have even to leave the village to escape the curse of hearing the bull-roarer. Should Euahlayi women of child-bearing age hear the spirit voice of Boorah, he would first madden and then kill them. So they stop up their ears when the first echo reaches their camp.

The bull-roarer is evidently an effective restrainer of female curiosity. But prying women must be penalized in other ways too. Were Kurnai women to see or hear what goes on after a certain point on the Jeraeil initiation ground, Tundun, the Great Ancestor would kill them. Nor would any woman in South-

eastern Australia trespass on the initiation ground for fear of being killed by the magic scattered in it by the old wizards.

Should a Queensland woman touch or even look at a death bone, a bone for murder by magic, she would straightway fall sick. Any Jabin woman of Kaiser Wilhelm's land who saw the sacred flutes used in the initiation rites would die. Once in an island of East Melanesia, Tepu, a ghost god, commanded that no woman should visit his shrine. But the chief's wife did, and the god, having to make an example of her, rendered her unconscious, attacked her and then let her come to in a pool of blood. The Eskimo have even a more alarming story for inquisitive women. Once upon a time, against all warnings, a woman entered the Singing House when it was dark. For a long time she had wished to see the Spirit of the House, and so she summoned him. He came and she felt him all over until she touched his boneless and hairless head. Then she dropped dead. In fact, an Aleut Eskimo woman who trespasses on their holy place runs the risk of illness, death or insanity; and all kinds of misfortune come from a woman finding out the least thing about the

ritual. A Mendi woman of Sierra Leone who finds out the Poro secret society mysteries, like the Australian woman, sickens.

Bogeys are useful to men not only in snubbing women who want to know too much; they help to keep women at home. In Australia there are the *Iruntarima* and the *Oruntja* to lie in wait for adventurous women. An ever-present fear of these spirits cows the women into keeping close to their camp fires—"a wholesome check upon their wandering about alone too much," writes their English ethnographer, in full sympathy with their Blackfellow husbands. Fjort women of the West Coast of Africa are also timid about being alone at night, dreading the *bimbindi* or ghosts. And for good cause, for it is said that these *bimbindi* have made women live with them. Jickolishe is another Bantu spirit who waylays women at night, coming out of the reeds to trick them. In many an island of the Malay Archipelago women dare not venture alone in the forest for fear of spirits.

In fact, the ghosts or gods of many a tribe or race are given to seduction, and women are taught to fear their devotion and avoid their haunts. Often, to make them doubly fearful, illness or death is said to follow upon their attentions. Belief in such unpleasant wooers is undoubtedly more effective than any anti-feminist argument that woman's place is in the home.

Not content with merely threatening dangerous spirit encounters, the men of secret societies make their women believe that their own systematic spirit impersonations are actual spirit apparitions. During funeral rites two or more of the Eastern Islanders of Torres Straits dressed up as ghosts and banged and scraped on walls and doors, greatly frightening the women mourners within. In the Elema district of New Guinea men disguised as the spirit forerunners of Koveve, their mountain god, terrify the women into staying at home to cook a great quantity of food for the coming of the god. If a woman shirk her work during the initiation celebration in Kaiser Wilhelm's Land, the *Asa*, descending upon the village with a great hullabaloo, the women flying before them in fright, set up a stick before the hut of the slouch.

It is always effective. Florida Island women also cook for their "ghosts." During the day the Matambala secret society men foregather undisguised among the women, gossiping of what the "ghosts" have done and are going to do. In the Niger Delta the Ibo impersonation of the dead has a right to any girl he can catch. Yoruba women are forbidden, on pain of death, to laugh at or even to disparage the Epungun ghost impersonations—a prohibition that suggests that even in America woman may sometimes be flippant or skeptical. According to a story of Mary Kingsley they were decidedly so once upon a time toward the I-Kun Secret Society—a society of the Bakele. The heresy had spread so far that the women had to be disciplined collectively. So what did the men do but bury the I-Kun impersonation under the ringleader's floor, and when the ladies started to say, "What fools those men had been making of themselves all the afternoon with their I-Kun," appalling squeals and howls came from under their feet.

"They stared at each other for one second, and then, feeling that something was tearing its way up thru the floor, they left for the interior of Africa with one accord."

No arrests were made, but society was saved, adds Miss Kingsley, for it is clear it "cannot be kept together without some superhuman aid to help to keep the feminine portion of it within bounds." And so to keep the women in order is one of the chief objects of men's secret societies the world over—except, perhaps, in New Haven.

Savage woman must neither pry nor roam. For the comfort of the men in general she must be unquestioning and unadventurous. But furthermore, for the good of a particular man, she must be obedient and faithful. To ensure such wifely docility most of the men of Central Australia carry a magic knout in their wallets. The mere sight of it terrifies an offending woman; its stroke she believes to be fatal. In spite of this implement, or perhaps because of it, wives seldom run away in Central Australia. Then the husband and his friends punish the runaway thru black magic. They bewitch a diagram of her which they have drawn on the ground, and into a piece of

green bark representing her spirit they stick miniature spears. Sooner or later her "fat dries up," she dies and her spirit appears in the sky as a shooting star. The Bangala of the Upper Congo say that once a hunter called Mokwete found that, thanks to his polygamous habits, his allotment of meat was small. So going into the bush he called out: "Wives of Mokwete, wives of Mokwete" They answered "E!" and heard: "When your husband comes with meat you must not eat it; if you do, you will die." Thereafter *all* the meat was brought to him—until he was given away by his little son and deserted by all the outraged women. In California and on the Loango Coast of Africa husbands manage better. A Pomo Indian will terrify an unruly wife by dressing up as an ogre. After such a scare she is said to be usually tractable for some days. On the Loango Coast there is a special fetish to keep wives in order and punish them for infidelity. A betrayed husband finds the "medicines" in his fetish basket wet. In East Central Africa, if he eat food salted by an unfaithful wife, he dies. So, in order always to be on the safe side, a little girl regularly salts his food. For the same reason the traveling Acaxée husband keeps from salt altogether. Kayan and Kenyah husbands of Sarawak can tell from the knots of camphor trees, while they are away collecting, if their wives at home are unfaithful—evidence enough to kill them on, on their return. Unsuccess in hunting is like evidence to both the Wagogo and the Aleut husband.

The modern novelist has made use of the theory that conjugality may defy death. To more unsophisticated men a widow's mourning is no mere sentimentality. Were she not to mourn with all propriety, her dead husband would harry her unmercifully. Were she an Unmatjera or Kaitish tribesman, and had she not smeared herself with the mourning ashes, his ghost would haunt her and finally kill her and strip her bones. In the islands of Torres Straits an aggrieved marital ghost is said to have once burned down the house of his widow. Among the Matse, a Ewe-speaking tribe of the Guinea Coast, the Spirit of Mourning would be apt to waste an unceremonious widow away. In Matamba a deceased

husband is able to lodge himself in his widow's breast—greatly to her discomfort. In South and East Africa he can also most unpleasantly haunt her as a serpent. A Tarahuamaran widow of Mexico has been known to avoid her husband's grave from fear of being kidnapped by his spirit. In a great number of places his resentful spirit can do no end of harm to a second husband, so that marriage with a careless widow is a precarious undertaking.

In developed tribal life and in early civilization supernatural reward or punishment is a more thoroughgoing affair than in savagery, and wifely subjection as well as the rest of the social order is thereby more systematically secured. Even an unfaithful or worthless husband is to be constantly worshiped as a god by a Hindu wife. If undutiful, after death she enters the womb of a jackal and is tormented by disease. Hindus still believe that wifely disobedience or disloyalty or husband-murder in a former existence are punished in the present birth by widowhood—that greatest of Hindu curses. On the other hand, if a wife obeys her husband, she will for that reason alone be exalted in heaven, declares Manu, the sacred code maker. A chaste widow is also promised a place in heaven beside her husband. As for that most devout of devout widows, the suttee, her term in heaven is immensely long. Moreover, she expiates her husband's crimes for him and sanctifies his and her ancestors.

Obedient to her husband, the Parsee woman was accounted holy; disobedient, fiendish. Thrice a day a wife was to go before her husband, inquiring his wishes, and never, either by night or day, was she to avert her face from his command. Thus served she God. "The well-ordered wife will justly consider the behavior of her husband as a model of her own life and a law to herself, invested with a divine sanction," writes Aristotle. Simpler and even more forcible is the divine dictate of Genesis to the Hebrew wife: "Thy desire shall be to thy husband, and he shall rule over thee." Paul thoroly agreed with this point of view and passed it on to Christendom. "Man is not of the woman; but the woman of the man. Neither was the man created for the woman; but the woman for the man," he authori-

tatively opines. And until the "Origin of Species" most men—and women, too—undoubtedly held that the creation of Eve as an afterthought was argument enough against refractory wives.

Nowadays the deliberate anti-feminist must draw up a more critical kind of brief, but does not he or she depend at heart upon primitive views and feelings for the proper control of women? Has the proportion of women to men in the churches any bearing on this question? Of the total number of confessions made per annum in the Catholic Church, how many, we wonder, are made by men, how many by women? Who at some time or other has not heard a Protestant non-churchgoing *pater familias* declare: "But I don't interfere with the religious beliefs of my wife and daughters. I believe in their going to church." Only a gen-

eration or so ago was not a girl warned against going to college because of its irreligious influence? How is it that still today women are condemned in the same breath as both curious and conventional?—traits that are surely incompatible except under a supernaturalistic discipline. Is a woman's fear of being out alone, particularly at night, always explicable upon rationalistic grounds? Why in a society whose divorce *laws* are the same for men and women is there more prejudice against a *divorcée* than a *divorcé*? Is not the widow who remarries within her year or two of mourning accused of heartlessness? We all know that almost any one talking about sex differences may be easily led up to saying: "A bad woman is worse than a bad man." What do they really mean?

NEW YORK CITY.

The Canticle of Fontebras

BY THOMAS WALSH

AMONG the nuns of Fontebras—they told young Don Bivar—
Was come a novice Juana, who was lovely as a star.

And thru the silver night she heard the lute implore and sing;
The casement trembled unto vows and breath of blossoming;
Adown the glen the fireflies lit the jewels of a king.

But at the dark portcullis, Christ in stone hung sentrywise,
And tho the gallant spread his cloak, she felt its haggard eyes,
And trembling sank from out his arms despite of pleas and sighs.

Yet scarce her lips could breathe, "O Christ, do Thou renounce me now——"
Ere bent the carven stone and smote her sharp upon the brow,
Imprinting there a piercèd hand—the token of her vow.

Still in the crypts of Fontebras the golden censers swing;
And still the lark and nightingale by spire and valley sing;

But at the raptured moment when unto supremest grace
Each cloistress lifts her forehead bare in Christ's espousal place,
Alone the Sister Juana kneels, the veil upon her face.

BROOKLYN, N. Y.

Literature

Round the World in Fiction

THERE was a time when America was the home of romance, but thru the years it has, like the Indian, been thrust westward till now the Pacific has apparently engulfed it and we must perforce turn to other lands and other peoples till some great novelist arises and writes the wonderful romance of our own commonplace. To those, therefore, who are weary of stories of political graft, indecent social conditions, Western cowboys, and psychological character-sketching, the following books, with their scenes often laid in the remote corners of the earth, will prove singularly refreshing and always interesting.

Just now Mr. Conrad's book, *Under Western Eyes*,¹ with its scenes for the most part Russian and certainly its contents Russian, will be of special interest to a curious American public who have the Western eyes that are gazing with a somewhat inquisitive contempt now at a country remaining in some respects barbarous in spite of time and the progress of nations. This novel is a textbook of Russian character. It is a profound analysis of what the author believes makes up Russian revolutionary idealism, and it is an equally profound and bitter criticism of Russian despotism. The story purports to be a record kept by a young Russian student, and in its turn is presented to the reader and commented upon by an Englishman. The tragedy of a simple scholar caught in the web of a hideous circumstance and thereby perverted into a deformed mass of passions.

As a rather direct contrast to Mr. Conrad's story of the tragedies of despotism comes this light novelette, *The Love Story of a Maiden of Cathay*,² as told in letters from Yang Ping Yu, the young heroine. Its scenes are also laid in a region of despotism; but now

that China has risen and shaken herself, this correspondence will prove even more timely and readable to those curious about the higher education of Chinese women and the various customs of Chinese society. Just as in our younger days those large blank spots designated on our geography maps as Russia and China meant to our imaginations chiefly the homes of the bushy-headed Cossack and the pig-tailed heathen, just so that vague and inclusive appellation, the South Sea Isles, spelt to us the treasure lands of romance and adventure. However that may be, probably Mr. London's catboat was hurricane driven just as he sighted romance and adventure, for certainly his *South Sea Tales*³ have no personal encounters with them. In the past Mr. London used to give us quite delightful adventures in strange seas, strange forests, and even in strange societies, but oh, where before, Mr. London, did you force a poor shipwrecked woman to saw off her hair with the edge of a salmon can when a leather belt was to be had for the needed rope?

Mr. Gibbons's *Flower o' the Peach*⁴ is an unexpected story to come out of Africa, from which we are accustomed to receive pseudo-Kiplingism and passion-baked scandals of love. The scenes are laid in and around an African tubercular sanitarium. The problem is the inscrutable one of race prejudice. An inexperienced English girl who is an inmate of the sanitarium espouses the cause of a highly educated kafir and thereby incurs the fierce hostility and criticism of the white community. The book is not a novel, but rather it is a disjointed account of an interesting and significant episode on the African veldt. Another novel with no such age-old problem as race prejudice, but with the brand new one of feminine emancipation

¹*SOUTH SEA TALES.* By Jack London. New York: The Macmillan Company. \$1.25.

¹*UNDER WESTERN EYES.* By Joseph Conrad. New York: Harber & Brothers. \$1.50.

²*THE LOVE STORY OF A MAIDEN OF CATHAY.* Told in Letters from Yang Ping Yu. New York: Fleming H. Revell Company. 50 cents.

is *Love Versus Law*,⁵ by a French woman, and with its scenes in Paris. Incidentally, it an interesting presentation of the Feminist Movement in France as represented by the admission of women lawyers to the French Bar. But primarily the book is concerned with a young lawyer's professional jealousy of his lawyer wife. The latter appears in a sensational trial, wins her case, and is famous in a day, while her more brilliant husband is completely overshadowed. The author leaves us with the impression that this woman's meteoric rise in popularity and distinction was due largely to that same quality in people's emotions which makes them listen breathless to their baby's first "goo-goo," while they may yawn before the eloquence of a Demosthenes. The emancipated woman just now is the world's obstreperous baby, and any clutching she may show at the red ball of masculine wisdom will be applauded far more than any demonstration by a man of skilled juggling with that same ball. The book concludes with the greatest problem women have yet to solve, namely, that no success in the world of competition compensates a woman for the loss of domestic happiness.

Quite opposite in its contents is *April's Lady*,⁶ another story with its scenes and most of its characters French. The chief actors are a conventional young Frenchman and a very happy-hearted American girl. Their love affairs are so romantic and so quaintly emotional that it is like a return to Charlotte Brontë. There are no problems save the unworldly ones of love. There are no scandals, and there are no embarrassing situations save those of lovers' quarrels. Equally romantic, but far more entertaining, is Mr. Mitchell's *Pandora's Box*,⁷ with its scenes in and about an old English castle. It has been a long time since we have enjoyed the delights of a Prince Charming in disguise wooing and winning a princess in a tower, but here we have it embellished with a humor and a quizzical wit that must leave both American and English readers a bit wise and sadder about their snobbery, but in

no way hostile to a romance so pleasantly written. As to Mr. Mitchell, we also owe Mr. McCarthy a debt of thanks for a clean and wholesome tale of love and good fortune. In fact, the latter seems to like to play fairy godfather to his characters. Usually presented to us merry but in rags, his heroes and heroines have to wait only a few pages before he waves the wand of success over them, and like all such stories, "they live happily ever afterward." The scenes of *The Fair Irish Maid*⁸ are first in a little village near Dublin and later are transferred to London after the fairy in the form of a wealthy uncle from America has transformed the ragged Irish heroine into an heiress and the toast of London. The fact that she remains true to her poor Irish lover is the last jewel in this crown of romance, and quite reconciles us to the little gusts of politics and Home Rule that somewhat trouble the early serenity of the fairy story. *Tarantella*,⁹ with its scenes in Italy and its characters animated by Latin passion, is necessarily a very different romance from those just considered. The very nature of its contents forbids its belonging to romance. Passion, not romance, seems in fiction to go hand in hand with Italy. A young American woman—a Catholic—comes to Sorrento to appeal to the cardinal for a divorce from her degenerate husband. The cardinal's nephew falls in love with her, and the complications ensuing make up the story. The author's descriptions of Italian scenery are perhaps the best features of the book. *The Blood of the Arena*¹⁰ will not assist the horrified Westerner to understand the Spanish zest for blood, but it will go far toward enlightening the ignorant reader about the life of a favorite bullfighter in Spain. In *The Transformation of Krag*,¹¹ we return to our side of the world. The scenes are laid first in a small American town and later in Mexico. It is a sort of "Dr. Jekyll and Mr. Hyde" romance,

⁵THE FAIR IRISH MAID. By Justin Huntly McCarthy. New York: Harper & Brothers. \$1.30.

⁹TARANTELLA. By Edith Macvane. Boston and New York: Houghton Mifflin Co. \$1.20.

¹⁰THE BLOOD OF THE ARENA. By V. Blasco-Ibáñez. Translated by Frances Douglas. Chicago: A. C. McClurg & Co. \$1.35.

¹¹THE TRANSFORMATION OF KRAG. By Eugene P. Lyle, Jr. Garden City, N. Y.: Doubleday, Page & Co. \$1.20.

⁶APRIL'S LADY. By Guy Chantepleure. Translated by Mary T. Safford. New York: Dodd, Mead & Co. \$1.50.

⁷PANDORA'S BOX. By John Ames Mitchell. New York: Frederick A. Stokes Company. \$1.30.

the difference being that Krag eventually becomes a Dr. Jekyll for life and no alchemy of evil serves to bring back Mr. Hyde. The book is roughly written and a bit melodramatic, but the originality of a hero who practises good with the purpose of doing a great wrong in the end is splendidly developed.

✱
The Leaves of the Tree. Studies in Biography. By Arthur Christopher Benson, Fellow of Magdalene College, Cambridge. New York: G. P. Putnam's Sons. \$1.50.

In spite of Mr. Benson's scattered hints and final explanation of his allegorical title, one is still at a loss to see its appropriateness to the substance of the book, which is composed of a number of short, ingenuous biographical sketches, prefaced with some observations in regard to the principles which should guide one in such writing, and followed by some moralizing philosophy which the author imagines to be deducible from the lives he has portrayed. About the only things in common which the subjects of the sketches have would be indicated in the statement that they are all cultured Englishmen of university training with whom Mr. Benson had more or less personal acquaintance. Matthew Arnold and Bishop Wilkinson are the only Oxford men. All the others, including three bishops, were associated with Cambridge, most of them in Mr. Benson's own university days. The author succeeds best in vitalizing those personalities least known among American readers, such as J. K. Stephen, Professor Newton, and Mr. Bradshaw, who are depicted with admirable skill and frankness, with little attempt at analysis. But when Mr. Benson leaves the concrete and objective and seeks to discover the motives and meaning of the lives he delineates, or tries to estimate their work, his efforts fail to reach convincing results. For this reason his essays on Bishop Westcott, Bishop Wordsworth and Matthew Arnold are the least satisfactory in the collection. But even in these many personal anecdotes and enlivening touches of description show how well Mr. Benson has used his unusual opportunity of meeting and associating somewhat intimately with these men in

the quiet unreserve of his distinguished father's home. A certain richness and variety of diction and profuseness of characterization often give the reader the impression of overloaded sentences and a lack of proper simplicity and restraint. Any faults the essays may have, however, are more than atoned for by the wise choice of worthy subjects and the supreme excellency of candid, sympathetic and illuminating portrayal.

✱
History of Biology. By L. C. Miall. 16mo, pp. vii+201. Illustrated. New York: G. P. Putnam's Sons. 75 cents.

History of Geology. By H. B. Woodward. 16mo, pp. viii+201. Illustrated. New York: G. P. Putnam's Sons. 75 cents.

The general public, we know, is not very exacting, but it has a right to expect of "a history of science," with the date 1911 on the title page, something a little more recent than the death of Darwin. And in this book the general public gets information about a more recent event in the history of biology, namely, Pasteur's work on the prevention of hydrophobia, published in 1885. Not a word in the book refers the general public to the suspicion that biology has contributed to changes in human ideas and to mankind's intellectual development since organic evolution became generally accepted among the biologists themselves. Nothing suggests that the idea of organic evolution is anything other than "Darwinism." Nothing to inform the general public about the relation of Wallace to Darwinism; not a mention of Weismann, Haeckel, Boveri, Delage, the Hertwigs, DeVries, Mendel, Loeb, Wilson—nothing to insinuate that human ideas keep right on evolving after the idea of evolution had evolved. It cannot be altogether a matter of concentration; the general public should have a map of the whole field, even if it cannot have all the details. A chronological table of several pages is helpful in orienting the progress of biological thought in relation to other great historical marking points. The index points to very few items in addition to names. The *History of Geology*, in the same series, brings its bibliography and narrative more satisfactorily up to date, but is somewhat overloaded with names and similar details. Neither of

these books compares with the second volume of Thorpe's admirable "History of Chemistry," published previously, which gave a fascinating account of the growth of knowledge and strife of theories.

Literary Notes

....Wilfrid Ward, editor of the *Dublin Review*, is the author of the long expected "Life of John Henry Cardinal Newman" announced for immediate publication in two volumes octavo by Longmans, Green & Co.

....The Putnam's latest addition to their "Connoisseur's Library" (to be complete in eighteen volumes, of which twelve preceded the present addition) is a study of *Etchings*, by Frederick Wedmore.

....The *Biblical World*, published by the University of Chicago, concludes in the January number its valuable reading course on "Jesus in the Light of Modern Scholarship" and begins in the February a new course on "The Organization of the Efficient Church," under the direction of Prof. Shailer Matthews.

....*The Practical Book of Oriental Rugs*, by G. Griffin Lewis, is published by the J. B. Lippincott Co. (pp. 360; \$4.50). The writer avers that "no such systematized and tabulated information regarding each variety of rug in the market has previously been attempted." The colored plates should prove not the least valuable part of the work, which is a mine of information for the collector.

....Rev. Charles S. Nutter, D. D., and Prof. W. F. Tillett, D. D., have issued an annotated edition of the Methodist Hymnal entitled *The Hymns and Hymn Writers of the Church* (Eaton & Mains; \$2), which will be of service not only to ministers of that denomination but to others interested in hymnology. Each hymn is followed by some account of its author, its composition and its use in worship.

....The Yale lectures on preaching for 1911 were delivered last spring by Rev. F. W. Gunsaulus, D. D., of Chicago, who took for his theme *The Minister and the Spiritual Life*. The lectures are now published with some additions (Revell; \$1.25). Dr. Gunsaulus holds that the minister's own spiritual development is the key to his success or failure in meeting the difficulties and solving the problems of his profession, and this thesis he elaborates and illustrates in many ways.

....A new quarterly magazine published in England under the auspices of the School of Russian Studies in the University of Liverpool is entitled *The Russian Review*. The pro-

spectus promises authoritative discussions of past and current questions in Russian history, politics, economics and literature, and the contributors will be both Englishmen and Russians. It will especially seek to make accessible to English readers what Russia has achieved in arts and in science, and will give a carefully prepared chronicle, in each issue, of recent events. The first number includes "The Imperial Duma and the Land Settlement," by Sergius Shidlovsky; "Leo Tolstoy," by Aylmer Ufande; "The Russian National Problem," by Harold Williams, and "The New Land Settlement in Russia," by Bernard Pares.

....The Medieval Towns Series calls for no introduction and the most recently issued addition, Mary Dormer Harris's *Story of Coventry*, calls for all the less detailed criticism in view of being the work of an acknowledged authority in this department of local history. We reproduce one of the many illustrations in black and white by Albert Chanler (Dutton; \$1.75).

....The prospective publishers of Harold Donaldson Eberlein and Horace Mather Lippincott's *Colonial Homes of Philadelphia and Its Neighborhood* request subscriptions at five dollars per volume. It is proposed to issue a limited edition, octavo, in a slip case, uncut, with over 50 illustrations. Messrs. J. B. Lippincott & Co. announce that the architecture and scale of living of the city for many years the capital "were unsurpassed by anything in Virginia, New York, or New England"; the present work is prepared with the consent and aid "of the oldest members of the old families, together with that information which can be gathered from records, contemporary journals, etc., and should the response not make the publication possible much of this information will in a few years become irrecoverable."

....Many articles have been written within recent years on the cruelties to be found in the *Mother Goose Jingles* and it has been the desire of commentators to rid editions of such barbaric matter. The latest editor to join the ranks is Clifton Johnson, and the publishers are the Baker & Taylor Company. We are assured that the omissions are confined to such verses as are coarse and rough-mannered, and as are ungrammatical. Notwithstanding this modern zealotry, the book is full of frolic, interspersed with line drawings by Machan Knowles. An introduction gives the historical setting for the Collection of Rhymes, which were at first attributed to a family of Vergoose in Boston. But later it was found that Perrault, immortal author of "Little Red Riding Hood," was the first to make use of the name of

Mother Goose in a book. We are surprised to find that, tho Mr. Johnson mentions the Newbery edition of the jingles, he fails to note that it was Oliver Goldsmith who compiled the book for publication. But the changes and the omissions, together with the inclusion of verses which are not legitimately the Mother Goose of old, make us feel that Mr. Johnson has gathered a sheaf of verses that is not the real Mother Goose sheaf.

...George Wahr, of Ann Arbor, Michigan, is the publisher of a neat paper-bound book by Thomas Hill Green entitled *An Estimate of the Value and Influence of Works of Fiction in Modern Times*, and Professor Fred Newton Scott is the editor (pp. 79; 65 cents). It is the editor who, reporting upon his classroom use of the essay, describes it as arousing discussion and serving as a stimulus to high thinking. Green's work was, we must confess, unknown to us until the Michigan professor brought it within our ken; and so it may not be amiss to remind our readers that he was born in Birkin, Yorkshire, in 1836; was a pupil of Jowett at Oxford, and became a neo-Hegelian; married a sister of J. A. Symonds; was for a space professor of philosophy at his university, and died thirty years ago, the author of various periodical essays gathered up in three volumes of "Works." As for Green's essay on *Works of Fiction*, it is all that Professor Scott claims. The brief sketch of the beginnings of the English novel is illuminating, and so are passing remarks like that on the "Spectator"—"the most pleasing expression of this self-satisfaction of the age . . . the first and best representation of that special style of literature—the only really popular literature of our time—which consists in talking to the public about itself." Green generalizes very boldly, telling us flatly that the novel reader "gains no real strength, reaches no new hight of contemplation, "but "comes back to the world, as a man with a diseased digestion, after living for a time on spiced meats, comes back to ordinary food." Novelists should be banished from the new-republic, as poets were from Plato's, "not as artists, but for the inferiority of their art." The philosopher's complaint is that the aspect of things which the novelist reveals "is merely the outward and natural, as opposed to the inner or ideal." This objection would certainly apply, not only to the eighteenth century fathers of English fiction, but to the Victorians who were Green's contemporaries, and to the Arnold Bennetts of today. Yet in some respects the naturalistic school of novel writers escapes this criticism, for they definitely undertake to reproduce the slowness and monotony of life, avoided by most of their predecessors in favor of stirring incident and more

rapid movement. It is not the reader of every novel who "sees human action pass before him like a panorama," without feeling any of its pains and penalties; and more than one nineteenth century novelist realized that "a great part of the discipline of life arises simply from its slowness"—difficult tho it is to render the full values of

"patient waiting and silent labor, the struggle with listlessness and pain, the loss of time by illness, the hope deferred, the doubt that lays hold on delay."

Pebbles

YET SOME SAY THAT CATS ARE NOT SYMPATHETIC.

Mrs. George Watkins, the possessor of a fine Angora cat, that was given her by relatives and which was highly prized by her, was run over by the street car Tuesday morning, cutting off one leg and the tail. The cat was shot to put it out of its sufferings.—*Grass Lake (Michigan) News*.

ACCORDING to the editor of *Le Temps* of Paris the motto of America is:

"*Fais de l'argent; attrape le succès; efface Crésus!*"

And he is kind enough to add in parenthesis the original American of the motto:

"Make money; win success; do-out Crœsus!"

To the Editor of the New York Times:

Knowing that you are always interested in and open for any investment in a good live business proposition, I take the liberty of presenting to you what seems to me to be an excellent business proposition. The object of this company is to operate a large cat ranch at Grand Rapids near the Proudfit Binder Factory, where land can be purchased cheaply.

To start, we will collect about 100,000 cats. Each cat will average twelve kittens a year. The skins will sell for from 10 cents for the white ones to 75 cents for the pure black. We will have about 12,000,000 skins to sell, at an average of 30 cents, making our revenue about \$10,000 a day gross.

A man can skin fifty cats a day. He will charge \$2 a day for his labor. It will take about 100 men to operate the ranch; therefore, the profit will be about \$9,800 a day.

We will feed the cats on rats and will start a rat ranch adjoining the cat ranch. The rats will multiply four times as fast as the cats, and if we start with 100,000 rats we will have four rats a day for each cat, which is plenty.

We will feed the cats on rats, and in turn will feed the rats on the stripped carcasses of the cats, thus giving each rat one-fourth of a cat.

It will be seen by these figures that the business will be self-acting and automatic. The cats will eat the rats and the rats will eat the cats, and we will get the skins.

Make check to my order. Don't bother about having it certified.

SKINNUM WHENYOU CAN

New York, Dec. 27, 1911.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Democratic Presidential Candidates

THE Democratic party will find its nominee for the Presidency in a group composed of four Governors and two members of the House of Representatives. These six men are Governor Wilson, of New Jersey; Governor Harmon, of Ohio; Champ Clark, Speaker of the House; Oscar W. Underwood, chairman of the Ways and Means Committee; Governor Foss, of Massachusetts, and Governor Marshall, of Indiana. The Governor of the great State of New York is not in this list, altho it may be that the New York delegates will give him a complimentary vote in the national convention. Mr. Dix has not shown that he is qualified for the office. Nor is Mayor Gaynor included. Politicians elsewhere have found the careers of these two men in office disappointing, and New York, with approximately one-tenth of the country's population, will simply assist in nominating a man brought forward by another State.

It may be expected that complimentary votes will be cast on the first ballot for men whom we have not mentioned.

For example, Connecticut will probably vote for Governor Baldwin. A decision as to the action which Missouri's delegation will take has not yet been reached. Missouri is Speaker Clark's State, but the Democrats there some time ago endorsed ex-Governor Joseph W. Folk for the nomination. Mr. Clark quite naturally would like to have the support of his State in the convention. In a letter recently published, Mr. Folk asserted that those in Missouri who professed to stand for the Speaker were really working for the nomination of Governor Harmon. Mr. Clark declines to be a party to an agreement for a division of the delegation, preferring, as he says, "to stand on his own feet." But if Missouri gives him no votes, he will not be entirely ignored elsewhere.

A week ago we considered the situation with respect to the Presidential nomination in the Republican party, where the commanding figure is that of a President in office who desires a re-nomination. In a consideration now of the situation in the other party, it may first be said that, altho the leading issue (if a possible revival of objection to a third term be excepted) will be the tariff, the nomination of no one intimately associated with the party's tariff work in Congress is expected. The two men in our list who are prominently identified with that work are Mr. Underwood and Mr. Clark. The first of these represents a district in Alabama, and the party will not nominate a Southern man. Mr. Clark comes from a border State, where he is now involved in controversy with another aspirant. While the party acknowledges the merit of his service in the House, both while he was leader of a minority and since he has been Speaker, it does not, we think, regard him as well qualified, either as to residence or by temperament, for the nomination. The convention will turn, therefore, to men who have not been directly concerned in recent national legislation, but who have attracted public attention by reason of their political strength and their service as Governors. Mr. Foss will have support in New England; Governor Marshall will have the delegates from Indiana on the first ballot; but the foremost candidates for the

nomination will be Governor Wilson and Governor Harmon.

We do not undertake now to measure carefully the merits of any of the six men in our list, or to weigh the policies for which they stand, but only to speak briefly of their platforms, of their friends and foes, and of what may be said for or against them by politicians. Mr. Underwood, a legislator of the business type, holds a position of great power, owing to recent changes in the government of the House. He favors progress on conservative lines. Born in Kentucky, he lived for a time in Minnesota, was graduated at the University of Virginia, and has practised law both in Minnesota and in Alabama. His authority has been used in the House with due regard to the party's welfare. Altho he supported Mr. Bryan in three campaigns, that gentleman is now his foe. They disagreed as to the provisions of a tariff bill. Then Mr. Bryan asserted that Mr. Underwood had avoided a reduction of iron and steel duties because of his interest in iron furnaces. Mr. Underwood proved in the House that Mr. Bryan had accused him unjustly; that he had desired to attack the iron and steel duties first of all, but had been overruled by his committee. He opposes now the proposed "money trust" investigation, which Mr. Bryan favors. He desires "more legislation and less investigation." To the initiative, the referendum and the recall he is "unalterably opposed," holding that a general adoption of them would be the end of representative government. On the other hand, Speaker Clark has voted in Missouri for the initiative and the referendum. His sincerity and integrity are unquestioned. But some think his judgment is occasionally at fault. They point to his untimely and unfortunate utterance concerning the annexation of Canada, an utterance which may have turned the scale against reciprocity in the Dominion. Politicians are asking to whom the first ballot votes for Underwood and Clark will afterward be shifted. Governor Marshall, who will have the votes of Indiana for a time, at least, has been called "a Progressive with the brakes set." He is a trustee of one college and has received the degree of

LL.D. from four. In the Legislature he has promoted a long list of progressive bills, but he opposes the recall of judges and would use the initiative and the referendum only as a last resort for the recovery of lost power.

Owing to the controversy with Henry Watterson concerning the rejection of Mr. Harvey's support, everybody has been reading, in the last few weeks, about Governor Woodrow Wilson, who is easily the leading figure in the field. It is because of this political prominence that Mr. Wilson's record has been carefully examined, especially by his enemies. He is a man of rare intellectual cultivation and much energy, having an exceptional knowledge of political history, but no legislative experience and no political executive experience except that which has been gained by one year of service as Governor. In that office he has sought justice and the enactment of good laws. It must be understood that in pointing out the objections raised against his candidacy by some, we are not attacking him. It is said, for example, that his course in the Harvey controversy left something to be desired both in the way of tact and on the side of frankness. It is difficult to say whether the effect of that incident has been favorable or harmful. Rejection of suggested reliance upon the financial aid of Thomas F. Ryan commends the Governor to a large majority of Democratic voters, but the bitter denunciation of Henry Watterson must have some weight in Democratic councils. Perhaps we may say that loss and gain are nearly equal. Because of the ownership of the publications with which Mr. Harvey is connected, it can be understood that the Governor regarded his support with some misgivings, owing to popular prejudice against that ownership. But if there be no warrant for that prejudice, and if, as we think, Mr. Harvey had a free hand, the situation called for treatment somewhat different from that which was shown.

Those who prefer another candidate say that the Governor's opinions have been greatly changed since he entered public life and sought the Presidency. This is true, notably with respect to the initiative and the referendum, and to

Mr. Bryan. When the Governor wrote in 1907 to Mr. Joline, expressing the wish that "we could do something, at once dignified and effective, to knock Mr. Bryan once for all into a cocked hat," he also said that he had read an address of Mr. Joline "with entire agreement." In that address the speaker denounced an outcry of the time against railways as "a socialistic, populist, anti-property crusade—the cry of the envious against the well-to-do." Critics say this does not agree with the Governor's recent denunciation of the "money monopoly" and the alleged control of our system of credit by "a few men." As to this he now appears to be in agreement with Mr. Bryan and Congressmen Henry and Lindbergh, who are demanding an investigation of the "money trust." And Mr. Bryan, whom he then would have knocked into a cocked hat, has now become "the one man whose broadened mind has been able to see what is the matter and point it out." As the Governor says, "a man who can't change his mind gives evidence of the most pathetic ignorance," but these changes may deprive him of needed support in the convention. On the other hand, it is possible that they will aid him.

Certain utterances of the Governor concerning labor unions have been taken up by the Chicago Federation of Labor for consideration. It is alleged, for example, that he said:

"We speak too exclusively of the capitalistic class. There is another as formidable an enemy to equality and freedom of opportunity, and that is the class formed by the labor organizations and leaders of the country—the class representing only a small minority of the laboring men of the country—quite as monopolistic in spirit as the capitalists, and quite as apt to corrupt and ruin our industries by their monopoly."

Men on the Pacific Coast who oppose him are quoting from his historical works passages in which Chinese immigrants are highly commended, in comparison with "multitudes of men of the lowest class from the south of Italy, and men of the meaner sort out of Hungary and Poland," a "coarse crew," composed of the "more sordid and hapless elements of the population" of Southern Europe. For obvious reasons, this is not relished on the coast. In the East, the Italians

and Poles and Hungarians (there are said to be 30,000 of the latter in the Governor's State) are beginning to protest in public meetings. All this may have some effect with respect to the nomination. A man who seeks popular political support may be embarrassed by history written and speeches made before he decided to enter public life. We mention these things to show some obstacles which the Governor may find it necessary to overcome.

Governor Judson Harmon, whom Ohio will support in the convention, has been called a reactionary, but the evidence is lacking. He has been a judge, and, as President Cleveland's Attorney General, he conducted several important cases against Trusts. Mr. Bryan has bitterly and persistently attacked him. He did not vote for Mr. Bryan in 1896. In 1908, when Bryan lost Ohio by nearly 70,000, Harmon was elected Governor by about 19,000, and he was re-elected by a plurality of 100,000. There is complaint that he does not talk enough about national affairs. The reason appears to be that he is busily engaged with affairs of the State of Ohio. He attacked State treasurers, exposing the frauds by which they had been enriched. With the help of Detective William J. Burns, he brought bribed legislators to justice. He has thoroughly reformed the State's system of taxation. When he began this work appraisals of property were made in a haphazard way. Corporations were favored. Railway property was appraised at 20 per cent. of its value. He demanded and obtained a Tax Commission, and taxes are now justly levied. The appraised valuation of railroad property has been raised from \$166,000,000 to \$580,000,000. Similar additions have been made for the property of street railway companies and other public service corporations. Valuations for personal property tax have been multiplied by three. A public utilities commission has been created. He insisted upon the adoption of the Oregon plan for the election of United States Senators. Laws enacted at his suggestion include those relating to workmen's compensation, ballot reform, corrupt practices, and the hours of work for women. The initiative and referendum were given to mu-

municipalities, but there is no recall. He says it is not needed. His platform in national politics is tariff reform, economy, and regulation of Trusts. The record made by him in Ohio is not that of a reactionary, and the charge that he deserves to be called one appears to rest upon the fact that he served as the receiver of three bankrupt railroads, turning back the property to the companies without the loss of a dollar for creditors, stockholders or employees. He is sixty-five years old, proud of the support of the people of his State, and does not seem to long for a higher office. So far as can be foreseen at the present time, the contest in the convention will be between his friends and those of Governor Wilson.

If the opposing nominees in the campaign should be Governor Harmon and ex-President Roosevelt, much would be said about the Atchison rebate case. President Roosevelt asked Judge Harmon and Frederick N. Judson to examine the charges and report to him. They reported that the officers of the company ought to be prosecuted. One of these officers was the late Paul Morton, then a member of Mr. Roosevelt's Cabinet. Mr. Roosevelt held that the defendants should be the corporations, and not the officers. Thereupon Judge Harmon and Mr. Judson withdrew from the case, permitting the public to know why they did so. "Guilt is personal," said Judge Harmon.

The Rockefeller Hundred Million Foundation

MR. ROCKEFELLER desires that at least one hundred million dollars of his wealth shall be devoted to the benefit of the public. Mr. Carnegie is understood to plan that the bulk of his enormous fortune shall similarly be made a trust for the public. Whatever taint may yet attach to wealth secured under conditions when less stringent ethical conditions were demanded, and laxer laws prevailed, we may all rejoice that our two leading multimillionaires recognize the obligation resting on them to make their wealth serve the people.

When a year ago Mr. Rockefeller asked that Congress grant a charter for

his Foundation, we hastened to call attention to the possible dangers involved in the perpetuation of so vast a trust, which might grow by accretion indefinitely, and which would be controlled by a close board of self-perpetuating trustees. These and other apprehensions led Congress to hesitate and fail to grant the charter. While these dangers did not seem very imminent, and we presume the fund would have continued indefinitely to perform its beneficent purpose, it seemed wise to Congress to avoid a possible peril, and the gift to the people was declined under the circumstances, just as these two philanthropists have had the experience of having their benefactions declined.

But Mr. Rockefeller and his advisers were not discouraged or offended. They simply took back the offered charter and carefully revised its draft to meet these and all other possible objections.

First, the board of trustees is not to be an unlimited, self-perpetuating body which may continue indefinitely in a course which may be inimical to the public good. When a trustee dies or resigns, the election of his successor can be vetoed by an outside body, consisting of the President of the United States, the Vice-President, the Chief Justice of the United States, the Speaker of the House of Representatives, four men representing the people, and the presidents of five universities—Harvard, Yale, Columbia, Johns Hopkins and Chicago. That certainly ought to assure independence as well as necessary continuity. These are men of the highest character, who know equally what would imperil the interests of the people and what are the demands of progressive research or public welfare. If these men cannot be trusted no men can.

But let us suppose the five university presidents and the Chief Justice are conservative men, and are going contrary to the will of the people; then another guard is provided. Congress is given the right at any time to limit the objects of the corporation as public interest demand. Let us suppose an improbable case, that the will of the people is moving toward public land and manufacturing—that the

control of the nine men with the power of veto, should use the fund to thwart the will of the people, then Congress is given the right to forbid such expenditure. The fund is not allowed to thwart the people, but the people can coerce the fund. That adds another point of protection where no further protection is needed except against almost inconceivable danger.

Yet one more protective circumvallation is put around the endangered people. The Foundation may wind up its affairs at the end of fifty years, and at the end of a hundred years Congress may close the whole concern. That is enough, or ought to be enough, to quiet the alarm of the most imaginative at scenting peril to the people; and yet it is not quite all. A final provision is that the income, if not spent in any year, shall not be added to the principal, and that the principal shall never exceed the present \$100,000,000. This seems to us both unnecessary and unwise. The fund is devoted to the benefit of the world, and it is forbidden that its amount shall ever be increased. We fail to see why the income of twice or ten times that amount should not so be used, all danger having been triply averted. Mr. Rockefeller is told that he must not by his will add another hundred million to what is thus given to mankind. Why should a mere hundred million be feared? A hundred million is not so fearfully large an amount. There are a plenty of organizations not devoted to benevolence, carried on for personal gain—railroads, manufacturing companies—whose capitalization vastly exceeds this hundred million. Let the Government watch them as it will watch this, and we do not fear their influence; only, the income of this is all spent for the benefit of the world, and theirs for private gain. We should welcome the enlargement of this fund, and we hope this provision will be stricken out.

The advantage of such a large fund is this, that it allows continuity of operation. As in the case of the Carnegie and Polakoff lines of research can be carried on, scientific or sociological, which of the population generation to complete. For obvious reasons, this will be the case on the coast. In the East, the knowledge

that require long and expensive investigation: in pathology, in physics, in biology, in sociology, in archeology. The experts know it, and they long for combined, continued research. How long would it take us to learn the history of civilization, of which we now know only the barest outlines? How long will it take to abolish poverty? We would have such a noble fund allowed to do all the good it can without suspicious limitations.

Lincoln as a Greek God

THE proposed Lincoln Memorial Monument is a public confession of architectural insolvency. It is a bare-faced contradiction. A memorial is a reminder, something that recalls to mind what we would not willingly forget. It accomplishes this by association, by some likeness between the symbol and what it stands for. The more of the common element and the less of the foreign, the more effective the memorial. But can any form of monument to Lincoln be conceived less appropriate, more incongruous, than the Greek temple which it is intended to erect at Washington at the expense of the American people? We have a great admiration for the architecture of the Greeks, we have a great admiration for the personality of Lincoln, but somehow we cannot make these two things match in our mind.

A white marble building according to the designs of either architect would no doubt be an ornament to the national capital. But it can never be a monument to Lincoln. It will be a monument to Ictinus, architect of the Parthenon and to the unknown builders who preceded him and worked out from humble beginnings a system of architecture that has been the admiration of all the ages since. The \$2,000,000 appropriated by Congress may well be spent in erecting such a monument in their honor. They deserve it, and it is particularly appropriate that a monument to the creative genius of the Greeks should be erected by American architects, since our monument builders are painfully deficient in the faculty that distinguished the Greeks, that is, in the

MR. JOHN RUSSELL POPE'S DESIGN FOR THE MEMORIAL

The architect drew plans also for a building for the Meridian Hill Site, but it has been decided to build in the Potomac Park

ability to discover the artistic possibilities of commonplace objects.

We all know what the Greek artist would do under such circumstances, altho none of us can tell how he would do it. He would take the log cabin and rail fence of Lincoln's birthplace and transmute them into an edifice so glorious and beautiful that generations after-

ward men would admire and imitate it. Yet he would not falsify his material. He would not seek to disown its origin. The perfected structure would still frankly retain some of its primitive characteristics.

We know that the Greek artist would do this, because that is what he did do. What is the Parthenon but a glorified

THE PROPOSED LINCOLN MEMORIAL IN POTOMAC PARK

From the design by Mr. Henry Bacon, another New York architect

cabin? Its columns are peeled logs, not notched and crossed as in old Kentucky, but set up on end. On top of them is laid another log, hewn square and two more form the peak of the roof. All this the architect has carefully preserved, even emphasized, in the marble; and, look! under the eaves you can even see sticking out the ends of the old wooden rafters, now petrified. And the water spouts, homely, necessary, unconcealable things, what can he do with them? Why, he has carved them so cunningly that we Americans adopt them as ornaments, sticking them in a row on top of a public library.

Our architects can copy, but they cannot imitate. They model their work after the original Greek instead of modeling themselves after the original Greeks. If they did they, too, might become architectural alchemists, capable of transmuting the base metal of everyday things into golden art. We should then have in our public monuments, as indeed we have in some of our buildings, an indigenous architecture, adapted to our purposes, expressive of our ideals. Our national capitol has Washington as a Roman general. Let us not add the more atrocious anachronism of Lincoln as Apollo.

The artist whose opinion on this point should have most weight is Gutzon Borglum. He, like Lincoln, is a son of Western prairies, and he knows the heart of America. No one else has studied the features of Lincoln so long or so lovingly as he, and "the great stone face" that he has modeled shows us the soul as well as the physiognomy of the martyred president. Let us hear what he has to say of the proposed memorial:

"The poor, emasculated, soulless esthetics of the first half of the nineteenth century tore the severe yet well-suited dress from the father of this land, conceived him in dead Rome, even bore him there, shipped him home and placed him and kept him sitting in front of our national legislature for half a century, 'appealing to an unresponsive Congress for his clothes.' Is it possible that nearly a hundred years later no consciousness of the utter falsity of this attitude toward civilization, our aims and ideals, toward our great men, has dawned upon those who are entrusted with expressing the nation's thought of Lincoln?

"Poor Nancy Hanks! We have all forgotten you, dearest of mothers. All this might

have dazed you, but your son who said, and knew, he owed all that was good in him to you, would have brushed this imported finery back to the records and people of the past, and he would say, tired, bored, disgusted: 'I'd rather you men of art left me alone; there has crept into letters a story of two about me; that will answer.'

"Surely we are in esthetics a nation with our back to our own dawn, watching yesterday.

"Is there no one who feels enough this simple, real meaning of the monument, who is at once strong enough and with the strength brave enough to stop this vulgar, unfelt, boughten taste that is steering the likeness or symbol of a great nation's tenderest of memories into a cold, meaningless pile of imported garments of the past?

"It is not a question of who shall build, but how? In heaven's name, in Abraham Lincoln's name, don't ask the American people even to associate a Greek temple with the first great American."

West and New East

How many nations are in process of evolution in the United States at this present time? In the largest sense of the word, one nation, the dynamic American people. Notwithstanding the enormous immigration that we have absorbed since 1776, and the exceeding miscellaneousness of the ethnic stocks that have come from every part of Europe to blend their characteristics in our composite blood, we are now more united in feeling and in purpose than at any former time in our history. Sectional interests are in many respects stronger than ever before, but sectional prejudice has nearly disappeared. We frankly criticise our institutions, and even speak irreverently of that ark of our covenant, the Federal Constitution. But for all that we are politically one people and are profoundly loyal.

In a narrower sense we have been and we are many nations. New England, until thirty years ago, was a homogeneous folk, with a life and a literature all its own. The South, before the Civil War, was another folk, also homogeneous, and cherishing a civilization which exhibited many delightful qualities. Unlike both New England and the South was the raw but virile frontier population of the West.

Communities habitually think of themselves and of their neighbors as they

were and not as they are. How unlike present reality is the popular conception of our Eastern and Middle Western populations is effectively shown in an admirable study of "The Middle West," contributed by Prof. Edward A. Ross to the February number of *The Century Magazine*.

We still picture to ourselves the New England of Lowell, Holmes and Emerson, and the Illinois, Iowa and Kansas of the seventies and eighties, but both sections have been transformed. The Middle West is no longer the home of relatively large aggregations of the foreign born. It is the East in which we find not only the great colonies of southern and eastern European peoples, but also the substitution of Italian, Hungarian, Russian and Jewish farmers for the rural population that, until a generation ago, had clung since Colonial times to the ancestral acres.

In the Middle West a vigorous population of descendants of Atlantic seaboard colonists has absorbed a later immigration, but this has been for the most part from the northwestern European stocks, the Baltic peoples, which blend readily with the English blood. One finds, therefore, in the Middle West today a larger proportion of men and women whose ideas, habits and institutions are essentially those of Colonial America, and of England, than can be found now in the East. We may add that in a still higher degree the characteristic civilization of New England flourishes at present in the Pacific Coast States of Oregon and Washington.

It is, of course, a broad generalization thus to say that the civilization which lives in our imagination as abidingly Eastern flourishes actually in the Middle and North West. The generalization is subject, therefore, to certain reservations. One of these, which Professor Ross is careful to make, is that, while a large proportion of the more vigorous elements of the Eastern stocks went westward to the frontier, another vigorous contingent has found its way from the Eastern farms into the Eastern cities, which, like the West, preserve and develop the old conditions.

A feature that Professor Ross does not quite appreciate, however, differentiates

the civilization of the Middle West from that of the Eastern towns, and of those villages where the older stock and the older *mores* linger on. We mean the difference in manners. This is a delicate point, and we shall touch it but lightly. It is true that the West exhibits frankness, sincerity, warmth, hospitality, generosity. These are admirable qualities, but they are not manners. Manners are conventions, and not all conventions are as absurd and useless as the people of the Middle West are wont to think. We make this observation not by way of detracting from the merits of the West, but for the purpose of calling attention to an important factor in the social evolution of the New East.

For the development of a New East has already begun. In the East, rather than in the West, will be worked out the experiment of assimilating and blending the peoples that seem to have least in common with the ideas and traditions of early New England, New York and Pennsylvania. These peoples, however, are not savages nor even mere barbarians. They bring some of the most important traditions and habits of the oldest civilizations of Europe. In particular, they are far more susceptible to esthetic influences—to art, music and literature, and especially to forms of relaxation that are not hopelessly inane—than the Puritan temperament is. They will bring into the civilization of the New East ideals and tendencies not to be lightly regarded.

We are not venturing to predict what will happen to our political creeds and practices when we have made this miscellaneous mass of raw material into American citizens. Perhaps the East will have to look to the West to maintain our characteristic governmental institutions. But we anticipate that the New East will presently exhibit a warmth and richness and a variety of life that will seem not unattractive to the visitor from the more austere West. In the difficult task of combining emotional exuberance and esthetic freedom with the requirements of social control, a regard for the social conventions which the West undervalues, but which older civilizations have always cherished, is likely to play an indispensable part.

Ratify the Peace Treaties

The arbitration treaties that Secretary Knox has negotiated with England and France are still hanging in abeyance in the Senate. Delay follows delay, and it is not yet certain when they will be taken up for final consideration. These great and righteous treaties have now been before the country since last summer. No measure that has been introduced into Congress in years has been hailed with such general favor by all classes. All the arguments pro and con that can be made have been made and are available. Senators have had plenty of time to make up their minds. Let them now act, unanimously and favorably.

The Exit of Marse Henry

Colonel Watterson has retreated into the wilds of Florida, and it is well; he had said enough. At last the whole story is out which he started and on which he should have held his peace. After the now famous interview which resulted in the withdrawal of Woodrow Wilson's name from the columns of *Harper's Weekly* Colonel Harvey said nothing; Mr. Wilson said nothing; but Marse Henry charged the Democratic candidate with base ingratitude, and told part of the tale. Then others told, or guessed, more, and he told more; and at last he declared that Mr. Wilson had groveled and humiliated himself before Colonel Harvey in his desire to atone for his coldness. Then this correspondence had to be given to the public. We find in it simply that Mr. Wilson learned that he had grieved his friend, and he made as handsome an apology as one could make, and it was most courteously accepted. Not a word was said by either of them that a gentleman might not properly say. But the correspondence, and most of the story of this private interview, was such as should not have been forced upon the public. It was all confidential; but Colonel Watterson's sense of honor did not forbid him to give it to the press. It threatened at first to hurt Mr. Wilson as the Democratic candidate, but it has probably not hurt him a particle, and the boomerang has come back to him that threw it. In the words of the Elizabethan poet who taught

"The Graces grace, and made the virtues
thought
More virtuous than before."

we repeat a general human conviction:

"Unworthy he to have a worthy place,
That cannot hold his peace and blabbing
tongue." "Britain's Ida" VI, x.

In previous years, when the military bills came up for consideration, the war clouds would thicken in thousands of newspaper sanctums while all of us shuddered at the danger of war, for the benefit of ordnance manufacturers, battleship builders and every incipient "Fighting Bob," who hoped some day to command another American Armada on its gastronomic voyage around the world. This year the Democrats have taken a mean advantage of the situation by agreeing in caucus last week, before the manufactured Japanese war scare was ready to be sprung again on the country, not to authorize any Dreadnoughts at all this year. As can be imagined the Navy League is in eruption. Secretary Meyer is calling for help, and the heathen generally are raging. The caucus, however, is binding and there is no hope unless the Senate acts. And now come along the Democrats on the Military Committee, who have added insult to injury by agreeing to cut the army appropriation by \$5,000,000, thus reducing the number of cavalry regiments from fifteen to ten. We are glad that the Democrats have decided to take both these steps even if their motives may have been actuated more by the exigencies of politics than the love of universal peace. Still, there is absolutely no reason why the United States should emulate other nations in this insane race for greater and ever greater armaments. Our geographical isolation, our inexhaustible resources, and the moral fiber of our people are our impregnable guarantees against foreign aggression. If we really desire peace, all we need do is to mind our own business and act justly to all nations. A great English statesman, deploring the staggering burden of ever-growing and overgrowing armaments that was oppressing his countrymen, said that soon the people of Great Britain must decide whether they prefer to enjoy life in danger or starve in security. We

have not yet reached that dire point; the great military expenditure is one of the causes of the increased cost of living. We are glad, therefore, Congress has called a halt. It may mark the turning point in the world's peace movement.

Canal Tolls Two very important reports on the subject of the tolls on the Panama Canal have been presented during the past few days, and both of them agree in substance. The question is as to preferential rates; shall we charge the same rate on all commerce passing thru the canal, or shall we allow American vessels to pass thru free? The canal will have cost our country—what with the very expensive fortifications, \$400,000,000, and we, say some, should make other nations pay the bills. Others say that under the treaty with Great Britain we are obliged to make no discrimination; and that, further, our own country has no right to give special favors to our ship owners as against other citizens. We are glad to say that after very careful study the report presented by a committee to the New York Chamber of Commerce, and that presented by its canal committee to the House of Representatives, agree in advising one common rate, say \$1 a ton, for all vessels, American or foreign. The Clayton-Bulwer treaty stands in the way of discrimination; but even without that it seems fairer that all should stand on an even footing. We did not build the canal solely for ourselves, but as a world blessing whose achievement naturally belonged to us and would most benefit us.

Jonah's Adventure We have the following from Prof. George McCloskie, of Princeton University:

AS THE INDEPENDENT (January 18) has done me the honor of quoting my views about the whale, I offer its readers a few additional notes.

1. While the original words of the Scripture will equally apply to lung-breathing and to gill-breathing fishes, the facts of the narrative indicate lung-breathers; either the sperm whale, or the rorqual, or one or two other kinds of whale which inhabit the Mediterranean.

2. The words inaccurately rendered "belly," are not the words for stomach; but the word used in the Old Testament is sometimes ren-

dered "bowels," as of any internal organ, and that in the New Testament will answer for any cavity or sac in the body. Whalers usually miscall the parts, speaking of the wind pipe as an intestine and fancying that the air-sac is the belly or stomach.

3. The whale's air-chamber is as large as an ordinary bedroom, extending from chin to chest, so as to make the neck bulge in front with a thick muscular wall which is sometimes wrinkled in front, and with an entrance from the large wind pipe, large enough to admit any modern prophet who ventured that way.

4. There has been some mystery as to how the mother-whale manages to shelter her young during tempestuous weather at sea. In medieval times it was reported that the young found refuge in air-chambers close to the mouth of the mother. Abbe Grosier informs us that whales can take in two of their young when weak. Hence we may infer that Jonah's presence would not greatly incommode the animal. The "blowing" of the whale, and its habit of coughing when stranded may help the exit of its guests.

5. The Prince of Monaco in his famous exploring voyage found that large animals sometimes escaped alive from harpooned whales: (he supposed from their stomachs, but we may be certain that they had been in the nuchal air-sacs, if they came out alive).

(Jebb's Sacred Literature, 1820, advanced the theory that Jonah's asylum must have been in the "thoracic," that is nuchal, air-sac. But his theory has been hitherto overlooked.)

Such an adventure as Jonah's might be repeated at any time, and if fairly reported should be accepted without any theory of its being miraculous.

We observe on the above that Professor McCloskie minimizes the miracle. His explanation does away with that view of the miracle which supposes that when we are told that "the Lord had *prepared* a great fish to swallow Jonah," the preparation consisted in supplying air-room for his survival.

The Chinese Republic The absurdly impossible seems now achieved. China will become a republic, possibly two republics. The Queen Dowager, under the direction of Yuan Shih-kai, has signed the abdication of the Emperor and the inauguration of a republic. It seemed past belief when a few years ago, on the advice of a commission sent about the world for investigation, it was proclaimed that as soon as China could be made ready for it constitutional government would be established. The set period is not yet past, and the throne is gone, and ancient China accepts the example and tutelage of the great republic

of the West. A new cycle of Cathay whizzes around so fast that we staid Americans get dizzy trying to follow the revolution. So well have things moved so far, so decent has been the conduct of the revolutionists under such men as our Dr. Wu Ting-fang and our Dr. Sun Yatsen, and so shrewd and canny the policy of the Imperial Premier, Yuan Shih-kai, that we may indulge the good hope that they will come together with one purpose without personal ambition and jealousy. They have made a great name for themselves in the future history of the world, and will divide among the millions of China in all coming ages the sort of honor which we give to George Washington if they continue to act on the high level of unselfish patriotism. And the ferment which has created this astounding revolution is to be found not in the influence of traders and merchants, nor in the doings of foreign statesmen and diplomats, of whom we talk in histories, but in the quiet mining under the surface of foreign missionaries and teachers, who have penetrated into every corner of China and taught strange ideas of the worth of personality, of human obligations and rights. Missionaries ought to be excluded severely from every land which does not wish reform. Russia has sense enough to do this.

Other counties in our Northern States may be as guilty, but no other, perhaps, so frankly confesses its shame as does Chester County, Pa., within whose borders, at Coatesville, an untried prisoner was burnt alive by a mob. Hundreds know who did the horrid deed, and the officers of the law have tried to convict several charged with the murder, but no jury will convict. There are too many citizens who approve of murder and do not wish it punished. The officers of the law, judge and prosecuting attorney do their duty, but the citizens are at fault. So now the Supreme Court of the State is asked for a change of venue, in order that the trial may be moved from a county where conviction is impossible, whatever the evidence. Of course there are worthy citizens who deplore the condition; and the presbytery of Chester County has by unanimous vote of its

ministers and laymen adopted a resolution which says:

"That such a crime could be committed in our midst is humiliating enough, but that such a crime should go unpunished and that an Attorney General should feel it necessary to ask for a change of venue in order to secure a conviction, owing to the alleged sentiment against convicting the conspirators of the deed, is enough to cause our Christian citizenship to hang its head in shame."

Every rose has its thorn
There's fuzz on all the peaches
There never was a dinner yet
Without some lengthy speeches.

Senator La Follette last week at the banquet of the Periodical Publishers' Association in Philadelphia began his two hours' address near the witching hour of midnight. No one seems to have objected to his general ideas save the few muckraked daily newspaper men present, but the rest of his hearers were so bored and offended that it is freely predicted that the Senator's long-windedness has already put him out of the Presidential race. We suppose few men are invited to more public banquets in this banquet-ridden town than editors. Speaking, therefore, from large and bitter experience we declare without fear of contradiction that at least nine out of every ten after-dinner speakers talk too long. Speeches are seldom golden.

The resolution introduced into the House by Representative Slayden, disapproving a third term for the Presidency, is simply another effort to limit the will of the people who cannot be trusted. If the people should ever want to elect a man for the third term they ought to have the right to. If the third term should ever endanger the liberties of the people then they have already lost the spirit of freedom. Similarly his proposed amendment to the Constitution limiting the Presidency to a single term has no merit, except that it provides that honors may go around more abundantly.

So Monsignor Duchesne's famous "Ancient History of the Church" has been put in the Index Expurgatorius, and with them "Letters to His Holiness," by the American "Modernist." Both are able and intelligent books.

INSURANCE

Automobile Insuring

WHEN a man buys an automobile he thinks of it as an asset, a personal possession that may rapidly depreciate in value, but is in the meantime valuable property that he owns and is to be set down in a schedule alongside of his other worldly goods. In reality, an automobile is a liability. Any conservative banker will mark it up on that side of a financial statement. A man pays \$1,000 to \$5,000 for one on Monday. On Tuesday his machine may be fit for the scrap heap only, and he may be liable to pay out ten or fifteen thousand dollars more.

This condition, with much more than half a million pleasure automobiles now in active operation, and an uncounted, constantly increasing number of commercial cars, has brought about the rise of a new and very promising business—automobile insuring. One young New Yorker, a clerk in the insurance district, who had the forethought to see what could be done, is now a wealthy man and the chief figure in an insurance company that does little else than place risks for motor cars. But the new industry of automobile insurance has gone far beyond him. Nearly every fire and casualty company is now reaching out for a share of this trade and has organized special departments to care for it, under the direction of an expert.

There is no other insurance so expensive. If you, the owner of a car, are to be "covered" completely, that is, protected against every possible contingency, it will cost you 11 to 12 per cent. a year on the cost of your car. Five policies will need to be written for this protection, tho, by means of "riders," the five policies can be, if wished, compressed into two. The ordinary car needs \$150 to \$200 of insurance premiums annually, if a man would be "safe." What this means in premiums to the rich man with many cars can readily be imagined. There are scores of wealthy owners who pay from \$5,000 a year up for their automobile insurance. For some the annual amount is over \$10,000.

In insuring a car the owner has to insure against many different kinds of

risk. One policy "covers" the machine against fire when in the garage, when being transported by steamship or rail, when moving under its own power. You must be covered, also, against theft of the movable parts of the car, and damage to some one else's property, moving or stationary: horse, cow, fence or building. Then there is the "collision damage" to one's own car, a quite separate risk. Besides all of these is the "personal liability" risk, the most important of all, for this protects the motorist against damages that may be charged against him from the death or injury of any one caused by his machine. As much as \$10,000 has been paid for the killing of a man by an automobile, and \$5,000 for serious injuries. With a \$2,000 car, of say 32 horsepower, the cost of insurance runs up this way:

Fire Policy, also covering theft of movable parts	\$45.00
Damage to the property of others.....	19.50
Collision damage (to one's own car)...	71.00
Personal liability policy.....	78.00

\$213.50

A curious fact about automobile insurance today is that its benefits are not taken advantage of, as a rule, by the man with only one medium priced car. He does not seem to feel the need of protecting himself against possible big damage suits, and, generally, is content with just the fire and theft policy. On the other hand, the rich man nearly always takes out every policy he can find. He seems to fear the risk, and this is reasonable for a multimillionaire like one well-known New Yorker, who has a minimum of twenty-two cars always in commission—and sometimes fifty.

There are any number of new phrases that have come up in connection with this automobile insuring. There is the "Collision Risk," "The 5 and 10 Policy," "Full Coverage," the "\$25 Deductible Average," "Property Damage." Only those who have become experts in the new business know exactly what they mean. The men who have thirty to seventy-five thousand dollars each invested in new machines—and there are plenty of them—simply put the whole matter into the hands of agents.

FINANCIAL

Iron and Steel

With returns from every furnace in the country, the American Iron and Steel Association reports that the output of pig iron in 1911 was 23,649,344 tons, or 13 per cent. less than that of 1910. Totals for the last six years have been as follows:

1906	25,307,191
1907	25,781,361
1908	15,936,018
1909	25,795,471
1910	27,303,567
1911	23,649,344

Following the panic of 1907, the output was greatly reduced in 1908. High water mark was reached in the first half of 1910, when 14,978,738 tons were produced. Last year, 9,806,834 tons were credited to Pennsylvania, and 5,310,310 to Ohio.

The quarterly reports of the Steel Corporation's net earnings are regarded with much interest by those who seek evidence concerning the condition of productive industries. It was shown last week that the Corporation's net earnings in the last quarter of 1911 had been \$23,105,115, or \$6,000,000 less than those of the quarter immediately preceding. The following table shows the earnings of the last two years:

	1910	1911
First	\$37,616,876	\$23,519,203
Second	40,170,960	28,108,520
Third	37,365,187	29,522,725
Fourth	25,990,978	23,105,115
Total	\$141,143,941	\$104,355,563

It will be seen that the net profits in 1911 were less by \$36,800,000, or 26 per cent., than those of 1910. Last year, after deductions for interest, sinking fund, and dividends on the preferred and common shares, there was only \$89,638 to be added to the surplus. There were no appropriations during the year for new construction or extensions. In 1910, such appropriations amounted to \$26,000,000. The year 1911 was not a good one for the Corporation. Earnings were affected by low prices, the average being as low as at any time since the company was organized. And

in the last quarter the company was attacked in the courts by the Government. But at the end of the year there were signs of improvement. One of these was an increase of the unfilled orders on hand to 5,084,761 tons, which may be compared with 3,611,317 tons reported at the end of September.

All records were broken in our exports of iron and steel and steel manufactures during the year 1911, the value of them having been \$249,656,411. This total shows an increase of \$49,000,000 over the exports of 1910, and it exceeds by \$92,000,000 those of 1909. It includes steel rails, \$12,229,000; structural steel, \$10,270,000; wire, \$11,637,000; builders' hardware and tools, \$17,328,000; sewing machines, \$9,417,000; locomotives, \$4,199,000, and typewriters, \$10,603,000. The value of all the machinery sold abroad was \$111,135,833. In the exportation of a considerable part of this iron and steel there is an answer to those who oppose a reduction of the present tariff duties on imports of similar products.

....President Ripley, of the Atchison Railroad, predicts that within twenty-five years electricity will have entirely supplanted steam power on the railroads of this country.

....It is proposed that \$40,000,000 shall be expended for a new central railway depot, and connections, in Cincinnati, for the use of nine railroads. Five years will be required for the work.

....The price of crude petroleum in Pennsylvania has been increased four times since Christmas, rising from \$1.30 to \$1.50 per barrel. This advance has increased the prices of kerosene and gasoline.

....An inquiry made by the *Journal of Commerce* concerning 91 railroad and 143 industrial corporations in this country shows that they have 980,399 stockholders, whose average holding is 109 1/4 shares. While the capital of these companies has been increased in one year by 1 1/2 per cent., the increase of the number of shareholders is 7 per cent.

The Independent

VOL. LXXII NEW YORK, THURSDAY, FEBRUARY 15, 1912 No. 3298

Survey of the World

Since La Follette's Retirement

Senator La Follette is no longer a factor in the Presidential contest, altho he refuses formally to withdraw. Roosevelt supporters who were ostensibly La Follette men are now "out in the open." There have also been accretions to the Taft forces. Mr. La Follette's breakdown has been attributed, in some quarters, to anger and disappointment at the progress Mr. Roosevelt has made as a candidate. The Wisconsin Senator's best friends at home assert that he had Mr. Roosevelt's pledge that he would not be a candidate in 1912. Senator La Follette plans a European voyage, it is said.—The Slayden resolution against third terms for Presidents has not passed the House of Representatives, but gave Mr. McCall, a Republican from Massachusetts, a chance to deliver a notable speech, in which he declared a limited tenure of office for the Chief Executive to be "the most important bond to republican institutions." Examples were cited by the learned Representative from Roman history and the history of Mexico. Since Washington's refusal to stand for a second re-election, the third term has been "the Rubicon over which no President might pass." The traditional restriction of the presidency to two terms "has acquired the force of a constitutional limitation, and . . . the validity of positive law."

"The restriction imposed by Washington's example," Mr. McCall continued, "was never so salutary as today. The army of Federal employees has grown from a few hundred to nearly half a million. The activities of the National Government have expanded in a bewildering fashion. More than the total amount of our annual expenditure under Washington is now spent by the Government each year for inspectors and detectives for

supervising what we write, what sort of contracts we make and how we conduct our business. The central authority may know what every man does. This knowledge or ability to know business secrets and an unlimited power of prosecution for loosely defined statutory crimes enormously increase the weapons which an ambitious and unscrupulous President might employ to continue indefinitely in office."

—According to A. P. Moore, editor of the *Pittsburgh Leader*, who claims to have been the first to utter the "Roosevelt for 1912" slogan, Mr. Roosevelt bade him last week tell

"the progressives that I will not desert the cause, and that they will find me fighting side by side with them to the finish."

Mr. Roosevelt is kept busy daily interviewing friendly politicians from every State and Territory. He has accepted an invitation to address the Ohio Constitutional Convention on February 21. At Chicago, eight governors and delegates from twenty-eight States met on February 10 and organized permanently to advance his candidacy. The delegates favor presidential primaries in all the States.—From the Rocky Mountain States, where the Roosevelt stock has stood high, a warning has been conveyed to the ex-President that, unless he drops Gifford Pinchot, ex-Chief Forester, as an active campaign worker, he must lose the support of that region, Mr. Pinchot's advocacy of conservation along radical lines having made him unpopular in the less developed parts of the country long ago, even among many so-called progressives.—Representative William B. McKinley, of Illinois, has been selected to conduct the President's campaign for delegates to the Republican National Convention at Chicago. Mr. McKinley is classified as a standpatter, and was

lately elected to serve a third term in Congress. Taft headquarters will be opened in Washington. Mr. McKinley, after a conference with Senator Crane, of Massachusetts, and Secretary Hilles, claims that the President will have 780 votes at Chicago on the first ballot—or 241 more than the required majority. Before the President addressed the New York Republican Club on Lincoln's Birthday he learned that the Colorado State Central Committee had voted, 105 to 10, to send Taft delegates to the convention, that the Republicans in Alaska had taken similar action, as also the Eighth Virginia District, that of Alexandria. Mr. Taft has the Florida delegation, as well.

The Democrats A bitter attack upon Mr. Bryan was delivered in the House of Representatives on February 10, by Representative Martin E. Dies, of Texas, and received applause from the Democratic members who, in two caucuses, have ignored that leader's advice. Praising Messrs. Clark and Underwood, and replying to Mr. Bryan's criticism of the Supreme Court, and to personal criticism, the Texan declared that he "neither feared the power nor respected the judgment" of the Nebraskan, who "has led the Democrats thru three disastrous defeats." Mr. Bryan's name is frequently spoken now in connection with the threatened probe of the "money trust." The Bryanite resolution for such an investigation was introduced by Representative Henry, chairman of the Rules Committee, which committee was authorized to make the special investigation; but the Democratic congressional caucus of last week directed that the investigation should be made by four standing committees of the House, those on Banking and Currency, Judiciary, Interstate and Foreign Commerce, and Elections. An investigation by a joint committee of the House and Senate is the latest proposal. "There has been much loose talk," says Mr. Pujo, of Louisiana, chairman of the Committee on Banking and Currency, which will probably call Mr. Bryan as the first witness in the case, if the House authorizes an investigation. "The monetary system

should be investigated along scientific, not political lines." But Mr. Bryan "fears the investigation will prove a farce." No action or remedial legislation is expected at this session.—Ex-Governor Folk, of Missouri, has withdrawn as an active candidate for the Democratic nomination for President. He asks his friends to support Champ Clark. But if the Speaker cannot secure the nomination he will feel free to re-enter the race.—Governor Harmon, addressing the Ohio Constitutional Convention on February 8, declared against the initiative and referendum. The initiative and referendum are, he said, mere experiments in government, and he counseled the men who are making a new constitution for the State to wait and see how the innovations worked in other commonwealths before adopting them. He regarded the question of liquor licenses as calling for the exercise of self-government, and he believed a majority of the voters preferred a license system. He counseled the restriction of licenses to proper persons, and strict regulation.—Governor Wilson, of New Jersey, will not accept the invitation of the Ohio Constitutional Convention to address it, declining an opportunity to reply to Governor Harmon on the initiative and referendum. He has also declined to address the Ohio Presbyterian Convention at Warren. He will not invade the State while its Governor is a rival candidate for the nomination. It is reported, however, that Wilson headquarters are to be opened in Cleveland. The New Jersey candidate was well received last week at Frankfort, Ky.

From Washington Several witnesses have been ordered to appear before the House Committee on Expenditures in the Department of Agriculture to testify in the Florida Everglades Land investigation decided upon February 8. The dismissal of Chief Engineer Elliott, of the Drainage Division of the department, and his assistant, precipitated the investigation. The engineers were charged with misapplying funds—tho not with peculation. Indeed, their friends say that they were dismissed "to cover the

embarrassment" of a superior and to punish them for rendering an unfavorable report. Solicitor McCabe, of the Agriculture Department, declares that the statement issued by Representative Frank Clark, who has moved for the investigation, is "prejudiced and one sided," the Florida representative having charged that officers of the Government made it possible for "land sharks" (who have advertised widely) to sell lands under from two to ten feet of water, and practically valueless, thereby bringing discredit upon the Federal Government and the State of Florida, while enriching unscrupulous real estate boomers. In the House, Mr. Clark has declared that he is ready to prove

"that the Secretary of Agriculture told me in the presence of reputable witnesses that he suppressed a circular letter that gave the facts, at the instance of persons engaged in selling lands in the everglades of Florida."

This report had been prepared, it is said, at an expense to the Government of \$11,000.—The Senate Committee on Privileges and Elections ordered, on February 10, by a vote of 8 to 5, a report exonerating Senator Isaac Stephenson, of Wisconsin, of corruption in his election to the Senate. Five members—Senators Clapp, Jones, and Kenyon (Republicans), and Lea and Kern (Democrats) will sign a minority report, holding that the admitted expenditure of \$107,000 to obtain the nomination raises a presumption of guilt which the evidence has not removed. Five Republicans and three Democrats—Johnstone, Fletcher, and Pomerene—signed the majority report of exoneration.—The Senate Committee on Pensions has voted to report unfavorably the Sherwood bill, passed by the House, adding about \$75,000,000 to the yearly cost of pensions. The vote was 10 to 4. The vote for a favorable report on a compromise measure, suggested by Senator Smoot (Utah), was 12 to 2. This will carry an annual appropriation of about \$24,000,000.

Labor Cases The Federal grand jury at Indianapolis, which has been investigating the dynamiting cases, returned thirty-two true bills on February 8. Some forty labor

men are implicated. March 12 is the date set for the arraignment. The aggregate of bonds to be required is about \$300,000. Arrests the country over will be made simultaneously. Four labor leaders indicted at Los Angeles—Tveitmoe, Johannsen, Clancy and Munsey—on the charge of conspiracy to transport dynamite, entered pleas of not guilty.—The joint committee of the Massachusetts Legislature which is investigating the Lawrence strike has been holding sessions with the manufacturers in Boston and the strikers in Lawrence. The strike committee is disposed to accept no settlement until the release of strike leader Ettor is effected. While Ettor has been in jail William D. Haywood has been touring the East to enlist sympathy and raise a strike fund. About 170 children, varying in age from two to fourteen years, selected from the families of striking operatives, were forwarded to New York on February 10, under the escort of parents, strike leaders and nurses. In New York they were distributed among various families, after parading with red flags draped in black. At Lawrence prosecutions of the leaders and parents responsible for sending the children to New York were threatened. Yet it is planned to send on a thousand more children. About 10,000 operatives, or one-third of the normal number, are now at work. Some strikers are also drifting out of the Industrial Workers of the World (Ettor's organization) into the American Federation of Labor, the rival union.

Central America Secretary of State Knox is about to visit the Latin-American countries bordering upon the Caribbean Sea and the Gulf of Mexico, his purpose being to promote a better understanding of the spirit of the Monroe Doctrine and to show the friendly attitude of our Government, especially in its attempts to improve the financial condition of several of the republics. He will be carried by a naval cruiser to Colon. After visiting the capitals of Costa Rica, Nicaragua, Honduras, Salvador and Guatemala, he will go to Venezuela, Porto Rico, San Domingo, Hayti and Cuba.—The stipulated period of time hav-

ing expired, the syndicate of New York bankers (led by J. P. Morgan & Co. and Kuhn, Loeb & Co.), which offered a loan of \$10,000,000 to Honduras, in connection with the pending loan convention, has withdrawn from the undertaking, and the convention, or treaty, has been recommitted by the Senate to its committee on Foreign Relations. The money was to have been used in paying the foreign debt of Honduras, at 15 cents on the dollar, and in building a railroad. It is now expected that a New Orleans syndicate, led by the Whitney Central National Bank, will loan \$6,000,000 to Honduras, in accordance with the terms of the treaty.—Following what seemed to be a rejection of the treaty, the Honduras Congress ordered a cancellation of railroad and wharf contracts or concessions held by W. S. Valentine, of New York, and directed the Government to take possession of the property at Puerto Cortez. When the Government was about to seize the property, it was protected and held by marines, landed from the United States gunboat "Petrel." Whereupon trains on the road (which is fifty-six miles long) were stopped by the Government. The marines have been withdrawn, but our Government reserves the right to make a claim for damages.

Disorder in Mexico There was great disorder in many parts of Mexico last week, an unorganized revolution being in progress. This movement is due mainly to the disappointment of many of Madero's men, who expected that his victory would be followed by a distribution of the great landed estates for their benefit. Half of the state of Chihuahua is in revolt, and uprisings have been reported in nearly every other State. In the south, near the capital, the Government has been unable to overcome Zapata's bandit army, altho in several battles the Zapatists were driven back. There were rumors that Chihuahua was about to secede, declaring its independence, and that General Orozco was disloyal. Both were denied. Madero urged Orozco to become military dictator of Chihuahua, and, upon the resignation of Governor Aureliano Gon-

zales, the General was elected by the Legislature to succeed him, but he declined the office because the Legislature refused to indorse the Madero Government. At the beginning of the present week there were no signs that Orozco was disloyal. On the other hand his acts, as well as his words, showed that he was faithfully supporting the Government. In all parts of Mexico reports that the United States was about to intervene caused resentment. For this reason, and on account of unrestrained brigandage, many American residents hastily left the country. Prominent and wealthy Mexicans also crossed into Texas. Railroads were disabled by the burning of bridges. At the capital, Manuel Ugarte, the Argentine agitator, was denouncing the United States before large audiences. On the other hand, Madero, in published statements, was commending the United States, upon friendly relations with which, he said, Mexico's peace and prosperity depended. Mexico had never been aided by other Latin-American countries, and could not look to them for help. The retiring Governor of Chihuahua, Aureliano Gonzales, urged all to unite in resisting the United States. Our recent order for mobilizing the army, he said, meant approaching invasion and subjugation. Mexicans must resist or be enslaved. The constitutional Governor, Abram Gonzales (who is also Minister of the Interior), arrived in Chihuahua at the beginning of the present week, empowered to distribute \$250,000 among the discontented Maderist soldiers, to give \$50,000 to the widows and orphans of revolutionists, and to buy large estates in order that the land might be sold in small tracts at merely nominal prices to those who fought for Madero. He hoped all this would restore peace. The situation caused much anxiety at Washington. Our entire mobile army of 34,000 men was ready to start for the border, but no marching order was given. While it was thought that anarchy might eventually call for intervention in behalf of 45,000 American residents and about \$1,000,000,000 of American capital, it was seen that such a step must expose resident Americans to great danger.

British Politics After all the dire threats by the Ulsterites of riot and bloodshed if Winston Churchill and John Redmond dared speak for Home Rule in Belfast, the affair went off very peacefully. The only violence was that displayed by a suffraget, who struck Mr. Churchill in the face with her flag when he landed in Scotland on his return from Ireland. A heavy rain in Belfast assisted the police in maintaining order, for the drenched crowds on the streets had hardly spirit enough to say "Boo!" to the First Lord of the Admiralty on his arrival. The big tent on Celtic Park did not keep off the rain, but the 5,000 people gathered listened with enthusiasm to Mr. Churchill's defense of the Home Rule bill, which he explained thus:

"The Crown will be in a position to refuse its assent to any unjust law, and the Imperial Parliament will be able to repeal any such law. Religious freedom will be secured. The Privy Council will be able to declare void any law which goes beyond the limits of the home rule bill. The military will remain under the control of the Imperial Government.

"The financial proposals of the bill will give a fair start to the Irish Government and it will not be possible that insidious taxes can be placed upon Ulster. The Irish Parliament, however, will have real control of its finances, but the system used must be consistent with the financial system of the United Kingdom.

"The Imperial Government will continue to carry out the land purchase and old age pensions schemes. The Irish representation at Westminster will be reduced."

He defended the idea of local government by calling attention to the fact that England's two rivals for commercial supremacy, the United States and Germany, were governed respectively by 46 and 23 separate legislative bodies.—Mr. Churchill's speech in Glasgow on the following day was perhaps more important than his Belfast address, for in speaking of the naval program he said:

"There, however, is this difference between British naval power and the friendly empire—and I trust it may long remain a great friendly power—of Germany. The British navy is to us necessary, and from some point of view the German navy is to them more in the nature of a luxury. Our naval power involves British existence in its expansion. We cannot menace the peace of a single Continental hamlet, nor do we wish to do so, no matter how great and supreme our navy may become.

"But, on the other hand, the whole fortune of our race and empire, the whole treasure accumulated during so many centuries of sac-

rifice and achievement, would perish and be swept utterly away if our naval supremacy were to be impaired. It is the British navy which makes Great Britain a great power. But Germany was great, respected, and honored all over the world before she had a single ship.

"The Government resolved to maintain the naval supremacy which this country enjoys. We were never in a better position and the country was never more united in its resolve to see the supremacy of the British navy maintained."

—This utterance must be considered in connection with the visit of Lord Haldane, Secretary of War to Berlin, ostensibly "to investigate scientific education in the German universities." It is admitted, however, that he is holding political conversations with the Chancellor and the Kaiser, and that Russia and France are being informed of what takes place in them.—Great indignation has been aroused in England by the conviction at Leipzig of Bertrand Stewart, a London lawyer, for espionage, after a secret trial and his sentence to three and a half years' imprisonment. The only witness introduced by the prosecution was a Belgian ex-convict.—About the same time Heinrich Grosse, a captain in the German merchant marine, was sentenced in England to three years' penal servitude for espionage in trying to get information as to the armament of the British submarines. But Grosse was tried by jury in open court with a lawyer to defend him.—The King and Queen returned from their three months' trip to India on February 6, and were greeted by crowds in the streets singing "Home, Sweet Home." There is great relief over their safe return.

Knox's Note on China Secretary Knox is following the precedent of Secretary Hay in insisting upon an "open door" and "hands off" policy in China. Germany also takes the same view of the situation, and the agreement of the two Powers found expression in the publication of a note dated February 3 and addressed to the Imperial German Ambassador at Washington, Count J. H. von Bernstorff, by the Secretary of State. After calling attention to the unanimity of action which the Powers so far have shown, Mr. Knox says:

"It is, therefore, evident to this Government that all the powers have up to the present, by common consent, not only refrained from independent action and from intervening in China's internal affairs, but have acted in full accord with their mutual assurances that they would respect its integrity and sovereignty.

"There happily has thus far been no reason for interference on the part of foreign powers, inasmuch as both Imperialists and Republicans have guaranteed the lives and property of the foreign population, and the latest reports tend to strengthen the belief that it is improbable that future developments will necessitate such interference. If, however, contrary to all expectations, any further steps should prove necessary, this Government is firm in the conviction that the policy of concerted action after full consultation by the powers should and would be maintained in order to exclude from the beginning all possible misunderstandings.

"Moreover, this Government has felt it to be a corollary of the policy of strict neutrality hitherto pursued by common accord with respect to loans to China to look with disfavor upon loans by its nationals unless assured that such loans would be of neutral effect as between the contending factions, as it has also felt that the present was an occasion where there might be invoked with peculiar appropriateness the principle of the lending Governments deterring their nationals from making loans not approved as to their broad policy by their own Governments in consultation with the other interested powers."

The German-American declaration is regarded by Dr. Sun Yat-sen as having strengthened the republican cause and protected the integrity of China. The action is said to have been taken on account of the discovery by the German secret service that Japanese troops had been mobilized on the Manchurian frontier. Russia has openly announced her support of Mongolian secession and Great Britain is likely to follow suit by assuming control of Tibet. The Dalai Lama, the spiritual and temporal ruler of Tibet, is now living under British protection at Darjiling, having found a warmer welcome in India than he did at Peking. The Japanese Government is being attacked by the Nationalists in the Diet for not taking advantage of the crisis to push Japanese interests. In replying to their criticisms the Minister of Foreign Affairs, Viscount Uchida, said that all had been done that the circumstances allowed. He admitted that the Government had helped the Japanese Steamship Company in the attempt to buy out the Imperial Chinese Mercantile Marine Company and the Japanese interests which were trying to acquire control

of the Han-yang iron works and Chinese coal mines, but he said that such a policy must now be abandoned as likely to be regarded as violations of neutrality.

The Retirement of the Manchus

At noon on February 12 three edicts were issued announcing the withdrawal of the Emperor from the Government and authorizing Premier Yuan to establish a republic. The first edict concludes:

"The majority of the people are in favor of a republic. From the preference of the people's hearts the will of Heaven is discernible. How could we oppose the desires of millions for the glory of one family?"

"Therefore, the Dowager Empress and the Emperor hereby vest the sovereignty of the Chinese Empire in the people.

"Let Yuan Shi-kai organize to the full the powers of the provisional Republican Government and confer with the Republicans as to the methods of union assuring peace in the empire and forming a great republic with the union of Manchus, Chinese, Mongols, Mohammedans and Tibetans.

"We, the Empress Dowager and the Emperor, will thus be enabled to live in retirement, free from responsibilities and cares, and enjoying without interruption the nation's courteous treatment."

The Republicans have made the following pledges in regard to the deposed monarch:

First—The Emperor shall retain his title and shall be respected as a foreign monarch.

Second—The Emperor shall receive an annual grant of 4,000,000 taels until the currency is reformed, after which he shall receive \$4,000,000 Mexican.

Third—A temporary residence shall be provided in the Forbidden City and later the imperial family shall reside in the Summer Palace, ten miles outside of Peking.

Fourth—The Emperor may observe the sacrifices at his ancestral tombs and temples, which will be protected by Republican soldiers.

Fifth—The great tomb of the late Emperor Kwang-Su will be completed and the funeral ceremony fittingly observed at the republic's expense.

Sixth—The palace attendants may be retained, but the number of eunuchs cannot be increased.

Seventh—The Emperor's property will be protected by the republic.

Eighth—The imperial guards will be governed by the army board, the republic paying their salaries.

The Manchu nobles are to retain their hereditary titles and private property and will be exempt from military service. The pensions of the Manchus will be continued until the State finds them occupation.

Lincoln and Grant Today

BY JOSEPH H. CHOATE, LL.D.

[The following article is the substance of an address made by Mr. Choate at a meeting of the New York Genealogical and Biographical Society held last Friday in honor of Mr. Choate's eightieth birthday. Whitelaw Reid, the successor of Mr. Choate as Ambassador to England; General Stewart L. Woodford, ex-Minister to Spain, and General James Grant Wilson made brief addresses and a letter of congratulation from Andrew Carnegie was read. General Woodford knew Lincoln and Grant. He was the messenger of the New York Electoral College to take the first vote of New York for Abraham Lincoln to Washington to place it in the hands of John C. Breckenridge, then Vice-president of the United^e States. As Mr. Choate is the acknowledged leader of the American Bar and for fifty years has been a leading citizen of New York, the gathering to do him honor last week was naturally a notable one.—EDITOR.]

TO say anything new about Lincoln or Grant is an absolute impossibility. The world's literature is full of the story of both of them, and it so happened that I had very little personal knowledge of either of them by actual contact, never having been in the habit of running after Presidents. But I did have the great privilege of hearing Mr. Lincoln's address at the Cooper Institute, which was a great event in his life, and as I think, a signal event in the history of New York.

I remember very well speaking to him and shaking hands with him before he went forward to deliver his address. With an awkward form and most ungainly address, and one far from prepossessing, a countenance as he stood there with a little trepidation, not very prepossessing; but when he came to speak, it was as a flashlight—as it impresses you nowadays, for flashlights had not then been invented. Not only his whole personality and his face lighted up, but he seemed to lighten up the audience, and for one hour or an hour and a quarter he discussed the great questions of the day, and held the audience in his hand. He concluded with the memorable words: "Let us ever feel that right makes might, and in that faith let us dare to do our duty as we understand it."

He came to New York unknown, and he left an applauded hero, and the next day the whole country rang with his praise. Alas, the next time I saw him was as his body was carried thru the streets of New York on the way to its last resting place at Springfield. But it is never out of order to speak in praise of Mr. Lincoln. His fame has been

growing all the time, the literature that has gathered about his name is a library in itself, and he stands recognized not only in his own country, but in all of the other countries, as one of the great heroes, the great martyrs of mankind, and the great liberator of an oppressed race.

And so it was of General Grant. My personal acquaintance with General Grant was very slight. I used to meet him at dinners. I used to hear him speak—and that was one of the most remarkable things about General Grant, that almost never having spoken at all, within his last few years when he settled in New York and was victimized by being compelled to attend many public dinners, his faculty as a public speaker wonderfully increased, and he soon became one of the popular orators of the day.

As Lincoln was a liberator, Grant was the savior of his country, acting with and under Lincoln, who practically surrendered into his hands from the time he came to be actual commander in the field of the whole army, surrendered to him all his powers as commander-in-chief under the Constitution, and never questioned any of his acts, faithful to him to the end; and it is a very great delight to recall the memory of those two men, who will live in history as the true saviors of their country.

I do not think it is well for us, even on an occasion like this, to say so much about Lincoln and Grant, as to wonder and conjecture what they would say to us—what position they would take on these great burning questions that now so oppress the hearts of the American people. On that first great question, that great

and momentous question of peace, which is the great industry, the stable industry of the people of the United States, on which all other interests depend, can we doubt for a moment how Lincoln and Grant would stand?

They were both intense lovers of peace, notwithstanding it fell to their duty to carry on one of the most horrible and destructive wars. "Let us have peace," said Grant. And we all know that Lincoln, in all of his great and troubled efforts, had but one end in view, "To restore peace to this afflicted country."

There are a great many forms in which peace presents itself every day, and it is for peace, not only between this nation and all the other nations, but for peace among all the nations of the world, one with the other, that our great President at Washington now is making the best possible effort. I cannot doubt Grant and Lincoln, if they were here, would hold up his hands, and do all they could to support him in the effort he is making to promote the peace of the world.

Those arbitration treaties which are now hanging fire in the Senate may not prevent war—I do not suppose if we made treaties every day and filled the library of Congress with them that it would do that. Still they do tend to promote peace and prevent the possibility or the chance of war. And I can conceive of no more powerful advocate that we could have than those two great Presidents of former days, who would stand by our President and support him on every such question.

Then there is another question closely bearing upon that, which it seems to me would enlist their sympathies. I mean this threatening question growing out of this almost anarchical condition of affairs existing in China. It was my good fortune some twelve or thirteen years ago to present to Lord Salisbury from my chief, Mr. John Hay, one of the greatest diplomatists that America or the world has ever known, the proposed declaration for the open door and for the preservation of the integrity of China, and it was one of the happiest days of my life when I was able to send word to Mr. Hay that Lord Salisbury had assured me that Great Britain was fully in accord with his proposed decla-

ration, because I felt then, as I feel now, that if the two great English-speaking nations stood together and acted together, the peace of the world was almost assured.

But within a few weeks it came about that all the other great nations of the world responded in the same vein, and Mr. Hay was able, within a very few months from the time the matter was presented to Lord Salisbury and so favorably received by him, to issue another note to all the nations of the world that had any interest in the Far East, stating to them that all had assented, that the Open Door was guaranteed by the nations of the world, and the integrity of China had been absolutely preserved, and that he regarded it as definitive and final.

Well, there are other great questions now on our carpet on which I think we can look for advice to the lives and to the sentiments of these two men whom we love so much to honor and to glorify. I speak again, not only of the preservation of peace and the ratification of these pending treaties, but of the preservation of the Constitution of the United States. For what was it that Lincoln and Grant and the people of their day and time rallied with such wonderful and effective force and power to? It was to preserve the integrity of the United States, under the Constitution as it had come down to them from our common fathers. And there were never any two men who had more absolute faith in the perfection of the Constitution of the United States and its certainty to promote the welfare of the people of the United States if carefully guarded—the Constitution with all of its safeguards.

Well, now, we hear every day of every new kind of nostrum, every new kind of device, all tending to weaken, to impair the Constitution of which I have spoken.

It was the Constitution of the thirteen confederated States, and all those States which have since joined them, for the establishment of a free representative government, with safeguards actually to prevent any inroad of popular impulse or wild enthusiasm of the moment interfering with the judgment of the selected men who filled the legislative, the judi-

cial and the executive offices at that time. And now, what do we find? What is the object of all these new-fangled inventions that are daily proposed—proposed amendments to the Constitution without number, but also efforts to undermine and get behind the Constitution, to brush aside the safeguards which it contains and to transform our free representative Government into what they call a “true democracy” appealing to the people, in moments of hot enthusiasm, of wild excitement, on any question that might come up, from the President, from the decisions of Congress, and even from the judgments of the Supreme and the other Federal courts.

Now I cannot conceive of any situation of affairs that could so strongly have evoked the condemnation of these two great men of whom I have spoken, as these efforts to undermine and find some substitute for the safeguards of the Constitution.

I remember when in England asking the Prime Minister of that day: “What are you going to do? You have given the suffrage to substantially all the people. What are you going to do when they take possession of your House of Commons and begin to vote away your assets?” He gave a characteristic shrug of the shoulders and answered that that was something that could not happen.

It seems in both countries alike there is a great drift, not to what I call “de-

mocracy,” not toward that well-regulated Democracy which Jefferson and Madison and even Jackson upheld and applauded; I mean not to the organized and co-ordinate arrangement of powers under the Government of the United States, each department being absolutely independent of the other, and independent so far as possible from the immediate and actual impulse of popular passion and emotion.

Now, we have all got to be students and followers of Lincoln and Grant and the men who preceded them and followed them; and study all these new fandangled suggestions, and I have that faith in the wisdom and prudence of the American people to believe they will stand by the Constitution and that they will not accept any of these radical changes which tend to undermine it.

When Lincoln spoke at Gettysburg and prayed that there might be preserved for us “a Government of the people, by the people and for the people,” he meant just what I have referred to—a Government under the well-regulated system established by the Constitution of the United States at a time when none of these new ideas had ever been heard of; and if we are true to his memory we shall stand also for the same form of government, and truly shall have “a government of the people, by the people and for the people.”

NEW YORK CITY.

Love's Anthology

BY CHARLES F. LUMMIS

THOU art a thousand poems all in one—
Thy lips of laughter, and thy questioning
brows,
Thy cheeks wherein Castilian roses run,
And, God! How life-and-death is in thine
eyes!
The baby feet, whose twinkling mysteries
So patter as a vestal at her vows;
The wizard little fingers
That compel the soul of song,
The voice of mirth that lingers
In our ears and hearts so long;
The proud young neck, a dream beyond be-
lief;
The night of hair above a brow of snow;
The wayward dimples dancing as they go;
The willowy form, a-flutter as a leaf.

A thousand poems bound in one—
Poems and poet in a single self!
The very queen, in essence of an elf—
The artist and the canvas and the sun!

For more than all thy beauty is the soul of
thee;
More than thine eyes, thy laughter and thy
grace;
More than the master-music owns control of
thee—
Above them all I place
The heart of youth and fire and spotlessness,
The unsullied spirit and the poet's thought;
God keep thee so, and give thee never less—
Thy life, thy lot, thy love, as poets ought!
LOS ANGELES, CAL.

What Is the Matter with Our Army?

II. It Is Needlessly Expensive

BY BRIG. GEN. W. W. WOTHERSPOON

[The following article by the president of the Army War College is the second in our series of "What Is the Matter with Our Army." Last week Major General Wood discussed the lack of concentration in the Army? We shall soon publish articles by General Edwards, General Evans and others.—EDITOR.]

THAT the cost of the regular army of the United States is excessive considering its strength and state of preparedness for war can hardly be disputed. Probably no army of the world is composed of better material both in its commissioned and enlisted branches; certainly none is more highly paid, more comfortably quartered, more luxuriously fed, or costs more per man when the number of men is divided into the total sum of the appropriations made by Congress for its maintenance. Not only is the per capita cost of maintenance in peace very high, but the preliminary cost incident to the assembly of its fractions for its functions in war must necessarily be very great owing to its faulty strategic distribution at points far distant from the places where it will be

needed in the event of war or domestic disturbances.

An analysis of the appropriations made by Congress for the support of the army in 1910, and strictly pertaining thereto, shows the cost to have been about \$117,900,000, of which sum \$5,383,000 was for pay and allowances for retired officers and men, \$25,816,000 for permanent improvement and reserve supplies, and \$86,764,000 for maintenance proper, including the civil establishment in the War Department. Dividing the approximate authorized strength of the army, 80,000 men, into the cost of permanent improvement, reserve supplies and maintenance proper, it will be seen that the per capita cost is somewhat over \$1,470.

All military men recognize that the present strength of the army, its distri-

MAP SHOWING THE DISTRIBUTION OF THE MOBILE ARMY

bution and lack of the higher organized units, is inadequate to the needs of the nation, and that with adequate drafts, aggregating at a minimum 30,000 men, upon our military establishment for the protection of our possessions in the Philippines, in the Hawaiian Islands, Porto Rico, Alaska and in the Panama Canal Zone, the remainder of the army, or about 50,000 men, of which 14,000 would be coast artillery and only about 36,000 would be mobile troops, would be insufficient properly to perform its full duty in the United States proper. No military man, however, believes that Congress should be asked to authorize the necessary increase in enlisted strength of our army on any such basis of cost as \$1,470 per capita, or even half that sum, and recognizes that to do so would be unreasonable. What is contemplated by the War Department and what is being undertaken by it is a careful study of the reasons for what is admitted by it to be the inordinate per capita cost of our military establishment, in the hope and expectation that the expensive defects of our military system may first be recognized and then corrected either by administrative action or by the action of Congress.

The primary causes of the expensiveness of our army are, undoubtedly, our defective geographical distribution of its units and the defective system of quartering our men. As regards distribution, every one will admit that reasonable expense incident to a proper distribution of our army for the purposes for which it is maintained is warranted, but no one is so bold as to claim that any expense incident to or arising out of an improper distribution of the elements is justifiable. As regards the system of quartering our men, every one will admit that they should be quartered comfortably and in such a way as to insure health, but no one will admit that it is a sound principle to quarter them in very many expensive houses when a less number of less expensive houses will meet these ends.

In testing the question of the expensiveness of any system of distributing our army, it is first necessary to formulate on broad outlines what its proper distribution should be. This can only be done

by a study based upon the needs for any army at all, and of the localities in which it should be stationed to best meet the contingencies for which it is maintained.

Our regular army, so far as its employment in the United States proper is concerned, has for the reason of its existence the following objects: The need to protect the country from invasion, to assist the civil authorities in preserving order and suppressing insurrection, and the need to maintain our obligations as to neutrality with our immediate neighbors. So far as its employment outside the United States is concerned, it has for its reason of existence the need for garrisoning, protecting and reinforcing the civil power in our insular and foreign possessions; it must also be prepared to enforce the policies of the Government in regions within the political spheres of our influence.

Invasion of our territory, while remotely possible on our northern and southern land frontiers, is most to be expected on the sea frontiers of the Atlantic, Gulf and Pacific coasts. On the Atlantic and Gulf coasts the invasion would most probably be made north of Chesapeake Bay; on the Pacific coast, somewhere near the regions of Puget Sound, San Francisco, Los Angeles. If this probability be admitted, then the indication is at once apparent that the bulk of our army should be strategically distributed at or near to the most important regions of the Atlantic and Pacific coasts. The emergencies which may call for support of the civil authorities in preserving public order can, it is thought, only be expected to arise where great congestions of the turbulent (generally the foreign-born) elements of our population exist. If this conclusion be reasonable, then the indication is clear that units of our army should be stationed in or within easy reach of regions where the turbulent elements live, i. e., the mining regions where many foreigners are employed, and the large cities where this class of persons congregate. Our obligations as to the maintenance of neutrality with our neighbors involve only the Mexican and the Canadian frontiers. The Fenian threats against Canada a number of years ago and the recent revolutionary activity in Mexico sufficiently well indicate the

character and spheres of such influence as we need exert. If this is also a correct indication, then it is clear that units of our army should be stationed at or within easy reach of the points where our influence must be used. The regions within the spheres of our influence where our army may have to be used to enforce the policies of the Government lie to the south of our coasts and our insular and foreign possessions, and must be reached by oversea expeditions. If this be so, then, as in the other assumptions, there is an indication that such organizations of the army as may be necessary for those purposes should be stationed at or near the ports from which they would be required to embark.

So far as the distribution of the elements of the Coast Artillery Corps is concerned, the distribution is fairly good, the main defects being due more to local dispersion in the artillery district commands than to its general distribution. So far, however, as concerns the distribution of the main elements of the *mobile army*, the units of cavalry, field artillery and infantry, the distribution must be admitted to be seriously defective not only in the tactical, administrative and strategical senses, but, above all, in that its distribution is such as to involve the *maximum of expense* in its maintenance with a *minimum of effectiveness*.

Looked at from the point of view of the only reasons which can be given for its maintenance, the distribution of the elements of our mobile army is, as above suggested, seriously defective. The bulk of the army is not strategically stationed in the regions most susceptible of invasion on the North Atlantic coast and Pacific coast; units of the army are not stationed near to the turbulent regions, nor are they stationed near to the ports from which they must embark on oversea expeditions to garrison our foreign possessions or to maintain our policies to the south. As for the distribution of the elements of the army with reference to our obligations as to the maintenance of our neutrality obligations on the Mexican and Canadian borders, this is now fairly well, tho by no means economically, done.

The facts seem to be that the principal elements of the mobile army, consisting

of twenty-four regiments (ten regiments of cavalry, five regiments of field artillery, and nineteen regiments of infantry) serving within the continental limits of the United States, are distributed in forty-nine posts, in twenty-four States and Territories.

In the whole region bordering on the North Atlantic and extending from Portland, Me., south to include Chesapeake Bay, there are but two mobile army posts (Fort Jay, N. Y., and Fort Myer, Va.), containing one-third regiment of cavalry, one-half regiment of field artillery, and one-third regiment of infantry, or about 1,000 men.

In the region bordering on the Atlantic coast south of Chesapeake Bay and the Gulf coasts there are no mobile posts or mobile troops and but one post (Fort McPherson, Ga.), with one regiment of infantry, about 800 men, within supporting distance of the important ports of that region.

In the region bordering on the Pacific coast there are but five mobile army posts (Fort Lawton, Wash.; Vancouver Barracks, Wash.; Presidio of San Francisco, Cal.; Presidio of Monterey, Cal.; Fort Mason, Cal.), containing one-third regiment of cavalry, one regiment of field artillery, and three regiments of infantry, or about 3,700 men.

On or near to the Canadian frontier there are eight mobile army posts (Fort Ethan Allen, Vt.; Plattsburg Barracks, N. Y.; Madison Barracks, N. Y.; Fort Ontario, N. Y.; Fort Niagara, N. Y.; Fort Porter, N. Y.; Fort Wayne, Mich.; Fort Brady, Mich.), containing one regiment of cavalry and two and two-thirds regiments of infantry, about 2,300 men.

On the Mexican frontier there are four mobile army posts (Fort McIntosh, Tex.; Fort Clark, Tex.; Fort Bliss, Tex.; Fort Huachuca, Ariz.), containing two-thirds regiment of cavalry and one regiment of infantry, about 1,150 men, with a reserve or supporting force of one regiment of cavalry, one-half regiment of field artillery, and one regiment of infantry at San Antonio (Fort Sam Houston), Texas.

It thus appears that of the ten regiments of cavalry, five regiments of field artillery and nineteen regiments of infantry habitually stationed within the con-

tinental limits of the United States, but two and one-third regiments of cavalry, two regiments of field artillery and eight regiments of infantry, or about 35 per cent. of the units of the mobile army, are distributed in strategic positions with reference to the maintenance of our neutrality obligations on the Mexican and Canadian borders, the remaining twenty-two regiments, or about 65 per cent. of the mobile army, being stationed at thirty-six posts in the interior of the country, mostly in stations far west of the Mississippi, and, with one or two possible exceptions, far from the points where their services would ever be required.

Turning to the economic features arising from the disposition of our army and testing the question of economy in administration on the basis of distance between sources of supply in men and material and the points where the mobile army is located, it will be seen from the general outline given above that the major part of it is distributed in regions very far from the centers of population, manufacture and cheap supplies. There are three large areas of the United States where population is most dense, where factories are most numerous, and where the supplies used by an army are most abundant and cheap, viz.—first, the region north of Virginia and east of the State of Ohio; second, the region north of the Ohio River, west of Pennsylvania and east of the Mississippi River; third, the coastal region of the Pacific from Seattle on the north to Los Angeles on the south. From these three regions come most of our war material, most of our supplies, and most of our men, yet in the first there are but $13\frac{1}{3}$ per cent., in the second but $6\frac{1}{3}$ per cent., and in the third but $13\frac{1}{3}$ per cent., a total in the three areas of but 33 per cent. of all the cavalry, field artillery and infantry in the United States proper, while the remainder, or 67 per cent., of these arms of the service are located in the large area and where supplies used by the army are generally most expensive, comprised in the other two regions, the one that south of Virginia and the Ohio River and east of the Mississippi, the other that lying between the Mississippi River and the coastal region of the Pa-

cific, where population is most sparse and where factories are few. A comparison of the number of organizations stationed in the former with those stationed in the latter of these two comparatively non-populous regions shows that there are far less troops in the more highly developed area, the Southern States, than in the less highly developed area of the Western and Northwestern States, but one regiment of cavalry and one regiment of infantry being in the former to seven regiments of cavalry, three and one-half regiments of field artillery, and five regiments of infantry in the latter.

So far, then, as expense of maintenance of the army is concerned, we see that the distribution of its elements is such as to make it very high. Men have to be enlisted in the populous areas and shipped to and from distant regions at great expense; the larger part of the supplies for its support have to be manufactured or purchased in and shipped from these same populous regions to the distant Western stations over railroads whose freight rates, at least west of the Mississippi, are much higher than they are in the northeastern populous section of the country.

The distribution of the elements of our army has, of course, a direct bearing on its opportunities for tactical instruction. The instruction of an army begins with the individual soldier and progresses thru the company, battalion, regiment and brigade to the division. In relation to this fundamental requirement it may be said that our army's distribution is of such a character as to afford very poor opportunities for such instruction. If we classify the opportunities for the individual instruction of soldiers as "excellent" (which they are far from being, owing to his diversion from military work to non-military work), then the opportunities for instruction of companies might be classified as "good"; for battalions, "fair"; for regiments, "very indifferent"; for brigades, "exceedingly poor and rare" (only four brigades of the regular army at less than war strength have been assembled in the past ten or twelve years); for divisions, "none whatever." As illustrative, it may be pointed out that there are no posts in the United States where a brigade of any

arm of the service is assembled, there are fifteen posts where units of a single arm as large as a regiment are stationed and can be drilled together, thirty-two posts where battalion units can be drilled together, and two posts where company units can be drilled. Moreover, it is most unfortunate that the distribution of the army is such, i. e., its units, battalions and regiments, are stationed so far from each other as to make the cost of assembling them even once each year for regimental or brigade drill almost prohibitive and the assembly of a division for exercise out of the question.

The initial expense attending the assembling of a force of from 5,000 to 15,000 men of the army at ports of embarkation on the Atlantic or Gulf coasts for oversea expeditions, such, for instance, as were involved in our intervention in the affairs of Cuba in 1898 and 1906, must necessarily, as stated above, be great, for at least part of the forces and much of their equipment must be gathered from the Far West and transported to the port of dispatch. In 1898 troops were moved to Tampa from the Pacific coast. In 1906 troops for the Army of Cuban Pacification were brought from as far west as Fort D. A. Russell, Wyo., to Newport News, Va., 1,993 miles, or about the distance from St. Petersburg, Russia, to Rome, Italy. From the above it would seem as if a very large part of the excessive cost of our army must be charged to its faulty distribution at places far distant from the sources where men are enlisted and supplies purchased or manufactured, and that this distribution cannot be justified on the ground that there exists any strategic, tactical or economic necessity for such a distribution.

The next most important element in the excessive and unnecessary cost of our army, both as to money and efficiency, grows out of our faulty system of sheltering or housing the men. Practically all of our military posts are park-like establishments with areas varying from a few to many thousand acres, on which the company units are almost invariably more or less elaborately housed in separate buildings or barracks, with such utilities as administrative offices, shops, stables, storehouses, etc., each a

separate structure. The central area near the buildings and the approaches are carefully kept and beautified with lawns, trees, flowers, etc. Each such post has many thousand feet of costly roads, sidewalks, sewers, water supply and light conduits. Nearly every post has its own water and light plant with the necessary operative and repair force composed either of expensive civilian employees or of still more expensive soldiers diverted from their legitimate military duties to perform this character of civil labor. Not only is the original cost of these establishments, particularly when constructed, as many of them are, at great distances from sources of building material and supplies, very great, and the cost of maintenance very great in money, but the fighting branches of the army suffer serious injury in their efficiency, training and morale, inasmuch as the greater part of the care of the posts devolves upon soldiers who are for this purpose taken away from their military training to police and beautify the grounds, dispose of refuse, drive the teams and assist in maintaining the post in a satisfactory manner.

An estimate made in the Quartermaster General's office of the cost of one of the cheapest infantry regimental posts in the United States, omitting the cost of the land on which it is located and the money spent in the construction of quarters for officers, indicated that even with these exceptions the cost was somewhat over one million dollars, and that annually about two per cent., or \$20,000, of this sum is required for the maintenance or upkeep of its buildings, roads, walks, water and light systems. This post shelters about 850 enlisted men, making a per capita cost of about \$1,175 per man for original construction of shelter and utilities, and \$23.52 in annual cost for maintenance of the plant. The number of soldiers diverted from their military duty to non-military labor to help in the care of this post is not known, but it must be recognized that any men so taken away from the purpose for which they were enlisted is a direct injury to the military efficiency of the army as a whole.

An equally careful estimate made by the Quartermaster General's office of the

cost of a single building constructed after the European plan of barracks, and which would shelter this same regiment under a single roof, indicated that its cost would be less than \$500,000 if built in Washington, with an annual charge for maintenance or upkeep of 1 per cent., or \$5,000. This would give a per capita cost per man for the same number of men (850) of about \$588 in original construction of shelter and utilities, and \$5.88 in annual cost for maintenance and plant.

It will thus be seen that shelter for two regiments might be built in large cities, where all the accessories such as roads, walks, light, water and sewerage plants are already established at the present cost of shelter for one, and that the maintenance or upkeep charges for the buildings occupied by two regiments so quartered would be about one-half of the corresponding charge for one regiment sheltered on our present system. The saving to the army in efficiency, comfort, amusement and satisfaction of the enlisted men which would come from quartering them in large cities and relieving them from the labor and loneliness incident to the present system of quartering them in the park-like isolated posts in the Far West and away from large centers of population would, in my opinion, be simply incalculable.

No estimate is attempted of the annual savings in money which would result from the scientific redistribution of our mobile forces in the strategic and tactical areas where men and supplies are abundant and cheap and where the transport of men and supplies from the place of enlistment or procurement to the troop stations would be short. Such an estimate, to be of value, must be based upon a definite plan for the redistribution of the army. The magnitude of the money savings, as well as increase of efficiency which would result from such a change is, however, perfectly evident from the statement of the proposition.

A rough estimate of the saving in original cost of establishing and the annual expense of maintaining the shelter and utilities of our men can, however, be made. Basing such an estimate on the above stated cost for these items, i. e., \$1,175, original cost per capita for the

men's shelter and utilities, and \$23.52, annual cost per capita for upkeep of plant under the present system, and \$588, original cost per capita, and \$5.88, annual cost per capita for upkeep of plant under the suggested system, and multiplying these figures by the gross approximate number of men of the mobile army serving in the United States proper, 36,000 men, we have the following figures:

Original cost of establishment under present system	\$42,300,000
Original cost of establishment under suggested system	21,168,000
Savings on original cost	\$21,132,000
Annual cost of upkeep under present system	\$846,720
Annual cost of upkeep under suggested system	211,680
Savings on annual upkeep	\$635,040

It may well be asked, how has this unsatisfactory distribution come about. The answer in brief is that it has primarily arisen out of the absence of a definite military policy prescribed by that branch of the Government charged under the Constitution with the raising and maintaining of armies. Search the records of Congress as we may, nowhere can we find recorded a definite indication of a military policy for the country. At the close of the Civil War the regular army took up with its limited forces the subjection of the Indian tribes west of the Mississippi. It practically completed its task about thirty years ago, in 1881. It was then left standing in its positions on the extreme frontier, quartered largely in rough buildings constructed by the labor of its own men. There is shown in legislation from that time on an apparent tendency to make the army more comfortable in its isolation, but legislation has shown but little apparent tendency to gradually concentrate its small scattered units into localities where its new and changed duties and its more economical administration required it to be placed.

The efforts of the War Department in the past to improve conditions in the line of economy and efficiency in the distribution of the army, while in some instances successful, have in most instances been met by powerful opposi-

tion on the part of the local interests at the points where the now useless and expensive posts were left after the cessation of Indian hostilities. It is hardly too much to say that there prevails in a number of communities and in the minds of a large number of influential persons a general idea that the army exists and is maintained more as an adjunct to local commercial and political interests than for its more legitimate function of a military force maintained for national purposes of defense and offense.

The highest officials of the War Department are endeavoring to induce Congress to meet the, to them, unsatisfactory condition of affairs above set forth by the creation of a National Council of Defense, composed of two Cabinet officers, four Senators, four Representatives, two army and two naval members, which might suggest to Congress a broad and comprehensive military and naval policy for the country, under which policy it is to be presumed there would be such a gradual economical and scientific development of the military strength of the nation as would meet national needs. It is to be specially noted that under military (army and navy) initiative, this proposed National

Council of Defense is to be composed of ten civilian to four military members, and that in its composition there lies no indication of a desire that military opinion should prevail in its deliberations.

If the above premises are correctly set forth, it would appear that the present distribution of our army and existing system of quartering the units of our troops are not only very expensive, but markedly inappropriate to the strategic, tactical and efficient training, use and development of the army, and that a radical change is advisable, and that the War Department officials are, and have been for some time, earnestly advocating a method by which the indicated improvements can be brought about. The writer feels that while the War Department must anticipate that the same influences which have operated in the past to delay and obstruct a more economical and scientific distribution and quartering of our army will still be present and active, these influences will, and can only be nullified by the overwhelming effect of the deliberations and conclusions of so dignified and efficient a body as the proposed National Council of Defense.

WASHINGTON, D. C.

What Dreams Mean

BY STEPHEN S. COLVIN

[The professor of psychology in the University of Illinois here gives a popular explanation of Freud's startling theory of the significance of dreams which has aroused a hot controversy among psychologists the world over. Other articles on recent discoveries in mental science by the same author appeared in *THE INDEPENDENT*, December 7, 1911, and January 11, 1912.—EDITOR.]

DO you wish to know yourself as you really are? Then study your dreams. Do you desire to get at the very depths of your character and discover the true personality, stripped of all shams and pretenses? Then analyze your mental states as they exist during sleep. This is the theory of the latest and most generally accepted view in regard to the nature of dreams; a theory first set forth by Professor Freud, of

Vienna, a decade ago, which has gained a wide recognition both in Europe and America. Freud first arrived at his theory in his treatment of patients suffering from nervous diseases. He found that an analysis of their condition often involved their dreams, and in studying these dreams he has discovered what he firmly believes to be certain fundamental characteristics as to their make-up.

Freud considers dreams neither as portentous nor prophetic; but on the other hand he does not view them as irrational and without significance, as do many psychologists of the present day. He believes that dreams must be interpreted to be understood, but in this interpretation he finds nothing mysterious nor unnatural. Dreams, like waking states, obey certain definite and fixed laws that are capable of discovery and verification. In brief, Freud considers dreams as wish fulfillments. What we desire in our waking life and fail to get, we secure in our dream states. Asleep or awake, our minds are always active; hence we dream constantly, altho under the most favorable conditions we recall but a small part of what we dream. Every bit of this dream consciousness is significant; it all is employed in securing what we most desire. Often the meaning of the dream is obscure and involved. It must be interpreted to be understood. However, in this interpretation we are no longer at the mercy of the medicine man or the soothsayer, as of old. If we really wish to know the meaning of a dream, we must employ the psychological expert.

The dreams of little children and the most simple ones of adults need no such interpretation. On their face they carry their meaning, for they have nothing to conceal. There are many illustrations of dreams of this character. For example, a person wakes in the middle of the night and hears the rain splashing on the pavement outside. He then remembers that he has left his umbrella at home, and wonders how he will escape a wetting in the morning. He falls asleep once more and dreams that his umbrella is standing in a corner of the room, near the head of the bed. His dream has thus given him what his waking moments have denied.

A medical student turns sleepily on his couch as the clock strikes eight. Vaguely he realizes that the morning is advancing and that soon he should be at the hospital a mile away. However, he turns over for just one more nap and in a moment he is transferred in his drowsy fancy, bed and all, to the hospital. Thus his wish to be at his post is granted without the personal discomfort of getting

up, thru the convenient mechanism of the dream.

Freud recounts that he had lost a highly valued Etruscan vase. The loss troubled him not a little during the day. At night he was dimly conscious of thirst, and then he dreamt that the vase was brought to him, brimming with cool water. In this way his thirst is quenched and the lost vase restored.

Freud's daughter, Anna, is sent supperless to bed. In the night her parents hear her say, as she talks in her sleep, 'Anna has a lot of nice things to eat.' In such a fashion the ubiquitous dream fairy satisfies the heart's desire.

The foregoing example of dreams as wish fulfillments are extremely simple and quite within the experience of all who recall any considerable number of their sleeping fancies. The large majority of dreams, however, are much more complex, and do not reveal their actual significance without careful study. They have the habit of concealing the real wish in various ingenious ways. This is particularly true if the wish is of such a nature that we would not care to express it in our waking consciousness or even to acknowledge its existence to ourselves. Some of our most fundamental and instinctive longings are of such a character that from early childhood we are taught to repress them. We are led to believe that it is wrong even to think of them. However, tho we crowd them out of clear consciousness, these repressed wishes remain hidden somewhere in the "back of our head," altho we may not know that they exist. Our waking consciousness will not allow these tabooed wishes to appear above the surface. They are completely submerged. In the dream state, however, they more easily get by the guard, or "censor," as Freud calls it, and appear above the surface. Often, even in dream states, they cannot do this without some sort of a subterfuge. The dream, however, is very clever and skilled in deception. It accomplishes its purpose by an elaborate and concealed mechanism. The dream of this sort is not what it seems to be at first glance. Superficially considered, it generally appears as the most ridiculous nonsense. This is the "manifest content," according to the terminology used

by Freud. The "latent content," the real meaning, is, however, full of significance when once understood.

An example of the intricate and symbolic character of most of our dreams is given by Dr. Ernest Jones, of Toronto, who recounts the dream of one of his patients, a woman of thirty-seven. In her dream "she was sitting in a grand stand, as tho to watch some spectacle. A military band approached, playing a gay martial air. It was at the head of a funeral, which seemed to be of a Mr. X; the casket rested on a draped gun carriage. She had a lively feeling of astonishment at the absurdity of making so much ado about the death of so insignificant a person. Behind followed the dead man's brother and one of his sisters, and behind them his two other sisters; they were incongruously dressed in a bright gray check. The brother advanced 'like a savage,' dancing and waving his arms."

Such a dream as this seems completely absurd and fantastic, particularly to the person who has experienced it; yet a careful analysis reduces it to sense, and shows it to be replete with symbolism. No detail of the manifest content is without vital meaning when understood from the point of view of the latent content. The interpretation of this particular dream shows the following to be its real significance:

The patient's husband is a drunkard, for whom she has lost all respect. Indeed, in her innermost consciousness she wishes to be rid of him, as he has inspired her with an intense physical loathing. Added to this, she is really attached to the brother of the Mr. X of her dream. From this brother she was estranged before her unfortunate marriage by the maneuvers of her parents. By an interesting transposition common in dreams, the indifferent Mr. X symbolizes her husband, whom she actually, tho unconsciously, wishes in his coffin. Her feelings of contempt are represented by her astonishment in her dream that so much ceremony should attend the funeral of so insignificant a person, and further by the general character of the funeral and the indecorous conduct attending it. The dancing of the brother of Mr. X indicates the joy of her former lover in the

knowledge that the wife of the drunkard is now free.

The following dream, full of symbolism and hidden significance, is related by Freud. A highly respectable and tender-hearted woman dreams that a small yellow dog comes into her house and annoys her by its barking, whereupon she seizes it and wrings its neck. The interpretation of the dream reveals the fact that the dreamer has often quarreled with her sister-in-law, whom she dislikes. On the day previous to the dream, trouble between the two women had occurred. As the sister-in-law left the house, the other remarked, "You are nothing more than a yellow dog." Thus the meaning of the dream becomes clear. The sister-in-law is symbolized by the offensive dog. The killing of the dog represents the wish that the sister-in-law may die and thus no longer be a source of annoyance. Since the dreamer is tender-hearted, she thinks of disposing of the animal in what to her is the least painful way, by wringing its neck.

A man dreams that he is on a railway train journeying to meet his sweetheart. When the conductor comes to collect his ticket, it cannot be found. However, he finally arrives at his destination, only to learn that the lady of his choice is engaged to another man. An analysis of the dream shows the following facts:

The dreamer had been asked by his employer to make a business trip to a city which he much desires to visit; but on the day previous to the dream he has been informed that the trip would not be necessary. The loss of the ticket symbolizes the loss of the trip, which, however, he accomplished in his dream, thus fulfilling his wish. The engagement of the lady to another man represented a wish, buried deeply in his subconsciousness, so deeply that he did not know of its existence, that he be freed from an alliance with her. In his superficial consciousness he thinks that he wishes to marry her; yet in his very heart he does not.

The above symbolic dreams are examples of many that have been studied. Freud himself has analyzed nearly ten thousand, and is firmly of the belief that they are all to be interpreted from the standpoint of repressed wishes. Often

the most vital wishes are the most obscurely presented in consciousness, are the ones least recognized by the dreamer, and these clothe themselves in the most elaborate symbolism. The real meaning of these dreams is discovered by what is termed "psycho-analysis." The dreamer is asked to give his mind over to the various elements that constitute the dream and to let any thoughts that come into the mind develop in a perfectly free way. If this is done, the associations thus called forth firmly reveal the true significance of the dream.

The practical value of the analysis of dreams lies in the fact that thru them it is possible to get at the actual wishes of the person who is being examined. Nervous disturbances often arise because some deep-seated desire has been impossible of realization. It has been repressed. Sometimes these repressed wishes are quite forgotten in after life, and yet, all unknown to the sufferer, they exist to play havoc with his personality. They must be sought out and recognized by the patient before a cure can be effected. This is the general assumption at the basis of psycho-analysis as practised by Freud and his followers. In a lecture at Clark University, Freud used the following analogy to illustrate the nature of the repressed wish and the disaster it may cause even when expelled from consciousness. He said:

"Suppose that here in this hall and here in this audience, there is an individual who is creating a disturbance. I explain that I cannot go on with my lecture under these conditions, and there upon several strong men among you get up, and after a short struggle eject the disturber of the peace from the hall. He is now 'repressed' and I can continue my lecture.—It may very well happen that the ejected man may give us more ado. He is no longer among us, we are free from his

presence, his scornful laugh, his half audible remarks, but in a certain sense the repression has miscarried, for he makes a terrible uproar outside, and by his outcries and by hammering on the door with his fists interferes with my lecture more than before."

Under these circumstances peace is made with the rowdy, who is re-admitted on condition that he keep quiet and behave in a thoroly decorous manner. The rowdy in this illustration is the unrealized wish that has been banished from the conscious life of the individual. His re-admission corresponds to the discovery of the existence and nature of this wish and bringing it back into consciousness once again, where it hereafter behaves and fits into the total mental content without further disturbance. Freud has arrived at his theory in regard to repressed wishes and the method of dealing with them thru years of successful experience. The practice came before the theory and is the basis on which it rests.

The analysis of dreams is valuable not only in the treatment of abnormal states of mind. The average individual, if he takes occasion to analyze his dreams, and find out what they actually signify, will learn much about himself that he had no knowledge of before. Many of his acts that he naïvely believes are done for some seemingly obvious reason, are at their basis actuated by quite different motives. Human life is full of deceptions, and the most numerous of these are the deceptions of self. We fool others at times; we are apt to fool ourselves much more often. The study and interpretation of our dream states may result in bringing us to a clear understanding of what we really are at heart, and thus raise our thoughts and actions to a higher plane.

NEW YORK CITY.

Lord Rosebery on British Foreign Policy

BY W. T. STEAD

EDITOR OF THE REVIEW OF REVIEWS.

LORD ROSEBERY'S speech at Glasgow is chiefly notable because of its positive assertion:

"At any rate this we do know about our foreign policy, that for good or for evil, we are now embraced in the midst of the Continental system . . . which may at any time bring us into conflict with armies numbering millions."

Lord Rosebery went on to say:

"I take it for granted that the nation approves of our foreign policy, and if so it must be prepared to back it up, to make much greater preparations and much greater sacrifices than it has hitherto been called upon to make."

What right Lord Rosebery has to take the approval of the nation for granted I do not know. Possibly this may only be a dialectical form by him employed for the purpose of suggesting that the nation should not approve of our foreign policy. In any case no one can deny that if the nation does approve of engagements which "involve an immediate liability to a gigantic war," Lord Rosebery is right in saying that the nation must at once enormously increase its military preparations. But as the nation is showing no disposition to do any such thing, may we not take it for granted that the nation does not approve of our foreign policy, or, rather, that the nation does not realize that our foreign policy entails the obligations which Lord Rosebery thinks it does?

The fact is that the nation as a whole, expressing itself thru its representatives in Parliament and thru the press, does approve of what it believes to be the policy of Sir Edward Grey, but it most emphatically does not believe that that policy has committed us to the liabilities which Lord Rosebery described. If it did it would act as Lord Rosebery says it ought to act. But it is showing no sign of doing any such thing. That absence of all preparations for war is the

best and conclusive proof that the nation does not believe it has undertaken to make war except under circumstances which are not likely to arise. "If you have," said Lord Rosebery, "deliberately adopted a policy of large and perhaps unlimited liability on the Continent, you must be prepared to make good that liability." But we are not preparing to meet it, because, despite the scare of last summer, we do not believe that the policy of the Foreign Office entails an unlimited liability to participate in Continental wars.

It appears to be believed in Europe, because Sir Edward Grey allowed himself to be made the tool of the war party in the French Government when the Morocco question was under discussion, that therefore the nation acquiesces in substituting for the *entente cordiale* with France a cast-iron agreement to take part in any war France may provoke. There could not be a greater delusion. We are not and we do not intend to be tied up with France or any other nation to such an extent as to make us partners in her wars. If there ever were any disposition on the part of the nation to enter into an offensive and defensive alliance with France, that disposition has been eradicated by the evidence afforded by the recent French crisis as to the way in which a French *entente* may be misconceived and abused.

What to Englishmen and Russians is the outstanding fact about the revelations which resulted in the downfall of the Caillaux Cabinet? It is this, that at the moment when the bellicose section of the French Cabinet was using the British Ambassador in Paris to urge the British Government to make ready for instant war with Germany, the Prime Minister of France was busily engaged in negotiating a peaceable settlement of

Franco-German difficulties which, in Sir Edward Grey's phrase, would have brought France into the "orbit" of the Triple Alliance. Such a revelation of administrative anarchy, not to say of diplomatic treachery, has had a very sobering effect upon British opinion. Suppose that both currents had run their course. In that case M. de Selves and Sir F. Bertie would have committed England to war with Germany at the very moment that M. Caillaux had established a Franco-German *entente* on the basis of financial concessions on the Kongo. Britain and Germany would have been plunged into war, while France, if M. Caillaux had remained in power, would have been arrayed on the side of Germany rather than on the side of England. Such an unveiling of the possibilities that lie hidden in an understanding with France does not dispose the British public to go further in that direction. What many of us feel is that Sir Edward Grey was made the catspaw of the war party in Paris, who used him in order to checkmate M. Caillaux's efforts to arrive at an amicable settlement, without being able to guarantee that France would not settle with Germany behind our backs. Once bit, twice shy. Albion may be perfidious, but in England the Prime Minister does not intrigue for peace while his colleagues are working for war.

It is always difficult to interpret the exact meaning of Lord Rosebery's Delphic utterances, but I am disposed to believe that he spoke at Glasgow not in order to advocate universal compulsory military service so much as to use the prospect of conscription as an argument against drifting further in the direction of a French alliance. Lord Rosebery has always been anti-French. When he was Prime Minister he threatened France with war over a miserable squabble in Siam. When he was out of office he rallied to the side of Lord Salisbury when he was threatening France with war about Fashoda. When the Anglo-French *entente* was established in 1904 he was the only British statesman who made a public protest against it. It is worth while recalling what he said on June 10, 1904. Speak-

ing in London of the Anglo-French agreement, he said:

"No more one-sided agreement was ever concluded between two Powers at peace with each other. I hope and trust rather than I believe that the Power which holds Gibraltar may never have cause to regret having handed Morocco over to a great military power."

Writing two months later, Lord Rosebery's secretary was directed to write to a correspondent:

"It is true that Lord Rosebery is opposed to that part of the Anglo-French agreement relating to Morocco because he fears that it will by no means help to promote the harmony which ought to exist between the two nations."

Again, writing on August 4, on the centenary of the occupation of Gibraltar, Lord Rosebery denounced the Anglo-French agreement in good, set terms. He said:

"In my judgment this unhappy agreement is much more likely to promote than to prevent unfriendliness in the not distant future. I deplore the dangerous and needless concession which has been made. My mournful and supreme conviction is that this agreement is much more likely to lead to complication than to peace."

Lord Rosebery proved a true prophet. Nothing but trouble has arisen from that ill-fated agreement. But even Lord Rosebery in his gloomiest moments did not venture to anticipate that one of the sequels of the abandonment of Morocco would be that England and Germany would be brought to the brink of war.

Lord Rosebery now declares that he would prefer a definite alliance to the vague unwritten obligations into which he thinks we have entered. But here also, as when he argued in favor of conscription, he spoke rather in order to avert what he regards as an evil than to pave the way either for conscription or a definite alliance. He knows perfectly well that the British nation will neither adopt conscription nor enter into a definite alliance. Therefore, in order to attack a policy of which he has always disapproved, he warns them that if they go on as they are going, they will infallibly be driven into conscription and a definite alliance, the two things to which they have an unconquerable aversion.

If any one wants to understand the

popular British idea as to what ought to be the foreign policy of England, he should read Sir Robert Morier's recently published memoirs. Sir Robert Morier down to 1870 was passionately pro-German; he believed that from the days of the first Napoleon till the fall of the third Napoleon, the ambition and the vanity of France was the one constant peril to European peace. He wrote:

"If we inquire why it was that forty years went by without France kicking over the traces, we find that she was prevented doing so by a general coalition of Europe against her—partly acknowledged, partly tacit. Austria, Prussia and Russia are really coalesced against her, the recollections of the first fifteen years of the century having become a sort of *idée fixe* on their side, and leading them to act instinctively as one whenever any danger threatened from Paris. It is the part of England in the matter which is so important and so worth studying. She does not stand with the three Northern Powers, as they are called, on a great many points she and France go together; as long as France restricts her action to legitimate objects (as in the creation of the Belgian kingdom in 1831) we go heartily with her and stand together as the representatives of Western progress *versus* Eastern reaction, *but the moment she shows the cloven foot* and attempts to assert her claim to a privileged position we at once throw our weight on the side of the Northern Powers, and make her feel that (to use the language of Trafalgar Square, which, I presume, will soon be the recognized political phraseology of England) 'we wouldn't stand any of that humbug.' It is most interesting to watch the kind of clock-work regularity with which the process goes on. During the Belgian negotiations we step in some five or six times this way, so that England becomes the regulator by which the expansive force of France is utilized beneficially and productively, but always kept in check whenever it threatens to become destructive. Hence I venture on what I believe to be a sound generalization. The peace of Europe was maintained for nearly forty years by a *cordon sanitaire* being traced round France, three-fourths of which was of iron rigidity, the remaining fourth being elastic and so fashioned that she could take all the

air and exercise required for the good of her health. The Northern Powers treated France like an incurable and dangerous maniac; we treated her like a person on the whole sane, but subject to dangerous hallucinations, and reserved to ourselves the power of falling back upon the handcuffs and strait waistcoats kept in store by the Northern Powers.

"This satisfactory system was first broken into by the Crimean War, the only perfectly useless modern war that has been waged."

No hard and fast alliance bound England to aid the Northern Powers in maintaining a *cordon sanitaire* round France. Today the same policy is pursued, the only difference being that the *cordon sanitaire* is thrown around Germany instead of France.

Sir Robert Morier declared that the arrogance and overbearingness of the Prussianized Germany had replaced the boasting and vaingloriousness of the French. To meet the new danger England adopts her old policy. It is in a way a compliment to the strength of Germany and a tacit recognition that she has inherited the glories and the difficulties of France.

Lord Rosebery stated the views of the immense majority of his countrymen when he said in 1896:

"I do not say that I am unwilling to draw the sword in a great and necessary cause. I do not believe that any British Minister with reference to the duties consigned to his charge can avoid the risk of war. But I say that any British Minister who engages in a European war except under the pressure of the direst necessity, except under interests directly and distinctively British, is a criminal to his country and to his position."

It is probable that Lord Rosebery's speech will bring to a head a great deal of the indignation and dissatisfaction against Sir Edward Grey's policy which is smoldering far and wide in Great Britain.

LONDON, ENGLAND.

The Possibility of a University Newspaper

BY EDWIN E. SLOSSON, Ph.D.

IN an article on "The Place of Journalism in University Education," published in *THE INDEPENDENT* of November 23, 1911, I endeavored to show that journalism, defined as "the art of timely and effective presentation in print," played a part in our modern life corresponding to that of oratory in former times and should, therefore, have as prominent a position in our universities as oratory and forensic rhetoric had in the ancient and medieval educational systems. But even if that be granted, it is not enough that the university should train a few students in the profession of journalism and many in the journalistic use of their faculties; for it is also important that the university should take an active part in journalistic work. The undertaking to train students in this field would in itself involve some degree of participation in the practical work of the profession, for a printing plant is as essential to a school of journalism as a machine shop is to a school of mechanical engineering, and it would hardly be expected that the presses would run purely as a laboratory exercise without turning out some sort of a periodical. It is merely a question, then, of what sort of a periodical a university can publish to the greatest advantage of itself and the outside world. The answer to this is, it seems to me, that the university periodical should be sufficiently like others to give the students actual practice in the doing of real things and sufficiently unlike them not to duplicate or interfere with what is being done elsewhere. That is to say, the university in entering the field of journalism should aim to co-operate rather than compete, to supplement rather than supplant.

The school of journalism should not attempt to produce a "model journal."

In the first place, that is an impossibility, and besides—or therefore—it is an undesirability. A university journal would inevitably be inferior in some respects to proprietary journals, but might also be made so superior in other respects as to justify the journalistic reason for existence by filling a long-felt want.

The existence of proprietary schools and colleges, supported entirely by the tuition fees of students, does not preclude the desirability of there being also endowed institutions, and after these have been added to the educational system of a community there is still room and need for State institutions. Each of these three types benefits by the presence of the others. Each has its specific weaknesses and each has the opportunity to develop its peculiar virtues. A proprietary school is liable to be subservient to the whims of its students; an endowed school to the whims of millionaires; a State school to the whims of legislators; but backed up by each other's presence and example, they can all preserve a sufficient degree of independence.

Now, journalism is a kind of educational work. Its object is essentially the same as that of the university; to acquire and convey knowledge and to influence conduct. We might surmise, therefore, that it would be well to have periodicals of three types corresponding to the three types of educational institutions; that is,

1. Proprietary or self-supported;
2. Endowed or subsidized;
3. State supported.

As a matter of fact, we have now in the United States many representatives of all these types, and we could not well do without any one of the three. The common idea that journalism is necessarily commercial is far from true, as a rapid consideration of the numerous exceptions will show. A large number of our newspapers and magazines, and some of the best of them, do not "pay"

in the sense of being supported entirely by subscriptions and advertising, and it is not to be expected that they all should. I do not allude here to the periodicals which are intended to make money and fail, tho they are many, for the death rate among periodicals is very high, as any one can see by watching the news-stands. No insurance company would make out a policy for a new venture without an exorbitant premium. But setting aside these temporary and involuntary specimens of the non-paying press, we may fairly include those magazines and newspapers which are supported year after year by rich men because they take pride in them or find them useful in their business. Then we have numerous instances of political organs subsidized at intervals by a party. Most of our numerous societies for the booming of fine arts, the cultivation of peculiar tastes, the reforming of other people, the promotion of esotericism, the discovery of ancestors, and the like, support or aid an organ of some sort. Propaganda periodicals of any kind cannot be expected to be self-supporting on the start. The Socialist daily of New York, *The Call*, tho it is a regular newspaper, selling on the streets to many outside the party, has at times had to appeal for extra support from those interested in the movement. Religious papers are often started and sometimes maintained at the expense of the denomination. The Unitarian weekly of Boston, *The Christian Register*, is fortunate in having an endowment. *The Hibbert Journal*, of London, a quarterly devoted to philosophical and theological thought, would never have been able to maintain its high standard of scholarship and typography if it had not been endowed. The periodicals of similar standing and purposes edited by Dr. Paul Carus, the *Monist* and *Open Court*, of Chicago, are supported by the E. C. Hegeler Trust Fund. The St. Louis *Journal of Speculative Philosophy* was published by Dr. Harris at his own expense. We must also include in subsidized or endowed journalism the great number of scientific and scholarly periodicals maintained at the expense of the various learned societies and universities. We see, then, that the class of periodicals which are not

run to make money and not expected to be self-supporting is very large, and we could not dispense with them without serious loss to the intellectual life of our times.

But the non-paying periodicals comprise not only such as are supported by private individuals or associations, but also the third class mentioned above, namely, periodicals managed or subsidized by the people as a whole thru national, State or municipal government. This class is not a small one; in fact, we might assert upon the highest authority that it is the largest of all, including both the other classes, for the President of the United States has officially stated that every periodical in the country is subsidized by the national Government because of inadequate payment for postal facilities. The county papers are carried free and, according to the figures of the Postmaster-General, the cent a pound charge upon magazines and newspapers does not compensate the Government for its expenditure on second-class mail. But we are not concerned here with the question of such financial assistance so we will turn our attention to the periodicals which are edited and published by government officials. The price list of "Periodicals issued by the United States Government with foreign and domestic subscription prices" published by the Superintendent of Documents, enumerates thirty-nine regular periodicals, not including, of course, the annual reports, monographs and occasional papers of such departments as the National Museum, the Smithsonian Institution, Bureau of Education, and the Geological Survey. It is worth while to mention a few of these thirty-nine varieties to show how extensively our Government covers the journalistic field: the *Congressional Record*, issued daily when Congress is in session, printed and mailed at night as promptly and as early as any daily paper; the *Crop Reporter*, monthly, including general news of interest to farmers and dealers; the *Labor Bulletin*, bi-monthly, containing articles on arbitration, strikes, conditions of labor and digests of court decisions; the *Monthly Weather Review*, an illustrated quarto on meteorology; the *Naval Medical Bulletin*, quarterly; *Public Health Reports*, weekly; *Consular*

and *Trade Reports*, daily. Besides these there are three Government publications that deserve special consideration, because they show how close the official periodical may come to the standard type of the independent periodical. Oldest of these is the *Experiment Station Record*, now in its twenty-fifth volume. There are 250 publications listed in the Newspaper Directory under the head of "Principal Agricultural Newspapers" of the United States; and nobody knows how many minor ones there are, but a man who wants to keep up with the progress of agricultural science and practice and can only afford one journal should subscribe to the *Experiment Station Record* at \$2 a year, for from it he can learn something of all that is being done the world over in bacteriology, forestry, field crops, horticulture, dairying, human nutrition, entomology, rural engineering, education, etc. Besides these abstracts of research work there are half a dozen pages of news, giving appointments, resignations and deaths in the colleges, and informing the world whenever a station puts up a new barn, starts out a demonstration train, or buys a new bull. In the front there are editorials, not mere official summaries and perfunctory generalities, but timely encouragement and criticism, hard-hitting blows aimed straight at some station which has abused its privileges and wasted its funds in unprofitable directions. A marked improvement in the character of the research done in this country dates from the starting of the *Record*, and largely as a result of it. The young investigator in a remote and isolated A. and M. college watched with anxiety to see what Washington would think of his last bulletin. Washington never said in plain words, but if the *Record* dismissed him with a line of type, he was downcast, while if it quoted his conclusions in full he knew he had done something worth while. If the *Record* had permitted itself to indulge in verbal instead of mere spatial criticism, its influence would have been much more powerful for good. Another defect is the absence of advertising and communications. It is, therefore, a one-sided journal, lacking the interest and balance that comes from the voluntary

contributions of its readers. Its editorials present the official opinions of the Department or the Office, not what might be said on the other side, and sometimes there is a great deal that might be said on the other side. The *Record* could be profitably enlarged, but its expansion is prevented by the Procrustean rule of Congress which limits every issue to 100 pages, regardless of how much important matter there may be to go in. None of these defects are necessarily inherent in government control. They result naturally, however, from the disposition of governments in general and our own government in particular to restrict, rather than to develop.

All government had its germ in the department of justice. Its primary purpose was to punish. And now when the scope of its functions has so vastly extended, the new departments still show traces of their origin in being more ready to check wrong than to promote good. Thus our Government is vigilant in correcting abuses of the postal service, but negligent of extending its uses; it is more active in curbing trusts than in promoting business. But this negative view of government is gradually being changed by the development of its positive functions.

As an example of what can be done in official journalism, the *Bulletin of the Pan American Union* is equally instructive. This is a monthly magazine of 175 pages, profusely and handsomely illustrated, and costs \$2.00 a year. There are published Spanish, Portuguese and French editions at lower prices. The cover varies in color and design from month to month like other magazines, and nobody would take it for a Pub. Doc. Referring to the latest issue, I first find editorials, including a highly complimentary quotation from the *Quarterly Review* about the *Bulletin*, another evidence that the editor is merely human. The leading articles, all illustrated, deal with "Present Progress on the Panama Canal," the "Celebration in San Salvador of the First Effort for Independence," "Higher Education in Bolivia," the "All-Rail Route between Montevideo and Rio de Janeiro," the flag and arms of Honduras with a color plate, grasshoppers on the Argentine plains, and the Pan

American mass at Washington, with a portrait of Cardinal Gibbons. Then there come a few pages of personals with portraits under the departmental head of "Prominent in Pan American Affairs," followed by book reviews and a department equally important but lacking in most periodicals devoted to reviews of important articles from other magazines relating to Latin America. These reviews of books and articles are not purely formal, but discriminating and even at times critical. The number concludes with trade notes, classified by countries. It is hard to see what this lacks of being a complete and normal magazine, except advertising. The reason it has no advertising is because Congress forbids it. It used to accept advertisements on the start, and as a natural consequence it more than paid its way in those days. But somebody discovered that here was something that was turning an annual revenue into the United States Treasury instead of drawing from it, so he put a stop to it at once. It was setting a dangerous precedent, for other departments might be tempted to become self-supporting, and that would endanger our good old American principle that the only legitimate sphere of government is unprofitable business.

But there is another Government periodical which approaches more closely to the ordinary newspaper than the two mentioned because it is not confined to a special subject like agriculture or Latin-American trade, but has to serve in a measure the needs of a community, that ribbon of Americanism stretching between the two oceans and known as the Canal Zone. It is a unique community, composed of some 10,000 men, women and children from the United States and three or four times as many other persons; a colony planted in the tropics for a period of ten years and supported by the United States treasury. In this case paternalism became imperative. There was no opportunity for the community to provide for its own needs and develop its own institutions. So Uncle Sam had to undertake many services not allowed for in the Constitution, for example, baking pies and killing mosquitoes, washing clothes and editing a newspaper. *The Canal Record* is a real newspaper and a

good one, eight pages, 9 by 12, published weekly and furnished free to all employees on the gold roll. It lacks only the two essentials of a commercial journal, advertisements and subscriptions. It appears to be edited by J. O. Collins, W. C. Haskins and Miss J. M. Beattie, and it is classed in the diagram of the Panama hierarchy under the office of the secretary of the commission, Joseph B. Bishop, and just between the Inspector of Complaints and the I. C. C. Band, an appropriate place, since a newspaper generally has to vibrate between the two tasks of voicing complaints and providing entertainment. The primary purpose of the *Record* is to report the progress of the work and convey official instructions. I presume it performs this function more efficiently and about as cheaply as any other method, and it has been able to do some useful things besides. There is, for example, a page devoted to "Social Life of the Zone" and "Commission Club-houses," and we may read that the midnight choral celebration of Holy Communion at Christ Church By-the-Sea was attended by 400; that the Salvation Army is raising money; that the Ancon Dramatic Club has played "The Private Secretary" and "Lady Windermere's Fan"; that the Cristobal Woman's Club is studying "Garbage Disposal" and "The World's Great Cathedrals"; that another Congressional party is on the way; that the new motion picture films are much better than the old ones; that the Isthmus is inhabited by Red Men, Knights and Ladies of various orders, Boy Scouts, Moose, Kangaroos and other mysterious beings whose identity is concealed by cryptic initials; that Spanish classes are popular; that in the handicap pool tournament Hughes got the gold medal and Harrold the booby prize; that in the baseball game, at Empire, Pearce batted for Cushion in the eleventh inning; that butter has gone up from 30 to 45 cents at the commissary, etc.

In short, we learn that the Canal Zone, in spite of its tropical setting and temporary character, is a normal American community with the ordinary interests and avocations. *The Canal Record*, too, in spite of rigid neutrality and stiff sense of propriety, is not altogether un-

like the normal American newspaper. It is better printed, and, in a negative way, better edited. We miss most the familiar adjectives, dear to the heart of the local correspondent; the "elegant collation" at the ladies' lunch; the "tasteful decorations" of the Christmas church, and the "delightful evening" at the sociable. They do everything down in Panama, but there is no evidence in the *Record* that they enjoy anything. Then, too, we miss the free and unlimited coinage of parts of speech which in the country press encourages us in the belief that the language is still living. I have never found in the files of the *Record* that anybody "sundayed at the Tivoli," "week-ended in Taboga," "wintered in Caracas," "summered in the Adirondacks," "sprung in Jamaica" or "fell in Bermuda." Even the Government sporting editor is restrained in his use of the customary phraseology, perhaps because he also holds the office of Y. M. C. A. secretary. To judge from the *Record*, there is no scandal on the Zone, crime is almost unknown, and accidents extremely rare. At one time an attempt was made to introduce humor by quoting the most amusing things said about the Canal by American papers, but this feature was for some reason suppressed. When the *Record* was started there was a department headed, in correct journalisticese, "Letters from the Line," which served as a safety valve for the blowing off of high pressure steam, suggestions for the improvement of the board at the commission hotels, complaints of roughhousing in bachelor quarters, corrections of false statements, calls for volunteers for new organizations, and the like, but these lively communications have disappeared. The *Record* takes no advertising, but has the equivalent in the railroad and steamship time tables, the commissary price lists, the marriage and death items, the lost and found notices, the unclaimed letters, etc. If payment for these were made by other departments and individuals it would go a good way toward the support of the paper.

The success of the *Canal Record* proves that it is possible for a Government periodical to serve the journalistic needs of a community if only it be allowed sufficient freedom. Tho it has in

the course of its five years' existence grown more arid and formal, this is unnecessary and does not altogether destroy its usefulness considered as a general newspaper. If I were living in the Zone I should be immensely proud of the *Record*—but I should besides subscribe for the *Panama Star and Herald*, which contain more typographical and other errors and more interesting news.

I have dwelt on the case of the *Canal Record* because it shows how much has been accomplished in the way of general news service incidentally by a Government organ specifically devoted to engineering administration. A more interesting experiment to watch is the *Los Angeles Municipal News*, of which an account was published in THE INDEPENDENT of December 14 last. That city is well supplied with enterprising papers of various political proclivities, but the people wanted an organ of their own and voted for it last fall. This is not to be a mere bulletin of official announcements like the *City Record* of New York, but will include the three essentials of the normal journal, news, editorials and advertisements. The *Municipal News* will have a mind of its own and will speak it, but space in its columns is by law reserved to the critics of the administration.

The field of college journalism is a very extensive one and already diligently cultivated. Almost all colleges and many high schools and academies publish a magazine or newspaper of some sort, and the larger universities have a dozen or so. There are about 400 collegiate periodicals considered of sufficient importance to be listed in the advertisers' annuals. Their circulation ranges from 500 or less to 5,000 or more, and their character varies from staid and scholarly quarterlies to "josh" weeklies and gossip dailies. Some of them pay well; others regard themselves as fortunate if there is enough of a surplus at the end of the year to provide the editorial staff with a banquet. Most of them receive more or less financial aid from the university, a standing advertisement, editorial rooms, or something of the kind. They all serve their purpose of echoing campus news and affording the authorial aspirant a chance to try out his aeroplane. They give good practice in jour-

nalism for those who are lucky enough to "make" them, and will doubtless in many cases be utilized by the future schools of journalism for laboratory work. But since they appeal only to the limited circle of students and alumni, these periodicals need not be further mentioned here.

We find, however, a case in point in the University of Missouri, which was the first to recognize the needs and opportunities of this new field of education. The School of Journalism there has its separate professional faculty, on an equal footing with the Schools of Law, Engineering, Medicine and Education. In fact, it has higher standards than these professional schools in some universities, since it requires, for entrance, two years of college work in addition to a four-year high school course. The course covers three years and leads to a professional degree, B. S. in J.

When the School of Journalism of the University of Missouri was established in 1908, as a distinctive feature of the school was begun the *University Missourian*, a daily afternoon newspaper. The *Missourian* was to be a general newspaper issued by the students of the school under the direction of the members of the professional faculty. It was not to be a college paper, but was to cover the entire news field of this university town of 10,000 population. Subscriptions and approved advertising were solicited for it. The *Missourian* was a success financially and from other standpoints. It was so great a success that the other newspapers in Columbia, daily and weekly, objected to the State publishing such a journal in competition with them. They appealed to the General Assembly and secured the adoption, in conference between the two houses of the General Assembly, of a rider to the University Appropriation Bill, providing that no money appropriated for the university should be used directly or indirectly in support of any newspaper that solicited or accepted advertising or had a list of paid subscribers. This, of course, compelled the university to discontinue its connection with the *University Missourian*.

The students of the School of Journalism, however, formed a corporation.

obtained a charter from the State, and subsequently have issued the *University Missourian* on their own responsibility. It has continued to be a success financially, tho it is hampered by lack of a printing plant and by its removal from direct university support and control. The copy which it uses is gathered and edited by journalism students, under faculty direction, but it is impossible for the university to take such direct and helpful control of the publication as could be done if there were no legislative limitation upon the university's action. This legislative limitation may be removed at the next session of the General Assembly. Indeed, it will lapse if not reinserted in the appropriation bill at that time. The newspapers of Columbia now recognize that the *University Missourian* has come to stay, and their attitude toward it is much more friendly than when it was first begun.

The people of Missouri are proverbially characterized by the scientific habit of mind. They always demand a demonstration. If other States would adopt the same pragmatic philosophy our national progress would be swifter and safer. Thanks to this spirit and to Dean Williams's enterprise, we have now proof that there is no inherent difficulty in a university running a regular newspaper and even making it pay. This disposes, therefore, of the two stock arguments raised against an innovation in any university—that there is no precedent for it and no money for it.

The experience of the University of Chicago is equally instructive from another point of view, for this institution was the first to establish, twenty years ago, a department of journalism as a distinct and essential part of its educational work. President Harper was fortunate enough to find in Mr. Newman Miller a man who could keep both scholarly and commercial demands in mind, and under his management the University of Chicago Press has become a great publishing house with a large building of its own, equipped with presses and type capable of handling copy in languages and scientific jargon that hardly anybody but the author can read. The Press, in fact, shows a penchant for the kind of literature that other publishers

disdain. I do not find in its catalog any of Professor Herrick's popular novels, but, on the other hand, I see the "Morphology of the Gymnosperm" and the "Book of Thekla" in Ethiopic, for which there was doubtless no imperative demand from the public. That is to say, the policy of the University of Chicago Press is to print books and periodicals of educational value without regard to whether they will pay or not.

The University of Chicago publishes more periodicals than any other university and more than any commercial publishing house, with the exception of one or two devoted to fiction magazines. I had put down the number of periodicals on its list as eighteen, when I received the announcement of a new one, the *English Journal*. This does not include any student publications. The circulation of some of these periodicals is confined to a technical circle; others reach a wide-spread audience. They carry little outside advertising, and it is the plan of the university to eliminate it altogether. The periodicals as a whole are supported half by the university and half by subscriptions. The twelve leading journals cost \$40,253.36 for the fiscal year ending June 30, 1911, and of this amount the university contributed \$20,000. Any surplus profits are devoted to the improvement of the periodicals or put into a sinking fund as an endowment for their future support. It would doubtless be impossible without subsidies to issue such periodicals as *Classical Philology* or the *Astro-physical Journal*, or to maintain at their present high standard of scholarship and typography the *School Review*, the *American Journal of Sociology*, the *Journal of Political Economy* or the *American Journal of Theology*.

One other point is worth noting in this connection. It is commonly urged that endowed journalism, especially under university control, would be conventional and even conservative. This is a serious charge, because the worst possible vice of a university is to be conservative. The fundamental function of a university is advancement of human knowledge and leadership in thought. If it is recreant to this primary duty its chief reason for existence is abolished.

That American universities in general

are not guilty of this charge is shown by the fact that the attacks made upon them by popular magazines and newspapers have mostly been on the ground that the universities are too radical. The University of Chicago in particular has been complimented in that way. The editors of city dailies lie in wait for every issue of its periodicals as a cat watches a mousehole. Of course, what they pounce upon as novel and sensational is apt to be some commonplace experiment or long-known historical fact, and what they make of it often bears little resemblance to the original statement, but they are quite right in the instinct that leads them to peruse the reports of laboratory and seminar, for if research is carried on thoroly and honestly it is very likely to turn up something new. There are very few magazines supported by the subscriber and advertiser which would dare publish without disclaimer some of the criticism of established institutions, customs and beliefs which has appeared in the *Biblical World*, or the *American Journals of Theology, Sociology and Political Economy*. In the matter of freedom of speech and progressive thought on such vital topics the endowed journals have often shown themselves superior to the self-supporting.

The few instances here considered are sufficient to show that endowed, subsidized, and state-supported journalism of various forms can be successful, so there appears to be nothing to prevent a university, either State or endowed, from publishing any kind of periodical that may be desirable. What kind of periodical is most desirable and affords the best opportunity for the university to be of service to the community it would be rash to say. Nevertheless, I am going to be rash. It is more fun than being cautious and remaining safe from criticism by hiding under a cloud of generalities and vague phrases.

There is, it seems to me, urgent need for a university periodical devoted to current events, in short, a newspaper for the general reader, but more comprehensive and authoritative than the ordinary newspaper can be. It is the supreme achievement of the American press to have worked out a careful differentiation between its three departments—news,

comment and advertising. The boundary lines are clearly marked, tho they are often crossed, so it is a recognized impropriety when the editorial hand is visible in the news columns or when the advertiser invades the sanctum. These three divisions would of course be maintained in a university journal, tho treated somewhat differently. In the collection of news of spectacular interest the existing agencies are alert, enterprising, and, considering the circumstances, astonishingly thoro and accurate. But the picture of the world daily presented to our eyes is too Rembrandtesque to be a faithful portrait. A few spots are in the limelight, but the rest of the globe is left in darkness. The greatest progress is usually being made where there are no riots or revolutions, but we hear little of it, for the ordinary paper confines its attention to news that can be dated. It belongs to what the geologists call the "catastrophic school" as distinguished from the modern way of recognizing gradual and quiet processes as the main factor in evolution. We get in the dailies a series of excellent flash lights, but no real picture of contemporary happenings. We often read the beginnings of interesting stories and never know how they came out. For example, the outbreak of a strike in Wales, the opening of bribery investigations in San Francisco, or the invasion of Portugal by the royalists may be told in detail for a day or two, and then, as it declines in news value, it is not merely subordinated but perhaps dropped out entirely, so that we are left with little Peterkin's question forever upon our lips—"But what good came of it at last?" A university journal with a good endowment, freeing it in part from the compulsion of ever providing something new and startling, would be able to follow up events more satisfactorily and to give adequate attention to inconspicuous countries and movements. It could also assist in getting at the truth by sending a corps of trained investigators into any locality at any time. If, for example, a group of men and women such as made the Pittsburgh Survey were to be sent now to Lawrence, Mass., for a few weeks, would it not add greatly to our real understanding of the labor troubles there by giving us infor-

mation more important than who got shot and who got arrested?

The opportunities in the field of comment and criticism are greater than in news gathering. There would be naturally a bi-partisan or rather a poly-partisan board of editorial contributors, who would in each issue discuss current events and pending questions from their respective points of view. For the benefit of those who want to avoid reading any side but their own, the columns could be headed by the symbols used on ballots. Especial efforts would be made to insure that every cause worthy of the attention of thinking men should at some time be adequately expounded by its advocates and criticised by its opponents. There would naturally spring up lively and well-argued debates of controverted points by competent authorities such as are common in English newspapers, but not so often seen in ours. The propaganda of various forms of religious, social, political, moral and dietary innovations would find it more profitable to use its columns even at advertising rates than to support feeble organs unknown to the outside world.

This leads us to the third function of the newspaper, the advertising, which is in some respects the most important of all, without regard to the financial question. Even if a journal should be endowed so generously as to be relieved of the necessity of taking advertisements, it should maintain this department and adopt a liberal policy in accepting them. The tendency now shown to force the advertising columns under the domination of the editor seems to me quite as dangerous as the tendency not so plainly shown to force the editorial columns under the domination of the advertiser. I fear we have before us one more great fight before the cause of freedom of speech is finally won, that is, a fight for freedom of advertising, which to our present age corresponds in importance to the others that have been gained at the cost of many lives, freedom of speech in private, in halls and on the street corner. It seems to me, for example, that a man has a right to think that the phonograph he makes is the best in the world and to say so in the public columns of a newspaper, and that the pub-

lisher has no right to suppress this opinion, even tho he may disbelieve it or may hate all phonographs. The movement for restricting freedom of advertising has already gone so far that we see newspapers refusing to publish at their regular rates in their advertising columns properly worded statements of the case of their political opponents and openly boasting of this intolerance in their editorials. A university journal, however narrow it might become, would hardly do anything as bad as that.

Tho an endowed journal would not be so completely at the mercy of its subscribers as the ordinary, yet it must have readers and must in the long run please them. As it would not be local in its interests it might, instead of building up its own system of circulation, be supplied to the newspapers of several cities as a daily or weekly supplement. There

would probably be some in every locality who would prefer it to a supplement composed of yellow kids and actresses.

Much of what I have mentioned might be done by any endowed or subsidized journal, but the advantages of a university connection are very great, as I pointed out in my previous article. In a university we have several hundred specialists, conversant with all branches of human knowledge and trained in the arts of discovery and exposition, and also several thousand young men and women under training in these arts and anxious for practice. No newspaper office could afford to maintain such a corps of assistants for its occasional service. I fail to see why there might not be an extension of university extension by means of a journal. Perhaps it would not work. But I should like to see it tried.

NEW YORK CITY.

Immortality

BY H. HUSTON PECKHAM

"COME, let us walk on down the beach, while the morning weather
Is sweet with locust and rose and all cloudless above;
For our happiest times have been when we watched together
The sea on such days, dear love.

"Oh, why do you keep looking landward and shuddering, dearest;
When the deep is so calm, and its amber and azure and green
Are so bright and the gulls soar up and up thru the clearest
Blue that we ever have seen?

"Now why should you think of the ocean's winter anger
And the lives it has claimed, sweet? Sufficient unto the day
Is the evil thereof. And what can we fear in the languor
Of morning and calm and May?"

"Dear heart, it is not the thought of the ocean's rages
That frights me; but oh, the deep is so vast and so old,
And we are so fleeting! The waves murmur on thru the ages.
But our little tale, how soon told!"

"So fleeting? Oh, no, let us smile; for in glad blue weather.
Dear, eons and eons after this sea has gone dry,
We shall breathe the locust and rose as now together,
And shall laugh and love, you and I."

WEST RALEIGH, N. C.

Science and Sentiment

BY JOHN BURROUGHS

AUTHOR OF "LITERARY VALUES," "WAYS OF NATURE," ETC., ETC.

IT is often charged that science puts a damper upon the imagination, checking and limiting it and shutting us in with a blank wall of material things, while it is an undoubted fact that the greatest of the instruments of science, as Tyndall says, is imagination. Without imagination the scientific interpretation of the physical universe could never have been achieved. In all the great sciences, astronomy, geology, biology, chemistry, the imagination is the master builder. Observation and experimentation are its servants; they bring the material of the house, but its architect is imagination. Induction and deduction are its two hands. The imagination sees whole and sees the relation of all the parts, and if it leads to the atrophy of our esthetic sensibilities, as is often charged, or to the atrophy of our religious sensibilities, it is not because it inhibits or destroys imagination, for it really gives it a wider field in which to work, but because it is entirely occupied with the world of material or objective things, as opposed to the subjective world of ideas, sentiments and emotions wherein our esthetic and religious natures find their scope and activities. Science is impersonal and cold, and is not for the heart but for the head. The heart symbolizes so much for us, it stands for the very color and perfume of life, for the whole world of sentiment and emotion—a world that lies outside the sphere of science. Science may and does beget emotion, because we are emotional beings; it may and does awaken the feeling of the beautiful and the sublime, but this effect is incidental; its office is to

enlighten the reason and the understanding. It would not have us sigh or tremble or fear, or worship; it would have us see and understand. To this extent is it the enemy of literature, it cuts out the personal equation and the play of fancy and emotion which is the life of literature. If we can put soul in our science, and not vitiate the science, so much the better; if we can make literature out of it, as Huxley often did let us do it; but science, as such, looks with suspicion upon these things. It constructs a universe of system and law, and then leaves our feelings and emotions to play upon it if they can. If the poet is inspired by its results, so much the better for the poet; but the inspiration of the poet is not one of the results aimed at.

In view of these considerations, we see why science is accused of atrophying our esthetic sensibilities, and of being the enemy of literature, art and religion. These things do not belong to its world; they are quite apart from the system of material things, and while they may profit by the results of physical science, they may also be deadened or discouraged by them, as clearly they often are. Religion is at enmity with science only because science reveals an impersonal universe, a universe of matter and force bound together by the irrefragible chain of cause and effect, in place of the anthropomorphic universe which religion fashions. Science cannot be other than what it is, and religion cannot be other than what it is. They cannot supplant one another, but they may supplement each other. Religion may begin where science leaves off.

Without soul and sentiment we cannot have literature, art, music, religion and all that gives the charm and meaning to life; and without reason and the scientific habit of mind we cannot have exact knowledge and the mastery over the physical forces upon which our civilization is based. We must transcend physical science to reach the spiritual and grasp the final mystery of life. To science there is no mystery, there is only the inexplicable; there is no spiritual, there are laws and processes; there is no inner, there is only the outer world. To science Goethe's exclamation, "There is a universe within thee as well," or as Jesus put it before him, "The Kingdom of Heaven is within you," has no meaning, because it cannot weigh and measure and systematize this inner universe. Hence, I say, if we would know the world as it stands related to our souls—to our emotional and esthetic natures—we must look to literature and art; if we would know it as it stands related to our religious instincts and aspirations, we must look to the great teachers and prophets, poets and mystics; but if we would know it as it is in and of itself, and as it stands related to our physical life and well being, and to our reason, we must look to science.

Science and poetry go hand in hand in this respect at least—they transform and illuminate the common, the near at hand. They show us the divine underfoot. One brings to pass what the other dreams. One brings home to our understanding what the other brings home to our emotions and esthetic perceptions. The poets have always known there was nothing mean or commonplace; science shows this to be a fact. The poets and prophets have always known that the earth was our mother and the sun our father; science shows us how and why this is so. The poets know that beauty and mystery lurk everywhere, and they bring the fact home to our emotions, while science brings it home to our understanding. When Whitman says, "I am stuccoed with birds and quadrupeds all over," he made a poetic or imaginative statement of Darwinism. We think science kills poetry, and it does when it kills the emotion which the poet awakens, but in many cases science awakens an emotion of its own. In astronomy, in geology, and

often in chemistry, it awakens the emotion of the sublime. Poetry appeals to man, the emotional being; science appeals to him, the reasonable being. Science kills poetry when it moves the reason alone. The botanist with his pressed flower, and the collector with his skins, or his eggs and nests, is not an object the poet likes to contemplate. There are the esthetic values of things and the scientific values. The interest of the poet is in the beauty of the flower, its human significance, and the like; that of the man of science in its structure and relations, etc.

There is one emotion of knowledge and one emotion of ignorance—that of knowledge is often the emotion of joy and faith, that of ignorance is often the emotion of fear and superstition. It would be absurd to say that men of science experienced no emotion; only it is not the emotion of sentiment, it is not usually the emotion of awe or reverence. It is the joy of discovery, the intellectual delight in the solution of new problems. Darwin confessed that he had lost his taste for poetry and music and the arts generally, but Darwin had his own emotions, his own poetry, his own music, or he never could have done the work he did. He was thrilled by the discovery of a biological law as is the poet by his happy inspirations. Think you his conception of natural selection and the descent of man required no imagination? Darwin's mind had not atrophied; his desire to know had outgrown his desire to feel. There is the enjoyment of knowledge and the enjoyment of beauty.

Science rarely antagonizes poetry; it takes the other road. The world has got to a point, no doubt, where it sets a greater store by knowing than by feeling, by knowledge than by sentiment; hence poetry is in the decline. The pleasures of the understanding are more to it than the pleasures of the imagination.

Science has its mysteries, but they do not awaken our emotions; it has its revelation, but it does not touch our religious sentiments; it has its beauty, but it is not the beauty that so moves us in wild free nature; rather is it the beauty of the constructed, the artificial, or the beauty of machinery.

As a Man Prospers

BY WILLIAM FREDERICK DIX

AUTHOR OF "THE FACE IN THE GIRANDOLE," "THE LOST PRINCESS,"

THE present high cost of living may be, after all, a blessing in disguise, for it may teach us that simplicity of life may bring us more real comfort than elaborateness. The more goods we have and the more machinery of life with which we surround ourselves, the greater are our responsibilities. One does not need a great house with expensive furnishings and much plumbing, ornate gardens, a long club list and many servants in order to be comfortable. All these things mean wear and tear on the nervous system of the owner. Life, at the best, these days, is complicated enough, and, as a man prospers, why should he buy for himself more trouble in relation to his daily routine?

Why should a man who has a comfortable little home envy the man with a mansion? The man who tinkers about the house himself, who takes down his own window screens and puts up the needed shelves in the pantry, and helps his wife plant the garden seeds and trains the rose bushes, takes a more vital, personal interest in his home than the man who delegates these things to the artisans and gardeners and house servants.

As a man prospers, instead of spending his surplus in motor cars and Louis XVI drawing rooms and superfluous bathrooms, let him strive to improve the class of securities he has invested in. Let him purchase luxuries in the shape of carefully selected investments whose income may yield a smaller annual return than speculative ones, but which will be safe. Let him dispose of his six and eight per cents. which may be good and may not, and indulge in the luxury of four and a half and five per cents. which he need never have to worry about. In this way he is purchasing freedom from care and worry, and that is the very best purchase a man can make with his surplus earnings.

As a man prospers let him try to reach the point where the annual income from his investments will equal or even exceed his annual expenses. Then he will have

the comfortable feeling that, should he die or be incapacitated, his family can keep on living just as they have been doing. When he reaches that point, he will not have to spend any of his earnings for the support of his family; it can all go into capital and give him just that much more to live on "for ever after," as the fairy stories put it. Then, and then only, will he be on Easy street.

Many men think they live on Easy street when they really are in quite another part of town. A man who has plenty of ready money and spends most of it in luxury, and who has no substantial amount stored away in conservative investments, is not really on Easy street at all. He is a sham who lives in the lane in the rear named Short-sight, and only promenades up and down Easy street to show himself, and if he should die, his family would not even be allowed to do that. They would have to move over on Hustle avenue, the most overcrowded district in town, or worse still, occupy modest quarters in Poverty Flats.

Easy street is not given up to fine mansions by any means. There are many pretty little cottages upon it, with honeysuckle growing upon the porches, and usually with children in the little gardens. They are not in the least fashionable, but they are true homes of happiness.

As a man prospers let him first revise his list of investments, dispose of all the doubtful ones and purchase the class which are in favor with savings banks and trustees of estates. Let the thermometer of his dividends drop from the seven per cent. and plus to the temperate point of four and a half or five per cent. Let him cause the indicator-gauge of his income from investments to rise till it is the equal to or higher than his living-expense gauge, and let him attain an attitude of mind where he looks without longing upon the larger establishments of his neighbor and realizes that a few good books which he really reads, a few good pictures which he enjoys, a love of music and children and the beauties of

nature and the sweet intercourse of true friends are of far greater value to him than a multiplication of physical wants and a complicated establishment which demands formality and great care and expense of upkeep.

An invigorating walk thru the autumn-clad woods, a summer day spent in a sail-boat in a neighboring bay, can bring far more delight than a formal garden adorned with Italian statues. A man may be happy in having a town palace, a country estate, a yacht, motor cars and innumerable servants, but it is not because he has these things that he is happy. Never in the history of the world has a man increased his store of happiness by the purchase of princely

surroundings. A man who can be happy with them can be just as happy without them, and no man can be happy with them if he cannot abundantly afford them.

If the present high cost of living could make even a few people realize that, after all, they are better off without all these ornamental un-necessities, that the sweetness and beauty and real values of life are found in living things and not in carved stones and woven silks, that the luxury of financial stability, the regard of friends, the love of the family and the art of profitably spending one's leisure hours are the only true values, it might be something of a blessing after all.

EAST ORANGE, N. J.

The Queen Passes

BY ARCHIBALD MAC MECHAN

Down the street comes the heralds' cry
 "Room! ye knaves, till the Queen pass by."
 Ell-wand, hammer we drop, and stand
 By stall and window, cap in hand.

Open the causey lieth and wide,
 Fit for the Queen a-down to ride.
 And hawk on hand, in her saddle high,
 Ringed with her court, the Queen comes by.

The Queen is young, and the Queen is fair;
 Like meshes of gold is her floating hair;
 Her cheek is a rose, her eye of blue—
 It pierceth a poor knave thru and thru.

But an if she smile, would a man think meet
 To lay him under her horse's feet,
 To do her pleasure. She now is near
 And the lusty shoutings are good to hear.

The women's blessings, the children's cries
 Call up the proud light into her eyes,
 And the flush of pride to her rose-leaf cheek:
 Her lips they tremble, as she would speak.

The shoutings follow her. All the while
 I warm my heart in her golden smile.
 And I sing at my work till the end of the day
 Whenever the Queen hath passed this way.

HALEFAX, N. S.

The Conquest of the Tropics

THE two volumes of the Prevention of Disease Series¹ present practically the methods by which white men in our time have learned to guard against the dangers of the most serious tropical diseases. With yellow fever and malaria no longer dangerous wherever proper measures can be taken, the question of the white man living in the tropics is comparatively simple. The discoveries that both of these diseases were conveyed by mosquitoes were probably the most important ever made for preventive medicine. Prof. Ronald Ross in his chapter on "The History of Malaria" tells how old is the idea that the paludic diseases were due to the stings of insects.

Columella, about the first century B. C., says: "Bogs breed insects, armed with stings, and pestilent swimming and creeping things, from which come obscure diseases." Here we have malaria connected not only with the marsh but with insects or germs bred there. The erudite Varro (116 to 28 B. C.) had declared in his "Rerum Rusticarum" that in marshes there are animals too small to be seen which enter the mouth and nostrils and cause troublesome diseases. Those who wish to know how much has been done to prevent malaria in modern times, especially in the fever-laden parts of Africa, where the problem is at its worst, will find abundant information in Professor Ross's book. He was himself one of the makers of this subject, and has written worthily of it. He has such distinguished collaborators as Professor Howard, of the United States Bureau of Entomology; Colonel Gorgas, of Panama; Sir Rupert Boyce, of the West Indies; Professor Celli, of Italy; Dr. Balfour, of Khartoum; Professor Takaki, of Japan; Dr. Bostock, of South Africa,

and Dr. Watson, of the Malay States. Sir Rupert Boyce, F. R. S., in his book on *Yellow Fever and Its Prevention* has done for this affection what Ross did for malaria. Every phase of the subject receives thoro treatment. It is good to find that Sir Rupert straightens out the question of priority of the discovery of the theory of the transmission of yellow fever by mosquitoes and gives to Dr. Finlay, of Havana, the credit of which he has sometimes been deprived by over-enthusiastically patriotic writers in the States. It is extremely interesting to note what unexpected conditions may help in the dissemination of yellow fever because they foster the growth of the mosquito. In certain of the South American countries it used to be the custom in the villages to use bottles turned upside down and sunk in the soil as ornamental borders for flower beds. In the cuplike bottom of the bottle water gathers and proves a favorite breeding ground for the yellow fever-bearing mosquito. For those who wish to have the up-to-date story of our knowledge of yellow fever this book is not only informing, but exhaustive.

From an outpost in the very heart of the enemies' country, in immediate contact with the diseases to be combated, comes a large and handsome volume of 400 pages filled with research work of the highest order.² The invasion of the Sudan when it takes this form is fully justified, and we are glad to see the name of the Christian soldier who fell at Khartoum perpetuated in such a college. This volume is largely devoted to bacteriological studies of kala-azar and spirochætosis in fowls and human beings, but there are many other papers, one of which especially, "The Fallacies and Puzzles of Blood Examination," would be useful to every bacteriologist. The volume is thoroly illustrated by color plates, photographs, microphotographs, maps and drawings.

¹THE PREVENTION OF MALARIA. By Ronald Ross, D.P.H., F.R.C.S., D.Sc., LL.D., F.R.S., C.B., and twenty other contributors. New York: E. P. Dutton Co. \$5. YELLOW FEVER AND ITS PREVENTION. A Manual for Medical Students and Practitioners. By Sir Rupert W. Boyce, M.B., F.R.S. New York: E. P. Dutton Co. \$3.50.

²FOURTH REPORT OF THE WELLCOME TROPICAL RESEARCH LABORATORIES AT GORDON MEMORIAL COLLEGE, KHARTOUM. Vol. A, Medical. New York: Toga Publishing Co. \$5.

Venice

"A jest from Scaramouche or Harlequin, an old book bound in leather, the noise of a gilded coach rumbling along the street, the beautifully written score of some grave oratorio, the air of a song delicate as a bird's, a sham sun-dial painted on the wall—dust, luxury, nothing to do, Volta with his frog, Silvia with her smile—there you have Italy in the eighteenth century."

M. MONNIER'S *Venice in the Eighteenth Century*¹ is little more than an elaboration of this initial theme, but an elaboration as charming, however, as the suggestiveness of the theme itself. He has steeped himself in the very spirit of the pleasure, art, music, literature, and adventure of the voluptuous, dilettante, enchanted life of old-world Venice, and has painted it in a series of word pictures, of shifting figures of wits, and gallants, and zentildonne, and adventurers, the whole colored with the magical light of the lovely city. He has created not so much a history as a poetic mood. The danger in such writing is that the reader soon reaches the point of saturation. So much exquisiteness, so constant an appeal to the sensuous imagination palls after a while. The author recognizes this fact, and relieves the strain of too much "Venetian Love," "Festival, Carnival," and "The Passion for Music" by delightful chapters on "The Comedy of Goldoni," and that incredible adventurer, Casanova. He writes with that incomparable intimacy of touch, that sustained mood, that genius for massing together innumerable and irrelevant details into the precise picture he wishes to present, that vivacity of style which carries the reader impetuously along, literary qualities which only the French artist seems able to achieve in perfection. The translation is remarkably well done; the name of the translator, however, is modestly concealed. It is really a translation (not a paraphrase), with all the vivacity and atmosphere of the French original carried over into our mother tongue.

It seems strange that the city whose lovely senility M. Monnier describes should be the same that for a thousand years repelled Lombard and Frank and

Slav and Saracen and Byzantine and Turk, that built up an empire which included Dalmatia, Crete, Cyprus and the Morea; a city with 60,000 sailors, and a commerce that reached from Denmark to India. The author of *The Navy of Venice*² seeks to fill a literary gap with a history from the earliest times of the ships that made the greatness of Venice. She disclaims any intention of writing a technical treatise on naval architecture, or, on the other hand, of a history of Venice. Unfortunately her collected material has furnished her with little more than a long series of sieges and naval battles, of a prosaic sameness, extending over a period of a thousand years. The discussion of naval construction and development which intersperses the history is neither well digested nor interesting. The mercantile marine, of vaster significance to Venice than even her fighting ships, is dismissed in a brief chapter at the end of the book. In short, the work is one that is hardly calculated to prove satisfactory either to the general reader or to the historian.

European Years: The Letters of An Idle Man. Edited by George Edward Woodberry. Pp. 373. Boston: Houghton Mifflin Co. \$2.

One's first suspicion on opening this severely handsome volume is that Professor Woodberry has done himself the wrong of adopting the phrase "An Idle Man" as a pseudonym; that the editor is, in fact, the author. But this suspicion is soon laid. In the first place, this editor, if he were really the author, would not praise the *Letters* so highly—so inordinately, even. In the second place, there is no suggestion of Professor Woodberry, once one has read the brief introduction that describes his friend as an old traveler whose memory goes far back, and who has visited many lands; offering "interludes of California and Japan and India," ranging to Vienna, Copenhagen, Paris, London, and the Spanish and Italian towns, and residing, for the most part, in Germany, above all, Dresden. The reviewer is not sufficiently a Bostonian to "spot" the real author; though he is "of the generation

¹VENICE IN THE EIGHTEENTH CENTURY. From the French of Philippe Monnier. 255 pp. Boston: Richard G. Badger. \$3.

²THE NAVY OF VENICE. By Alethea Wiel. 352 pp. New York: E. P. Dutton & Co. \$5.

that neighbored Emerson and Hedge . . . an interesting and unusual New England type." This editor calls him an "escaped Bostonian," but it does not appear that he escaped so far in other dimensions as he did in space. This author escapes the Boston climate, to be sure; but any one who reads his letters will find pages on pages devoted to climate; and we all know the kind of person who has nothing better to talk about. If our tone is captious, so is that of the "escaped Bostonian." "An American lady here lent me the other day the two volumes of Ticknor's 'Life,' one of the earlier letters tells us. "I have no doubt that it will sound heretical in Boston to call them dull, but to me they seemed to be nothing more than two solid volumes of gossip." But stay: is it often you happen upon two *solid* volumes of gossip, O "escaped Bostonian"? This "citizen abroad" who is so severe upon Ticknor, and sneers at "an aristocrat whose father was a grocer," offers us in one volume a much less interesting memoir than either volume of Ticknor's "Life and Journals" makes; and that is only due in part to the fact that Ticknor accomplished something in the world. The Idle Man's temper may be gauged from the specimens already offered, and this excerpt from a Carlsbad letter of 1885:

"MY DEAR M—Your welcome letter from the Shelbourne Hotel, in Dublin, came duly to hand; and I was extremely glad to learn that you were all getting on well and were not in the least dismayed by the discomforts of foreign travel. And now I have hope of you, for if you can stand Ireland and like it, you can stand anything, and remain always serene. *I was never in Ireland myself except for an hour or two* when once our steamer stopped in Cork harbor, and I went ashore, and wandered about Queenstown:—that did for me."

One who has led, to all appearances, so trifling a life, with generalizations upon books, manners and cuisine for his principal concerns, might be expected to adopt a kindlier tone. But the author of *European Years* is a soured pessimist, whose talents were never exerted to a good purpose—possibly because of a certain want of robustness. And there you are. In spite of all, the escaped Bostonian has written some charming letters, *inter alias*; albeit he is somewhat heavy, at his best.

John Sherwood, Ironmaster. By S. Weir Mitchell, M. D., LL. D. New York: The Century Company. \$1.20.

It is not a little surprising that a writer of Dr. Mitchell's long experience, not only in scientific exposition and romancing, but as a maker of readable books for children, should not ere this have learned to handle his medium of expression with more aptitude and grace, not to say accuracy. The opposites of these qualities appear all too frequently in his interesting and engaging novel. Besides its faulty style the introduction of the study of a paranoiac, altho skilfully and effectively done, may not be pleasing to some readers. But, regardless of these minor tho hampering frailties, we should be thankful for such wholesome and enjoyable fiction, with its sound sense, its tonic of woodland air and sea breeze, its successful analysis of motive and tendency, and its high tone of optimism. There is just enough action in the story to open the way for the entry of new and modifying influences into the life of the Ironmaster, whose uneventful career forms the thread of the narrative. Family circumstances decreed for the boy social isolation to an unusual extent during his earlier years, and he came to manhood with restricted interests, finding an outlet for his enthusiasm only in following eagerly a natural gift of inventiveness. In the mill, of which he became master, he pursued the narrow road toward success which was finally attained, but the process repressed many normal human instincts and made inroads on health itself. In seeking to regain his former vigor amid the wild surroundings of the Maine coast, the hero becomes aware of unused areas and unknown depths in his own life. His awakening and growing response to the appeal of the beauty and mystery of nature is well described. It is thru this opening door of a larger existence that his fellow beings, so long neglected, begin to enter and share with him his new life. Among the acquaintances he makes in his forest retreat is a mysterious man who proves to be under the shadow of a monomania. The former Ironmaster studies his peculiar neighbor with growing interest and attachment, and finds later that his own happiness is bound up

with the tragic fate of this stranger. An accident relieves the tension of the plot and sets in motion the forces that conclude the fortunate ending of John Sherwood's long preparation to enjoy the largest and fullest life.

The Amazing Duchess. By Charles E. Pearce. Two volumes, pp. 359, 364. With 38 illustrations. New York: Brentano's. \$6.

The "Amazing Duchess" of these two large volumes is "Elizabeth Chudleigh, Maid of Honor; the Hon. Mrs. Hervey, Duchess of Kingston, and Countess of Bristol," and her history is qualified in the title page as "romantic." Nowadays a large number of readers prefer to take their romance in the form of lightly constructed history, and they do not apparently, object to bulk, so long as bulk does not conflict with lightness; nor to disproportion. Probably most persons know the name of this "amazing duchess," if they do know it, only because Thackeray made her over (and improved upon her) in his *Beatrice Esmond*. There is much that is diverting in this two-volume account of one of the minor personages of English history, and her eighteenth century setting.

Literary Notes

....The residence of Ex-Governor Morton at 681 Fifth avenue is to be replaced with a twelve-story building, of which the basement and first two floors have been leased for twenty-one years by Messrs. E. P. Dutton & Co., publishers and booksellers, at an aggregate rental not to exceed one million dollars.

....David Buffum's *The Horse: His Breeding, Care and Use* (Outing Publishing Co.: 70 cents) is an illustrated volume of 170 instructive pages, entirely comprehensible, whoever the reader may be, and instructive withal for the practical horseman. The book should be on the shelf of every horse-owner—and on that of every one of us who has a stable in Spain.

....Another play by Percy Mackaye is entitled *Tomorrow* (Stokes; \$1.25). This three-act drama has not been produced—possibly because the theme is not altogether attractive as a subject for dramatic entertainment. Eugenics is the euphemism coined to convey the idea. The scene is laid in California: partly in the garden of a Burbank named Peter Dale.

....The report of the Librarian of Congress and that of the Superintendent of the Library Grounds and Buildings for the fiscal year ending June 30, 1911, comes to us from the Government Printing Office at Washington, and is a high volume of 244 pages, with a frontispiece and plans. Early in the course of his report, the Librarian states that purchases "have been almost exclusively of material whose content renders it indispensable to the serious investigator." The Library has not been able to compete with private individuals and endowed institutions in the purchase of books and manuscripts valuable for rarity or form.

"The sale at auction, in May last, of the first section of the Robert Hoe collection, afforded a signal illustration of our inabilities. There was not a single item offered, not already here, which would not have been an appropriate, and in its way a useful addition to our collections; there was not, however, a single one upon which we felt that we could justifiably bid."

For such material, the Congressional Library must depend chiefly upon gift and bequest. "It is surely not too much to expect," Mr. Putnam adds, "that owners of private collections, considering a disposition of them that will combine distinction with utility, will in time give it the preference over institutions merely local." And further:

"Evidence is not lacking that such considerations are already appealing to owners of private libraries as they have to the owners of family papers—so many of which have been placed with us; and actual inquiry has induced us to suggest a form of gift or bequest the most secure and most suitable. It is to *The United States of America, to be placed in the Library of Congress and administered therein by the authorities thereof.*"

....A formidable list of good books that their authors never wrote might be drawn up. Balzac, in "La Cousine Bette," likens the process of dreaming over literary projects to a smoking of "enchanted cigarettes," and Stevenson was smoking the brand when he talked of his future "Life of Hazlitt," biography of Wellington, novel of "The Young Chevalier," essays on the Parnassians, novel of life in Tahiti ("Sophia Scarlett"), love-story "Canonmills" (that every one would think "dreadfully improper"), and "History of the Indian Mutiny." Coleridge, before Stevenson, smoked a whole boxful of enchanted cigarettes. Pope and Gray both projected "A History of English Poetry," and so did Warton, who smoked it further than the first named poets. Gibbons's "Memoirs" give a long list of such cigarettes, one of them a "History of the Republic of Florence." Burke contemplated a history of England, and Macaulay made some progress with "The History of France from the Restoration of the Bourbons to the Accession of Louis Philippe." His journal tells us, also, that, if he could have obtained materials, he would have written a short life of Jane Austen, to raise "a little money to put up a monument to her in Winchester Ca-

thedral." In our own times, Lord Acton gave much thought to a "History of Liberty," for which he made huge collections.

....Prof. T. K. Cheyne, of Oxford, does not weary in seeking to uphold and propagate his Yerahme'elite theory of Old Testament development. In his new volume on *The Two Religions of Israel* (imported by Scribners; \$4) he uses all the resources of his vast learning and extraordinary imagination in presenting different phases of the conflict which he holds existed from the time of Moses until the exile between the North Arabian religious forces centering about the ancient god Yerahme'el and the aggressive Hebrew leaders who were devoted to the pure worship of Yahweh. The final triumph of the religion of Yahweh was due to the great work of the prophets. It is mostly in the writings of the prophets and in the accounts of their work that Professor Cheyne finds his Yerahme'el material. The author's textual emendations, identification of dissimilar names, and consequent discovery of otherwise unknown events, not to say national movements, are often as interesting and diverting as they are fantastic. Much more evidence, however, must be brought forward before his theories and rereading of Hebrew history will be accepted by careful scholars.

....A few months ago Mr. Silas McBee took a trip thru Europe and the Near East in the interests of Christian unity, and recorded his impressions and experiences from time to time in *The Churchman*, of which he is the editor. These papers and some scattered addresses relating to the same general theme are now published in *An Eirenic Itinerary* (Longmans; \$1). If hobnobbing with Bishops, Primates, Metropolitans, Patriarchs, Cardinals and the other official aristocracy of Christendom will further the cause of unity, surely Mr. McBee has done yeoman's service in the good cause. He seems to have found the kindness, greatness and liberality of every one he visited raised to the superlative degree, to say nothing of the inexpressible beauty he sighted in everything oriental or eastern. His appreciation is unbounded, but his expression seems seriously limited by the distressing inadequacy of our language. Even for a Patriarch or an Archimandrite to deal in terms of Christian sentiment and courtesy fills editor McBee with astonishment and profound gratitude. He does not hesitate to declare that "the transformation in the attitude of Christendom toward unity is assuming the proportions of a historic revolution." We have, however, become so accustomed to revolutions that this sinister prediction hardly startles us.

Pebbles

BIGGS.—My half brother is engaged to my wife's half sister

DIGGS.—When will they be made one?—*Boston Transcript*.

A SORT of bathtub epidemic has struck this here burg. Quite a number of the neighbors are getting all ready for a bath when the borrough water is turned on next spring or summer.—Springdale Correspondence, *Alleghany Valley Life*.

A TRAVELLER had climbed to the top of the monument on Bunker Hill. He and his companion had been viewing the surrounding country, when his companion remarked: "And this is the place where Warren fell."

The traveler looked out at the surrounding country and then down at the vast expanse beneath, and, heaving a great sigh, exclaimed: "No wonder it killed him!"—*Ladies' Home Journal*.

"AND so you are an ex-slave," said the traveler in the South. "How interesting. But when the war was ended you got your freedom."

"No, suh," replied Uncle Rastus. "Ah didn't git no freedom. Ah was married."—*New York Sun*.

A YOUNG man lately called at the house of his sweetheart and was admitted by a new maid.

"Is Miss Dash in? This is Mr. Blank," he explained.

The maid smiled knowingly. "Oh, yes," she said, and led him into the parlor.

After three-quarters of an hour of waiting, he rang again for the maid. "Did you forget to tell Miss Dash I was here?" he asked.

"No, sir," the new maid explained. "She is not back from shopping yet."

"But you told me she was in!"

"Yes, sir. She told me she was *always* at home to you, sir!"

STRAIGHT FROM THE SHOULDER.

We men must view with deep distress
The fashions in the daily press;
For ladies shown in these designs
From top to toe are all straight lines,
As though, to suit the present taste,
A woman must avoid all waist.
It may be, fashion's present mood
Is influenced by the price of food.
Though too much waste may make us sad,
A little waist was not so bad;
And if we've sometimes viewed with scorn
The clothes that womankind has worn.
Or marveled at the facile grace,
With which she altered form and face,
We one and all must stand agape
Before the fashionable shape;
For there should be no doubt of this:
A miss was not so much amiss
That we can now, without dismay,
Look on, and see her waist away!

—*New York Times*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Senator La Follette's Disability

SENATOR LA FOLLETTE's address at the annual dinner of the Periodical Publishers' Association, in Philadelphia, on the 2d inst., has been followed by what is generally regarded as his withdrawal from the contest for the Republican Presidential nomination. His retirement is announced by the leaders of Progressive or La Follette organizations in New Jersey, Illinois and Ohio, who urge those associated with them to promote the nomination of Mr. Roosevelt. The Senator was suffering from overwork and nervous strain when that address was delivered. He must rest now, and it is expected that he will go abroad. His disability affects the Progressive movement and narrows the contest to one between Mr. Roosevelt and President Taft.

The memorable address had been carefully prepared. Mr. La Follette had dictated it to a stenographer, had revised it and had read it to his secretary. At the dinner he read it from typewritten pages, saying that he did so because he wanted a record of parts which might not be reported for the press. We have before us a printed copy of the address which he

prepared. There were also extemporaneous interpolations and expansions. Certain parts of the original address he repeated several times. He held the floor for about two hours, or until 1.30 a. m. Owing to the length of his speech and to some of the opinions expressed in it, there were interruptions which annoyed him and which he sharply resented. The audience of more than 600 persons included Governor Wilson, several United States Senators and Representatives, prominent editors, and many of the best known writers for American magazines.

We shall make a brief summary of his remarks. At the beginning he said that there had been built up in this country in recent years "a mighty power" strong enough "to nominate, again and again, the candidates of both political parties." It was now "ruling in the organization of legislative bodies, national and State"; its influence was felt in cabinets and "clearly seen in the selection of judges upon the bench." In business, it had crippled or destroyed competition. It was "making prices and imposing its burdens upon the consuming public at will." It was still master of the highways of commerce. In finance, its power was unlimited; there it was "giving or withholding credit" and was "from time to time contracting or inflating the volume of money required for the transaction of the business of the country, regardless of everything except its own profits." It was rapidly monopolizing the country's natural resources. Tracing the growth of combinations, he asserted that they were now "largely dictating the price of everything we sell or buy"; that monopoly had "acquired dominion everywhere," and that with it had come "rapidly advancing prices, increasing the cost of living upon people of average earning power until the burden is greater than they can bear." This "supreme control of the country's business" was the triumph of men who had at every step defied the common law and the criminal statutes."

The Sherman act, "a most perfect weapon for the protection of the people," had not been enforced. "Two or three score of prosecutions, dragging along at a snail's pace from administration to ad-

ministration," had been little more than notice to the business kings that they might extend their dominion, that there would be no show of enforcement except for occasional effect upon the political situation. Pointing to statistics relating to combinations while Mr. Roosevelt was President, when "prices were mounting higher and higher," he asserted that popular protest had "caused no fear on the part of the Trust makers, so long as the Government was prosecuting less than an average of seven cases a year." After thirty-eight years of contest with the railroads, the consumers had "lost in their long fight for reasonable rates," because "the power of the railroads over Congress has been well nigh supreme." Great banking institutions were bound up with the control of Trusts and railroad combinations. The Supreme Court, by "usurping both legislative and executive power," had modified the Sherman act. The Trusts exercised their greatest power thru control of credit and banking. However innocent the Aldrich monetary plan might seem on the surface, it should be scrutinized carefully at every step.

There were only two agencies, he continued, by which the intricate sources of the power of the great interests "that today control our property and our governments" could be disclosed to the people. These were the press and the platform. Here he made his attack upon the daily press:

"What do we find has occurred in the last few years since the money power has gained control of our industry and Government? It controls the newspaper press. The people know this. Their confidence is weakened and destroyed. No longer are the editorial columns of newspapers a potent force in educating public opinion. The newspapers, of course, are still patronized for news. But even as to news, the public is fast coming to understand that wherever news items bear in any way upon the control of government by business, the news is colored; so confidence in the newspaper as a newspaper is being undermined.

"Cultured and able men are still to be found upon the editorial staffs of all great dailies, but the public understands them to be hired men, who no longer express honest judgments and sincere conviction, who write what they are told to write, and whose judgments are salaried.

"To the subserviency of the press to special interests is due, in no small degree, the power and influence of the weekly and monthly magazines. A decade ago, young men trained in

journalism came to see this control of the newspapers of the country. They saw this unoccupied field. And they went out and built up great periodicals and magazines. These were free. Their pages were open to publicists and scholars, and liberty and justice and equal rights found a free press beyond the reach of the corrupt influence of consolidated business and machine politics.

"The control of the newspaper press is not the simple and expensive one of ownership and investment. Neither is it the 'kept sheet' owned by a man of great wealth to further his own interests. There are a few papers of this kind, but not many. The control comes thru that community of interests, that interdependence of investments and credits, which ties the publisher up to the banks, advertisers and the special interests.

"We may expect this same kind of control, sooner or later, to reach out for the magazines. But more than this. I warn you of a subtle new peril, the centralization of advertising that will in time seek to gag you. What has occurred on the small scale in almost every city in the country will extend to the national scale, and will ere long close in on the magazines. I believe that when the final test comes, you will not be found wanting; that you will not desert and leave the people to depend upon the public platform alone."

This was the end. The Senator had attacked his hosts. With respect to this dinner, the Newspaper Publishers' Association had co-operated with the Association of Periodical Publishers. Before him were editors of prominent daily papers. He may not have known that many contributors to magazines (hundreds of whom were in his audience) were formerly connected with the daily press, and that for some of them such a connection still exists. The toastmaster who had introduced the Senator is the business manager of a daily paper in New York, and at the conclusion of the address he remarked that the daily press had been "foolishly, untruthfully and wickedly assailed" by the speaker. What Mr. La Follette said about the daily papers and their editors was both discourteous and untrue. There are papers which are controlled in opposition to the public interest, but this cannot be said truthfully of a great majority of our newspapers. The charge was made with special reference to the influence of Trusts and railroads. Any one who is familiar with the attitude of the daily press, both in editorial articles and in news reports, toward combinations and railway questions knows that the charge is ridiculously false. Let us give

the newspapers what they deserve. There must be credited to them those exposures of municipal corruption and fraud which the Senator in his address credited to the magazines established within the last ten years.

These new magazines should also have their due. We would by no means belittle the work they have done. But the Senator should have remembered that something in the public interest, in the cause of liberty and for the promotion of honesty and good government, has been accomplished by magazines, weekly or monthly, which are much older. As for ourselves, we look back upon a record of more than sixty years with a modest sense of satisfaction.

Mr. La Follette has much good work to his credit in Wisconsin. His recent public utterances have been characterized by sensational exaggeration. He is prone to think and say that all who dislike him or do not agree with him are dishonest or corruptly controlled. This may be seen in his sweeping denunciation of the daily newspaper editors, "whose judgments are salaried." Here he is in accord with our Socialist friends, some of whom are accustomed to assert that all judges and editors (those of Socialist papers excepted) are "servile and venal lackeys of the ruling class." Because of the Senator's recent attacks upon the courts, one of the Socialist papers says he is at the fork of the roads, where he must speedily become either a Socialist or a reactionary. We do not forget that he was affected in Philadelphia by nervous strain and by anxiety concerning a member of his family who was ill. We have reason to think also that he had been much annoyed by the tendency of his followers to desert him for Mr. Roosevelt, and by the pleas of some of them who were urging him to withdraw in Mr. Roosevelt's favor. But it is true, as his secretary says, that all that he said in Philadelphia he had said repeatedly in recent speeches elsewhere, except that his denunciation of the newspapers had not been so sweeping. A few of them were supporting him, and he thought these were honest.

Mr. La Follette could not have been nominated for the Presidency. The

movement which seemed to be in his interest has been, for some, a cover for a movement in favor of Mr. Roosevelt, but we are convinced that the Senator did not consent to be a stalking horse. He stood for himself and for the principles which he asked his party to accept. Before the speech in Philadelphia some who had not sincerely supported him were already turning to the ex-President. The speech was only two days old when, as we have said, the leaders of three State organizations of Progressives seized the opportunity afforded by his disability and declared that Mr. Roosevelt was their choice. It is suggested that the Senator's name should go before the convention, in order that the votes of Wisconsin may be held in line. At present it appears that the President's only formidable opponent will be his predecessor, who said three years ago: "No man of better training, no man of more dauntless courage, of sounder common sense, and of higher and finer character has ever come to the Presidency than William Howard Taft."

Hands Off in China

TREATIES, international engagements of whatever sort, are of short life and need frequent renewal. They can be suddenly broken by war declared by either party, or they can fade away into desuetude like a civil law or an ecclesiastical edict. Other blue laws than those fabled of Samuel A. Peters, of Connecticut, die a natural death in many a state and nation; and we are assured on high authority that a recently revived papal decree has no force over half the world because it had lapsed by time. Treaties and solemn engagements between nations are very liable to drop their caducous leaves, and they need to be frequently revived and renewed. Austria's recent seizure of Bosnia is but one of numerous examples how soon their sap of life is dried up.

It was but a very few years since the nations had agreed to maintain the integrity of the Chinese Empire. They made a mutual promise that no one of them should take advantage of the others by seizing a port or a province, and so

shifting the balance of power and influence in the Far East. But there arose a sudden and new condition. China was in convulsions. In the midst of a mighty revolution, possibly breaking into fragments, the temptation to take advantage of the opportunity to help one's self to the fragments, or to bite off a morsel or to break off a larger portion, seemed almost too great to be resisted. There was Russia on the north protesting that she would not do what she seemed to be already doing; there was Japan to the east with her foot firmly planted in Manchuria and suspected of further designs which she denied; and there was France to the south enjoying the possessions which she had taken, and even desirous of enlarging her colonial empire. It was clear that it was time to renew the old engagement, and, if possible, hold back the hands of the eager, if not greedy nations.

What nation so fit as the United States to propose the new engagement? We are known by all to have no desire to enlarge our possessions in the East at the expense of China. To be sure, we have the Philippines there, but we got them unwillingly and almost unwittingly, and don't know how to get rid of them. It is to our interest, as it is our wish, that China should remain undivided. So Secretary Knox, after conference with Germany, a nation which holds no contiguous territory, agrees with her that we two Powers understand that in the present disturbances no Power should take advantage of them to increase its own holdings; and we ask the adhesion of the other Powers. They, of course, must agree that no nation shall take independent action. So for a while China seems protected, unless it be from the insatiable ambition of Russia, whose steady movement southward into the center of Asia no Power seems able to prevent.

In a measure, so far as possible, the United States thus stands forth as the protector of China. We are China's best friend. We have stood for the open door in Manchuria, and we now stand forth as her sponsor against further dismemberment. We would give her time to pull herself together, to solidify her republic, if she can. Give her one generation of time, as time was given to Japan,

and she will need no protection. She will be fully able to defend herself. She will be one of the greatest, and we believe one of the grandest, as she is one of the oldest, of the nations of the world. It is worth while for the United States to be China's friend, and to do her full justice. But this we have not hitherto always done.

"The monarchy now ceases forever, and the republic will continue forever." These are the concluding words of the despatch which Yuan Shih-kai, the administrator of the Imperial Government at Peking, sends to the administration of the Chinese Republic at Nanking:

"The object for which you have been fighting many years is now attained. Today the absolute monarchy ceases to exist, and the republic begins. Hail this change with delight."

This most momentous despatch announces publicly the abdication of the Emperor, the submission of the Manchus and the adhesion of all northern China to the republic, and all achieved without the clash of civil war in the north. It is a wonderful triumph of diplomacy for Yuan Shih-kai, as it crowns with triumphant success the patriotic idealism of Sun Yat-sen and his long-patient associates. It is the greatest political event of the century, one of the greatest of all centuries, and it marks an immense step toward the unity of the world's civilization. We are inclined to think that we may now expect China to make more rapid progress than did Japan when she broke away from her ancient seclusion, for China already has her own educated and Christian leaders. What a time this is for the United States and the American people to show their sympathy and to aid the forces which had already taught and guided this new and victorious movement.

Crime and Its Abettors

THE American people, as naturalists can have from time to time observed, has spells of behaving the part of a maudlin, maudering fool. It is having one of them now. It always has one whenever the question is raised of the treatment that ought to be applied to some peculiarly hypocritical scoundrel or to some human devil whose crimes are more

atrocious than ordinary. Let such a wretch be actually convicted and sentenced, after the whole crew of criminal lawyers has exhausted the resources of our "procedure" to save him, let him actually be incarcerated, or strapped into the electric chair, and a nation of 90,000,000 free-born citizens, more or less, begins to snivel.

This collective psychology must be remembered by any one who would understand a recent incident, not of the atrocious kind, but significant. A man of great wealth who played a conspicuous part in the world of fireworks finance was convicted of a felonious violation of the United States banking laws. To the amazement of the human race he was shut up in a Federal prison, shaved and scrubbed like any other convict, put into prison clothes and nominally set at work.

His tasks were soon made as easy for him as possible, because he began to exhibit symptoms of ill health. The symptoms increased and multiplied, notwithstanding kindly treatment. His wife, whose devotion was precisely the correct mental treatment to administer to a sentimental nation, set about moving heaven and earth to get the case reopened, or otherwise to secure her husband's release. In this adventure she proved herself a competent person. When every other expedient had failed, the health of the prisoner became very bad indeed; so bad, in fact, that his life was despaired of. The President of the United States was appealed to. His handling of the case betrayed a painful apprehension that somebody was "playing him for a sucker." Of course nobody was, and when he had assured himself that the convict had only a few days to live, a commutation of sentence was granted. The rapid recovery which has followed this act of clemency has added a new and startling chapter to the annals of medico-legal therapeutics.

The really important question, however, which this case presents is not whether President Taft was fooled. It is: Why, in the name of common sense, should he have thought it necessary to release this man from prison even if it was true that the man was dying?

The gasp of horror which ninety

Americans out of any hundred will make on merely reading the question in this form will be an all-sufficient proof of the wretched demoralization that we have fallen into. We have ceased to be able to behave like sane and grown-up creatures toward the law-breaking element. The humanitarian revolt against the cruelties which were inflicted upon prisoners and malefactors condemned to death in former generations has carried us so far to the other extreme that we have become hopelessly and indescribably silly.

What a sane people should be concerned to know is: Was the man who has just been released wrongly or rightly convicted? If he was wrongly convicted he should have been set free with the apologies of his fellow citizens. If he was rightly convicted he should have been kept in prison until the expiration of his sentence or until his death. The proposition that a prisoner rightly convicted should not be allowed to die in his cell is nothing but a bit of sickly, stupid and mischievous sentimentality. To dignify it as "humanity," or "Christian forgiveness," is drivell.

And here let us say one word to those self-described and self-classified "students" of criminology and prison reform who are proclaiming the doctrine that "experience," "history" and "statistics" have "demonstrated" that "mild measures" have been more effective than severe measures in suppressing crime. The true retort to this new-fangled doctrine is extremely simple. Express in the briefest and most impolite terms it is, "The boy—misrepresented!" So far from having diminished crime, the mild measures now in fashion are letting crime increase day by day, and "get away with the goods." We happen ourselves to know a little bit about the history of these things, and we have no hesitation in saying that the so-called "statistics" and the so-called "history" which the people who want to abolish capital punishment, for instance, are making use of are entirely worthless. And, what is more, most of these people wouldn't know either statistics or history if they were to run into them in broad daylight.

We shall return to this subject on another occasion.

Religious Garb in Indian Schools

A NOT wholly pleasant condition, and one that may arouse ill will, has arisen out of an order by Indian Commissioner Valentine forbidding in Government Indian schools the use of special religious garb or insignia. Complaint was made of this to the President by the Catholic Bureau at Washington, the very active representative of the Church, and the President six days later revoked the order with a view to further consideration. Thereupon the Home Missions Council of the Protestant Home Missionary Societies, thru its executive committee, telegraphed to the President its regret that this had been done, and presents a public appeal against it.

This is an unhappy complication. The crux of the matter is not in the wearing of a religious garb, but in the taking over by the Government of religious schools without any civil service examination of the teachers. This should not have been done, and yet they were taken over, known to be religious schools, and continued as religious schools and supported as such by the Government. Nor were they all Catholic. To be sure, the Catholic schools are the most numerous and the most ostentatiously sectarian, by means of the religious garb of the teachers and the other abundant insignia.

Certainly, Commissioner Valentine was right in declaring that the essential principle of the separation of Church and State forbids the teachers in these schools to impress their faith on the children by a peculiar sectarian dress and other insignia. Take the case of the Standing Rock Reservation. There are two Catholic Government boarding schools, and all are required to attend school. In the agency there are as many as four Protestant Indian churches. Their larger children must go to these schools, and crucifixes are at the heads of their beds, and pictures of the Sacred Heart of Jesus and other signs of Roman Catholic devotion are in constant evidence. They cannot escape being taught Catholicism. To be sure, they may at specified times be allowed instruction from their own minister or chaplain, as the Catholic children are allowed, but this

obtruding of one kind of religious faith is unjust in a country which knows no discrimination of faith.

And yet when these schools were "blanketed" in, with no civil service examination, it must have been known by the Indian Bureau that no visible change of management would be made, and we understand that no change of teachers or of management has since been made. Commissioner Valentine has tried to correct a real favoritism to one Church, and has required that in school work the teachers wear 'ordinary citizens' garb and remove sectarian insignia.

That is strict justice, but it will work much radical change, for the teachers are members of religious orders, required to wear their garb, and would have to resign. For this reason the President revokes the order. He is probably not unaware that the enforcement of the order would raise a protest from the Catholic ecclesiastics very much more vigorous and effective than any which the Home Mission Council, representing twenty-four organizations doing religious work in the United States, could arouse. Protestants do not attempt much political work; Catholics do. Political parties, Republican as well as Democrat, are very sensitive to the Catholic pulse. They like to do whatever they can to please that Church, whether in New York or Boston, or Porto Rico or the Philippines, or in the Indian service. Protestants are not likely to be so much stirred up over such a matter as this. They will think it of no great account what sort of clothes the teachers of Indian schools wear. They will think this one of the *minima* not worth getting excited over, and they will not be sending deputations of bishops to Washington to protest against this religious favoritism and support. We are no longer hostile to the Catholic Church. When, after our Catholic friends here had heaped on Cardinal Farley all the honor they could, they invited the citizens in general to add their congratulations, and at the dinner the Governor and the Mayor and the official representatives of the Protestant bodies did not refuse to be present and join their voices in acclaim. They did right to accept the invitation; but the Catholic Church under-

stands the value of the advertisement and display much better than the Protestants.

We think that Commissioner Valentine's order was strictly right; but the wrong lay back of clothes. It may be that the correction comes too late; or that it should have been accomplished more gradually or in another way; or that it may be thought politically unwise to allow any drastic correction.

Our Vacation Offer in a Nutshell

It is four weeks since we made our vacation offer to our readers. We recapitulate:

For the best vacation letter of not over 800 words (better yet, 400 words), \$15.

For the second best letter, \$10.

For every other letter published, two subscriptions to THE INDEPENDENT.

Remember that an illustrated letter is likely to prove more interesting than any other. Remember that it doesn't matter if you never *did* write for the magazines. We are asking our readers for letters—not essays.

As for our photograph offer, it is this:

For the best photograph, \$15.

For the second best, \$10.

For every other photograph used, two subscriptions to THE INDEPENDENT.

Remember that you do not need to be a "professional" to compete—nor even an expert. Glossy prints are preferred. Any subjects can be chosen, but we especially request water pictures. Any picture that reveals water to the imagination is a "water picture." And there is "water, water, everywhere!"

Accounts of vacation experiences submitted to the Vacation Editor will not be returned if unavailable. Keep a copy, therefore. Photographs will be returned only where full postage is provided. Do not forget to sign your full name and address. In sending photographs, write your name, address and a descriptive caption, the fuller the better, not on a separate sheet of paper, but on *the back of the photograph*, mounted or unmounted. And use a soft pencil; do not write on the photograph so that the writing "shows thru" or in any way disfigures the print.

The Candidates on Suffrage

Suffrage for women is moving eastward. We observe that there is a possibility of its being embodied in the new Ohio Constitution. It has even got a respectable minority of votes in the Virginia Legislature. But the most interesting development is seen in its treatment by candidates for the Presidency. Governor Wilson was told in a most courteous heckling letter that some hundreds of thousands of women will be voters at the next election, and that they would like to know what his opinion is on suffrage. He replied that he had not any opinion yet. It was a very important matter which he had not yet studied. We gather that he, a student of politics, who has reached conclusions on all other current questions of difference, has found this too much of a poser for him. Mr. Roosevelt is wiser and wiler. There is nothing so crude about his conclusion. He is not impaled on the fence; he is fairly on both sides of it. Yes, he believes in woman's suffrage, thinks it has the better reason in its favor. But he also is against woman's suffrage—for the present. Let the good thing be put off until the dear women are more nearly a unit in favor of it. Give it to them, not now, but when they ask for it. Meanwhile—well, we all know what he would have the good women do meanwhile; let them glorify their homes in the good old way. We are surprised to see that this answer does not give absolute triumphant satisfaction. We await a catena of answers from the rest of the candidates. Having learned prudence from the reception given to these responses it remains for them, if opposed, to hold to silence after the manner of British statesmen.

The Vacancy in the Supreme Court

It is reported that the President has turned down the names of two candidates for the vacancy in the Supreme Court caused by the death of Justice Harlan—one that of Judge Hook, of Kansas, and the other of Secretary Nagel, of Missouri. The reasons are very interesting and suggestive of the way the country judges of causes. Judge Hook is turned down be-

cause of his support in a certain case of a Jim Crow car law, and Secretary Nagel because of his relation as counsel to the St. Louis breweries. Judge Hook's decision may have been in accord with his own honest judgment, but the Jim Crow car is an injustice and indecency, and its protection by a decision of a Federal court is at least unfortunate, and is one not to be forgiven by those who suffer from it. Equally the brewery is a business off color in public esteem. To be its defender and to take its money will not give a man favor with the American people. To do so may be professional, but it shuts him out of the highest honors in his profession. And it is well that this is the case. It is impossible to make liquor selling a reputable business to engage in, and the making of it, or the defending and protecting of it, puts a man on his defense at the bar of the public conscience.

A Blue Sky Law A novel experiment in legislation comes from Kansas, a State which does not lack originality. Observing the losses to its citizens by means of swindling schemes which are so plausible that they deceive even college professors, schemes which use the post office until the department excludes them from the mails, the Kansas Legislature has enacted what is called the "blue sky law." It forbids in Kansas the offer for sale of interest in enterprises which have no other asset than comes from capitalizing the blue sky. It is a penal offense to offer shares of any company whose character has not been approved by a State commission. The small and ignorant investor is thus protected from those swindling concerns which the Post Office Department is trying to suppress. The department declares that it has already broken up swindling schemes which had already taken \$77,000,000 out of the savings of poor but thrifty people. The Philadelphia Legal Aid Society tells us that in the past year no other cause led to so much hardship and loss as did these sham enterprises. Unfortunately, it is not till after they have gathered in large profits from their dupes that the Post Office Department can learn of them

thru complaints of loss. The Kansas law attempts to prevent a great evil.

Local Crops Specializing crops has had the curious effect of making some of them entirely local, and then creating a sectional pride and prejudice against growing other crops equally valuable. Some of the cotton States are proud of being growers of that staple, and it is very difficult to get them to plant corn, even when it has been proved to be easily grown and more profitable. Georgia, if statistics are reliable, is paying out twenty millions of dollars annually for grain and hay and similar stuffs (more than her whole cotton crop is worth) to feed the mules that work the cotton fields and their owners. The fact is that corn can be grown in nearly all of the Southern States, and bumper crops in some of them. Much the larger part of hay that is used in Florida is imported from the North, at from \$30 to \$40 per ton; and most of it is very poor hay at that; yet no land in the world is better prepared by Nature to grow her own fodder for summer and her own storages for winter. Legumes cover the land from January to December, including some of the clovers, and "beggarweed," which is, all in all, the best legume ever discovered for hay—better even than alfalfa—it is a plant that will be world famous before long. Besides this, the velvet bean and the cow pea and the soja bean only begin the list that furnishes to the common sense cultivator everything that he can ask for. These Southern States ought to be exporting thousands of tons northward, where hay is sometimes deficient. One of the editors of Atlanta reports that, having need of a hay rake, he searched thru the hardware stores of that city to find one, but in vain. He could not find such a tool in the whole city for sale. New England has some of the same crotchets, and it was not easy to induce the clover growers to take up with alfalfa, altho that plant is now getting to be the rage. Connecticut has bought its wheat and corn of the West for a long time, but is now raising more wheat to the acre than Illinois. The corn States will grow fatter and richer,

in proportion as the extensive farms are cut up into those that are cultivated intensively with fruits and vegetables as well as cereals. These local whims and lack of equipment for varied farming are costing the nation a large sum annually; unfortunately we cannot put it into exact figures.

Ulsteria Belfast's threatened storm of civil war has blown over without a drop of rain or blood. Lightning flashed, thunder rolled, and suddenly the sky cleared blue. For weeks it had been war. Thirty thousand, sixty thousand, a hundred thousand Ulster men were to pack the streets of Belfast armed with guns and fiercer clubs and forbid Churchill and Redmond to speak in support of a measure which nearly half Ulster supports. But it was all a bluff. When the day came, came also Churchill and Redmond, and they spoke and went away, assailed with nothing worse than the cries that "Ulster will fight, and Ulster will be right." Ulster did not fight, for she was told very plainly by the saner Unionists of England that their support after this style was not wanted, and they subsided as quietly as did a vociferous editor on this side the water when told that his support was hurting the cause. There remains Ulster's declaration that she will never, never submit to an Irish parliament. We shall see. There appears to be no serious block remaining to prevent the passage thru the House of Commons of the Home Rule bill introduced this week, and with all the opposition of the House of Lords it can be enacted as law during the life of this Parliament. That will leave Welsh disestablishment as the next reform.

On Japanese Immigration We are glad that the protests (of which ours was one of the first) against that provision of the Dillingham immigration bill excluding Japanese laborers have brought about the section's elimination. It is extraordinary that by any perversity or blunder it could have found its way into the bill. As the Japanese were not mentioned by name, members of the committee may not at first have seen its

bearing, and when seen they readily made the correction. Its retention would have been an insult to a friendly nation which is doing all possible to keep on good terms with us, notwithstanding our attitude is not all that could be desired.

Japan in Search of a Religion

We give too much credit to the good sense of the Japanese Home Minister to believe that it is his plan to create a new syncretistic religion for Japan, which shall combine the excellences of Christianity, Buddhism and Shintoism. The statement is that he has called a conference of the leading representatives of these three religions for such a purpose. We can well believe he may propose to give them each a place as a state religion, such as Shintoism now holds; or, more likely, seeing the loss of faith in the old religions, and feeling the importance of strengthening decayed ethical standards, he may desire to discover among the three religions what they hold in common that is binding on the conscience. This is not an unreasonable thing to do, and it may be easier now that the later sects of Buddhism have been sloughing off the old crudities and superstitions and so are approximating somewhat toward Christianity, as do the new Somajes in India, and the Babists of Persia, who make much of the spiritual elements of religion and the fatherhood of God, which they learn from Christianity.

Father Hyacinthe Loyson, who died last week at the good age of eighty-five, was one of the most eloquent of French preachers. He left the Catholic Church for the Old Catholics, and maintained a sympathetic relation to the Protestants of Europe and America. He was born in New Orleans, La., visited here in support of the Old Catholic Church, and married an American lady. He was buried from the largest Protestant Church in Paris. His breadth of fellowship had no limits, and a few years ago the two visited North Africa and Syria in a movement for sympathy with the Mohammedans. He and Madame Loyson and their son Paul have all been writers for **THE INDEPENDENT**.

At the meeting in honor of Joseph H. Choate, mentioned in the introduction to the first article in this week's issue, Ambassador Reid referred to the distinguished members of the law firm with which Mr. Choate had been connected, and particularly to Mr. Evarts. Thereupon Mr. Choate was moved to tell a story of Mr. Evarts while he was Secretary of State. Said Mr. Choate:

"It was just at the time when he was thinking of asking Mr. Reid to accept the foreign mission. You have all been in Washington and you know very well the great elevator that takes people up to the State Department. Mr. Evarts and I were going up on the elevator to his office soon after he became Secretary of State. He looked serious. I think he was meditating the appointment spoken of. The elevator had forty or fifty people in it; and as we ground slowly up, Mr. Evarts looked around with that natural twinkle in his eyes and said: 'This is the largest collection for foreign missions that I have ever seen taken up.'"

We are not surprised that the Congressional Banking and Currency Committee will summon Mr. Bryan to tell them what evidence he has for a recent statement of his:

"Democrats, beware! The 'money trust,' having failed in its efforts to prevent an investigation, is now trying to force an investigation by the Banking Committee. The fact that the 'money trust' wants that committee intrusted with the investigation is proof positive that it thinks it can control that committee."

It may be difficult for him to show that he is sufficiently in touch with the "money trust" to know what it wants, or that it thinks that it can control that committee. Of course the committee resents the charge and will ask his proofs.

The Chinese Recorder is the monthly organ of the missions in China; and their attitude is well expressed in the following paragraph from its editorial columns:

"Now a stupendous revolution is in progress looking to the establishment of many of the ideas Christianity has advocated. Unless the signs fail, the end of the present revolution will mean a wider field and greater freedom of action for Christianity, for many of the men prominent in the revolution have espoused Christianity; of the rank and file large numbers have been under the same influence."

We have mentioned that Dr. Sun is a

Christian, that Yuan Shih-kai educates his sons in mission schools, and Wu Ting-fang has learned his love of democracy in our republic.

It is a pleasure to know by the decision of the Federal Court at Indianapolis that the detective Burns acted under full authority of law when he took under a requisition from the Governor of California James J. McNamara from Indianapolis to Los Angeles for trial. There was no kidnaping in the case, and no State law could interfere with the right and duty under the Federal Constitution of the Governor of Indiana to honor the requisition from California. The charge of kidnaping had been so often repeated that it was beginning to get credit.

The \$400,000 given by a Jew of India to found a Jewish university in Jerusalem will be a good starter. But while money will go a good way there in buildings and land, there will be needed much more from wealthy Hebrews of Europe and America to establish a really worthy institution. We do not regret the Zionist movement which is trying to regenerate and repossess Palestine. Let them win it if they can.

The printing by us of the poem "Kipling's Psychology," by Marion Couthony Smith, has stirred a flock of poets to offer verses in the Kipling meter, but we do not care to occupy our space with them. Miss Smith's residence should have been given as East Orange, N. J., instead of South Orange.

President Taft in an address last Monday came out as definitely as was possible without giving names in defense of his policy and record against the criticisms of Mr. Roosevelt. We may take it that there will be no further hesitation or avoidance, but that Taft and Roosevelt are both openly in the field as rival candidates.

It is said that the Kaiser intends to dissolve the new Reichstag, because it contains too many Socialists. But we doubt if such a body is soluble even in *aqua regia*.

The Injustice of Insurance Taxes

IF policyholders in American life insurance companies realized that every State in the Union was engaged in the profitable practice of taxing their insurance premiums, they might bestir themselves and try to abolish this unjust expense by appealing to their local Congressmen or writing letters to their respective State Insurance Departments. The States not only tax the real property owned by the life insurance companies but also—for the chief reason that they need the money!—put an obligatory tax upon the voluntary tax which the thrifty citizen puts upon himself when he pays his life insurance premium.

About four years ago the State of New York joined the procession by instituting this so-called Franchise Tax of one per cent., which it has rigorously collected ever since, and many other States tax as high as two and two and a half and even three per cent. the premium receipts collected by the various companies. As an example of how much is thus collected, the three great New York companies alone paid nearly two millions of dollars last year to the several States, exclusive of their regular taxes.

The various life insurance companies realize the injustice of this tax and do all they can to fight it, and the Association of Life Insurance Presidents watches the various proposed bills of State Legislatures which are aiming to increase this tax and strives to show the injustice of them as well as to procure more uniformity of rate thruout the States and a decrease in them all. But still the system goes merrily on because the States claim that a life insurance company which does business within their confines should pay something for the protection it receives. A State claims that the supervision which it exercises is an expense, which the company should properly pay for. The answer to this is that the expense to the State of supervising the business of a company

which pays, say, \$300,000 in premium taxes to that State, would probably not exceed \$10,000 or \$15,000.

It is a temptingly easy way for a State to add to its funds, for the people generally look upon a large life insurance company as a rich corporation, that can well afford to be "soaked," and the policyholders of that company are comparatively few in number, and those few do not realize that the taxes come indirectly out of their own pockets.

The hackneyed argument that this is a tax upon thrift does not make a very strong appeal, because most taxes are upon thrift. A man saves money and builds himself a house, and this house is taxed. That is also a tax upon thrift, but, as Daniel Webster first pointed out, a premium tax is a tax upon a tax—an enforced tax upon a voluntary tax. A man takes out insurance upon his life, not for his own comfort but for the welfare of his dependents, to keep his family from becoming a charge upon the State—and he is taxed by that State for so doing. His neighbor is not so unselfish; he does not insure his life, he pays no premium and no premium tax; he dies, leaving his dependents unprovided for, and his neighbors—including the man who pays his premium tax—pay taxes to support orphan asylums, homes for the aged and so on.

This iniquitous tax is not brought home to the policyholder, because his company pays it. But while the company pays it directly, its members pay it indirectly, because the insurance costs just that much more to maintain.

THE Aetna Life Insurance Company issues in the interests of its casualty department a handbook entitled *Emergency Medical and Surgical Aid*, with a subtitle, "What to Do and What Not to Do." The handbook has been prepared by Dr. Ernest A. Wells, and seems to us a most useful and practical work, equally compact and serviceable.

American Banks South of Us

It has frequently been said by those familiar with conditions in the countries south of us that our export trade with those countries would be facilitated and increased if there were American banks in the capitals or chief ports. American capitalists are about to establish a bank at the capital of Nicaragua. The capitalists are the well-known bankers of this city, J. & W. Seligman & Co. and Brown Brothers & Co. They have loaned \$1,500,000 to Nicaragua and will increase the loan to \$15,000,000 if the Senate at Washington ratifies the pending loan treaty. The withdrawal, last week, of the offer which J. P. Morgan & Co. and Kuhn, Loeb & Co. made, in connection with the proposed loan of \$10,000,000 to Honduras, and the shelving of the loan agreement with that country, do not necessarily affect the condition of the similar agreement with Nicaragua. The proposed bank is to be distinctly an American institution, chartered in Connecticut. It will be something more than a commercial bank, for it is authorized to be the fiscal and disbursing agent of Nicaragua, to issue bank notes, to coin money, and to establish a new currency system. We shall be glad to hear of the ratification of the loan treaty, and we hope a failure to ratify it will not prevent the establishment and maintenance of the bank.

It became known last week that a company formed in Argentina, under the auspices or with the aid of the American Manufacturers' Export Association—the North and South American Banking and Commercial Company—is to establish in Buenos Ayres a bank, with \$20,000,000 capital. While the twenty-five incorporators are capitalists, ranch owners and other residents of Argentina, there will be an American branch, and the institution will seek to promote trade with this country. We are confident that in the near future other banks, supported wholly or in part by American capital, and designed to facilitate international trade, will be established south of us.

Canada's trade with the West Indies has been promoted and enlarged by the Canadian branch banks in those islands. The newest of these banks is in Santo Domingo, where there is no American bank, altho the fiscal affairs of the republic are administered by agents or representatives of the Government of the United States.

✽

....A slight increase of the pig iron output is shown by the report for January. In that month 2,057,911 tons were produced, against 2,043,270 in December, and 1,999,443 in November.

....As all orders for mailing checks for Union Pacific dividends were destroyed in the Equitable building, stockholders are asked to apply to the treasurer, at 165 Broadway, for blank order forms, which are to be signed by them.

....A corporation in which financiers of Paris, Antwerp, Brussels and Amsterdam are said to be interested has taken the name of the Montauk Harbor Improvement Company and has bought 4,200 acres of land fronting on Fort Pond Bay, at the eastern end of Long Island, for a steamship terminal.

....The Treasury Department has awarded \$50,000 to Joseph L. Payne, bookkeeper, an informer who gave evidence as to the customs frauds of the Duveen Brothers, and \$25,000 to Peter Redling, informer in the Bradford lining cases. In the Duveen cases the Government recovered about \$1,200,000, and in the Bradford cases between \$400,000 and \$500,000.

....A special meeting of the stockholders of the Lawyers' Mortgage Company (of which Richard M. Hurd is president) will be held on the 26th inst. to take action as to an increase of the company's capital stock from \$4,000,000 to \$6,000,000 by the issue of 20,000 additional shares. It is proposed that each stockholder shall have the privilege of subscribing for the new stock at par, at the rate of one share for every two shares of the present stock standing in his name.

The Independent

VOL. LXXII NEW YORK, THURSDAY, FEBRUARY 22, 1912 No. 3299

Survey of the World

The Presidential Candidates

Mr. Roosevelt has said that he will, within a few days after his address before the Constitutional Convention at Columbus, Ohio, on February 21, reply to the letter signed by eight Republican Governors, asking him for an expression in regard to the nomination. An article in the *Outlook* explains, meanwhile, that Mr. Roosevelt's pledge against a third term meant only a third *consecutive* term. The "Old Guard" or New York Republican machine seems to be behind the ex-President, and William Barnes, Jr., boss of Albany and chairman of the New York Republican State Committee, attacked Mr. Roosevelt bitterly in the last State campaign, now reminds the population that during his term "as President Mr. Roosevelt performed a wonderful service to the people."—Opening the office of the Roosevelt National Committee in the Munsey Building, at Washington, on February 11, Medill McCormick, of Chicago, gave out a signed statement attacking the Administration and stating that Mr. Taft's Lincoln Day address at New York, referring to certain "political neurotics," marked embarkation upon

"a policy of political suicide and murder. . . . Those Republicans who really secured his [Mr. Taft's] nomination and election are now opposed to his renomination. At first they were merely disappointed by the Administration's vacillation, and hoped that the Administration eventually would adopt a consistent and progressive course. But what at first they took for temporary weakness they have now discovered to be a political paranoia."

Meantime the "National Taft Bureau" was opened in Washington at the Raleigh Hotel. Senator Townsend, of Michigan, declared at Adrian, Mich., on the same

day that "Theodore Roosevelt pointed the way; William H. Taft has traveled the road." The opposition to the President's nomination comes from "the great malefactors of great wealth, . . . and the men who make a profession of reform and insist that nothing is genuine that does not have their name blown in the bottle." "One good term deserves another," was his conclusion. It was on February 14, also, that the Republican State Convention met at Atlanta, Ga., and gave the President a solid delegation, plus strong endorsement. The regular Republican conventions of Florida and Oklahoma have also chosen Taft delegates. Roosevelt contestants will appear before the National Committee.—A statement was issued from the La Follette offices at Washington on February 14 in the form of a telegram addressed by the Senator to a Fargo newspaper which had inquired whether he had withdrawn from the contest:

"In response to your telegram I will say to the progressive Republicans of North Dakota that the report that I have withdrawn as a candidate is false, and the statements regarding my health are gross misrepresentations. They are a part of the pressure brought to bear to force me from the contest, which I willingly undertook at a time when no one else could be induced to make the fight. I have overtaxed my strength and require a few weeks' rest, which I shall take, and then return with renewed vigor to the struggle for thoroughgoing progressive principles.

"I want the support of delegates who are ready to win, or lose if need be, in the interest of a great cause, without compromise and without entering into any deals or combinations.

"Let me thru you assure the voters of North Dakota that I shall as always keep faith with them and with supporters in other States, and shall remain a candidate steadfast to the end."

Arrests in the Dynamite Cases

In twenty-five widely separated cities arrests were made on February 14, to the number of forty-one, of men connected with the International Association of Bridge and Structural Iron Workers. They are accused of complicity in a vast dynamiting conspiracy. As the warrants are issued by Federal authorities, the prisoners are held only on the charge of conspiring to transport dynamite in passenger trains from State to State. Among the men arrested are Frank M. Ryan, president of the association; John T. Butler, first vice-president, and Herbert S. Hockin, second vice-president and successor of J. J. McNamara as secretary-treasurer. Nearly every man whom the Indianapolis Federal grand jury has accused after a prolonged investigation is either at present or has been within a few years an official of some local iron workers' union. Ten more arrests followed, later in the week. Bail bonds of \$5,000 and \$10,000 each are demanded, making \$340,000 in all. "This is only a beginning," says the prosecution agent the arrests now made. There are fifty-four indictments in all, but three men were already in custody. The basis of the prosecution is said to be furnished by letters and telegrams, quoted in the indictments. Some 40,000 communications were seized in the headquarters of the International Iron Workers' Association. The dictagraph has been used for months to inform the District Attorney at Indianapolis of what the labor leaders were saying and doing. "The men indicted were, with a few exceptions, only tools in the hands of men higher up," says William J. Burns, the detective.

The Lawrence Strikers

A compromise between the Lawrence strikers and the agents of the Lawrence mills not immediately controlled by the American Woolen Company was reached on February 16, in the fifth week of the strike. All the strikers' demands except the 15 per cent. increase of wages were conceded; a fifty-six hour schedule for fifty-four hours' work, and a 5 per cent. increase of pay. About two-thirds

of the strikers are affected. On Saturday several thousand delegates from local branches of the Industrial Workers of the World, Socialist clubs and Ferrer association paraded Fifth avenue, in New York, headed by a band playing the "Marseillaise," and followed by 103 children, from four to eleven years of age, wearing pasteboard badges proclaiming them to belong to the families of striking operatives of the Lawrence mills. This demonstration followed the arrival of a second batch of strikers' children of whom about 250 have now reached New York, where they are distributed among the families of workingmen and sympathizers. Thirty-five children have been sent from Lawrence to Barre, Vt.

Various Items

On February 14 the President signed the proclamation admitting Arizona to the Union as the forty-eighth State. George W. H. Hunt was inaugurated the same day as the first Governor of Arizona.—Mahlon Pitney, Chancellor of the State of New Jersey, has been nominated by Mr. Taft to succeed the late Justice Harlan in the Supreme Court of the United States.—The alleged irregularities in the Florida Everglades, which resulted in the dismissal of C. G. Elliott, chief drainage engineer, and his assistant, have been laid before the District Attorney for the District of Columbia by Attorney-General Wickersham, with the request that the case be laid before the grand jury. An investigation is being made also by the House Committee on Expenditures in the Department of Agriculture.—According to Representative Henry, of Texas, there is in this country "a financial Mafia," using "black hand methods." The "Money Trust" investigation is discussed in our financial department.—On February 15, Major-General Frederick C. Ainsworth was relieved of his office as Adjutant-General of the United States, after thirty-seven years' service in the army, which he entered in 1874 as a surgeon. General Ainsworth was relieved by order of the Secretary of War, who alleged insubordination. The Adjutant-

General was retired next day on his own application. Previously, there was talk of a court martial. This is averted, but a subpoena, returnable February 19, was issued by the House Committee on Expenses in the War Department. This was said to be in connection with the case of Major B. B. Ray, an army paymaster, who, it is alleged, was saved from court martial on three distinct occasions in consideration of political work in the 1908 campaign. The investigation is likely to go deeper than this indicates. General Ainsworth has been suspected by the War Department heads of "conspiracy" with the Democratic majority to secure the passage of the Hay army legislation, and Representative Richmond P. Hobson, of Alabama (a Democratic member, but an opponent of the Democratic army program), made this charge on the floor of the House. General Ainsworth and the Chief of Staff, General Leonard Wood, have always been at odds. In relieving General Ainsworth, Mr. Stimson alleged that he had

"impugned the fairness and intelligence of the Secretary of War under whose authority the proposition in question [the proposal of the general staff to make changes in the form of the muster roll] was submitted to you. You also criticise and impugn the military capacity . . . of the officers of the general staff and the war college. . . . This is not an isolated instance of insubordination and impropriety."

In retirement General Ainsworth will remain on the payroll, receiving \$6,000 a year.—On February 16 the House of Representatives adopted amendments to the Army Bill, providing for the consolidation of the offices of Adjutant-General and Inspector-General with that of Chief of Staff. It is doubtful whether the Senate will concur. The House also abolished five of the fifteen regiments of cavalry and indorsed its action of the day before in advancing the term of enlistment from three years to five. This proposal was strongly opposed by the Chief of Staff and by President Taft, and is most unpopular in army circles.—On February 15 the Senate confirmed the nomination of Myron T. Herrick, banker and ex-Governor of Ohio, as Ambassador to France, succeeding Mr. Robert Bacon. Only fourteen Senators voted against the confirmation.—Three years ago General Theodore Bingham,

then Police Commissioner, brought suit for \$100,000 against Mayor Gaynor, of New York, then a Justice of the Supreme Court of New York, as damages for an alleged libel. The case was about to come to trial, after repeated postponements, when the Mayor apologized last week, and General Bingham withdrew the suit.—Mayor Gaynor is the choice of Martin W. Littleton, Democratic Representative of the Oyster Bay district, for President of the United States. Mr. Littleton names Governor Harmon as second choice, Mr. Underwood as third. Governor Wilson he regards as an unsatisfactory candidate, standing as he does for the initiative, referendum and recall: the "unholy trinity."—Republican members of the New York State Senate plan to contest the confirmation of Dr. Joseph J. O'Connell, of Brooklyn, best known as an alienist, as Health Officer of the Port of New York, to succeed Dr. Alvah H. Doty, whose resignation was recently demanded by Governor Dix, who nominates his successor. Dr. Doty has served about twenty years, and leading physicians of New York recently voted resolutions congratulating him upon the successful performance of his duties. Governor Dix's nomination is regarded as personal rather than political.

Continuing Disorder in Mexico

The situation in Mexico was not improved during last week, except in the south, where the Zapatist bandits were defeated in several battles. In undertaking the subjection or extermination of these malcontents, Madero has adopted a severe policy. His soldiers have burned villages where the inhabitants were in sympathy with Zapata, and have shot many prisoners taken in the battles. After one engagement about fifty men were thus put to death. There were uprisings and disorder in Vera Cruz, Oaxaca and Michoacan. In the north, half of Chihuahua was in the hands of the Vasquistas, or revolutionist followers of Emilio Vasquez Gomez, who also had possession of a large part of Sonora, including one port of entry on the New Mexican border. In Sonora there were many army mutineers. Scores of railroad bridges in both these States were burned. Torreon was sur-

rounded and isolated. The Chihuahua Legislature authorized Governor Abram Gonzales to borrow \$6,000,000 for the purchase of large estates, to be cut up into small farms. Owing to the cutting of telegraph wires and the interruption of railroad traffic, the news dispatches from all parts of Mexico were unsatisfactory. Evidence of growing hostility toward American residents, because of rumors of intervention, led our State Department, on the 13th, to send the following instructions to all of our consuls in Mexico:

"You are authorized officially to deny, thru the local press and otherwise, as under instructions to do so, all foolish stories of intervention, than which nothing could be further from the intentions of the Government of the United States, which has the sincerest friendship for Mexico and the Mexican people, to whom it hopes will soon return the blessings of peace, which is not concerned with Mexico's internal political affairs, and which demands nothing but the respect and protection of American life and property in the neighboring republic. You will observe the strictest impartiality and in no wise interfere between contending forces, counseling Americans in your district to act likewise. You will use the language of this instruction."

In interviews published at the capital, President Madero had expressed his appreciation of American friendship. On the 15th he sent the following message to a newspaper in Los Angeles:

"The attitude of the Mexican Government toward the Government of the United States is that of the most open friendship, and the attitude of the latter in the difficulties thru which the republic has passed has been most cordial. The difficulties thru which the republic of Mexico has been passing were not of really great importance and have been overcome. There has been no great political principle involved and there has been no notable leader as their sponsor. For all of these reasons my Government is sufficiently strong to give complete protection to all the interests."

But the situation did not warrant this optimistic opinion. Among the outrages committed by bandit revolutionists was the murder of E. Hans Angelman, a wealthy German ranch owner, and comments in the Berlin press indicated that Germany might complain to our Government. "Better a peaceful Mexico under the United States," said one of the Berlin papers, "than one devastated by rebels."

West Indies and Central America A Porto Rican newspaper publishes a report of an interview with the Mayor of San Juan, according to which he said he had always opposed a grant of citizenship to Porto Ricans by the United States Government. "It would involve us in grave political complications with Mexico, Central America, Santo Domingo and all the other Caribbean countries, and might seriously compromise us for the future." Porto Rico, he continued, should become a republic under an American protectorate. He regretted the annexation of Hawaii, which some day would be a republic. Porto Ricans must not expect that the island would ever become a State of the Union.—Our trade with Porto Rico in 1911 amounted to \$72,000,000, or eighteen times the value of the trade in 1897, one year before annexation. Exports and imports are nearly equal.—In Cuba, President Gomez declines a renomination, and it is expected that the Liberal candidate will be Vice-president Zayas. Cuba is quarreling with France, owing to the French Government's refusal to list on the Paris Bourse the bonds of a French loan to the Cuban Territorial Bank. The Cuban Congress has abrogated the parcels post agreement with France, and is considering a bill imposing a discriminatory duty of 50 per cent. upon imports from that country. All this is related to Cuba's failure to pay certain French claims. Cuba holds that these are unjust, but would submit them to the arbitration of President Taft. President Gomez has ordered the removal from office of many men who opposed Cuban independence, thus satisfying the demand of the Veterans' Association. The Supreme Court says these removals are unlawful because the recent legislative suspension of the civil service law was unconstitutional.—A part of the wreck of the "Maine" will be towed from the harbor of Havana, probably on March 4, and be sunk in deep water. There will be an escort of cruisers and appropriate ceremonies, with salutes from the warships and Morro Castle.—The directors of a new national bank established in Santo Domingo represent three firms of New

York bankers.—In Panama, the opponents of President Arosemena have nominated for President Dr. Porras, recently Minister at Washington. In testimony before a Congressional committee, last week, an attempt was made to prove, by documents and otherwise, that a contribution of \$60,000 to the Republican campaign fund was influential in procuring a rejection of the Nicaragua route; that a committee report in favor of Panama was written by the French company's counsel; that the revolution was financed in part by this company; that our Government prepared to assist the revolutionists; that a bribe of \$80,000 was paid to a Colombian military commander, and that President Roosevelt withheld from Congress important official papers relating to the revolution.

The Opening of Parliament Parliament was assembled on the 14th, instead of the 13th, as was first announced, because the Irish did not like to have the fate of their country dependent upon a session inaugurated on an unlucky date, recalling the fact that Gladstone's home rule bill, which caused the downfall of the Liberals and the division of the party, had been introduced on the 13th of March. The King's speech was short, and referred in the briefest possible language to the important measures to be brought forward: "A measure for the better government of Ireland"; "a bill to terminate the establishment of the Church in Wales and make provisions for its temporalities"; "proposals for the amendment of the law with respect to the franchise and the registration of electors." In reference to China the King said:

"I trust that the crisis in China may soon be terminated satisfactorily by the establishment of a stable form of government conforming with the views of the Chinese people. My Government will continue to observe an attitude of strict non-intervention, while taking all the necessary steps to protect British life and property. I fully recognize that the leaders on both sides in China have shown every desire to safeguard the lives and interests of foreigners resident in that empire."

No reference was made in the Speech from the Throne to the visit of Lord

Haldane to Berlin, but Premier Asquith spoke of it in the following language:

"Both the German Government and our own are animated by a sincere desire to bring about a better state of understanding. The visit of Viscount Haldane to Berlin in this connection involved both sides in a departure from conventional methods, but it was felt by both nations that frankness of statement and communication would be easier in the first instance if there were an informal non-committal conversation rather than regular diplomatic negotiations. Such an exchange of views under such conditions ought to dispel the suspicion that either Government contemplates aggressive designs against the other. That by itself would be a great gain."

The leader of the Opposition, Bonar Law, opened with a vigorous attack on the foreign policy of the Government and the changes in the government of India. In reply to a direct question from the Premier as to whether he proposed to repeal the Insurance Act when he came into power, Mr. Law replied that he did. This was received with jubilation by the Liberals, and Mr. Asquith clinched the admission by announcing "Now we know that the first plank of the platform of the Tory party under its new leader is the repeal of the Insurance Act." The Insurance Act, altho meeting with opposition in some quarters, has received the formal approval in principle of both parties. Mr. Law explained later in a letter to the press that he meant that the Unionists, if they come into power, would amend the Insurance Act. The Socialist Labor party held a mass meeting in Albert Hall on the eve of the opening of Parliament in favor of equal suffrage. It was presided over by James R. MacDonald, leader of the Labor party in Parliament, who declared that the Labor members would desert the Government if it refused to grant suffrage to women. King George has bestowed an almost unprecedented honor upon Sir Edward Grey, Secretary of State for Foreign Affairs, by making him a Knight of the Order of the Garter. Only four other Commoners have been so honored since the order was founded. The significance of this action on the part of the King has given rise to many surmises in view of the fact that Sir Edward Grey's management of the Morocco crisis and the Persian difficulty has been severely criticised even by members of his own

party, and that the visit of Lord Haldane is understood to be for the purpose of alleviation of the animosity aroused in Germany by his policy. According to Mr. Asquith, the suggestion that a British Minister visit Berlin originated with the German Government. Mr. Asquith denies as "a pure invention without a shade of foundation" the story that the British fleet was preparing last fall for an immediate attack upon Germany.

French Affairs The French Senate closed its long discussion of the Morocco agreement by ratifying it with a vote of 212 to 42. Leaders of all parties, however, voiced their dissatisfaction with the treaty and their hatred of Germany in more or less emphatic language. It was asserted that the protectorate over Morocco was gained at too great a cost, that it meant the ultimate loss of all French Kongo, that the Government showed weakness in giving way in the face of Germany's threat at Agadir, and that the agreement would not settle the difficulty, but bring more trouble in its train. In reply, the new Premier, M. Poincaré, confessed that he was not enthusiastic about the treaty, but he thought it necessary to vote for it. It gave France full control over Morocco and retained intact the reversionary right of France to Belgian Kongo, which, being personal, was not transmissible.—The negotiations with Spain in regard to Morocco are reported to be going smoothly, and all important questions have been settled except that of the territorial compensation claimed by Spain. The French proposal that the collection of customs in the Spanish zone for the repayment of the foreign loans be carried on by French officials was rejected by the Spanish Government, but the compromise proposal made by the British Ambassador that the matter be placed in the hands of a joint Franco-Spanish commission was accepted by both governments. Detailed plans are being prepared for the establishment of a French protectorate over Morocco as soon as an agreement has been reached with Spain.—The naval program of the Government, calling for the expenditure of \$279,600,000,

was passed in the Chamber of Deputies by a vote of 452 to 73. M. Delcassé, Minister of Marine, in presenting the naval bill, said that it was his aim to increase the number of the larger types of ships and make the navy strong enough to insure security on the Mediterranean, but it was not necessary to keep pace with other nations in construction. The Government program was criticised by M. Thomson, former Minister of Marine, who said that it was no time to increase naval expenditures, at a moment when President Taft was proposing general arbitration and practical disarmament to France and other Powers. It was noticeable, he said, that every such attempt on the part of the American President was followed by the doubling of armament by the various Powers.—M. Millerand, Minister of War, said that France was determined to maintain her supremacy in the air, and he asked for an appropriation of \$4,400,000 for aviation purposes in 1912 and \$5,000,000 the year after. He said that by the end of the year France would have an aerial fleet of fifteen dirigible cruisers and 344 avions or military aeroplanes, with 24 officers qualified as pilots, 210 observers, 42 mechanics, 1,600 sappers and 550 aviation soldiers. The people of France are rallying with enthusiasm to the support of the Government's aerial program, and liberal subscriptions are coming from all classes. The hat was passed around at a meeting at the Sorbonne and \$750 was contributed by the officials, while the eight pensioners who guard Napoleon's tomb united in a subscription of a dollar. The municipality of Paris will provide six aeroplanes and the municipality of Nancy one.

The Opening of the Reichstag The new Reichstag was assembled for the first time in the White Hall of the royal palace in Berlin. The speech from the throne, read by the Emperor in a strong voice, was moderate in tone, but laid emphasis upon the necessity of making the empire sufficiently powerful to defend at all times its national honor, and its possessions as well as its just interests in the world. In the preliminary organization of the Reichstag Dr. Peter

Spahn, leader of the Clerical Center party, was elected president in opposition to August Bebel, leader of the Social Democratic party, by a vote of 196 to 175. Philipp Scheidemann, a Socialist, was elected first vice-president of the House, defeating the Conservative candidate, Hermann Christian Dietrich, by 188 votes to 174. Dr. Spahn, however, resigned rather than be associated with a Socialist, so for one brief session a Socialist vice-president presided over the Reichstag. Dr. Johannes Kämpf, the Radical who won the Kaiser's district of Central Berlin, was later elected president of the Reichstag. Chancellor von Bethmann-Hollweg, in a speech in the Reichstag, said that the recent Socialist victories at the polls only strengthened the reasons against loosening the constitutional foundations of the empire. He saw no reason for altering the Government's policy by any further changes in the franchise in the way of making it more democratic. As to his own position, Dr. von Bethmann-Hollweg said:

"An Imperial Chancellor is responsible solely to the Emperor and he is an indispensable counterweight to the most liberal of all franchises."

The Chancellor, in referring to the visit of Viscount Haldane, said: "These confidential conversations which were heartily welcomed by us have been exhaustive and frank and will be conducted."

✱

The Imperial
Yuan Elected President edict announcing the retirement of the Manchus from the Government appointed Yuan Shi-kai to organize a constitutional republic in accordance with the will of the people. Yuan Shi-kai notified the Powers of the authority vested in him as President Plenipotentiary of the Republic and requested all ministers accredited to foreign governments to continue to perform their duties as heretofore. He promptly sent the following telegram addressed "to the President, Vice-President, Ministers, and National Assembly at Nanking":

"A republic is the best form of government recognized by the world. Its establishment is really due to your efforts. With a minimum shedding of blood the desired end has been reached. We must not allow the existence of a monarchical form of government in China.

"I am desirous of coming south to give greetings and receive guidance from you, but in view of the difficulties please excuse me. You have, I am sure, formulated a plan for a united government. Please let me know what measures you have taken."

In reply, Dr. Sun Yat-sen telegraphed a declaration of joy at Yuan's adherence to the united republic, inviting him to come to Nanking at once, or to send a fully empowered representation pending the decision of the National Assembly. Tho the Republicans of the south are still insistent that the capital be established in Nanking or Wu-chang, this difference of opinion may not prevent a union of the two governments. On February 17, however, Yuan Shi-kai telegraphed to Dr. Wu Ting-fang, Republican Minister of Justice, and to Tang Shao-yi, an able Chinaman educated in America, who is said to have been offered the premiership, urging them to obtain the election of Dr. Sun as president instead of himself, and saying:

"I am unable to control the involved situation in China, as I am suffering from impaired health. Now that the aims of the republicans have been attained I have accomplished my duty. The post of president of the republic would only serve to lead to my ruin. I ask your kind offices and interest with the people of the country to elect Dr. Sun Yat-sen, to whom credit should be given. I will wait here until I am relieved. Then I will return to my home and resume my work as a husbandman"

—When Dr. Sun Yat-sen sent in his resignation to the National Assembly at Nanking, the Assembly at once elected Yuan Shi-kai President of the Chinese Republic. In notifying Yuan of his election the Republicans reminded him that he and George Washington were the only Presidents ever to have been unanimously elected. Yuan Shi-kai has cut off his queue—the Chinese equivalent of burning his bridges behind him. It is suggested that Dr. Sun may be sent as Chinese Minister to London, where he not many years ago was kidnapped and imprisoned by the Chinese Legation as a revolutionist. Dr. Sun, who is a convert of the missionaries, advocates uniting the Christian denominations of China into one national Chinese Church. He states in a letter to a Paris feminist:

"It will be my first care to give Chinese women a higher and nobler education with a view of enabling them to exercise civic rights."

Violence in Labor Disputes

BY HARRY ORCHARD

[From May 9 to July 28, 1907, the whole country was stirred up over the trial of William D. Haywood, an officer of the Western Federation of Miners, charged with the murder of Ex-Gov. Frank Steunenberg, of Idaho. The trial was made a class issue by the Socialists and labor unionists, and Mr. Roosevelt added fuel to the feeling by calling Haywood and Moyer, as well as Harriman, "undesirable citizens." The issues in the case and its history are too complicated to tell here, but there seems to be no doubt whatever that what practically amounted to a state of war existed in Colorado and the neighboring mining States during the labor struggles out of which the crime grew and many acts of violence were committed on both sides. The jury consisting of farmers rendered a verdict of "not guilty," despite the testimony of Harry Orchard, who confessed to an appalling list of crimes, including forgery, arson, bigamy and murder. Orchard, who confessed that he had been incited to the murder of ex-Governor Steunenberg by Haywood, Moyer and Pettibone, was in a subsequent trial sentenced to death, but the Court recommended that the sentence be commuted by the Board of Pardons to life imprisonment, which has been done. Orchard is now serving his sentence in the penitentiary at Boise, Idaho, and in response to our request to the present Governor he has been permitted to send us the following article. As Orchard now claims to have repented and accepted the consolations of religion we think it worth while to print his article for whatever it may be worth as a contribution from one who has had experience in the violence politely called "direct action" that has so disgraced industrial conflicts in late years, especially in those that led to his own conviction and that of the McNamaras. This article will have special timeliness owing to the indictment last week of over fifty labor leaders charged with taking part in dynamite outrages.—EDITOR.]

THE INDEPENDENT asks my views in regard to the McNamara confession and the use of force in labor disputes. I am well acquainted with the methods of force so often employed by labor leaders in their disputes with capital, also the effect that it has upon both parties. The first union I belonged to was the most radical one I have ever known. A man could not do any kind of work within the jurisdiction of that union unless he joined at the first meeting after he went to work; neither did it allow any open criticism of the methods it employed in enforcing its demands. I never knew of anybody refusing to join, but I do know of a good many that refused to be gagged, and these were soon notified to leave the camp. Some who refused found themselves looking down the barrel of a Winchester some dark night with a masked face standing behind it. They were promptly marched down the only road that led out of the camp. Several of those who tried to get away paid the penalty with their lives, while hardly any escaped without a good beating. They were left with scars that they would always carry, and, as I have often heard it said, "were branded as scabs should be." When I first came to the place where this union had jurisdic-

tion my employer told me of the conditions that existed there, and told me, no matter what I heard or saw that related to the unions, to keep my mouth shut and say nothing, as that was my only protection and the unions were in complete control of the county. I did not take very kindly to these admonitions at first, but kept my own counsel.

About three years later a strike was called in one of the camps in the district, resulting in a large amount of property being destroyed and some men killed. This brought out the soldiers and martial law soon followed. I pass by the cause or justification that the union leaders had for committing the measures of "direct action," also the provocation that the military officials had for the retaliation that was meted out to the strikers, both men and women. But I do know that here is the very place where the breach is widened between the two contending parties, and where that feeling of hatred is engendered which is too bitter for human characterization. Only one that has been unfortunate enough to pass thru such an experience can in any degree realize the feelings that come to one's heart. It is true that circumstances seem to force these warring parties to enter into some kind of an agree-

ment, and often the trouble seems to be settled. But, as circumstances frequently force both parties to agree against their will, it is only the old saying that a man forced against his will is of the same opinion still. And when either see an opportunity to "get the better of the other," the old feeling of hatred returns.

A few years later I was in another part of the country, where another of those bitter struggles began, and the same methods were employed, and the same results followed, only on a larger scale.

There has been much said and written as to who is responsible for the violence and bloodshed that follow in the path of these bitter struggles, but I know that the rank and file of the union men are as much in the dark as the general public are.

In the first place, men do not go out in the dead hours of the night and commit murder and violence for that organization single handed and alone, unless

they have the approval and support of the men that are at the head of the union and direct its policies. I have been thru the mill to my sorrow and I know how these things are carried out.

Even local officers and leaders of the unions do not use these drastic measures without the approval and support of their superiors. This is where the inner circle comes in. The inner circle is the most thoroly organized group in the union. The president and secretary could not do these things without the support of the local leaders, and the local leaders would not take such responsibility upon themselves.

Now, in this last struggle I was unfortunate enough to get into the confidence of this inner circle, and met the executive heads of the whole organization. And this is the way that it was put up to me: "We cannot fight in the open," said they, "but if we do not fight for our rights and hang together, we will all hang separately." Now, I had the feeling of bitterness against the employers in my heart, and came to the conclusion that the end justified the means. True, the first rule above all others is that these acts of lawlessness must be kept from the rank and file of the union men and the general public. But they were intended to strike terror into all that were supposed to be unfriendly to the demands of the union, especially the officials of the employing corporations and companies. We did not intend to deceive these individuals; we intended that they should know from whence the violence was coming. It was figured out that they would lay it to the union officials, but it was also figured that the union officials would have far the best of the argument, as they could point out that it would be the very worst thing that could be thought of for the organization, and that it would knock out the principal prop that supported it, namely, "public sentiment."

Now, this system has worked and worked well with hardly an exception up until the McNamara confession, but I believe that it has now been dealt a death blow from which it will never be able to recover. There could not have been any better solution of that dreadful experience than the way it ended, and nothing that could have

HARRY ORCHARD AT THE TIME OF HIS TRIAL.

done such a public moral good. Inasmuch as these terrible depredations have extended from the Atlantic to the Pacific, it is foolishness to say or to think that they were done without the approval and support of the executive heads of the labor organizations and also many of the local leaders in the vicinity where the outrages were committed. Surely reasonable common sense will lead any fair thinking man to this conclusion.

There is much that might be said in support of this position but I do not care to go into details. It looks, however, as if the clouds that have long hidden these dark and mysterious deeds were fast clearing away, and the curtain will be raised so that the rank and file of every labor organization may see the actors that have so long deceived them and cast such a dark reflection upon the whole movement.

Organized labor has accomplished much for the uplifting of the laboring man. It has still very much more to accomplish. But it now has an opportunity to shake off the shackles that have held it back, and take its place with all other civil organizations, which are held in respect by all liberty-loving people, and not be classed, as it has so often been, as a lawless, irresponsible body. In the first place, it must rid from its ranks those who preach and practise the doctrine of "direct action" or force, as this is contrary to the law of God. Our great Creator gave us an open door and made us our own free moral agents. He told us what the result of disobedience would be. We find the great nations of the world that have forsaken that law and replaced it with the law of force have slowly, but surely, crumbled away. The religious organizations that have disobeyed have also suffered defeat. In the

face of all this, what can labor organizations hope to accomplish by the use of these methods? Now, while the great wheels of industry are busy grinding out their dollars, they are also slowly, but surely, grinding out the lives of men and women that keep them in motion. Some of the great industries are very hazardous at best. The greedy captains that control them should be forced to make the conditions as safe and sanitary as possible. The kind of force, however, that we have been talking about will not do the work. But if labor organizations will place big, broad-minded men at their head, letting them direct the policies of the union, and, instead of sowing the seed of discontent and strife, establish schools of education along economic lines so that its members will measure up with any other class in society, and command the same respect and consideration, then they will be in a position to appeal to the honest employer of labor and the general public for their sympathy and support, and, in any grievance that they may have, the greedy captain of industry will be forced to give way under this mighty force of sentiment.

I am fully aware that these are the words of one that has forfeited all rights to be heard by society and has become a moral leper on account of the dark and unnatural deeds he has been guilty of. But I want to say that no man, woman or child can paint them any darker than I paint them myself, nor regret the suffering and sorrow that I have caused others, more than I do. As for the affliction that I have brought upon myself, I consider it as nothing, for it has been the means of bringing me to repentance and to God, Who has clothed me and set me in my right mind.

STATES PRISON, BOISE, IDAHO.

Going Ice-Fishing

BY O. WARREN SMITH

ONE reason why I like winter fishing is because of its primitiveness, its glorious lack of burdensome paraphernalia. As angling editor of an outdoor magazine, I became so tired of talking and writing about rods, reels and lines that it is with positive relief and delight that I set out for the silent winter lakes, my whole outfit of lines, sinkers and hooks easily stowed away in a single pocket of my shooting coat. I carry an axe and a can of bait, either live minnows or earth worms dug from beneath the frozen crust of the earth with much toil, for "angle-worms" can be secured even in midwinter if you are possessed of sufficient courage and strength to wrest them from the unwilling earth. (If you do not want to be

considered a fit subject for the madhouse, dig after nightfall and in the dark of the moon, in a spot as far removed from observant neighbors as possible. I speak from experience.)

I nearly forgot to mention one important item in the midwinter fishing outfit, the tea can, black with the smokes of many fires, jammed from many a hard knock, but still capable of holding water and loved because of its many pleasant associations.

Such in a word is the equipment of a midwinter fisherman, tho there are those who fashion with infinite pains what they term "tip-ups" out of quarter-inch stuff; a contrivance which I use occasionally, when the other fellow makes and carries them, tho the primitive outfit seems to be more in harmony with Nature.

There is something aboriginal about ice-fishing. The ice-fisher alone of those who dwell in more tender climes can

"THERE ARE THOSE WHO FASHION WHAT THEY CALL TIP-UPS"

appreciate the wonderful tales of Alaska which Jack London spins; indeed, out on a wind-swept lake, the fisherman feels closely akin to those dusky brethren who dwell within the Arctic Circle. Ice-fishing, like all northern winter sports, is not for the physically unfit, the pale-blooded houseling afraid of the cold. It would be the height of folly for one who has been pent up all winter to set out on a fishing trip when the thermometer hovers in the neighborhood of zero, for nose and ears would be likely to suffer, and the sport voted a cruelty. Not so the men or women who met the first advances of winter with uncovered ears and brave smiles. They may go ice-fishing, even to the North Pole if they so desire. Winter has terrors only for those who fear it.

Considerable skill is required to cut a hole thru a foot or more of ice, tho the tyro no doubt thinks otherwise. Much less trouble will be experienced if the hole be made oblong instead of round, for then the axe handle will not strike upon the edge of the ice and a broken handle result. Once the imprisoned water is touched, how glad it is to escape from confinement, gurgling, bubbling, welling, until it fills the hole full to overflowing, and you find yourself marveling that it would consent to remain beneath the ice at all.

After you have learned the trick, and the first hole is cut and all the particles of ice skimmed from the water, you throw yourself down upon the ice, with coat and blanket thrown over your head to exclude every ray of light, and gaze

down into the water. If the bed of the lake is sand or other light-colored material, each stone or object lying upon the bottom is plainly discernible. You are astonished that so much light can penetrate snow and ice. It is a strange new world that opens before you, and you lie for long moments watching the fish that come and go—crappie, yellow perch and long-nosed pickerel. Perhaps a larger fish than usual will remind you

that you are there to fish, and hastily, with fingers that tremble from something besides cold, you rig up the first line and drop it in the water. You wait; one minute, two, five pass, and disgusted you turn from the spot to cut another hole. And just as your back is turned, down goes the red signal. You glance back over your shoulder, discover that the signal has disappeared, and with a wild whoop dash over the ice, forgetful alike of age and dignity. Hand over hand you draw in the line, little jerks and twitches indicating that there is a live something

AND SOMETIMES A BIG FELLOW

on the other end. With another shout that stirs the dormant and long undisturbed echoes into activity, you drag out a pickerel, a crappie, or more likely, a small yellow perch. Such is ice-fishing.

I have said nothing of cold fingers, numb toes and tingling ears, but they are a part of the day's work. I have been on the ice when the surface was sloppy in the late spring and yet suffered from cold; in fact, I do not remember ever being on the ice and perfectly warm unless busy chopping holes. At first you chop holes in order to get out lines, then you

in the lee of some sheltering bank, stump or wind-fall. Lying so, alternately feeding and watching the leaping flames, what matter if I forget the dangling lines out upon the lake? Is there any other creation of man so companionable as an open fire? Looking into the fire's red face, our fancies take form, live and move before us. How far away the world with its toil and moil. How easy to become a fire-worshipper. I am not surprised that Jehovah spoke to Moses from the burning bush; I would have been surprised

chop in order to keep warm, that is, unless you build a fire, which you do if you are wise and experienced.

I think a camp fire is never quite so satisfactory as in winter time, when there is real need for it. By all means build the fire on the shore in the most sheltered spot possible to find, and where there is a plenty of dry wood. I used to build my fire out on the ice, where the wind played pranks with the smoke, and one side of my body froze while the other burned. Nowadays I fish along shore, so that I can watch my lines from the vantage ground of a comfortable couch of brush placed near a fire located

"THERE IS SOMETHING ABORIGINAL ABOUT ICE FISHING"

had He not. And yet we want to remember that that bush burned in Moses's mind before it glowed upon the Midian desert. We will see in the leaping fire, in the broad-reaching expanse of white lake, in our neighbors even, just what we behold in our own mind and hearts; nothing more. He who has learned to see with his heart is wise.

I know of no sport so valuable as an aid to introspection and retrospection as ice-fishing from the warm vantage ground of a shore fire. The little black pail bubbles over the flames, emitting fragrant odors, while thin rashers of smoked ham fret and sputter at the end of a forked stick. If alone, one might imagine himself some Alexander Selkirk, "monarch of all he surveys." Not for long will your little fire send upward its thin blue spiral of notification and invitation without being discovered and responded to by those sprites of the winter woodland, the chickadees. No plains Indian of long ago answered smoke of council fire with greater alacrity. From all sides do they come; some seem to drop down from the very skies themselves, all eager and all chatting gaily. The winter fisherman would be very hard hearted indeed if he did not share his noonday lunch with such pert and fearless beggars.

Once in a dozen years or so the observant ice-fisherman will be treated to a visit from some birds of the Arctic circle, crossbills, evening grosbeaks, or others. That day will stand out a red letter day in all his experiences, and for many a day, as he sits by his noontide fire, will he dream of the occurrence,

dream with one eye open. But if I begin to talk of the birds to be met with along the shores of the silent ponds, this article will soon exceed the limit of space allotted me.

As to the fish caught, if you are such a winter fisher as I, they will be few, two or three dozen perch, perhaps six or eight crappie, and sometimes a pike or pickerel. On rare days a large pike will swallow your bait, and you will proudly walk down the street, the envy of all the fishermen whom you meet. Then, too, there will be days when not even a perch will touch your hooks, and you will turn homeward empty handed. "Empty handed," yes, but soul satisfied just the same. There will be the memory of the broad, white lake, emblem of immensity; the stark, brown trees lifting their tall heads athwart the gray winter sky; the purple and brown hills silhouetted against the far-off pink horizon; the devil's dance of the gay flames of the little camp fire; the friendly presence of the companionable chickadees—all this and more will be your portion if you return "empty handed." What matter if the creel be empty when the soul, the man, is full?

Reader, if you have never attempted ice-fishing, suppose you set out the first warm day February affords; the word of a lifelong disciple of Izaak Walton for it, you will be amply repaid. Perhaps it is the gradual approach of the sun, or perhaps the fish grow more hungry with the lengthening days; at any rate, February is the month of months for the ice-fisher.

DURAND, WIS.

The Prolongation of Life

BY IRVING WILSON VOORHEES, M.S., M.D.

[Dr. Voorhees is a member of the Vanderbilt Clinic of New York and our readers will remember his article, "The Scourge of Cancer," published in our issue of March, 23, 1911. The material for the present article has been drawn very largely from Prof. Irving Fisher's "Report on National Vitality," from Metchnikoff's "Prolongation of Life," from editorials in various medical journals, from the pamphlet on "The State and the Death Roll" by Mr. E. E. Rittenhouse, and from Warbasse's "Medical Sociology."—EDITOR.]

FROM the earliest times increase of years has ever been in the mind of man, and to attain this end the suggestions which have been offered are legion in number. Hippocrates and Aristotle both felt that human life was much too short, and Theophrastes, who is said to have lived to the age of seventy-five years, lamented when dying "that Nature had given to deer and to crows a life so long and so useless, and to man only one that was often very short." The Chinese Emperor Chi-Hoang-Ti believed that the Taoists possessed the secret of long life and immortality, and when told by a Taoist magician that beyond China there were islands whose waters conferred immortality, he equipped an expedition to discover them. Cagliostro, the celebrated eighteenth century quack, boasted that he had discovered an elixir of life which had brought about his survival several thousand years. Less than twenty years ago Brown-Sequard, the eminent American physiologist of French birth, laid great stress on the efficiency of emulsions made from certain body organs which when injected into old men would bring back their vigor. However futile all these attempts have been, they well illustrate the struggle of mankind to free itself from the tyranny of physical forces.

In seeking length of years it is obvious that there is no purpose to prolong the misery so frequently incident to the senile state, but so to develop the organism thru correct living and prevention of disease that one may pass over a long period of life in active and vigorous health to a final period in which there shall be present a sense of satiety and a wish for death. There would be, therefore; if this happy state were brought

about, a greater utilization of accumulated experience and an opportunity for the acquisition of means sufficient to provide for the period of senility.

Now, the preparation and education essential to our modern civilization demand a great deal of time, and as the stock of knowledge increases the period for acquiring it must be lengthened proportionately. Hence, the age of leaving school and college is increasing; and if this period be taken as the commencement of active participation in the affairs of the world the importance of its extension must be manifest.

For 350 years the average duration of life has been slowly on the increase. In the seventeenth and eighteenth centuries this increase was about four years per century, but during the first three-fourths of the nineteenth century the rate was increased to about nine years per century. In Massachusetts this lengthening is now said to be going on at the rate of fourteen years, in Europe about seventeen years, and in Prussia about twenty-seven years per century. In France, in a population of about 38,000,000 people, 2,000,000 have reached the age of seventy,—that is, about five per cent. of the total number. It would seem that the great strides in medical discovery and their application are here much in evidence; for in India, where medical progress is nearly unknown, the average life span is only twenty-five years and remains about stationary. It is possible that we may yet attain a general prolongation of life the world over equivalent to fifteen years; for future medical discoveries, together with the cumulative influence of hygiene, must be greatly felt. For instance, as Professor Fisher points out, when a pure water supply prevents death from typhoid, it

prevents two or three times as many deaths from the complications of typhoid.

The effects of prolongation thus carried out will not keep alive invalids merely, but a large number of vigorous old men. Says Metchnikoff:

"The old man will no longer be subject to loss of memory or to intellectual weakness; he will be able to apply his great experience to the most complicated and most delicate parts of the social life."

Metchnikoff believes that prolongation of life is due to strict obedience to hygienic laws, and quotes Liebig as saying that the amount of soap used by a nation could be taken as an index of the civilization of that nation.

When it is once thoroly realized by business organizations and by commercial interests that the present waste of life means an enormous loss not only to the country at large but also to the business interests themselves, steps will be taken to prevent the waste of life and energy which has been going on for so long a time unchecked. Professor Fisher says that \$1,500,000,000 annually is the very lowest at which we can estimate the preventable loss from disease and death in this country. The statistics of the Commissioner of Labor show that the annual expenditure for illness and death amount to \$27 per person per year. This is for workingmen's families only. But if this figure is applied to the twenty million families of the United States, it would make a total bill for illness and death of some \$500,000,000,000. This is merely an estimate and the true cost may well be more than twice this.

The cost of conserving the national health would be small compared with the increase in national efficiency. This subject is of interest not only to capital as represented by the life insurance companies and vested interests, but also to organized labor, since a large share of the preventable loss through sickness and death falls on the laboring man and his family. No other field of investment offers so grand an opportunity for rich returns.

Health is the most fundamental of all conditions. Students of vice and crime agree that these are chiefly the result of

morbid conditions and habits. In the last analysis nothing is really ugly save disease. Health reform brings great and lasting reductions in poverty and vice. It is well known that animals and children in good health are usually cheerful. Illness begets sadness and melancholy. The sum total of optimism is proportional, therefore, to the amount of normal health, and pessimism is simply an indication of physical and mental disease. Byron's pessimism has been attributed to his club foot, Leopardi's to tuberculosis, and the whims and peculiarities of Carlyle have been attributed by many students to the fearful dyspepsia from which he suffered. Joseph Grasset in his book "Demi-Fous et Demi-Responsables" describes many instances of psychic defects in the intellectually superior the ultimate cause of which was some physical ailment. Thus Gustave Flaubert was an epileptic and Nietzsche and Schopenhauer were confirmed invalids all their days.

At the present moment there is no greater national need than the organization and development of a federal department of health; for, since the State has demonstrated that it can prevent suffering and prolong lives by guarding them against accidents and contagious diseases, why should it not broaden its campaign to include all preventable diseases and attack the enemy with increased vigor and an enlarged organization applied in proportion to the work in hand? Far more people die from degenerative diseases of the kidneys, heart or brain than die from contagious or epidemic diseases. Why should we attempt to save one class and neglect the other? If the medical profession were given power and money to eliminate typhoid fever it would be done; for a great deal is known concerning this disease and how it may be prevented. Moreover, the people at large wish it stopped, but their representatives in the legislatures are too busy with mergers, tariffs and political appropriations to note the pale faces of those thousands of people who die yearly from a disease which might very well be prevented.

But in spite of legislative apathy, the death rate from typhoid fever is decreas-

ing. In Munich in 1856 the mortality was 291 per hundred thousand. The city at that time contained many cesspools. Upon the removal of these nests of typhoid germs the death rate fell to 10 per hundred thousand in the year 1887, making a reduction of 97 per cent. It has been shown that typhoid fever is absolutely preventable if the most extreme care is practised to prevent the individual infected from infecting others thru conveyance of the germ thru discharges, soiled clothing, etc. The typhoid death rate is greatest in those cities in which the rivers are polluted, the average for such cities being 62 as compared with 17 for cities using unpolluted water. Dr. Rosenau, of the United States Public Health and Marine Hospital Service, say that any community having clean water and uninfected milk may be freed from typhoid.

If the means of prevention were known and applied nearly every disease would be preventable. The importance of a municipal health board is acknowledged to be greater than that of a police or fire department, and it is not too much to say that the importance of a federal health board would be greater than that of the Department of Agriculture.

The term "death rate" describes the ratio of the number of deaths in a given locality in one year to the population. In all countries the death rates have been decreasing during several centuries. In London, where the death rate during the seventeenth and eighteenth centuries was 40 to 50, and where during the plague period (1680 to 1728) the death rate from pestilential disease rose as high as 80, the death rate is now only about 15. In Havana after the American invasion the death rate was reduced from a previous point of something over 50 to about 20. The registration area of the United States shows a death rate of about $16\frac{1}{2}$ per thousand, altho in different states it varies considerably—from 14 in Michigan, for instance, to 18 in New York.

The greatest reduction in mortality, in this country at least, has been effected among children, altho the death rate is still too high. This reduction has been brought about thru a study of the infant in relation to the pure milk problem, of

intestinal intoxication as a cause of death, and thru careful obedience to the principles of isolation and sanitation during acute infectious diseases. The outcry against vaccination is based on misinformation and on the ignorant but plausible reasoning that it is unnatural to introduce poison into the blood. Statistics, however, prove clearly enough that vaccination decreases smallpox and lengthens life, and even if it were true that the inoculated virus were slightly injurious, it certainly would be the lesser of two evils; for history shows that no disease is more deadly when allowed to pursue its course unchecked than is smallpox.

The science of eugenics or the well-being of the individual is slowly but surely assuming a place of importance in national affairs, thru the efforts of Francis Galton, Karl Pearson, and a number of philanthropists, both in America and in Europe. The purpose of this movement is to study the causes and to bring about the prevention of waste of life thru improper living, overwork and social disease.

From a study of the conditions present in factories and shops, it is now asserted that the present working day from a physiological viewpoint is much too long, since it tends to a state of continuous overfatigue among the majority of men and women. It therefore creates a vicious circle leading to the craving of means for deadening fatigue and inducing drunkenness and other excesses. The economic waste thru undue fatigue is probably greater than the waste from serious illness, for it is quite impossible for an over-tired person to do good work, and there is little question that excessive fatigue is frequently the starting point of a progressive chain of human ills. Experiments in reducing the working day show a greater improvement in the physical efficiency of laborers, and this efficiency by increasing the output of labor compensates the employer. One company which kept its factory going night and day found that by changing from two shifts of twelve hours to three shifts of eight hours each the efficiency of all the men gradually increased, so that the days lost per man thru illness fell from $7\frac{1}{2}$ to $5\frac{1}{2}$ per year.

The social diseases which are respon-

sible for so large a proportion of the defectives of various kinds which fill our charitable institutions are certainly preventable and constitute one of the greatest menaces to our national efficiency. Among the troops in the Philippines the venereal morbidity during the year 1904 was 297 per thousand, largely exceeding the death rate from malarial fever and diarrhea, which are the great destroyers of white men living in the tropics. Twenty-two out of every thousand soldiers were constantly ill from venereal disease. The statistics of social diseases in private life are of course unobtainable, but there is reason enough to believe that they might show a morbidity even greater. Public education in such matters is absolutely essential and could be carried out by a national department of health better than in any other way. To quote Professor Fisher, the real waste of human life can be expressed only in terms of human misery.

It is beyond question that there is need for the supervision of those elements in the process of reproduction which tend to the propagation of the physically unfit. In certain States of the United States laws already exist prohibiting the marriage of defective and diseased persons. This is true of Connecticut, Michigan, and especially Indiana. In Indiana confirmed criminals, imbeciles, etc., may be unsexed when this is deemed advisable.

There is ample reason for these seemingly stringent measures when we appreciate how rapidly degenerates multiply. From a study of 150 degenerate families, Dr. Tredgold found that the average number of children per family was 7.3 while the normal average for the country at large (England) is 4. There is no specification here of the frequency of marriage or of the mortality among degenerates. The results, however, may be judged from the history of one family alone—the "Jukes." R. L. Dugdale in his book on the Juke family estimates that they cost the State in the matter of prosecution, jail and hospital maintenance, etc., \$1,300,000 in seventy-five years, or over \$1,000 for each member of that family. Now if these criminals had been sterilized under some law like that of Indiana this powerful and dangerous influence, which extends even

down to the present time, might have been prevented. In this new movement the State of Indiana takes the lead, since it extends prohibition of marriage to all persons who suffer from transmissible disease of any sort, and not only does this law exist but it is put into daily operation. Moreover, the Indiana State Board of Health may in its good judgment raise the standards of health, thus making it more difficult for those who desire to marry but who are seemingly unfit to propagate the race to obtain a license. Under the laws of 1907 Indiana has unsexed over 800 confirmed criminals, idiots and rapists thru surgical operation.

Fortunately, however, to offset all this we have many examples of illustrious families which took root in American soil and who have thru great intellectual ability and moral worth exerted a profound influence upon national vitality. The youth of the land need to be taught that health, beauty and strength are greater objects for admiration than titles or wealth, which in the present day are so proudly held up to esteem.

There are two factors of vital importance which serve materially to increase or diminish the expectancy of length of life, namely, heredity and hygiene. Vitality is partly inherited and partly acquired. It is quite likely that inheritance plays by far the larger part, but of course a sound physical and mental inheritance is to be preferred above all the extraneous advantages of wealth. Even the landed aristocracy of the Old World are entitled to and sometimes receive less respect because of their degeneracy and moral obtuseness than does the vigorous and strong middle class. A sound heredity when acted upon by improved and improving environment is capable of producing a very high type of individual even in the course of one generation.

Now the importance of proper environment is nowhere more manifest than in its effect upon the child at school, for the real health of the nation is in its children who are to become the men and women of the future. There is great need for proper education of the school child in matters that relate to health and the possibility of prolonging life, but as Dr. C. A. Herter has well said in his

book "The Common Bacterial Infections of the Digestive Tract": "The truth is that neither parents nor schools are to-day able to give this much needed sort of education. The remedy must be provided by the schools, which in their eagerness to impart the conventionalized facts are now quite blind to some of the most pressing needs of their pupils. Thru the schools and universities (or other appropriate organizations) the parents of the future must be educated both as to the facts and the moral aspects of bodily hygiene. . . . I believe the lengthening of the span of human life to be among the attainable results of such teaching. Is it not unlikely that as men grow wiser an increasing number will deliberately strive so to regulate their lives as to improve the expectation of crowning well spent days with the peculiarly fine satisfaction of old age?"

To attain the highest efficiency in this matter school children must be medically inspected and made to practice hygiene. Such inspections would prevent eye-strain and the miserable horde of symptoms arising from the presence of adenoid and tonsil enlargement. Epidemics

should be prevented by early isolation; and ventilation, light and cleanliness secured to all at all times. The properly trained health officer is absolutely necessary to the attainment of this end.

Too much idealism is doubtless a bad quality—at least it is not especially helpful so long as it remains unconverted into realism or into those factors that make for realism; but the prolongation of life thru such simple application of the elementary laws of hygiene and sanitation belongs not to the millennium. It can begin here and now if the public conscience can be quickened and a sense of individual responsibility can be inculcated as a result of broad and effectual education. Surely this is a task not too great for strong and vigorous America where degrees of efficiency are so carefully weighed and measured in terms of economic values; and if the scientist believes that life can be conserved and prolonged to the attainment of great ends and can make the practical man of business believe it also, it is not unlikely that the test will be made within the memory of the present generation.

NEW YORK CITY.

Woman Suffrage Crisis in Great Britain

BY IDA HUSTED HARPER

AUTHOR OF "THE HISTORY OF WOMAN SUFFRAGE," ETC.

WITHIN a year and a half the woman suffrage movement in Great Britain has reached three distinct crises, and the one now at hand promises to end in a measure of success—much less, perhaps than its advocates have hoped for, but much more than its opponents have been willing to concede. The first crisis came when the introduction, in 1910, of the so-called Conciliation Bill into the House of Commons united the suffragist members of all parties into a majority large enough to pass it, but its prospects were ruined by the refusal of Prime Minister Asquith that year and the next to permit the final reading. In the midst of the

uproar caused by this arbitrary action Mr. Asquith met the situation in 1911 by the explicit pledge that at the next session of the Parliament the bill should have the necessary facilities to reach its last reading. When everything pointed to its triumphant passage during the spring of 1912, came suddenly the third crisis with the announcement by the Premier of a manhood suffrage bill, which should enfranchise every man, but not include any woman. In answer to the outcry against this proposition he agreed in behalf of the Government that if the suffragists in the House of Commons should adopt an amendment applying to women, this would be accepted as

part of the bill. At the present moment, when such an amendment seems not impossible, the anti-suffragists are endeavoring to bring about a fourth crisis by securing a referendum of the question to the voters of the country, who, they think, would defeat it. This is apparently the last move left for them to make.

The beginning of the struggle for the enfranchisement of women in Great Britain postdated that in the United States by about twenty years, but it is an interesting fact that what might be called the organized movement began in both countries in 1869. In that year the National Association was founded here by Elizabeth Cady Stanton and Susan B. Anthony, which is still at the head of the work. The same year municipal suffrage was granted to widows and spinsters who were ratepayers in England, thru the efforts of John Stuart Mill and Jacob Bright, and the women organized to obtain the complete franchise for both married and unmarried. They worked thru strictly constitutional methods for the next thirty-five years without apparently being one step nearer their goal. Then Mrs. Emmeline Pankhurst, widow of the barrister who had drafted that municipal suffrage bill of 1869, stepped from their ranks and formed the militant association which soon broke down the dead wall of indifference and put John Bull on the defensive. It is not necessary to go into the story of that contest which has sent nearly a thousand women to prison and set the whole world to talking woman suffrage.

The Liberal party had always posed as the champion of woman's enfranchisement and had received much greater support from women than had the Conservative. When it went into power in 1906 it was confronted by an army under determined leaders who demanded that it make good its many promises. This the rank and file of the members of the House of Commons were willing to do, but the Government, thru the Cabinet Ministers, blocked every effort. Then the so-called "suffragets" began the time-honored militancy which has always been recognized as legitimate in British politics. By 1910 this had reached such proportions that parlia-

mentary action became necessary, and thru a committee a conciliation bill was framed, not to conciliate the women, but the members of the Commons from the different parties. This bill gives full suffrage to women property owners and rent payers for even so much as one room if held independently, while a wife can vote, but not on the same property as the husband. As this bill may be the one ultimately adopted, it should be borne in mind. It was accepted by all the suffrage associations, but most reluctantly and only because assured that nothing more could be gained at present. In July, 1910, it was thoroly discussed for two days and received a non-party majority of 110 on the second reading. Then Mr. Asquith refused the third reading and all the work was lost.

In November of that year occurred the demonstration of the women before the House of Commons; when, by order of Winston Churchill, Home Secretary, the police were brought from the lowest quarters of London, and scenes of indescribable brutality took place. This and the subsequent cruelty of prison treatment resulted in the death of three women, one of them Mrs. Pankhurst's sister, and the permanent injury of many more. The following May, 1911, the House of Commons voted again on the conciliation bill, giving it the unprecedented majority of 167, drawn from all the four parties, and again Mr. Asquith refused to allow the final reading. The women prepared for another demonstration in Parliament Square many times larger than the former, and the leading members of the Prime Minister's own party told him that this situation could not continue any longer. He then capitulated to the extent of giving his pledge that in 1912 a week should be granted for the consideration of the bill and facilities for the last reading. Later he emphasized this promise in a letter to Lord Lytton, chairman of the conciliation committee, stating that it would be carried out in spirit as well as letter. In return for this all militant demonstrations ceased and not so much as the "heckling" of a speaker was allowed by the suffragists. The various associations united, as they had done the preceding summer, in a magnificent parade in London, representing women

of all classes. They marched five abreast in a procession seven miles in length, carrying flags, banners and emblems of their trades and professions, ending in a gathering of 8,000 in Albert Hall. During the summer they held hundreds of meetings thruout Great Britain and Ireland to create public sentiment. Over one hundred city and town councils adopted resolutions urging the passage of the bill, and that of Dublin sent the Lord Mayor to appear in person at the bar of the House of Commons with their request.

Everything pointed to the adoption of the conciliation bill, which it was generally understood would be brought up in March, 1912. Then suddenly, on the 7th of last November, "like a bolt from the blue," to use the English expression, came the announcement from Premier Asquith that the Government would introduce a manhood suffrage bill—one vote for every adult male—but no women would be included in its provisions! He said, however, that the House could amend it in favor of women if it so desired. As a bill with the force of the Government behind it is sure of adoption, and as the bill of a private member to amend it is almost equally sure of rejection, the suffragists were in despair. The leading newspapers declared that "the women had been tricked"; that "the Government had dealt a deadly blow"; that "their cause was lost." Chancellor of the Exchequer Lloyd George said "the Conciliation Bill had been torpedoed," and the *Times* added, "by a measure devised for that purpose." The Labor parties took official action condemning the manhood suffrage bill in strongest terms and saying that "no measure for the extension of the franchise will be satisfactory which does not give votes to women." Trade unions in all parts of the country have followed with similar resolutions, and, although it is the workingmen who would benefit most by it, their leaders both in and out of Parliament are denouncing it and declaring that they will not accept it with women excluded.

In fact, there is no demand from any quarter for this bill, not even from Mr. Asquith's own party. A bill for electoral reform is greatly needed, to abolish plural voting with the long-drawn-out

elections, and to remodel the whole cumbersome and complicated system. Eventually this should, perhaps, be extended to include the 2,500,000 men who are at present disfranchised, but thus far they have not shown the slightest desire to have this done, and the required qualifications are so slight that practically all men of any stability can meet them. To propose to bring into the electorate this vast, irresponsible body of men while denying the franchise to the educated, tax-paying, public-spirited women is unthinkable, and the opinion is widely expressed that Mr. Asquith was driven to it as the last desperate means of defeating woman suffrage. When for the first time, a few weeks ago, he consented to receive deputations from the suffrage associations, he frankly admitted that the majority of his Cabinet and the great majority of the House of Commons were in favor of enfranchising women, "but," he said, "I am the head of the Government and I am not going to make myself responsible for a measure which I do not believe to be in the interests of the country." "Then you can go and we will get another head," answered Christabel Pankhurst.

Developments have shown that the Cabinet are sharply divided on the question. Lloyd George, who ranks next to Mr. Asquith in power, has announced that he is ready to fight to the last ditch to amend the manhood suffrage bill so that it shall provide some measure of suffrage for women. With Sir Edward Grey he has opened a campaign for this purpose with a great meeting in Horticultural Hall, London, and proposes to follow with others. Lord Haldane, Mr. Birrell and other members of the Cabinet will speak for it, as will the Labor and other members of Parliament. At the announcement of the manhood suffrage bill Mrs. Pankhurst's association, the Women's Social and Political Union, nailed the black flag to the mast and refused to place any confidence in the proposed amendment or those who support it. *Votes for Women*, its official organ, declares that, since there is to be a bill granting universal suffrage to men, nothing less shall be accepted for women and they shall be included in the original bill. Amendment by a private member will be impossible, it says, and the concilia-

tion bill, enfranchising only a million women, is now more than ever an insult.

On the other hand, Mrs. Fawcett's organization, the original National Association, with thousands of members, accepts Mr. George and his colleagues in good faith, and agrees to co-operate with them. Similar action has been taken by the Women's Labor League, the Professional and Industrial Women's Suffrage Society, the Women's Co-operative Guild, the Women's Freedom League (militant), the People's Suffrage Federation, the Men's League for Woman Suffrage, the Fabian Society, and, most important of all, by the Women's Liberal Federation of over 100,000 members, the bulwark of the Liberal party. They take the ground that the addition of 2,500,000 men to the 7,500,000 who are already voters will make so great a change in the electorate that it would be useless at present to hope for the further addition of the 11,000,000 women who would be enfranchised by universal suffrage for women. This will, however, be the first amendment proposed in the Commons, and when defeated, as it will be, the so-called "Norwegian" plan will be advocated. This would give the franchise to the wife of every voter, and, in addition to the number who now have the municipal ballot, would make about 7,000,000 women voters. If this cannot pass they will try to have all included who now possess the municipal suffrage. Failing in this they will try to defeat the manhood suffrage bill. In the last extremity they can take up the conciliation bill, for whose final reading Mr. Asquith's promise still holds good.

Some measure of suffrage for women had become so certain that the Anti-Suffrage Association grew thoroly alarmed, and a deputation headed by Lord Curzon and Mrs. Humphry Ward recently had an interview with Premier Asquith on the subject. They came to propose a referendum to the voters, claiming that Parliament never had had a "mandate" from them on this question. He asked if they thought the suffragists would accept a verdict of men alone, and Mrs. Ward suggested that the women who had the municipal franchise might also pass upon it, altho she did not explain the connection between a municipal and a national question. Mr. As-

quith said that "the grant of the franchise to women would be a political mistake of a very disastrous kind." He urged the men to "take off their coats, and the women whatever panoply they can best dispense with, for effective *militant* operations of a constitutional kind." The British constitution is very elastic in this respect, but it is hardly expected that Lord Curzon and Mrs. Ward will throw stones or chain themselves to railings.

Meanwhile, the anti-suffrage press is calling aloud for a referendum, the *Times* leading, altho just before the last election it said: "Woman suffrage is an issue at this election . . . and the new Parliament will be considered to have received a mandate on this subject." This is the ground taken by the suffragists, who point out that at the last two elections, while it was not in the party platform it was considered an issue with the Liberal party, whose candidates had to declare themselves on it, and that they should not be put to the expense and labor of a special election. There is no law providing for a referendum and an act of Parliament would be necessary, which, if it were passed for this case, would run the risk of being invoked for Home Rule, the tariff and many other great national issues, a proceeding which would be strongly opposed by all the parties. The papers are as widely divided on the referendum as on woman suffrage itself, and many of them say with the *Daily News* that "for Mr. Asquith to break his pledges made to the suffragists would be as naked a breach of honor as was ever committed."

The situation grows daily more acute. Its most advantageous result has been the raising of the newspaper boycott against the suffrage movement. This has been rigid and absolute by the majority of the papers, which never have mentioned it except to notice in a distorted way some sensational feature. Now it is occupying columns of space and calling out leading editorials in all of them, for, as the *Daily Chronicle* expresses it, "Never was there a political question on which there was so much diversity of opinion." Many of the papers are declaring that with part of the Cabinet on the platform demanding a woman suffrage amend-

ment to the manhood suffrage bill, and part of them just as vehemently demanding that it shall not be amended, and with Mr. Asquith announcing his willingness to accept a measure which he declares would be disastrous to the country, there is but one decent thing for the Ministry to do, and that is to resign. Others are insisting that the manhood suffrage bill shall be withdrawn. Still others are sug-

gesting that the Government shall consume so much time with Home Rule and Welsh Disestablishment that none will be left for woman suffrage. This, however, would be merely to postpone the settlement, for Great Britain could just as easily prevent the oceans from beating upon her shores as to turn back the tide of women's determination to have a voice in the Government.

NEW YORK CITY.

The Drama of the Winter Stars

BY ANNIE L. MUZZEY

O SPLENDOR of the crystal winter night,
When bold Orion stars the blazing sky,
Belted, and armed and poised for valiant fight,
He faces Taurus of the fiery eye.

Close on his track the brave Dog Sirius leaps,
The Unicorn vaults o'er the Milky Way,
And Procyon his faithful vigil keeps
Upon the fight that rages till the day.

The gentle Gemini with arms entwined
Smile softly at the sister Pleiades,
Whose "influences sweet," that none may bind,
Are infinite as the eternities.

Northward, young Perseus, flushed with victory,
Comes with the trophy of Medusa's head;
But rests not till his loyal sword sets free
Andromeda, chained to her rocky bed.

Eastward King Leo, rising in his wrath,
Bears up the sickle with its golden light,
To cleave a way on the Ecliptic path
To the fair Virgin of the summer night.

Pacing forever on his polar round
The Great Bear watches the celestial play,
Unconscious that his plodding feet are bound
By an attraction that he must obey.

So we, firm-planted on our rolling star,
Heed not the subtle change of time and place,
Unmindful, while we gaze on worlds afar,
That we, with them, are wanderers in space.

But this we know: that tho the heavens fall,
By Power Omnipotent our way is spanned;
That the Creative Love doth hold us all
Secure within the hollow of His hand.

Utica

BY WILLIAM PICKENS

PROFESSOR OF LATIN IN TALLADEGA COLLEGE.

IT is in Hinds County, Miss., about 30 miles from the city of Jackson. It had been almost unknown since the famous Reconstruction riots, in which it had a bloody hand. But a thing happened in Jackson in the latter part of April, 1911, which caused the people of that city and of many other parts of the State to run their fingers over the map in search of Utica. This incident leads back thru a chain of recollections to the first causes which made it possible.—First the incident and then the antecedent history.

A negro club in Jackson decided to promote an oratorical contest among the various negro institutions of the State. The contest was held in Jackson last April, and there were offered a first, a second and a third prize. There were representatives from the various colleges—Jackson College, Alcorn College, Tougaloo University and others—and among them was represented only one "Normal and Industrial Institute," that of Utica. After the Utica orator had spoken, the institute band struck up a lively air amid the wildest applause. But, band or no band, the audience was thundering its

verdict in favor of the clear superiority of that Utica oration. The judges agreed with the audience, and the representative of the Normal and Industrial Institute was awarded the first prize and a fitly inscribed gold medal. And what is more, this Utica orator is a little, ordinary-looking, country black girl.

On the following week I was on my way to deliver the commencement address at this Institute, and, hearing in Meridian of the contest, I made the very natural remark that it would be hard for a judge to vote against one girl if she did at all well. But doubt vanished from my mind when I heard the oration itself repeated at the commencement exercises. It was clear, convincing, and in both rhetoric and matter it was of the superior sort, and was delivered with the naturalness, the enthusiasm and the spontaneity which characterize the birth of thought and dispel all doubt as to its originality.

The faith, the enthusiasm and the pluck which carried this little Black Belt heroine to success is characteristic of the work of which she is the immediate product. Eight years ago William H.

Holtzclaw, a graduate of Tuskegee, after three repeated failures to found a school, being aroused to a fourth effort by the words of some book as the Scotchman was encouraged by the perseverance of a spider, finally succeeded in starting a "normal and industrial" school with one teacher and twenty pupils, one mile from Utica—just 30 miles from Major Vardaman and scarcely a longer distance from Congressman Williams. He has now more teachers than he had pupils at first, and the number of pupils has more than squared itself. The negro population of this section greatly preponderates.

At the original site of the school only 100 acres of land could be purchased, which soon proved to be very inadequate for the school's development. With characteristic pluck the principal decided to move the school to a site where land could be bought. This was 5 miles from the original site, 4 miles beyond the town in another direction. In the summer of 1910 the frame buildings were torn

down, moved and put together again on the new site, and students and teachers have put so much work into laying off and beautifying the new location that the stranger would not take it for less than one year old. In recognition of such pluck friends in the North furnished \$25,000 to purchase 1,400 acres of land. It was a great task to accomplish so large a moving in one summer, and the difficulty was increased by having the largest dormitory blown to the ground when it was about two-thirds reconstructed on the new site.

I wish to call attention to the fact that this is the work of young negroes. These twenty-five teachers, in charge of nearly 500 students, are practically boys and girls themselves, recent graduates of Tuskegee, of American Missionary Association schools, and of various smaller schools. The young negroes are ordinarily regarded as an appalling problem for the South, but when they are seen in a magnificently useful work such as this at Utica, one gets the idea that if the

THE UTICA INSTITUTE FACULTY

THE UTICA INSTITUTE BAND

problem is given opportunity and time it will solve itself. The new life brought by the invasion of these young educated negroes has so vitalized the community that the negro farmers have acquired thousands of acres of land in the last half dozen years.

Another usual representation is that between the young negro and the white South there is an especially bitter antagonism. I doubt the truth of that as a general statement, but, if it be the rule anywhere else, it is certainly contradicted at Utica, Miss. I have seen many negro schools of this class and similarly situated in the South, but I have never seen one in the success of which the white people of the community were more interested. Many white citizens in the town of Utica are contributors to this negro school, some of them offering annual prizes to stimulate industry, scholarship and manhood among the students. One business man gives annually a gold watch and chain worth \$65 as a prize, with no other condition than that the faculty shall vote it

to "the most manly young man of the school." That is a thing to contemplate: a white man in the State of Mississippi, where the idea of the negro's being a man has for a decade been most vigorously and most eloquently attacked—that a white man in such a community is offering a valuable prize to call young black men to *manhood*. And this man's name is not printed by the newspapers nor his deed advertised; unless we go all the way to Mississippi and talk to black folk there, we should not learn that such a man exists in that State. On April 26 two young white men, scarcely out of their twenties, as members of the trustee board of this independent negro school, were seated with the negro trustees and farmers, giving and taking counsel as to the best means of advancing the interests of the institution—and somewhere else in Mississippi the newspapers were advertising a white man because he had said that negro education is a mistake. Why does the newspaper do this? The probable explanation reminds me of a bit

of history I have learned about the famous Senator of a Southern State who has made much money and acquired much notoriety by his attacks upon the negro, especially in the North. He was once asked by a negro friend of his, who was raised with him from childhood and whom the white man evidently loved: "Senator, how is it that you are so affectionate and so kind to me personally and yet say such awful things about my people?" The chuckling big Senator, in true ante-bellum fashion, slapped his negro friend on the back and said: "Boy, there's money in it! The Yankees like to hear it, boy. There's money in it!" And then he related how hard he had to work in his senatorial capacity to earn \$8,000 a year, but how one spectacular anti-negro speech, delivered for a few weeks thru the North, would bring him \$25,000 and no end of publicity.

Another statement of the usual sort is contradicted here at Utica: that the negro can find no friends in the South save among the more aristocratic Southerners. The majority of the whites of this particular section have not only been looked upon by the negroes as their worst enemies ever since the unenviable day of its Reconstruction activities, but they have been regarded by the white aristocracy of the larger towns as "trash" and have been known to vulgar fame as "red-necked heel-scratchers." It will be a great day in the South if the poor white man chooses to make common cause with the negro.

It encourages the heart of a man to see the strong and ambitious Black Belt children that attend this school. Their commencement program was odd, but interesting. They delivered orations and exhibited various manual arts from the same platform, many of the latter taking place simultaneously, to the great entertainment of the audience. Two girls made a hat from start to finish; another cut out from the bolt of calico, sewed and finished a girl's waist, while the audience looked on; iron was forged and welded, clothes washed and a "farmer's dinner" cooked; a chicken was killed and cooked "scientifically," as the young woman explained who performed that part, and then four big farmers and two farmers' wives were called to take seats at a

table on the platform, to show them how to serve a dinner, and that chicken and the rest of the food was just as *scientifically* eaten. One lithe black girl, who was helping to cook this dinner, like a true farmer's wife, led the whole vast congregation in plantation songs while she worked. She led in the solo parts, and while the audience repeated the chorus she deftly kneaded dough or cut the biscuits or opened the steaming oven. A race that can smile at adversities and season its simple dinners with a song will be "mighty hard" to kill. Their literary performances were encouraging to see; often crude, but always prophetic.

These Black Belt children are of strong bodies and quick intellects. They are ambitious of attainment, proud of their opportunities, and exceedingly proud of their negro teachers. I learned from one young man how narrowly he escaped receiving this year's prize for "the most manly young man" and what a confident determination he has to merit it next year.

A conviction has taken me, after much observation of the kind, that negro students under negro teachers, especially teachers of the younger generation, seem in all their performances, both physical and intellectual, to display an exhilarating freedom of body and soul. There was a naturalness and spontaneity in all that these boys and girls did.

With what enthusiasm the impartial historian of the future will scan the records of these pioneer efforts of young black men! When he comes across an example like this one at Utica he will fairly gloat over the material. The personal sacrifice which many of these young builders have suffered simply cannot be told. The material rewards for negro educational work in the South are exceedingly poor. But this poverty serves one good purpose: it weeds out all save those who do the work for love and who find life in the work itself. Very similar stories of sacrifice and success and prophecy could be told about Snow Hill, Ala., and Cottage Grove, Ala., and Fort Valley, Ga., and Okolona, Miss., and Kowaliga, Ala., and Denmark, S. C., and many others of the growing monuments to the manhood and womanhood of young Black America.

What Is the Matter with Our Army?

III. It Lacks Organization

BY BRIG.-GEN. CLARENCE R. EDWARDS

[Two weeks ago we published an article on this general subject by Major-General Wood, and last week another by Brigadier-General Wotherspoon. The author of this week's article is the Chief of the Bureau of Insular Affairs. A sketch of him appeared in our issue of January 18. Our next week's article will be by Lieutenant-Colonel Leggett. His subject is "The Army's Alienation from the People."—EDITOR.]

I N these days of "scientific management," every system depending for results upon combination of the muscles or minds of many men is highly organized, and constant watchfulness is exercised to keep the "overhead charges" at the lowest possible point. We see this everywhere in industrial and in professional life, even in athletics. Were a railway system, for instance, employing some 20,000 men, to attempt no distribution of its employees according to the particular needs of the different parts of the system in their relation to the whole, and no preparation of the different classes—engineers, firemen, section hands, and the like—in their proper proportion, and were to neglect the matter of "overhead charges" altogether, no one certainly would expect it to remain long outside of the hands of a receiver. Yet with the military establishment of the United States, employing over 80,000 men, it is impossible under the system as now fixed by law to attempt distribution of its forces according to the particular needs of the different parts of the system in their relation to the whole, or even according to the needs of the country they are designed to serve. Preparation of the different classes, moreover, in their proper proportion is out of the question, while unnecessary "overhead charges" reach at least one-fifth of the total annual appropriations. Were the army a private enterprise, then, in competition with other similar enterprises, we could not expect it to remain long outside of the hands of a receiver. Again, were a football eleven to make no attempt to organ-

ize as a team, or to train players in their proper proportion for each of the different positions, or to develop teamwork, it would in time of contest not only suffer defeat, but be laughed to scorn. Yet the military establishment of the United States can make no attempt to organize as an army, nor to train its parts in their proper proportions for their different duties, while any effort to develop teamwork would be altogether futile. In time of contest, then, nothing but defeat should be expected, and as for the rest, those who know are on the verge of laughter now—which is not a pleasant thing!

Now, all of this is more surprising because armies are the oldest institutions known to mankind. Into their organization, training and use more time, energy and thought have been put than into any other institution of the world. Moreover, tho for success they must, of course, follow the genius of the people from which formed, and differ in details of their organization, training and use accordingly; nevertheless, since they exist and have always existed everywhere for the same purpose, and in their ultimate use must be employed and have always been employed with or against each other, regardless of racial or national differences, it is only natural to find that their organization, training and use everywhere follow similar general lines.

The United States has not, then, the excuse of ignorance of organization in general or of armies in particular. She has carried organization in nearly all things to a higher point probably than most nations, and she has used armies actively more years during the period of her national life than any other nation during that same period. But, with or

without excuse, the fact remains: the military establishment of the United States is not only without organization as an army, but is maintained at an unnecessarily extravagant cost, and is distributed and quartered in an unmilitary manner. Despite the possession of a highly qualified personnel, it is without collective efficiency. This extravagance, unmilitary distribution and collective inefficiency, if not altogether due to the lack of organization, can certainly never be materially corrected without a proper organization. To make this clear we have only to note what correct organization would mean. The military establishment is composed of over 80,000 armed and uniformed men, divided into companies, battalions and regiments. But none of these, nor all of them in combination, make an army. Armed and uniformed men are but a mob; companies, battalions and regiments, but an aggregation of troops. Neither can be usefully or economically employed for the ultimate purpose of an army. This ultimate purpose, whether we like the idea or not, is to fight. Unless we recognize this we should maintain no army at all. For all other purposes of an army—and there are many—other and more economical means can be provided. Success in this ultimate purpose of armies all ages have shown to be dependent not upon machines but upon men; upon men trained and working in combination and employing weapons, it is true, but still upon men individually independent in movement and action. In other words, success of armies is dependent upon the foot soldier armed merely with the rifle and bayonet. Decision in war has always rested and must always rest in the man and not in his weapon. The best weapons do nothing more than help to attain success at a lesser cost. As it happens, and probably fortunately so, the foot soldier is the least expensive element of an army, but success is dependent on him, not because of this fact, but because he is the most important element, capable of the greatest resistance defensively and productive of the deadliest effects offensively. Everything else that goes to make up an army—non-commissioned officers, officers and auxiliary troops of whatever character, cavalry, ar-

tillery and what not—has no other purpose than to assist the foot soldier in attaining the end for which he exists. Everything else, then, should be subsidiary, should be in the nature of assistants merely, should represent nothing more than "overhead charges" in securing military results; and because of this, as well as because everything else is comparatively much more expensive than the foot soldier, it must be provided only in the absolute measure demanded. But in this measure it must be supplied. The foot soldier, even in vast numbers, well trained and well armed, is in general insufficient; and, if sufficient, attains his purpose only at the cost of enormous sacrifices. He must, of course, be directed, equipped and cared for. Non-commissioned officers, officers, supply and administrative staff departments thus become essential. But the foot soldier alone can move but slowly, and in great bodies must move even more slowly, and he must be protected from surprise. Here the cavalry serves its main purpose in war: The foot soldier's advance against an enemy is difficult and tedious and costly in life. He must be supported by every arm and device that inventive genius has made possible. And here the artillery finds its most important purpose. The combination of these three arms—infantry, artillery and cavalry—then, together with the necessary technical forces, like engineer and sanitary troops, and the staff departments for the supply and administration of the whole, makes an army. Out of world-long experience, however, the proportion of all other arms, corps and departments to this main battle force, infantry, has become within reasonable limits fixed. But merely fixing the proportion of these several arms is insufficient. They must not only be correctly proportioned, but combined into units making their collective use possible. This is why regiments, battalions and companies can never be combined into an army. These are units composed of but a single arm and are merely elementary in the way of military organization. True units of military organization—that is, units composed of all arms, are the *tactical division* and the *army corps*. The latter is a common unit in many of the greater armies of the

world, but it is practically no more than the combination of two or more tactical divisions and may therefore be neglected here. The infantry division, then, as it is commonly called, is at once the smallest tactical and administrative unit into which an army can properly be divided and the largest one essential to organization. Without it, or without some similar tactical unit, organization is impossible, correct training for battle is out of the question, and supply is rendered difficult and unnecessarily expensive; indeed, we may say that the forces in whatever number provided are incapable of collective use until organization in this way has been completed.

The infantry division is, roughly speaking, at full strength about 20,000 strong. It is a complete army in itself, self-sustaining and capable of independent action. An army, however great, is no more than a combination of so many divisions. Apparently, then, with our army we should be able to form some four divisions, and if we had four divisions we should have an army, small, it is true, but still capable of effective use in time of emergency. But far from having four divisions, the existing proportions and distributions of our troops make it impracticable to form even one complete division. While, therefore, we have a military establishment, we are not only without an army in the true sense, but have not even the forces from which one may be organized. And we are spending a hundred million dollars annually to accomplish this result.

Without organization as an army our military establishment must needs be administered thru territorial commands. Thus we have at present three territorial "divisions" (altogether different, be it noted, from tactical divisions), which are subdivided into numerous territorial "departments." This territorial system, while unavoidable until some military organization is provided, is itself sufficient to account for the army's unreadiness, inefficiency and extravagance. France was in the same condition prior to 1870. Almost the first military result of her defeat by Germany was the change from a territorial to a tactical arrangement of her

forces. In other words, she organized her army. We are in the same state in this respect that France was more than forty years ago. Organized brigades and divisions, the first thing required when emergency comes, do not exist. The whole country is divided territorially, and the troops within these territorial regions are assigned to the "command" of an available general officer known as the department or division commander. But he is a territorial, not a tactical commander. His "command" represents nothing in the way of a unit known to the military world. He cannot use it as a military body in war or even in any minor emergency. Militarily speaking, he exercises only a titular command. He is practically no more than a civil administrator governing a proportion of the population by military forms. His authority is more apparent than real. It is a system devised purely for peace administration, and war or other emergency means complete change. No two of these territorial commands are the same in size, in the number or proportion of troops, or in the number, character or location of garrisons. The general and the staff officers serving with him gain no experience useful to them in a campaign, and very little that serves them when transferred to another territorial region, or of use to them in administering, training and supplying troops militarily organized.

On the other hand, if organized into tactical as distinct from territorial divisions, each such command would be the same as all others in number and proportion of troops; the condition and requirements for supply and training would be the same, and the passing from peace to war footing would mean nothing more than filling the ranks to their proper strength. This would be the gain in a military sense. But there would be gain also in an economic sense. The mere emphasis placed on military readiness by a proper military organization would gradually force redistribution of troops in such way as to bring them not only closer together geographically in each tactical unit, but generally toward the strategic points for use offensively or defensively, and toward more accessible places from the view-

point of supply and movement of troops. The emphasis put upon correct military development and training would lead us away from the unmilitary method of quartering our troops now followed in the so-called posts, badly located generally and built always at extravagant cost, and toward modern military barracks that shelter the troops comfortably but economically, without demanding the employment of the larger part of their time in the mere administration and upkeep of their quarters and grounds. The annual saving from these things alone, the cost of transportation of troops and supplies, and the cost of construction and upkeep of posts, would run into the millions of dollars.

Militarily speaking, there is perhaps no greater evil resulting from our present unfortunate system than the centralization of all power and authority over the army in the War Department. In war such centralization must give way to proper distribution of control or break down, and so it is, as in all other things, at the very moment for which all our preparations presumably have been made and at the time all things should be working with the highest degree of efficiency, little or nothing with us can be found to work at all, and the whole machine, including the headquarters itself, is involved in the confusion of change. Yet centralization now is unavoidable. The territorial commanders have, as already shown, little real authority. They can be given no more. The army as a whole is the only unchanging thing in the army, and so must be administered and controlled entirely by the only office that has a view of the whole establishment—the

War Department itself. A tactical organization means at once proper distribution of authority.

The lack of organization has wholly prevented the growth of that spirit of unity among the parts of the army essential to success in the time of its actual employment. Where the parts are neither trained to work together nor properly proportioned in size, correct or efficient combination is impossible. Teamwork, then, is out of the question. But, worse than this, the result has been that each arm or department of our service, forming no part of any recognized unit, has been left to develop in itself separately and to struggle, not for the whole, but for itself alone. The results have been, of course, lack of sympathy where sympathy is essential, and the growth of jealousies and selfishness to a degree not always pleasant to witness, tho altogether natural under the conditions and unavoidable so long as humanity is what it is. But a tactical organization would fix the proportion of the arms and departments in their proper strength, the only way in which they can be used in time of emergency, and the only way in which they may be regarded as useful at any time. It would reduce, if it did not completely end, the separate struggles for existence or increase. It would tend to produce realization of interdependence of the parts and respect for the functions of each. The efforts of the whole would have to be exercised for the good of the whole, and unity of purpose, that prime requisite for success in war, would take the place of discord and disunion—those two breeders of defeat that have stalked thru all history.

WASHINGTON, D. C.

One District Messenger

BY SCOTT NEARING

AUTHOR OF "SOCIAL ADJUSTMENTS," "THE SOLUTION OF THE CHILD LABOR PROBLEM," ETC.

IT was two hours before sunrise and the morning air of February was biting cold. A theater ticket sale was on and people were standing in line and waiting. A boy in messenger uniform straggled up and took his place in

ain't no places open no more—what'll we do?' The other feller he looks over and sees me and he says, 'There's a feller what knows, let's ast him.' So they comes over and I says, 'What's up?' One of them gives me half a dollar and says,

"THE FELLERS WHAT KNOWS"

the line. We knew each other by sight and he started to talk.

"I ought t'a been here first—I was sent over here at six last night. I stays till one o'clock this morning and then I see a good chance, an' I skips off."

"A good chance? What do you mean?"

"Two marines comes along here and one says, 'This is a bum town, there

'You know the places what's open—take us to the nearest.' So I takes 'em to 1624. There's only two places open around here now. The reserves has raided all the rest. But they ain't touched 1624 and I know the woman what keeps it. She gives me half a dollar apiece for all I brings around there. She's a dandy, she is. She's asked me to marry her a couple of times, but it ain't no go. I

don't get married yet a while. So you see I makes a dollar and a half out o' that there business and loses first place in the line. 'Tain't no matter—I'll tell the feller what sent me here that there was people ahead o' me when I come."

"What hours are you working now?"

"I'm on the regular night shift. I looks sixteen, so nobody never says nothin' to me. Sometimes they keep you on part of the day, too, but that ain't often now. They mostly does that around Christmas, tho."

"Is night work harder than day work?"

"No, it ain't harder, but you get sent to worse places, and you've got to carry heavier loads. There's lots of tips on the night shift, tho, and lots of boys likes to get the job. They don't let no one

work nights that ain't sixteen. These here factory inspectors was around the other night, and they said no work for boys under sixteen after nine. If you wants to work under sixteen, yer old man has got to swear that you're sixteen or over. That's a cinch, only they stick you a quarter."

"Can you get an affidavit if you are under age?"

"Sure—only, if you looks very young, it's risky, and the feller sticks you half a dollar for the affidavit. This here life is awful hard on a feller—no sleep all night and somethin' doin' all the time; I guess I'll take a little snooze."

The morning broke, cloudy and lowering, over this future citizen of the Republic, who sat dozing on the sidewalk.

PHILADELPHIA, PA.

The Angels

BY CLINTON SCOLLARD

BENEATH the plane-trees by the city wall
Sasan and Sakim strayed at evenfall,

Holding sweet converse, when upon them came
One, Abdul-Khattab, who cast words of shame

On Sakim's name, nor ceased to vilify
Until the infuriate man made fierce reply;

So Sasan left them, in despair of truce,
Tossing the shuttlecock of vain abuse.

"Why didst thou fail me?" grieving, Sakim cried,
Meeting his friend upon the morrow-tide.

"Whilst thou were silent," gravely Sasan said,
"I saw ten angels hovering round thy head,

"Who, when thou spakest, faded from the view:
As they forsook thee, I departed, too!"

CLINTON, N. Y.

The Harvester

FEW authors of the day have the knowledge and the elemental power of dramatization to lay the scenes of a story in a forest and keep it faithful to the life of the earth and to the life of a man in such an environment. Usually, when the effort is made, the woods become merely the stage setting for an erotic performance, where the chief characters disgrace themselves exactly as they would in a play of feverish urban life. The author simply pollutes the virgin earth with all the modern vices and calls it "nature." And it is nature dishonored with unbridled instincts. So many gifted novelists have written so many romances of this kind that one might conclude that the pioneer man was no better than a wild ass, looking for a short spring-time diversion in love. As a matter of fact the writer who understands the gospel of the earth, the silence and seclusion of the woods, the calm placidity of far inland waters, the oaken manhood of great trees, the fragrant testimony of deep green heart leaves sweetening the air, the novitiate modesty and whiteness of the first spring flowers, knows that no ethics in modern civilization, no iron-bound customs of modern society make so strongly for virtue and health and endurance in the minds of men and women. Mrs. Gene Stratton Porter's new novel* is an illustration of this harmony and intimacy which does rightly exist between a man and a forest. In *The Harvester* she has not only dramatized, but proved the purifying and preservative forces that are always present and predominant in such a situation. This is why the story is so popular. It is utterly simple, nothing in the plot to appeal to morbid interest or curiosity. We really prefer what is good and clean in man and in nature if we can get it portrayed in fiction. "This portion of the life of a man of today is offered," she writes in a fore-

word, "in the hope that in cleanliness, poetic temperament and mental force a likeness will be seen to Henry David Thoreau." But the likeness is deeper, wider and more far-reaching in its significance than to the eccentric and somewhat affected pose of the Hermit of Walden. There is not a financier in Wall Street, not an artisan, nor grocerman, nor clerk in any city who reads this story who will not discover in himself some dim relationship, buried beneath the dry and dead leaves of commercialism, to this medicine man, who lived with his dog in a cabin in the green shade upon the banks of his singing water. A vacation likeness to be sure, for few men of today are sufficiently hardy in mind or body to endure such an existence longer than three weeks. But that is the fault of our kind of civilization, not of the life portrayed in *The Harvester*.

The girl scarcely counts in the tale, except as she affords occasion to illustrate the virginal love of a forest man. She is simply the frail, thin-stemmed thing from the city transplanted in hardy soil who has the usual difficulties getting acclimated. And no critic will be able to praise the peculiar doctoring method the author has chosen for this purpose. Seeing that the Harvester is the husbandman of medicinal herbs, it is too obvious how he experiments upon her with his concoctions, as if this was the only way to bring out the intellectual and scientific side of his character. The plant from which asafetida is made is one of the few not mentioned among those he cultivates, but one has the feeling that if he had given Ruth enough of this, three times a day, he would have had less difficulty in domesticating her. The Harvester himself approaches the ridiculous now and then in the ardor and simplicity of his character. But the same objection may be made to some great poetry if you lack the epic sense.

The book has another unique claim to originality. This is the first time the entire botany of the drug business has been

*THE HARVESTER. By Gene Stratton Porter. Garden City, N. Y.: Doubleday Page & Co. \$1.50.

exalted into the flowering garden of romance. The Harvester has made himself rich and famous cultivating spice bushes, mullen stalks and ginseng, not to mention fifty other herbs which figure almost like characters in the story, and all of which are used in compounding remedies for the ailments of men and women. The effect of this medicine farm upon the imagination of the reader is that of an immense flower garden, spread in unending variety of blossoms in the shade of the forest, along the banks of the lake, on a sunny hillside and in long, flowing hedges about the home of the Harvester. When one compares the charm and reality of this feature of the story with the hairpin horticulture of the average garden romance, where the heroine dresses too adorably for digging about a few scrub rose bushes and lily bulbs, one receives that impression of reality which is the chief attraction in any work of life or fiction.

The works of Gene Stratton Porter, from her "Song of the Cardinal" to this last book, will in time furnish another strong argument for the preservation of the forests of this country. We shall come to understand that men used these far, dim, green solitudes of nature in which to heal themselves of the fevers incident to the crowded fierceness of modern life. We shall understand at last that every man and woman who have their homes in cities is living in exile, under alien and injurious influences which report themselves in vices and illnesses.

Three Books on Heredity

THE values of these books to the general reader are approximately in inverse ratio to the sizes. Rignano¹ challenges the traditional open-mindedness of the scientist, but he does not convince. An engineer by training and profession and a philosopher by temperament, his interest in sociology leads him to speculate upon the mechanism at the basis of

life. The result is interesting to those of similar interest and temperament, but is likely to be exasperating to scientists of a different type. This work first appeared in 1906; naturally the author does not refer to important results obtained by biological investigators since that time. But neither does he refer to a single work in experimental biology bearing on his main thesis more recent than the last decade of the last century. Of Mendel he seems never to have heard, and all that he knows of DeVries he learned before the great Dutchman published his great work. Moreover, Rignano seems to be unaware of the great change that has taken place in the very form of the problem of heredity since the pregnant theories of Weismann became common property. The problem used to be, "How do the characters of the hen get into the egg?" and a difficult problem it was. Now the biologists are chiefly concerned with the question, "What is there in the egg to correspond to each of the characters of the hen—*into which it will develop?*" In other words, we assume today not that the character of the parent determines the character of the offspring, but that the character of the germ determines the character of the parent as well as of the offspring. This is an important distinction for all who would understand the modern trend in the analysis of heredity; it is a distinction, however, which Rignano has evidently not made a part of his working philosophy. He attempts to explain *how* characters acquired during the lifetime of an individual may be so transferred to the germ as to cause the next generation to present the same characters; it is more important to find out now *whether* such transfer actually takes place. Those best informed on the subject are agreed that such transfer has never been positively demonstrated. Rignano evolves a "centro-epigenetic" theory of development in which specific nerve currents play an important part. Sometimes these currents are to be conceived as waves of force; on other pages they are streams of specific substances. The translation does not help to clarify the intricate thoughts; on the contrary. That this is not altogether due to the difficulties of the author's style may be in-

¹THE INHERITANCE OF ACQUIRED CHARACTERS. By Eugenio Rignano. Translated by Basil C. H. Harvey, Assistant Professor of Anatomy, University of Chicago. With an Appendix on the Mnemonic Origin and Nature of the Affective Tendencies. Translated by L. C. Robinson. 8vo, pp. 413. Chicago: The Open Court Publishing Co. \$3.

ferred from the appendix, which is in very readable English.

Castle's book² is intended as a general exposition of the principles of heredity, with special reference to animal breeding; the aim of Doncaster's book³ is still broader, assuming that the reader's interests are not restricted. Both books do well what the respective authors contemplate. Doncaster describes the statistical as well as the experimental methods of studying the problems of genetics; Castle confines himself exclusively to the results and methods in the field of "Mendelian" experiments, and derives his illustrative material as well as the beautiful plates largely from his own work with guineapigs, rabbits, mice and rats. In both books there is sufficient description of the structural elements involved in heredity to enable the layman to understand the argument and the problems. In accordance with the purpose of the lectures upon which his book is based, Castle shows in detail how new characters arising in animals may be permanently established by the breeder. Every one to whom this subject is new must be impressed by his account of how a pink-eyed albino mouse, when crossed with a pink-eyed pale straw mouse, may give rise in the second generation to sixteen colored-eyed animals of distinct color patterns, in addition to sixteen albinos that all look alike, but have distinct properties in heredity, besides a host of "impure" albinos with varying possibilities.

On the question of transmissibility of acquired characters, Castle is radically outspoken: bodily influences are not inherited. "*This knowledge [sic] we owe to Weismann, who showed experimentally that mutilations are not inherited.*" Doncaster is more conservative: we must guard against dogmatism in such matters. On the other hand, Castle still has a strong feeling that selection is an effective agent in the evolution of characters, notwithstanding the shrewd analysis of the evidence made by Johannsen in recent years.

Doncaster points out some of the practical problems that must wait upon a more thoro knowledge of heredity, such as the transmission of certain diseases, alcoholism, crime, the preservation of the socially unfit, etc. Castle gives more attention to some of the new problems that have arisen in the course of recent experiments, such as the apparent reversal of dominance, "potency," the relation of selection to the stability of characters and others. Both books are well printed and well illustrated with diagrams and pictures; both give references for further study, both are provided with adequate indices. Doncaster gives a glossary of technical terms that should be helpful for the beginner. The subject of heredity is coming to play an increasingly prominent part in the thought of the world, and these two books furnish excellent starting points for those who have not "kept up."

✱

Yiddish Dictionary. Containing all the Hebrew and Chaldaic elements of the Yiddish language, illustrated with proverbs and idiomatic expressions. Compiled by Dr. C. D. Spivak and Sol. Bloomgarden (Yehoash). 8vo, pp. 340. New York: Yehoash Publication Society.

It is not necessary to give the longer Yiddish title of this book in the Hebrew letters. Altho the Yiddish speech is based on German, it is full of Hebrew and Talmudic words, which need a dictionary for the unlearned Jew of East European birth. The volume has a foreword and an introduction, which they can read who understand. The latter is mainly grammatical, both Hebrew and Yiddish, and we learn how corrupt the German is from such a short paradigm as this, which we transfer from the Hebrew letters: "*Ich hab, du hast, er hat; mir haben, ihr hat, sie haben.*" The bulk of the volume is given to the dictionary of words of Hebrew and Chaldaic origin; and this is followed by appendices and proverbial expressions, biblical or Talmudic, which are worth the reading, for they are often pithy. Biblical names receive their interpretation. It appears to be a very useful book for Yiddish-speaking people, especially as Yiddish books and papers have so large a circulation.

²HEREDITY IN RELATION TO EVOLUTION AND ANIMAL BREEDING. By William E. Castle, Professor of Zoölogy, Harvard University. 12mo, pp. 184. Illustrated. New York: D. Appleton & Co. \$1.50.

³HEREDITY IN THE LIGHT OF RECENT RESEARCH. By L. Doncaster, M.A., Fellow of King's College. (Cambridge Manuals of Science and Literature.) Cambridge: The University Press. New York: G. P. Putnam's Sons. 40 cents.

Literary Notes

....Henri Poincaré's article on *Chance* is translated by G. B. Halsted in the January *Monist*.

....Mrs. Isobel Strong's tribute to *Robert Louis Stevenson* is an informal memoir, but a welcome one. It is issued by Charles Scribner's Sons (pp. 87; 50 cents).

....Collectors of various kinds will find of decided interest *The Bargain Book*, by Charles Edward Jerningham (Marmaduke) and Lewis Bettany (Frederick Warne & Co.; pp. 339; \$2.50). They will enjoy the volume for its entertainment in anecdote, its instruction, and its illustrations.

....We reserve for review at a later date Mrs. Marks's "Book of Songs and Shadows" entitled *The Singing Man*, published in very attractive style by the Houghton Mifflin Company. (*The Singing Man*, by Josephine Preston Peabody; \$1.10.)

....*The Story of the English Bible* (Pentecostal Publishing Co.), by Preston B. Wells, is a plainly told tale of the manuscripts, versions, textual criticism, and translation labors that have gone into the making of the great English versions of the Scriptures now in use, including the American Standard.

....That Kipling and his followers have not exhausted the possibilities of India as a source of good short stories is proved by the volume *The Garden of India*, by Michael White. (Duffield; \$1.25.) Sacred monkeys, alligators, cobras, jewels, dancing girls and yogis make a striking combination with adventurous young men and women from America.

....Rev. Julian K. Smyth has issued thru the New Church Board of Publication an attractively made volume of sermons, condensed and arranged one for each week in the year. His purpose, as indicated by the title, *Religion and Life*, is so to interpret religion that it may permeate and illumine every-day living. Spiritual significations are everywhere drawn from the simplest facts.

....Some of our subscribers have been kind enough to inform us that Mr. Plato, whose interesting Utopian romance, "The Republic," we reviewed in these pages on January 11, died some time before the work appeared in print. We can only express our sincere regret that so promising a career should be brought to such an untimely end.

....The Hastings *Encyclopedia of Religion and Ethics*, invaluable for reference not only to the church worker, but to the psychologist, sociologist and anthropologist, has completed the fourth of its large volumes, which begins

with "Confirmation" and ends with "Drama." The longest article is that on "Demons and Spirits." (Scribner: \$7.)

....William Savage Johnson's *Thomas Carlyle: A Study of His Literary Apprenticeship, 1814-1831* Yale University Press; pp. 136), will interest no one outside the academic or bibliographical circle, and we do not guarantee it to interest every bibliographer and academician. The book is uncommonly dull for its size and subject.

....Ginn & Co. issue *Gardens and Their Meaning*, by Dora Williams. (\$1.00). It is meant for teachers and embodies excellently the results of the author's experience in teaching agriculture for children in the public schools. It is compact, trustworthy and is illustrated; and it opens the way to what is bound to be a more popular as well as useful department of education.

....From the Government Printing Office we receive the *Navy Year Book*, being a compilation of Annual Naval Appropriation Laws, 1883-1911, including provisions for the construction of all vessels of the "New Navy." Tables show the present naval strength in vessels and personnel, and the amount of appropriations for the naval service of the United States and other nations. Woodbury Pulsifer edits the volume.

....Professor Frederick Taber Cooper is the author of a volume of fourteen essays entitled, *Some American Story Tellers* (Holt; pp. 388; \$1.60), all of the story tellers being contemporaries of our own, and the majority alive at the moment. Some of the papers are of no durable value, others we welcome as likely to assist in fixing the importance, or want of importance, of recent fiction. Professor Cooper is, on the whole, a rather genial and not too exacting critic, asking above all, like the big public, to be entertained, and not exaggerating the importance of his own task.

...."To convert the hard, high-pitched, nasal tone which betrays the American voice into the adequate agent of a temperament which distinguishes the American personality, and to help English speech in this country to become an adequate medium of lucid intercourse" is the purpose of Katherine Jewell Everts's *Vocal Expression* (Harpers; \$1.00)—a rather "large order," but the writer has won recognition as an authority on voice culture and she is right in holding that the real and only "reliable remedy" lies with the teachers in American schools and colleges. Her book will be found both interesting and valuable by others than the teachers to whom it is addressed.

Two new quarterlies devoted to the science of missions to non-Christian nations deserve special mention, one Protestant and the other Catholic. *The International Review of Missions* has issued its first number from Edinburg (\$2) and continues the work of the World Missionary Conference of 1910. This is no new subject, as we know from *The Missionary Review*, the monthly published in this city, and from the pioneer German *Allgemeine Missions-Zeitschrift*, conducted for thirty-seven years by Dr. Warneck, of Halle, who is a contributor to this first number, as is also Ambassador Bryce. The Catholic quarterly is the *Zeitschrift für Missions-Wissenschaft* of Münster, and has completed its first year. The editor, Professor Schmidlin, says that hitherto there has been no organ for the scientific study of Catholic missions, as well as for current reports. With this new movement a professorship of missions has been established in Münster and an "Institute for the Scientific Study of Missions" is being organized.

....In the *Revue* of January 1 we read an article on "Le Nouveau Théâtre Irlandais." Here, however, Synge, Mr. Yeats and Lady Gregory are under consideration. "Cathleen ni Houlihan" is, writes the critic, Mr. Yeats's greatest success as a stage-play; if, "from the literary standpoint, it is not Mr. Yeats's best production, it is a play that goes straight to the heart of every Irishman, and we know that an Irish public is guided by heart rather than by literary judgment." The reasons which explain the popularity of this play, wherein Cathleen personifies Ireland herself (as the eighteenth century poets personified her in their love-verses), suffice also to explain the bitter opposition of many Irishmen to hearing out John M. Synge's "Play-boy of the Western World." Some time ago a certain Irish-American cleric denounced Synge's "Riders to the Sea" as a plagiarism of Loti—a naïve criticism; but the *Revue* says naught of Loti in this connection, while noting that the subject of the play suggests the "Good Hope" of Heijermans. It is instructive to note the fine translation of the title of Synge's longer play: "le Casse-cou de l'Ouest." The "moral" objection to the play is pityingly discussed by the critic, who concludes that, not morality, but "national vanity," has been wounded by this "painting of primitive manners." The higher beauty of the play lies in

"the poetic prose that Synge manipulated to a marvel; a prose full of wild and new imagery. . . . It is a young and bold language, conscious of its forces, joyous at living. This language, so different from the anemic English of the twentieth century, was spoken in the England of Shakespeare, and is still spoken in Ireland, where the popular imagination is not yet dead. Nothing in our contemporary literature surpasses in beauty at once tender and wild the love scene between Christy and Pegeen."

Pebbles

MOTTO for escaped spies: *Ex tenebris LUX.*
—Punch.

A BOX of eggs (contents not yet known) has also been received from Mrs. A. V. Doyle.
—Launceston (Eng.) *Examiner*

"Do you love me, darling?" she coaxed.
"Sweetheart, I love every hair on your bureau!" he fervently answered.—Gargoyle.

"We surprised all our friends by getting married."

"Very good. Now surprise 'em by staying married."—*Washington Herald*.

A BELLEVILLE merchant has this sign on his store door:

"Come in without knocking. Go out the same way."—*Kansas City Journal*.

"I'LL give you \$2 for this anecdote about Daniel Webster."

"What's the matter with you?" demanded the hack writer. "You gave me \$4 for that anecdote when it was about Roosevelt."—*Pittsburgh Post*.

SHE was a freshman from Vassar.

"Oh, dear!" she sighed. "I simply can't adjust my curriculum."

"It—it doesn't show any," he reassured her, blushing. And then they both talked rapidly about the decorations.—*Yale Record*.

MRS BROWN—Mrs. Jones has the worst habit!

Mr. Brown—What is it, dear?

Mrs. Brown—She turns around and looks back every time we pass on the street!

Mr. Brown—How do you know she does?—*Judge*.

"SOMETHING wrong with this item."

"How, now?"

"Says the bridegroom took his place beneath the floral bell and 2,000 volts were immediately shot thru his quivering frame."—*Washington Herald*.

A FRENCHMAN who had spent thirty years in prison was asked what change in the world surprised him most. He passed over aeroplanes and motors and phonographs and said: "When I went to prison women were quite round. Now they are flat and oblong."—*Boston Advertiser*.

PHILADELPHIA's reputation as a slow town would seem to be justified by the following story: A Philadelphian visiting a friend in New York was taken to a hotel for lunch, and was asked what he saw on the bill of fare that he would like. He chose snails, and after having eaten the portion was asked what he would take next, and said he would like a second dish of snails. When a third time he chose snails his host was surprised and asked: "Don't you have snails in Philadelphia?"

"Oh, yes," was the reply, "we have snails, but we never can catch them."

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Direct Action

If the Government has such a case against fifty-four or more labor organization leaders as the newspaper accounts indicate the policy of "direct action," will be expounded to the community and reduced to lower terms in one comprehensive effort.

The name is new to American ears, but "direct action" as a method of waging the contest between unionized wage-earners and their employers has been practised at least since the days of the labor riots in Rome, and probably since the earliest organization of artisans at Babylon. As a modern incident of "capitalism" (to use the word in the meaning which socialism imputes to it), "direct action" has been the favorite strategy of labor union leaders of the ruthless sort, ever since those turbulent days in the English steel and iron district which Charles Reade pictured in his dramatic story of "Put Yourself in His Place."

In its up-to-date development, however, direct action includes both practice and theory. It has found a philosophy of self-justification, thru which it ap-

peals to a class of anarchistic and revolutionary minds outside of labor circles. The communist-anarchist and the syndicalist interest themselves in the philosophy, while labor union leaders get busy on the performance. The socialists are divided. The parliamentary socialists (a majority of the party) hold that "the social revolution" must be achieved in the political and legislative arena; they are opposed to direct action. A radical wing of the party, however, is as strongly in favor of direct action as the syndicalists, the communist-anarchists, and the labor unions are.

Not all forms of direct action are favored by all the persons who accept the direct action philosophy. The man who believes that the struggle between a working class and a capitalist class must assume the uncompromising character and develop the mercilessness of civil war—because educational and political methods have failed, and offer no promise of success—naturally stands ready to use brickbats, torch and dynamite, as weapons legitimate in a contest of mere brute strength or endurance. On the other hand, the man who believes that political and educational efforts may accomplish something, tho not all, may advocate the strike with picketing, the boycott, and perhaps a certain amount of sabotage—i. e., the wilful destruction of employers' product or plant. A very few direct-action idealists, here and there, accept the teachings of Tolstoy. Despairing of political methods, or despising them, and refusing to countenance force, they would exploit to the utmost the direct action of passive resistance.

Now, it happens that one of the chief arguments urged by the direct actionists (whether violent men or mild), is punctured and destroyed by the facts brought to light in the case against the McNamaras and the organization leaders under arrest. The argument in substance was: The mass of wage earners, the world over, are simple-minded, elementary human beings. They are not equipped with education and they have no leisure, but they have passion and will, endurance and determination. They cannot grasp the ways of the politician,

nor understand the sophistries and perversities of the law. Yet they must play their part in a class struggle. It must be an elementary part, and it must be played in a straightforward way. For these men direct action is the only possible action.

This argument, if valid, would justify a kind of mob movement, a crudely instinctive sort of collective effort, without intellectual content or organization. It might be violent or merely doggedly obstructive, according to the temper of the unsophisticated thousands or millions participating in it. It could not become a cleverly conducted campaign of crime. That always calls for intellectual ability.

The "direct action" brought to light by the case against the McNamaras and the men "higher up" was in every respect at variance with the elementary onset of an inarticulate mob. It was action planned with devilish ingenuity, secretly perfected, and directed by an "inner circle" of intellectually alert, exceptionally able, entirely unscrupulous individuals. It was direct action of precisely that kind which the most extreme writers among the anarchistic revolutionists justify, namely, the carefully planned and unsparing employment of force, in contravention of the criminal law, by a daring minority whose business it is not to take orders from any majority (in tame acceptance of a banal democracy), but with resolute initiative to offer an example for the multitude to follow.

It is at least interesting, we think it is also significant, that Harry Orchard, who is undergoing life imprisonment for a notorious crime of "direct action," in the remarkable article that we publish this week, explicitly repudiates the notion that direct action is a product of the mob-mindedness of a human mass denied any other way of participating in the struggle for a better existence. All the direct action that Orchard knew about (and he knew about a great deal) was devised and directed by the "inner circle," which took extreme precautions to prevent its doings from becoming known to the rank and file. It was the direct action of criminal conspirators, not of masses of oppressed men.

There is no hope for labor in direct action like this. Now and then direct action of the peaceful sort may be useful under circumstances exceptionally unfavorable to the success of other policies. But the chances are extremely small that organized labor will, from this time on, make headway unless it sets about the work of developing a great educational policy. Ignorance may have been the mother of devotion to the labor leaders now under arrest, but ignorance will not further emancipate the wage-earning masses.

✽

Dr. Sun

So far as the world outside can judge, the Chinese republic is now assured, and assured without division, and without diminution of territory, unless Russia should play the robber's part and annex a portion or the whole of Mongolia just now while she can, and while no Power would feel obligated to prevent it; indeed, it would be difficult for any Power to do so. If we may assume that Russia will prove true to the international agreement inaugurated by the United States, China will have past, whole and complete, with but a minimum of bloodshed, thru the most tremendous revolution the world has ever seen; and for its triumphant success a chief credit will be due to Dr. Sun Yat-sen.

Thru the long years of anxious, dangerous endeavor Dr. Sun was the active, responsible but hidden leader. It was but natural that by the universal acclaim of the southern provinces he should have been chosen President. To be the first President of the Republic of China was a tremendous honor, one that doubtless he would wish to hold. He who had guided and encouraged the revolutionaries thru the struggle might well have wished to be the Washington of the mighty Eastern republic, to be held in all succeeding ages as the father of his country. But he has had the amazing magnanimity to lay down the honor before he had become fairly settled in his seat, that he might give place to an older man, and a wise and experienced statesman, whose succession will weld north and south together, will save the

effusion of blood, and will assure the union of Manchu and Chinese, and maintain the peaceable integrity of the empire now made a republic. So Sun Yat-sen steps down from democracy's throne that Yuan Shih-kai may take his place. And he does it in the most cordial way, telling Yuan that he has been chosen unanimously to the Presidency, the only man in the world's history ever so chosen except Washington. We do not wonder that his act is acclaimed as unparalleled.

How is it that Dr. Sun could be willing thus to say, "He must increase, and I will decrease"? It is the highest fruit of Christian self-abnegation, and Dr. Sun is a Christian; but there may be yet another explanation, altho neither Confucianism nor Buddhism would have taught him this sacrifice. It is a fact that a sudden tempest of patriotism has swept over the country, and it has found thousands willing to die for their country's welfare. Why has there been hitherto no such thing as Chinese patriotism, and why has it so suddenly become a consuming passion? Simply because there was, till now, nothing to excite patriotism. Can one love a country which oppresses him, grinds him down, holds him in poverty for the aggrandizement of a few thousand oppressors? It was not their country; it was the fief of the Manchus. Chinese could not love a country enslaved, plundered. But the hidden fire was in the bones, and as soon as the opportunity came the flame burst out into a conflagration of patriotic fury. Dr. Sun was possessed of it. Life was nothing for his country, fame was nothing. He believed that his own abdication and the choice of Yuan was the hope of peace and victory; and so he stepped down and welcomed in his place a man whom China knew, a man whom the world knew, who had proved himself able to guide the affairs of state at home and abroad.

We believe he was right, as he was grand. China will never forget his service as the creator of the republic, nor his amazing self-sacrifice as its deliverer. Our own Revolution cost us seven long years of war; Dr. Sun has closed the period of the vastly mightier

Chinese revolution in half as many months. Perhaps Yuan Shih-kai is intellectually a greater man than Dr. Sun, as Dr. Sun is the greater man spiritually. Yuan has conducted himself with an astuteness of the very highest order. We believe that he has all along desired the republic, or believed it inevitable; and all his maneuvering has been to hold back the Manchu princes from resisting it, and to make the abdication of the imperial family as easy and peaceful as possible. So he temporized until he could bring in the army to Peking, his army, which he had trained and created; and at the right time he forced Manchu submission, and the proclamation of the republic by the Manchu court itself. The diplomacy was magnificent, and it was right that the man who alone had achieved it should be the first President of the united nation, as Dr. Sun was of the Southern republic. But for all succeeding generations the name of Sun Yat-sen will stand prime in national history as that of the man who made the republic possible and then willingly subordinated himself for its peace and glory.

Have we such patriots, such statesmen, in our own country? We have those in plenty who are eager to take the honor of the Presidency; but how many are there who would cheerfully withdraw from the race that a better man might be chosen? Where shall we find the sacrificial spirit? It is a noble country, a race second to none, that can show two such patriots, such statesmen, as Sun Yat-sen and Yuan Shih-kai.

Mr. Roosevelt and the Republican Party

THERE is no longer any room for doubt as to the attitude of Mr. Roosevelt toward the Republican Presidential nomination. The reports given to the public by many prominent men after interviews with him are to the effect that he would take the nomination if a majority of the convention should offer it to him. "He will accept," says Judge Lindsay, of Colorado, "because the people are recalling him to a job that he left unfinished. I

know this because of several visits to his home in the last year." Letters are published in which the ex-President confirms the statement and uses the phrases which first were printed in a long interview, on January 30, by a Chicago newspaper. The magazine of which Mr. Roosevelt is one of the editors publishes editorial articles showing why his solemn promise, in 1904, that he would never accept another nomination, should not restrain him from taking one this year. He begins to talk like a man who seeks the nomination and who enjoys the contest with his competitor. For example, he tells reporters that he has received extraordinary and highly interesting reports as to influence exerted by certain banks to procure the election of Taft delegates, and says he has been informed that a majority of the delegates in the Florida convention "wished to vote for me, but were prevented from doing so." He laughs at the claim of the Taft campaign manager that Mr. Taft will have more than two-thirds of the national convention on the first ballot.

Closely related to the disclosure of his purpose or aim is the bitter disappointment of Senator La Follette and a sharp attack upon the ex-President made by the Senator's campaign manager, Mr. Houser, who says:

"La Follette became a candidate because Roosevelt urged him to make the race. Then Roosevelt began, insidiously and secretly, to undermine La Follette's organization. Some people are already realizing that if this is the kind of square deal Roosevelt stands for, they do not want his kind."

Senator La Follette declines to withdraw, altho those who appeared for a time to be his most active supporters have deserted him for Mr. Roosevelt. Up to the present time forty-two convention delegates have been elected. All of these are for Taft, but the elections of a majority of them are affected by contests.

In our judgment, as we have said before, Mr. Taft deserves a renomination and it should be given to him by the party. Mr. Roosevelt said of him in 1908:

"I do not believe there can be found in the whole country a man so well fitted to be President. He is not only absolutely fearless, absolutely disinterested and upright, but he has

the widest acquaintance with the nation's needs, without and within, and *the broadest sympathies with all our citizens*. He would be as emphatically a President of *the plain people* as Lincoln, yet not Lincoln himself would be freer from the least taint of demagoguery, the least tendency to appeal to class hatred of any kind."

We have italicized certain words above because the magazine of which Mr. Roosevelt is an editor now asserts there is widespread popular discontent with the Administration of Mr. Taft because he has not been sufficiently interested in "the promotion of human welfare," and because the people have not felt his leadership "on the question of the draining of the country population into the city"; the "question of turning desert lands into a region of homes"; the question of the protection of children, etc.

Mr. Roosevelt recently said he would never desert the Progressives. If he is to stand as their representative, Mr. Taft's progressive record is certainly as good as his. We cite the President's memorable peace treaties; his remarkable recommendations for a broad extension of the merit system in the civil service; his reciprocity agreement with Canada; his policy as to the conservation of national resources on the public domain in Alaska and elsewhere, and his promotion of publicity with respect to campaign contributions. Comparison with his predecessor as to these things is not to Mr. Taft's disadvantage. We remember that the records produced during the Controller Bay controversy showed that when the ex-President shied a stone at Mr. Taft's action he forgot that he lived in a glass house. And with respect to Trusts, is it not more progressive to enforce the law than to express disapproval of the suit against the Steel Corporation, as ex-Secretary Garfield did in a letter which Mr. Roosevelt printed, with comments which were generally regarded as sympathetic? So far as treatment of the Trust problem by legislation is concerned, Mr. Taft and his predecessor are substantially in agreement as to what should be done. We have recently spoken at length about the President's relation to the tariff blunder of 1909. It cannot be denied that he sought to improve the tariff law. The same law was in force during Mr. Roosevelt's

service of seven years. Did he ask for a revision of it? We are not attacking Mr. Roosevelt, who was a good President, but are considering certain questions raised by some of those who now support his candidacy mainly because they dislike Mr. Taft.

The Republican party would stultify itself by refusing to renominate the President. At the risk of repeating what we said some weeks ago, we direct attention to the ridiculous attitude of a party that, having enumerated in its platform the achievements of an Administration, says to the people that it rejected the head of that Administration, altho he sought another term. This would involve a contradiction which must invite defeat.

We have said that if Mr. Roosevelt should be nominated this year, it would not be for a third term, in the original and correct interpretation of the phrase. But Mr. Roosevelt's solemn promise, on November 8, 1904, immediately after his election, was not that he would not stand for a third term, but that he would not accept another nomination. Here are the words:

"On the 4th of March next I shall have served three and a half years, and these three and a half years constitute my first term. The wise custom which limits the President to two terms regards the substance and not the form, and *under no circumstances* will I be a candidate for or *accept* another nomination."

Assuming that the editorial explanation in last week's issue of the magazine of which he is an editor was published with his knowledge and approval, we must say that we read it with a sense of disappointment, so far as his relation to it is concerned. The article closes as follows:

"In Mr. Roosevelt's specific case it is sometimes said that his statement in 1904 and 1907 that he would not accept another nomination would make his acceptance of a nomination this year inconsistent. What Mr. Roosevelt said in 1904 and 1907 referred, of course, to a consecutive third term. Mr. Roosevelt believes, although we do not share his belief, that the settled policy of this country makes a third consecutive presidential term for any man impolitic, if not improper; but the *Outlook* has a better appreciation of his intelligence than to suppose that he had in 1904 or has now the slightest idea of defining a third term except in the way in which we

have here defined it. The situation may perhaps be made clear by a homely illustration. When a man says at breakfast in the morning, 'No, thank you, I will not take any more coffee,' it does not mean that he will not take any more coffee tomorrow morning, or next week, or next month, or next year."

We assume that it had his approval, because we find substantially the same reasoning in the long interview with him, published by the *Chicago Evening Post*, on January 30. He then said:

"I used language which simply stated that I paid heed to the essence and not the form of the wise custom of our forefathers; the essence, of course, being that the custom applies just as much when my first term was the filling out of an unexpired term of my predecessor as if it had been an elective term, and that, on the other hand, it *had no application whatever to the candidacy of a man who was not at the time in office, whether he had or had not been President before*. Men at once began to ask me whether my refusal was to be held to apply to 1912 or to 1916; to which I of course responded that it would be preposterous to answer any such question one way or the other."

This will not do. The people did not, and do not now, so interpret the promise made in 1904. If the Republican party now deliberately shelves Mr. Taft and nominates Mr. Roosevelt, it will be bidding for defeat. Such action could be taken only after a bitter contest which would prevent harmony in the campaign. It would involve the humiliation of the President, the sharp disappointment and anger of his friends. It would be accepted as the party's disapproval of the four years' record of its own Administration, its proclamation that its President had been unworthy or incompetent. It would give the lie to its platform, which is adopted before the successful candidate is named by a convention. Thruout the campaign the nominee would be confronted by a broken promise and the third-term cry. Mr. Roosevelt should read thoughtfully these words spoken by Secretary MacVeagh in Michigan last week:

"I believe the 'anything to beat Taft' people will never get Roosevelt to lead them. They are dealing with a man who knows politics and with a man who has a wealth of great things of the past to cherish and protect. A third term, even if a third term were legitimized by the authority of a unanimous demand of the people, would be of far less value to him than the undimmed record of the two terms he has served."

Condemnation of Monseigneur Duchesne and His Reply

IN announcing that the Italian translation of the "History of the Ancient Church" by the well known French scholar and academician, Duchesne, had been forbidden even as a book of reference in all the seminaries of Italy, THE INDEPENDENT stated that doubtlessly the original in French would also be condemned. This has been done. Coupled with Duchesne's are the two works, "Letters to Pius X" and "The Priest," both the efforts of an ex-Paulist, as well as ex-priest, now a professor in one of our well-known educational institutions. The Paulists are the only American religious who have won a place on that long roll of renowned and also of forgotten writers. The "Life of Hecker," by the Paulist Elliott was condemned about the time Leo XIII denounced Americanism. Rome, however, forbade that the sentence be published. Now comes another Paulist, this time, however, an "Ex." These three books are the only books written by Catholics or ex-Catholics, natives of our land, which have been put on the Index, not many in the history of a Church which dates, at least as far as its hierarchy goes, back to 1789. In 1822 a pamphlet, written against his bishop, Conway, of Philadelphia, by the Rev. William Hogan, was condemned. But Hogan was an Irishman. This brochure appears not in the Index published by Pius X in 1907. In 1884 an English translation of a Spanish work on the history of natural generation, made by a Frederick Hollick, was also condemned. Of all our leading writers, only Draper's "Conflict" was honored by a place on the Index. Among our political writers, Henry George alone found his way there, but it is uncertain whether Henry Georgeism was condemned or the book "Progress and Poverty." Cardinal Gibbons could solve that doubt better than either Cardinal Farley or Cardinal O'Connell. The fullest solution, however, could be given by Archbishop Ireland or, if he had not died so lately, by Mgr. Burtzell, of Rondout, the canonical lawyer of Dr. McGlynn.

Recently Duchesne has given the story

of the publication of the condemned "History" in *L'Italie*, a French newspaper of Rome itself. In the first place, he contends that he wrote as an historian, who had to follow the lines proper to historical research. In finishing the first volume he submitted it to the Papal censor, Lepidi, who gave it the papal *imprimatur*. Furthermore, Duchesne presented the same volume to the Pope himself, who had heard Lepidi speak of it. The two succeeding volumes on their appearance were also given to his Holiness. On each occasion the Pope congratulated the author and promised to read the volume. Likewise the Italian translation, which Cardinal De Lai forbade to be used in the Italian seminaries, was formally approved on December 8, 1910, by competent authority with the proviso that it be submitted to Mgr. Faloci-Polignani, Vicar General of Spoleto, "who has not the reputation of dealing gently with Modernists." He too declared: "*Nihil obstat.*"

A curious fact about Duchesne's protest is that it is a memorial, addrest to a friend, who seemed to believe that in publishing it in *L'Italie*, he would be acting according to the wishes of Pius X, who gave it his official *imprimatur* thru his own censor, Lepidi. *Qui facit per alium, facit per se* is good canon law and civil as well. The principal is bound by the acts of his agent. The protest brings to light the petty intrigues which have ever marked the inner history of the Curia. Here we see the loudest defenders of, and the closest to, the Pope. Del Val, De Lai, the Jesuits, and all that ilk turning on the Pope when it suits them. Duchesne will die hard. The day may come, however, when his history will be taken off the Index, as was the book on "The Temporal Power" of the Jesuit Bellarmine, which Sixtus V condemned, but his successor rehabilitated.

• Behind the Scenes

WHEN you go to the theater you are simply buying \$2 worth of illusion. The scene painter has done his best to make you believe that you are looking at a distant landscape instead of a piece of canvas, the stage carpenter that the tree trunks are round, the electrician that sunlight is falling thru the leaves, the

actors that they really look like the characters they impersonate, and the author that the dialog is genuine. And you yourself—unless you are a dramatic critic—take your seat as a willing partner in this conspiracy of deception. But you may be so unfortunate as to have a friend who has the entrée to the world behind the curtain, and you may be led by curiosity or accommodation to accompany him. It is undeniably interesting to see how thunder can be made from a sheet of tin and a cannon ball, how the man at the rheostat regulates a sunrise, how the actor builds up his patrician nose out of wax, and how the angels are hung up by wires hooked in their backs. But when you go back to your seat for the next act you discover that you have been robbed. To gratify a moment's curiosity you have forever lost that innocence of the eye on which the delight of the drama largely depends. You have been cheated out of what you paid for. As you realize the extent of your loss you look with aversion upon your friend who knows the ropes and who has shown them to you. You observe with surprise that he thinks he has done you a favor, that he regards himself as a promoter of dramatic art, he who, instead of teaching you how to see the play, has taught you to see thru it.

In all the other arts it is the same. There is always a large body of camp followers and hangers on who make it the business of their lives to undo the work of those whom they profess to admire. They turn poetry into prose; they decompose the grandest music into its constituent noises; they convert a picture into painted cloth and a statue into a stone. They do not criticise a work of art, they expose it. They are like the moon trying to eclipse the sun from which it derives the light that makes it visible.

A master magician like Wagner would lift us for a time out of this everyday life into a world of gods and heroes, where momentous deeds are enacted and superhuman passions find fitting expression in superhuman music. But we are not left long to our enjoyment, for some impertinent fellow nudges us with his elbow and points out

with a snigger: "Look this way! Turn your opera glasses around with the small end to the stage. Now you see not Isolde or Brünhilda, but only Matilde Wesendonck and Frau Cosima." He is right. The goddesses have vanished and in their stead stand mere vulgar mistresses, from whom we turn away in indifference and disgust.

We are interested in Da Vinci's Mona Lisa. We do not care at all for the Signore Gioconda's wife whom the critics try to palm off in her stead. We want to see Laura thru Petrarch's eyes, not thru the eyes of those who see only Laura de Sale, née de Noves, and her eleven children. We love Dante's Beatrice, not the wife of Simone dei Bardi. It is inspiring to hear

"And it's there that Annie Laurie
Gie'd me her promise true
Which ne'er forgot will be;
And for bonnie Annie Laurie
I'd lay me doune and dee."

It is not inspiring to be told that she did forget her promise and that he didn't lay him doune and dee. Who cares if it is true. This is the realm of poetry, not science.

The only way to appreciate literature is to fight shy of the literary biographers. It was perhaps not so much of a mistake as has been supposed, that the author's will which read that his letters and unpublished works were left to his "literary executioners." Fortunately for the permanence of Shakespeare's poetry, his personality soon vanished. If the literary sleuth hounds should ever succeed in discovering the dark lady Shakespeare would suffer. Browning was killed off by the Browning clubs; not the kind that sat in a circle reading "The Ring and the Book" aloud by turns, but the kind that spent their time running down all his allusions and showing where he stole his archaic phrases and how he misunderstood them.

Publishers nowadays try to kill off any chance of their books attaining an independent and immortal life by circulating personalities of the author before ever the book comes out. The way a poet says things is important. The way he ties his cravat is not. How to tie a cravat is also worth knowing, but on such a question Beau Brummel is the authority, not Browning. We measure

a mountain by its highest peak. should we measure a man. The value of a genius to the world lies in those qualities in which he excels other men. We are interested in the things that he can do and we cannot. What he does that we also do or may not want to do is a matter of indifference to us.

A great work of art is timeless and impersonal. It stands alone. It is to be considered on its own merits. It must live its own life. The author of it himself is apt to be somewhat in awe of his creation. He recognizes that it is greater than he, so he is usually willing to retire modestly into the background. But his so-called friends insist upon his coming forward and standing in front of it. They erect the scaffolding about it, and, if they are allowed to have their way, even tear it to pieces and scatter the blocks which had been so laboriously and ingeniously put together. Any filing clerk can take the words of a poem and put them back into their proper places in the dictionary, but it takes a genius in the first place to pick the words out of the dictionary and make a poem of them. They are the true iconoclasts who substitute for the illusion of art a knowledge of the mechanism of construction and the life of the artist.

Secretary Knox and Colombia

When Secretary Knox's itinerary was first published it did not include Colombia, but in later dispatches it was said that he would go to the capital of that country. It may be expected now, however, that Bogota will be dropped from the schedule. Colombia's Minister at Washington, Señor Ospina, has informed the State Department that such a visit would be inopportune; in other words, that the Secretary is not wanted in Colombia. The Minister made his act more offensive by giving his official letter to the press. His diplomatic career in this country is closed. It is unfortunate that the Secretary, at the very beginning of his tour, should encounter such hostility in any quarter. All the other countries to be visited have sent to Washington a hearty welcome. There was reason to expect that his round of visits would distinctly serve both the interests of our Government and people

So and those of the republics which are to receive him. It is greatly to be desired that they should believe that the United States does not seek to acquire their territory or to be concerned in their local affairs, unless by mutual consent it strives to assist them, as it is assisting San Domingo. But how can we ask them to believe this so long as the Panama sore is not healed, so long as we refuse to submit to arbitration the controversy with Colombia? Minister Ospina's action was not diplomatic, and he will suffer for his conduct, but Colombia may justly complain. The question is whether we violated a treaty and ignored the obligations of international law. Such a question may with propriety be submitted to The Hague tribunal. Our Government professes to desire that all international disputes shall be settled by arbitration, yet it has persistently refused to grant the arbitration by which Colombia is willing to end this controversy. In this there is inconsistency. Before Mr. Knox started on his journey, our Government should have consented to arbitration for this case. But it declined to do so, or ignored the reiterated demand, and he started while a congressional committee was taking testimony which supported Colombia's claim. Acceptance of the proposed arbitration would have measurably promoted the success of his tour.

The Industrial Commission

While there may be such a thing as too many commissions of investigation, President Taft's recommendation to Congress urging the creation of a Federal Commission on Industrial Relations is most wise and timely. There is no doubt that the relations of capital and labor constitute one of the most important problems now before the American people. In most civilized nations the governments have taken more interest in these questions than has ours. Canada and New Zealand, for instance, have enacted very progressive laws for settling industrial differences, while labor regulations in Germany, England, etc., are much more advanced than in the United States. As the prosperity of the nation is conditioned on the good conduct of industry and the good relations

of those engaged in it, the matter is one of nation-wide concern, and comes properly within the sphere of the Federal Government. Indeed, no other agency can handle so fairly or effectively the problems involved. There is a most distinguished national committee in existence to secure the appointment of the Federal Commission on Industrial Relations, and the matter is now before Congress. The commission should be created.

Children as Exhibits The Lawrence Mills strike has not yet been settled, and meanwhile it has developed a new weapon of defense for the strikers in the bringing to New York of one or two hundred little children to be exhibited and paraded in the streets as specimens of the suffering which the operators have to endure. It is not exactly clear just how this plan will work. Doubtless some money will be given for the cause by those whose eyes see some of those little ones whose support has been taken away by the strike; but it is difficult to see here a legitimate method of carrying on the industrial war. These children are from five to ten years old. They ought to be under the care of their mothers. The military authorities in control of the place now refuse to allow any more children sent without assurance of their mothers' consent. We have laws forbidding children to be exhibited on the stage. We are glad that while here they are to be sent to school, but it is in Lawrence that they should be in school, in their regular classes and at the expense of that city. There is something not very fitting about taking a regiment of little children from their homes and herding them in halls, in conditions necessarily more dangerous to health than in an orphan asylum, and then making their pitiful condition, as they trudged the streets, an appeal in behalf of their parents' cause. So far as it is true that these children are brought to this city for adoption, the case is no better. Children for adoption should be sent to the country; and it is a very sad condition in which a strike forces parents by the hundreds to dispose of their children. Meanwhile the legitimate

efforts for arbitration and conciliation are going on.

The Little Tin Plate Father Curry, of St. James's Church in this city, is the author of a practical suggestion that deserves more than local attention. He has organized a committee that proposes to have a law passed requiring every public building, apartment house, saloon, theater, store, hotel, etc., to have placed on it a conspicuous plate bearing the name and address of the owner. The reason for this is obvious. It is to enable the opponents of unsanitary tenements, law-breaking saloons, Raines law hotels, houses of prostitution, etc., to trace back the evil to its ultimate source of responsibility. We can see no objection to this suggestion, provided the ordinance is so drawn that the real owner cannot shift his identity to some dummy. We hope the ordinance will pass our Board of Aldermen and be copied in other cities.

The Starling The danger of absolutely upsetting industrial conditions by the importation of a beetle, or a bird, or even a fungoid growth, has been already so often demonstrated that any more experiments in that line should be left to the supervision of the Agricultural Department at Washington. Whoever brought the San Jose scale into this country brought what neither he nor all the people in the United States could control, until it had invaded every State and cost us millions of dollars. Thanks to the work of our agricultural colleges we are just now getting that pest under foot. The codlin moth was a foreigner, and the Russian thistle was a foreigner, and the root gall, which is still taking terrible toll out of our gardens, was also imported. We do not know that all of these invasions could have been prevented; but we do know that the English sparrow could have been left at home and should have been left there. His annual food bill runs up into the millions, and we are no nearer the control of this pest in feathers than we were twenty-five years ago. Now we have the starling to deal with, and, what is worse, we have to find out what good

he is worth and what mischief he can accomplish. These experiments will have to go on in our gardens and orchards, with the probability very much against the starling. That it is a special friend of the sparrow, indulging in similar habits of gregarious and predacious food hunting, does not add to its welcome. It seems to have one thing in its favor, that it will eat the grub of the maggot fly that infests sheep. However, a very small part of this country belongs to the sheep breeder, and by no means are all sections infested with the fly. It is a local affair, never traveling any great distance. The merino sheep can be bred successfully where the fly is known to be present. Our mutton makers have therefore this resource, and besides, there are other ways of fighting the fly; other ways besides that of importing into this country a bird that bids fair to duplicate the English sparrow for filth and destructiveness. The sparrow can take our grain fields and the starling our orchards, making the havoc complete. Only horticulturists know how much is already wasted by the reckless habits of bluejays, mainly in Southern orchards, and orioles in the Northern. The robin also takes his fair share, and sometimes a little more, out of our berry gardens, and so also do the catbird and grosbeak. We can get along with these birds very cordially, because they balance the account with grasshoppers and worms. What we specially should look out for and be protected from is the addition of a bird that revels in waste; that comes in huge flocks, every bird in the flock picking at every grape in the vineyard. What the starling is going to do by way of compensation we do not yet know. He may have something worth the while for somebody besides the wool grower. We hope he has; all the same let us turn over this importation business to the proper authorities.

Japan in Korea

Just now we hear renewed complaint of the harshness of the Japanese government of Korea, and there is evidence in northern Korea, where the American Presbyterians have their stations, of not a few arrests of Korean converts on the charge of being impli-

cated in an attempt on the life of Governor General Terauchi. It is a matter of internal control with which our Government has no international concern, but we gather that our missionaries have made appeals to the Japanese authorities in Tokio in behalf of Christian converts. To understand the matter it must be remembered that Prince Ito, the Governor General who was assassinated, represented the civil government and was a wise and tolerant ruler placed in a most difficult position. His successor is a military man, and it is the military department which has made these numerous arrests and not the civil. Pastors and others of high character have been held in prison for weeks without trial. We are not inclined to regard these acts as indicative of hostility to Christianity, but as one of those unfortunate conditions that are likely to arise where there is suspicion, and military rule may easily become severe. It will be the wisdom of Japan to conciliate and not to frighten its new subjects, and we believe the present local tension will soon be relaxed.

In Los Angeles, Cal., the voting is done in schoolhouses mainly, in a public library and in a church, with a saving to the city of \$15,000, and they manage to do it without interfering with the school exercises or anything else except the rent elsewhere paid for the back room of a saloon. Why not do so everywhere?

We give pensions to soldiers, and Congress is planning to increase their pensions. But there are other servants of the Government whose perils are quite as great. We do not refer to Presidents, altho three have been killed, and they have to be protected wherever they go, but to our internal revenue officials, particularly in the South, many of whom have been shot, disabled or killed while hunting for moonshine distilleries. A woman writes us:

My husband, the late Joseph Dawson, was the first revenue officer to be shot and thereby crippled for life by an illicit distiller while he was, at the order of the Government, hunting for moonshine stills thru the mountains of Virginia. His brave act never received the slightest Government recognition.

A case like that should be recognized by pension or by private claim.

Insurance

Newark Fire Insurance Company

A CORPORATION which has celebrated its one hundredth anniversary certainly has a right to live. The Newark Fire Insurance Company, chartered in 1811, celebrated on November 4 last its one hundredth anniversary. It has just increased its capital from \$250,000 to \$500,000 and added \$250,000 to the surplus. The net surplus a year ago was over \$453,000; this, with the new surplus of \$250,000, and the proceeds from the sale of the old building, \$150,000, will make a total surplus of over \$850,000, while the assets have increased nearly \$300,000 and are now \$1,370,656. The Newark Fire has recently moved into its new building, and is now regarded as one of the well-known fire insurance companies of the country. The officers are E. J. Haynes, Jr., president, and T. L. Farquhar, secretary. The agents in New York are W. B. Ogden & Son, 55 John street.

THE NEW HOME OF THE NEWARK FIRE INSURANCE COMPANY

Providing that students in schools be instructed in the simple and ordinary means of fire prevention and in the careful use and handling of combustible and inflammable materials.

Prohibiting the manufacture, storage, sale and use of white phosphorus matches on the ground that they are "one of the most prolific causes of fire."

Making it a misdemeanor when a person refuses to demolish or repair an old and dilapidated building which might cause a conflagration, and giving the State Fire Marshal the right to demolish the same after due notice.

Here are reforms that should interest other States than New York. In the next issue of THE INDEPENDENT we plan to publish an illustrated article comparing the fire loss of this country with that of European countries. The showing we make is one that calls for deep blushing.

GOVERNOR DIX sent to the New York Senate for confirmation, on February 13, the

nomination of William Temple Emmet, of New York, as State Commissioner of Insurance, to succeed William H. Hotchkiss, whose term has just expired. Mr. Emmet was born in New Rochelle in 1869, and is a graduate of Columbia College, and of the law school of Columbia University. He is a member of the New York Bar, and, until recently, was chairman of the New York County Branch of the Democratic League, of which Thomas Mott Osborne is the head.

Safeguards for Life and Property

THOMAS J. AHEARN, Fire Marshal of the State of New York, recommends in his annual report to the legislature certain additional safeguards for the protection of life and property. His recommendations deserve the fullest publicity:

Providing for the issuance of licenses or permits for the manufacture, transportation, storage, sale, or use generally of explosives, highly combustible substances, or other similar dangerous articles.

Requiring fire drills in all factories and schools at least twice a month, and imposing a penalty for failure to do so.

FROM Albany comes, in two volumes, the fifty-second annual report of the Superintendent of Insurance of the State of New York (pp. 511, 1400).

Looking for a Money Trust

THE Democratic majority of the House decided, by a vote of 115 to 66, that there should be no investigation of an alleged Money Trust by a special committee, but that an inquiry as to banking and currency conditions should be made by the regular committees. At present it is probable that the work will be done by the Committee on Banking and Currency, which will try to ascertain in what way the currency laws ought to be changed. Mr. Bryan, who preferred a special committee, practically asserts that this regular committee is controlled by "Wall Street." This seems absurd, for, of the fourteen Democratic majority members, nine are from small towns in the South and three from the West. There is only one from the vicinity of New York, and he is a physician. Mr. Bryan, as the first witness called, will have an opportunity to explain.

An investigation of this kind, if soberly and wisely conducted by well-balanced legislators, can do no harm and probably will be beneficial, because it will emphasize the need of currency reform, that need which caused the appointment of the National Monetary Commission. But an inquiry in this field should not be made by men who accept the wild assertions of Mr. Bryan, Mr. La Follette or Congressman Henry, of Texas, about a greedy and cruel combination of capitalists in New York, that manufactures panics, fixes interest rates, "nominates the presidential candidates of both parties," rules everything and robs everybody, with the aid (as Mr. La Follette would say) of a press that is subsidized and wholly corrupt. Mr. La Follette began with a Money Trust of one hundred men (some of whom, we think, were dead), but has since reduced the number to fourteen, or possibly to only three. Nor should an inquiring committee be guided by the complaints of those who have failed to borrow millions in New York for large

projects. It is conceivable, for example, that bankers at the country's money center might reasonably and honestly decline to risk millions on the construction of a railroad thru Northern Mexico, where the leading industry now is the burning of railroad bridges, or on a new line of steamships so planned that, in their judgment, the investment could not be profitable. If the committee seeks to ascertain whether it is true that a Money Trust exists which makes high rates of interest, it should ask why the current rates in New York have been unusually low for two or three years past, so low that at the end of 1911 it was estimated that at least \$100,000,000 had been loaned by New York in Germany, because better rates could be obtained in that country.

There is, naturally, a concentration of funds in New York, as there is in London and Berlin, but we have seen no evidence of a foul conspiracy to compel the payment of unjust rates for the use of it, upon good security. There are evils connected with this concentration, and a committee that directs attention to them must at the same time direct attention to the glaring defects of our banking and currency system. This may hasten the enactment of remedial legislation. It may also cause an impartial consideration of the Monetary Commission's plan, in order that, if possible, it may be improved. The perfection of a currency reform project and the adoption of it are greatly to be desired.

....Sauerbeck's annual statement (London) of commodity prices shows an increase of 2 points (to 80) for the year 1911. Articles of food closed 10 per cent. higher, while materials were slightly lower.

....The average per capita consumption of sugar in the United States last year was 81.78 pounds. This was a new high record. The average has advanced to 81.78 from 43 pounds in 1881, 61 in 1891, and 72 in 1901.

The Independent

VOL. LXXII NEW YORK, THURSDAY, FEBRUARY 29, 1912 No. 3300

Survey of the World

Mr. Roosevelt's Candidacy

Mr. Roosevelt's formal announcement of his candidacy for the nomination to succeed Mr. Taft was issued on Sunday, February 25, from his editorial offices. The announcement takes the form of a reply to the letter of eight Republican Governors, who asked him, a fortnight ago, to issue a frank statement of his intentions. "This matter is not one to be decided with any reference to the personal preferences or interests of any man," says Mr. Roosevelt, "but purely from the standpoint of the interests of the people as a whole. I will accept the nomination for President if it is tendered to me, and I will adhere to this decision until the convention has expressed its preference." At Columbus, on February 21, Mr. Roosevelt made known his platform—upon which we comment editorially. His so-called Charter of Democracy was issued to the Ohio Constitutional Convention. The ex-President stated his belief in a pure democracy. He said, also:

"Many eminent lawyers believe that the American people are not fitted for self-government, and that it is necessary to keep the judiciary independent of the majority of the people." I take absolute issue with all those who hold such a position."

The newspapers regard this as a slap at Mr. Taft, who took occasion to deny, on February 24, the charge circulated of late that he said in the course of his Lincoln's Birthday address: "The people are not fitted for self-government." The White House statement adds that he "said nothing . . . which could possibly be tortured into any such construction." The President will make an address at Toledo, Ohio, on March 8; and this will

be in some degree a reply to Mr. Roosevelt's constitutional convention oration. Mr. Roosevelt's advocacy of direct nominations, preferential primaries, the initiative, the referendum, and, "as a last resort," the recall of judges, was no surprise; the sensational feature of the day was his declaration that he "very earnestly believed in" the recall of judicial decisions by the electorate, and that the people should have, in his words, "the final say-so on all legislative acts." This pronouncement, and the ex-President's much less radical references to trust legislation and business interests, are the subject of nation-wide discussion. Some of the leading members of the progressive movement have not yet accepted the principle of the recall of judges—Senator Borah, for example. The recall of judicial decisions is a far more radical recommendation.—Mr. Roosevelt went to Boston after returning from Columbus. He has held conferences there with party leaders, and there was a rumor that he would extend his trip to Concord, N. H., in order to confer with Governor Bass—one of his supporters for the presidency.—William Jennings Bryan says that Mr. Roosevelt "delivered the strongest speech he has ever made." He does not agree "with all of the arguments," but the speech was "very progressive," and "right in the main."

"One of the weakest points," says the Democrat, "is his discussion of the trust question. . . . A monopoly cannot be safely regulated; it must be prevented. . . . Mr. Roosevelt had seven and one-half years in which to test the ability of the Government to control monopolies. We had more monopolies at the close of his administration than at the beginning. One of them, the Steel Trust, used a panic to force him to consent to the swallowing of its largest rival."

At Washington The Supreme Court of the United States, in a unanimous decision, rendered on February 19, refused to declare contrary to the Federal Constitution the initiative and referendum provisions of the Oregon Constitution. This decision does not discuss the question raised as to whether the Oregon organic law establishes, not a republican form of government, guaranteed by the Federal Constitution, but a pure democracy; it simply denies jurisdiction, asserting that the question is political, not judi-

MAHLON PITNEY

The Chancellor of the State of New Jersey, appointed to the Supreme Court of the United States by President Taft, to succeed the late Justice Harlan.

cial. The decision ends the long litigation of the Pacific States Telegraph and Telephone Company, plaintiff in error, versus the State of Oregon.—On February 22 the President approved and sent to Congress a report of the commission on second-class mail matter, recommending that the postal rate on magazines and newspapers be increased from one to two cents a pound. (Postmaster-General Hitchcock originally recommended a four cent rate.) The commission finds the cost of handling second-class matter to be about five and a half cents a pound. The President transmits,

also, the report of the Postmaster-General. He informs Congress that he does not indorse Mr. Hitchcock's suggestion that the Government buy and operate all telegraph lines as a part of the postal system. He says that if it can be shown that the public would benefit, as a result, by receiving service at a lower rate he may change his opinion, but this has not, he thinks, been demonstrated.—After two hours' debate on Saturday the House of Representatives adopted by a vote of 268 to 8 the amended Pujo resolution directing the Banking and Currency Committee to investigate everything alleged in the Henry "money trust" resolution falling within that committee's jurisdiction. Other committees will inquire into phases not pertaining to banking and currency. The amendments, which make the resolution as passed more radical than as Mr. Pujo drew it up, represent a compromise between the conservative Democratic members and the Bryan supporters.—In the House, Representative Roddenbery, a Georgia Democrat, declared on February 23 that the Sherwood service pension bill which passed the House some time ago had been loaded down with "graft, steals, injustice and privilege." But the Sherwood bill stands small chance of being accepted by the Senate, which will soon take up the McCumber bill, carrying at the start an annual appropriation of about \$20,000,000. One feature of this measure provides for the publication of a list of pensioners, arranged by counties.

Various Items The Oklahoma Democratic convention will send to Baltimore a delegation consisting of ten Wilson men and ten Clark men, with half a vote apiece. If either candidate withdraws before or during the convention, the delegation is to cast all its votes for the remaining candidate.—Governors Plaisted (Maine), Gilchrist (Florida) and Baldwin (Connecticut) have declared for the Harmon candidacy.—Hiram C. Gill, elected Mayor of Seattle two years ago, and recalled before he had served a year, finished at the head of the poll in the nomination primary for city officers, on February 20, receiving some 25,000

votes, while his nearest competitor had only about half that number. The Socialists polled about 10,000 votes.—Senator Heyburn, chairman of the subcommittee which has investigated the right of the senior Senator from Wisconsin to hold his seat, spoke on February 19 in defense of the majority report in favor of Mr. Stephenson. While the majority report holds that the charges of corruption have not been proven, the minority report of Senators Jones, Kenyon and Clapp (Republicans), and Senators Lea and Kern (Democrats), denounces the expenditure of \$107,793 in Senator Stephenson's campaign for the nomination as "in violation of the fundamental principles underlying our system of government." A long and acrimonious debate is expected.—Before the Committee on Judiciary of the New Jersey Senate, charges were made on February 20 that Senator Richard Fitzherbert, of Morris County, had solicited a \$5,000 bribe of the Commercial Acetylene Company, of New York. The State Senator denies the accusation. An investigation has been ordered. The charge is that the bribe was demanded in exchange for the withdrawal of bills hostile to the gas company.

The Railroads The President urges vigorous legislation for the protection of railway employees in a message sent to Congress on February 20, with the report of the Employers' Liability and Workmen's Compensation Commission. He praises the bill drawn up by the commission urging its enactment as

"one of the greatest steps of progress toward a satisfactory solution of an important phase of the controversies between employer and employee that have been proposed within the last two or three decades."

This bill works out in detail a scheme of compensation for accidental injuries without reference to contributory negligence. The only cases in which compensation is refused are where injury or death results from the employee's wilful intention to bring about the injury or death of himself or another, and where the injury results from intoxication. Medical and hospital service are included in the plan. The extra expense involved

for the railroads is very great.—Officials of the Interstate Commerce Commission are said to look for an attempt this spring on the part of Eastern roads to secure a horizontal increase in freight rates. Conferences are now in progress between the Eastern carriers and locomotive engineers, who demand an increase in wages of from 20 to 50 per cent.—ten millions a year. The carriers will probably decline to make advances, on the ground that without increasing rates they cannot afford to increase expenses. In February, 1911, the commission declined to approve general advances in freight rates on Eastern and Western railways.—The Federal grand jury at Chicago returned indictments on February 20 against three railroads, two theatrical companies and four individuals, alleging the giving and receiving of rebates.—On the night of February 19 a lone highwayman held up a Baltimore & Ohio express train a few miles west of Piedmont, W. Va., securing \$700 in money and many personal articles from the passengers and train crew. He was arrested next day and his booty recovered.—Four trainmen were killed in the Hoosac Tunnel, near North Adams, Mass., as the result of a collision on the Boston & Maine, on February 20.—Three Pennsylvania Railroad express trains, running between New York and Chicago, have been wrecked in the last fortnight; the "Limited" (twice) and the eighteen-hour special ("No. 28").

The Strike at the Woolen Mills

The strike at Lawrence, Mass., was estimated, on February 14, after thirty-four days, to have cost, besides several lives, close to a million dollars in wages, an enormous loss of trade, and the inevitable suffering among the strikers. At that time half the 20,000 or 24,000 operatives at one time on strike were said to have returned to work. When the strike is finally concluded, it is doubtful whether the Italian operatives will be reinstated by the mill owners. Boston churches have taken up contributions for the families of needy strikers. The courts at Lawrence have been especially severe in cases of alleged intimidations.

tion of workers. W. J. Lauck, formerly in charge of the industrial investigations of the United States Immigration Commission, writes, for the *Survey*, that the most significant feature has probably been the attitude of the southern and eastern Europeans, who are chiefly responsible for the disturbance. He adds that the industry involved "is one of the chief beneficiaries of our protective system," and recalls the old argument

"that the woolen and worsted goods manufacturing industry needed a high tariff in order to protect its wage-earners from the products of the pauper labor of Europe."

This is a myth. The body of "American" woolen mill operatives is largely composed of representatives of the "pauper labor" of Europe. According to the last census the town of Lawrence had a population of 85,000, made up of the following nationalities:

English	9,000
French-Canadian	12,000
Polish	2,100
Hebrew	2,500
Syrian	2,700
Lithuanian	3,000
American	12,000
Irish	21,000
Scotch	2,300
German	6,500
Portuguese	700
Italian	8,000
Armenian	600
Franco-Belgian	1,200
Other nationalities	1,400

Total85,000

Of the foreign-born operatives one-fifth of the males and two-fifths of the females have had experience in the same kinds of work in their own countries. The average weekly wage of the male operatives eighteen years of age or over is only \$10.49, and of the females, \$8.18. Male heads of families average only \$400 a year. The average family income is \$661. The effect of these low wages is shown in the bad living conditions and congestion. The boarding group system is general among the southern and eastern Europeans employed at Lawrence. Only three out of ten males eligible to citizenship have taken out naturalization papers. Sixteen out of every one hundred immigrant employees are totally illiterate. Less than half the operatives of non-English-speaking nationalities have acquired a speaking knowledge of our language. Only 4 per cent. of the

foreign-born employees, as contrasted with 21 per cent. of the native-born, are members of labor organizations.—Joseph J. Ettor, the leader of the Lawrence strike, took the stand in his own defense on February 19, charged with being accessory to the murder of Anna Lopizzo, shot during a riot on January 29. He testified that he had always been ready to assist the authorities in preserving order. He had recommended a peaceful strike. Witnesses for the defense claim that the Lopizzo woman was shot by a police officer. On February 21 Ettor and Giovannitti, his lieutenant, were held without bail as accessories to the crime.—The strikers are indignant at the action of the police on February 24 in preventing them from sending some forty children to Philadelphia. The strikers desire a Federal investigation of this action, based by the police on "legal and humanitarian reasons." Mr. Wilson, of Pennsylvania, chairman of the Committee on Labor of the House of Representatives, has sent to Lawrence and to Boston for definite information concerning this phase, and others, of the strike. Both Mr. Wilson and Mr. Berger, the Socialist member from Wisconsin, have received telegrams from the strikers demanding a congressional investigation of alleged brutality.

Much disturbance in
The West Indies Cuba is expected, owing to the Supreme Court's decision, on the 22d, that the law suspending the civil service act (in order that Spanish guerrillas might be removed from office) is unconstitutional. One of the men so removed appealed to the court. Hundreds were ousted by President Gomez, in response to the demand of the Veterans' Association. The decision requires the reinstatement of these men and the removal of veterans who filled the vacancies. The veterans are angry, and the situation may call for such a warning from the United States as the one by which they were restrained a few weeks ago.—It is pointed out in London that by means of a bill now pending in the Parliament of Denmark a syndicate of Danish capitalists may soon obtain possession of the harbor of St. Thomas, with power to lease or sell almost unlimited rights, and that the har-

bor may thus pass under the control of France or Germany, becoming a powerful naval station.—The Government of Jamaica is considering the offer of an American syndicate, which proposes to spend \$15,000,000 in building docks and making other improvements in the harbor of Kingston.—The revolt is spreading in the northern part of Santo Domingo, altho the revolutionists were defeated in a battle last week, when forty of the Government's soldiers were killed.

The Situation in Mexico

There was great disorder in Mexico last week, with anarchy in a dozen States, bandits unrestrained, foreign residents leaving the country, and foreign owners of lost property appealing to their Governments for protection. In the north 2,000 men, commanded by General Rojas, were about to attack the Juarez garrison. Our Government reenforced the troops at El Paso, and it was understood that if shots crossed the river our field artillery would respond. At the battle of Juarez, last year, five persons in El Paso were killed, and the people of the city now demand protection. The rebels, or Vasquistas, lost 257 men in a fight near Torreon. In the south, Zapata's bandit army was whipped in a three days' engagement nine miles from Cuernavaca, with a loss of 200. It was asserted that in the north General Orozco had joined General Trevino in a movement against Madero. Trevino, one of Diaz's old commanders, was to be President, it was said; Orozco was to be commander of the army, and they had the consent of Emilio Vasquez Gomez, who recently proclaimed himself President. But Trevino, at Monterey, sent this denial to Madero:

"I have not accepted and will not accept any public office not tendered to me by the national Government. I am an honorable soldier, and loyalty will always be the guide of my acts. I shall defend the established Government until peace is restored, or I shall go down with it in accord with my convictions of duty."

At last accounts Orozco also was loyal. Gomez, in San Antonio, sent to Madero a long telegram, urging him to resign, and asserting that in no other way could peace be restored. Madero replied as follows:

"I occupy my post by virtue of an immense

majority of the votes of Mexican free voters. You were the opposing candidate, and the small number of votes you received should have taught you that the Mexicans do not desire you and disapproved of your conduct while Minister of the Interior. You abused my confidence when occupying that post, using department funds for the furtherance of private ambitions, distributing among your followers great sums of the nation's money. I will not resign. I do not fear your movement or the troubles you have created. I shall do my duty, which is to save the Republic from the perils confronting it. No revolution can be successful unless voicing public wrongs, and when the leader hides like an arrant knave beneath the protection of a foreign flag and fears to take the brunt of battle, it is especially improbable that his revolution can succeed."

Replying to recommendations from Madero, the permanent committee of Congress refused to revoke the freedom of the press, or to suspend the constitutional guarantees thruout the country, unless he would promise to resign if peace should not be restored within sixty days.

South America

General Ospina, Colombia's Minister at Washington, whose letter to the State Department, saying that the proposed visit of Secretary Knox to Colombia would be "inopportune," was published on the 19th, was recalled by his Government on the 22d, and on the following day Colombia cordially invited the Secretary to visit that country. He was then at sea, and the invitation was sent to him by wireless telegraph. There was a report that he would not accept it. General Ospina had explained that he did not intend to insult our Government, but he did not say why he had so promptly given his letter to the press. Dispatches from Bogota say that his conduct was not approved by either his Government or the Colombian people, and that his recall was not suggested by the United States. It is said that Mr. Roosevelt, when President, opposed submission of the dispute about Panama to the Hague tribunal, holding that the question was not one for arbitration, and that President Taft's opinion is the same. In the House, last week, Chairman Sulzer, of the Foreign Relations Committee, said that the taking of Panama could not be defended in morals or law, and that there must be reparation. In testimony before the committee, the opinion was expressed that the

Hague tribunal would probably require our Government to pay at least \$100,000,000. It is reported that a settlement had almost been reached when, about a year ago, Mr. Roosevelt remarked in California: "I took Panama." This interrupted the negotiations.—Friendly relations between Argentina and Paraguay have been restored, the latter having given satisfaction for Paraguayan rebels' attack upon Argentine ships.

English Affairs The coming week is likely to prove a serious one to British industry, because all efforts to prevent the great coal strike set for March 1 have so far been fruitless. The representatives of the miners' unions and of the employers have had many conferences with the Prime Minister and other members of the Government, but they have not been brought together and no basis of compromise has been reached. Sir Thomas B. Crosby, Lord Mayor of London, called a meeting of the provincial mayors at the Mansion House to consider the situation, and was emphatic in his declaration that the strike should not take place. A resolution was adopted by the mayors appealing to both mine owners and miners to consider the responsibility to the nation and not to inflict cruel hardships on the community. The efforts made by many parties to induce the miners to postpone their strike notices for a week to allow further negotiations with a view to compromise have failed and the miners in Derbyshire and Nottinghamshire persisted in their resolution to leave their work on the 27th, to be followed by the Yorkshire miners on the 28th. If the coal strike is general, it will involve some 800,000 miners and throw out of employment millions of men in other industries thru the stoppage of manufactures for lack of fuel. Large quantities of coal have been purchased and stacked by municipalities and private owners of power plants, but it is impossible to provide in most cases for more than a few weeks. It is reported that the German miners have agreed to support the English either by a simultaneous strike or by a refusal to mine coal for exportation to England. The British Admiralty has chartered four vessels for conveying American coal from Norfolk,

Va., to Gibraltar or Vigo, and has notified other shipowners of the intention of exercising its option to charter vessels in such an emergency.—The Opposition in the House of Commons attempted to pass a vote of censure on the Government introduced by Frederick F. Smith in the form of an amendment to the address in reply to the Speech from the Throne. Mr. Smith accused the Government of having "bamboozled the nation" by the promise of a measure for the reconstruction of the House of Lords, but immediately after the election the mask was thrown off and the Government took refuge behind the phrase "if time permits." This action, he charged, was a "flagrant shuffle out of a plain and positive promise under duress from the Nationalists." When the question was put to a vote the Government was supported by 324 to 231.—A Liberal member, Arthur Ponsonby, in the debate on the Speech from the Throne, criticised the British policy in Persia and complimented the work of W. Morgan Shuster, the deposed American Treasurer-General. Sir Edward Grey, the Foreign Secretary, in defending the Government, assured the House that there was no danger of Russia securing control of the country. The Russian troops now in Persia would be withdrawn as soon as the former Shah, Ali Mohammed Mirza, had left the country.—The Government has announced its intention of reintroducing during the present session the naval prize bill ratifying the declaration of London, which was written by the House of Lords on December 12.

Beirut Bombarded The Italian Government seems to have determined upon a change of policy and an extension of the sphere of operations to other parts of the Ottoman Empire than Tripoli. An attack upon the Syrian coast was made on the morning of February 24, when an Italian cruiser and a gunboat appeared off Beirut and demanded the surrender of the Turkish corvette "Avinillah" and a torpedo boat, which were lying at anchor in the port without steam up. Three hours were given in which to comply, but the Provincial Governor not having been able to deliver his answer in that time, the Italians opened fire and

within twenty minutes both the Turkish vessels were disabled by torpedoes and sunk. The custom house and other buildings near the sea were greatly damaged and many shells fell in the higher parts of the city, causing destruction of life and property, but the Italian commander asserts that his gunners were ordered to aim only at the gunboats and that the injury to the city was done by stray shots. The college and mission buildings were not hit. The Syrian Protestant College was founded at Beirut, in 1864, by the American Board of Commissioners for Foreign Missions, and now comprises fifteen buildings, about eighty instructors and nearly a thousand students of all nationalities. A French news agency at Rome a week ago put in circulation a report that the Italian Government had determined not to bombard Beirut because of its cosmopolitan character and the action of the Turks in laying mines outside that port was unnecessary and a menace to neutral shipping. The Turks removed the mines in consequence of this criticism and the Italians promptly took advantage of it. It is estimated that during the bombardment 80 persons were killed and 150 wounded, mostly civilians.

The Annexation of Tripoli

The popularity of the war in Italy was demonstrated at the assembling of parliament on February 22. When Premier Giolitti presented the royal decree annexing Tripoli and Cyrenaica to the Chamber of Deputies for approval it was received with the most enthusiastic applause by all except the Socialists and was passed on the following day by a vote of 431 to 38. In the upper house all the Senators rose when the war was mentioned and joined in singing a patriotic hymn. Leaders of the Opposition express their approval of annexation, tho reserving the right to criticise later the conduct of the war. Greetings and congratulations were exchanged between the President of the Chamber of Deputies and General Caneva, commander of the Italian forces in Tripoli. When the passage of the annexation bill was reported outside the city was given over to general rejoicing. All business was suspended and the

buildings decorated and illuminated. A crowd, estimated at 200,000, assembled before the chamber and called the Premier to receive their applause, and then visited the palace, where King Victor Emmanuel, Queen Helena and Crown Prince Humbert appeared on a balcony.

The Great Chinese Republic

This is the official designation of the new Government, the word "Great" being used to indicate that Mongolia, Manchuria, Turkestan and Tibet are to be included in some sort of a federation. It is understood that the Mongol princes, who at first refused to consent to the deposition of the dynasty, have accepted such an arrangement, and it is hoped to effect the transition to the new form of government without territorial losses. Nevertheless there is great apprehension lest Russia and Japan should take advantage of the crisis. Much of the disorder in Mongolia and Turkestan is ascribed to Russian intrigues, and the Japanese are accused of fomenting disturbances in Manchuria in order to provide grounds for interference. From London it is reported that Japanese troops in plain clothes are assisting the bandits about Mukden in their opposition to the republic. In Tibet there has been a great deal of fighting since the outbreak of the revolution between the Chinese troops and the Tibetans and the Dalai Lama is coming back from India to resume his position. Yuan Shi-kai has formally notified the Powers of his election as President and requests recognition of the Chinese Republic. The Western calendar has been adopted in place of the Chinese, which reckoned time by dynasties. Yuan Shi-kai received a deputation of Protestants and assured them of his determination to remove all religious disabilities and enforce religious toleration thruout the republic. A delegation from the Republicans at Nanking, headed by Tang Shao-yi, has gone to Peking to notify Yuan of his election as President and to request him to go to Nanking and appear before the National Assembly there to take the oath of office. Yuan hitherto refused to leave Peking, but it is expected that he will consent.

Count Terauchi, Governor of Chosen

BY THE REV. JAMES G. GALE

[In view of the attempted assassination of Count Terauchi by some dissatisfied Koreans and the subsequent arrest of many charged with the conspiracy, including over 100 Christians, there have been published in this country sensational charges that the Japanese Government in Korea is persecuting the Christians. Tho Korea is still under military rule, which is always more drastic than civil rule, the missionaries, almost without exception, favor the Japanese control with its stable and incorrupt government, and introduction of enlightened reforms. The author of the following article is one of the most prominent missionaries in Korea and the Far East and his views regarding the personality of the man who succeeded Prince Ito in the difficult task of governing an alien people will be read with interest in this country.—EDITOR.]

HIS face is one not to be forgotten. There are in it certain suggestions that call up the Orient of the story book, the Willow Pattern, Saladin with his curved sabre, and the Mogul world of the Taj Mahal. A heavy built, somewhat ponderous man is he, with a disabled right arm, shot thru in Saigo rebellion days, so that he alone, and by special permit, salutes His Imperial Majesty with the left hand.

Count Terauchi is fifty-nine years of age, a silent, almost forbidding personality, but kind underneath, and capable to a degree of dealing quietly with every task on hand. He has had a large place in guiding his country thru its myriad decades of change during the past forty years.

He was born in Chosen, just over the way, and Koreans like to think that in the early days of the world his forefathers and theirs may have been brothers on each side of the whirling waters of Tsushima. He was a clansman of some mighty lord of West Japan before the days of the modern era.

When thirty years of age he went to France to finish his studies and to fix those foundation principles that were to guide him in the trying days to come. It is not necessary here to tell of all the high offices that he has held, or to enumerate the honors and decorations that have been showered upon him—Stars of the Golden Kite and of the Grand Cordon of the Rising Sun. At the hands of Edward, King of England, too, he was made a Knight of the Grand Cross of the Bath (G. C. B.).

These decorations pale, however, be-

fore the actualities of life thru which he has passed. He was Minister of War during the momentous campaign with Russia. On his heavy, somewhat bowed shoulders rested the burden of the day. As his office excelled in its choice of men and means, so could the campaign be expected to go. February 8, 1904, marked the opening of Japan's fight for her life. Win it and she would lead the East; lose it and she would be but a myth and a tale of the past, like the ghosts of the ronins that used to be.

His Majesty the Emperor has among his imperial qualities this, that he knows how to choose great and gifted men. Terauchi has for years been one of his special choice, and he it was to whom he entrusted the empire's chances in the day of her fiery ordeal.

To Togo goes rightly all honor, for he had the fleet in hand that won; and to Nogi likewise, who hammered his way thru the impregnabilities of Port Arthur. These great warriors were advertised by Reuter and press dispatches, but who ever heard specially of Terauchi? He was Minister of War, and from his office went forth decisions and plans that touched nearly a million of men and made victory possible. He had all the burden without the romance, the exhilaration, the desperation that goes with the line of battle.

The writer recalls one wild winter night, the wind blowing off the Yellow Sea as only a February wind can blow. Along all the lines of jetty were piles of firewood, dashed every few minutes with a bucket of kerosene, flaring up their lights into mid-air till the whole

GENERAL COUNT M. TERAUCHI
Resident-General of Chosen

頭取君星村

有吉心毅

明治四十二年七月廿六日東京

arena of the harbor came into view. In its lurid flare, horses, men, pontoons, guns, commissary supplies and what not were being landed, quietly, orderly, rapidly, every man seeming to know just where his post and duty lay, planned and arranged by the office over which presided this expert in the science of war.

This showed skill and meant success, and success and skill marked every feature of the army's movings. But think of Terauchi when the "Hatsuse" went down off Port Arthur, a prize battleship, 15,000 tons, seven hundred men and more on board, with these sorely needed twelve-inch guns; and worse still, when the loss was wired home to him of the transports that had been sent off without convoy! The way seemed clear, and the move a secret one, and yet the Russian cruisers suddenly appeared and Japan that would not surrender went down.

There had been a leak somewhere in the sources of information. Some one had spied and the unpleasant task of locating the spy fell to Terauchi. One fair morning, on the seacoast at Dzushi, near the quiet Buddha of Kamakura, a posse of soldiers was seen to be encircling a French officer's house. The officer was arrested by order of the Minister of War, tried, sentenced to fifteen years in the penitentiary, but afterward pardoned and sent home. This was a part of the burden, added to the loss of those heavy siege guns that went down with the transports.

Think of him when the news came

that thousands had fallen without any visible effect on Port Arthur; or again, when the sinews of war ran low and monster loans had to be effected.

But today these are forgotten and no one sees any trace of resentment. The Governor is the genial host toward all good friends, France and Russia included. His manner of entertainment is perfect according to modern day official functions, touched off by delicate hints and suggestions of old Japan. A little flower like the daisy interests him, and light *plaisanterie* finds its place in his world of sociability.

He came to Chosen (Korea) as a soldier-Governor. Many feared. He was a god of war and would have his way by cold steel with no heart back of it—so said rumor. But far from it; he has been Korea's best friend and benefactor; has brought rest and quiet to the country. His hand has the iron grip when it closes, but it can deal lightly, too, with kind and gentle touch. He is the ideal Governor for a day like this—a good manner of governor for all lands and all ages. Korea has prospered and improved under his administration. To those who wish well for this central portion of the Far East it is a matter of gratitude that Terauchi still holds the post of governor, even after his resignation from the office of Minister of War. We Westerners who live here are fortunate in having for chief magistrate a man so wise, so greatly experienced, and so kindly disposed to every one. May we long enjoy his rule.

SEOUL, KOREA.

The Return

BY GEORGE HERBERT CLARKE

HELEN softly stole to me just now,
Smiled and chided while she smoothed my
brow:

"Why so still and serious?

Please don't be mysterious!

Laugh and love and let us both be gay!"

The shadow stirred and vanished; life was
lit,

Quick ecstasy irradiating it;—

Ah, how I sprang to clasp her hand! . . .

Hardly yet can I understand;—

Helen died a year ago today.

KNOXVILLE, TENN.

The Latest Step in Arbitration

BY THEODORE E. BURTON

[To his everlasting credit Senator Burton was the one man on the Foreign Relations Committee of the Senate who submitted a minority report in which he upheld without amendment the drafts of the great arbitration treaties with France and England submitted to the Senate by the President. As a long-time friend of peace and now president of the re-organized American Peace Society, no man in the Senate has rendered more conspicuous service than he to the cause which he has so close at heart. As it is definitely announced that the treaties will come up for consideration on March 5, this is probably the last article that we can print before the Senate acts.—EDITOR.]

is my conviction that among the questions of foreign and domestic policy now pending before the Congress of the United States, the great arbitration treaties between our country and England and France assume the foremost importance. I sincerely trust that these treaties may be ratified at the time which has been fixed for a vote upon them in the Senate. It will be but part of a great world movement which has been at work with tremendous force since about 1898. The advance is marked as yet by only partial success, but no one can any longer be regarded as visionary, or a dreamer, who looks for eventual disarmament. Instead, we must acclaim as eminently practical those who have advocated the successive steps which have led toward an era of peace and good will. For the strength of the movement against the evils and burdens of armed camps and possible wars now promises a certain triumph, and it is the patriotic duty of every true American to insure our country a leading part in this most important progress.

There has been much discussion and some doubt concerning the exact intent of the phraseology in Article I and Article III of these two treaties, and its bearing upon certain constitutional prerogatives of the Senate, which we all admit should be most jealously guarded. But according to the interpretation which I place upon these treaties, whether an agreement for arbitration is submitted under Article I or Article III, it comes back to the Senate for its approval. Of

course there is much which can be said on the question of the language and the scope of its application. I confess that I would prefer to see these treaties ratified in the exact words in which they were transmitted to the Senate; but placing the interpretation upon them which I do, I find no grave objection to the so-called Lodge amendment.

The fact that questions for arbitration under either Article I or Article III are to be submitted, finally, to the Senate certainly does not mean that the treaty is to be nullified thereby, or that the prerogative of the Senate is to be exercised except in furtherance of the general plan of arbitration. Anything else is inconceivable, in any case. The treaty is one of arbitration and commits the Government of the United States to that plan of settlement, in every case which may possibly occur in the future which may be reasonably included under the terms of the treaty, and it is hardly conceivable that either the joint high commission or the Senate of the United States could assume to restrict or expand these limitations in defiance of the terms of the treaty. There are other powers belonging to the different branches of the Government which might, by vivid stretch of the imagination, be abused, but it is not at all expected that they will ever be so exercised. For example, treaties have been framed and ratified by the Senate which involved the payment of money. This money can only be appropriated with the concurrence of the House of Representatives—which has no part in ratifying the

treaty. But the House has never once refused the money made necessary by the terms of a treaty, whatever may have been the opinion of the members of that body. This, I apprehend, will be the condition under these treaties, either with or without the Lodge amendment.

Agreements for arbitration may be submitted in two ways, according to the terms of the treaties: First, the controversy may be submitted for arbitration by the executive departments of the two countries, and, second, if one or the other of the two countries, thru its executive department, fails to admit that the question is justiciable, it must be submitted to a commission of inquiry—three members to be appointed by each contending Power—and if all of them, or all but one, decide that it is justiciable, that decision merely places the controversy, so far as its justiciability is concerned, precisely where it would have been if, in the first instance, the executive departments had decided that it was justiciable.

I believe that the terms of limitation should be left as broad as possible. International law, even more than domestic law, is a matter of growth. Controversies between individuals which three hundred years ago would have been thought impossible of settlement in the courts are now settled there every day. New principles are becoming established in international law; and I think it most desirable in these treaties to give the largest possible degree of latitude for future growth. I do not mean to say that a time is coming when such questions as relate to the Monroe doctrine, or to immigration, or to State debts, could be submitted to arbitration; but other questions which now are regarded as entirely outside the purview of international law, not justiciable according to the principles of law and equity—in the words of the treaty—may, by a natural growth, by better relations, by more thoro study or better understanding of the subject, in five or ten years from now be regarded as capable of ready decision by a court of arbitration. There should be the amplest opportunity for the development of friendly relations and the settlement of an increasing number of controversies. This is accorded in the language of the treaty provision which reads "by virtue

of a claim of right made by on the other, under the treaty or other language which would seem to include every possible justiciable which could arise between the two countries, whether under the treaty or of the general relations existing between them. What better phraseology could be selected than that used in Article I, "claim of right" is very comprehensive. Of course it must be read in connection with that which follows, in which the term "justiciable" is used. "A claim of right" certainly includes any situation arising under international law.

In this connection it is intensely interesting to glance back thru history and note the growth of the idea of arbitration; for arbitration was not unknown even among the ancients. Cyrus left the settlement of a dispute between Persia and Assyria to a prince of India. Pericles was commended for his willingness to leave the contentions of Athens to arbitration. Philip of Macedonia signified his willingness to submit a dispute to arbitration. Thucydides quotes the King of Sparta as saying: "It is wicked to proceed against him as a wrongdoer who is ready to refer the question to an arbitration."

There has been no epoch so remote or so lacking in civilization but that some statesman could be found who entertained views upon this subject as humane as those of this modern day. But in 1794 a very advanced step was taken, which may be called the classic example of modern arbitration treaties. It was the Jay treaty with England, which brought so much obloquy upon its author and caused so much opposition to Washington. The provisions of this treaty were carried out, and led to the settlement of many perplexing questions, all of them, however, relating to past disputes. The period following is rich in instances in which the most irritating questions have been settled by arbitration, including the so-called Alabama Claims; but the various treaties pertained either to specific difficulties or to past disputes. Then, as early as 1849 propositions were made in the House of Commons by Richard Cobden for the future settlement of all disputes. And tho these propositions were not adopted there was a treaty, in which

felt own country had part, which stands permanently as a beacon light in the palace of arbitration. It was the treaty existing with Spain, in 1848.

The next step in this direction was the Clayton-Bulwer treaty of 1897. It was ratified in the Senate by a majority of votes. Under its terms we should have had a treaty with Great Britain in which the high contracting parties agreed to submit to arbitration all questions of difference between them which might fail to adjust themselves by diplomatic negotiations. The next treaty of arbitration which provided for the future and comprehended all disputes was between Italy and the Argentine Republic, and was signed in Rome on the 22d of July, 1898. Then came the greatest step of modern times—the Hague Conference of 1899, followed by the Second Hague Conference of 1907, which was attended by forty-four nations.

At both of these conferences the desirability of delaying the date of arbitration until excitement and passion had subsided was emphasized, and as the result some of the modern treaties have contained a provision for such an interval of deliberation. I think that if we were to study the history of wars, we should agree that if in each case a year's time had been given for deliberation the number of bloody conflicts would have been very much diminished. The whole tendency of modern times is to furnish adequate means for the peaceful settlement of controversies. And whether the judgment in every case is satisfactory or not, the advantage of peaceful settlement as opposed to war is so incalculable that the common sense of mankind will eventually realize it is far better to submit cheerfully to a decision not wholly satisfactory rather than resort to arms.

The cause of arbitration was powerfully promoted in 1903 and 1904 by

treaties between Great Britain and France in a form which excluded only questions of honor and vital interest. The United States made a similar treaty with each of these nations, in 1898, in which the questions excepted from arbitration were vital interests, independence, honor, and matters concerning a third party. In the past few years many such treaties have been ratified between nations—the United States is a party to more than a score of them. It is only to be regretted that it was found necessary in each of these treaties to except questions of honor and vital interest, but they, nevertheless, marked a distinct advance and established guaranties of peace quite in advance of preceding conditions. The great difficulty was in establishing an exact interpretation of the phraseology "honor and vital interest," and it seriously detracted from the value of the treaties as a guaranty of international peace.

It is in this feature that another important step has been taken in the treaties now under consideration, in substituting the rule that the subject shall be justiciable. The exact language of these treaties is: "By virtue of a claim of right made by one against the other under treaty or otherwise, and which are justiciable in their nature by reason of being susceptible of decision by the application of the principles of law or equity."

The important advantage of such a provision is that it contemplates a gradual growth, an advance in amicable settlement of international disputes, increasing in momentum year by year. It gives most hopeful promise that just as law has grown up within nations, between individuals, so a system of international law may be established which will be equally effective among all peoples, insuring perpetual peace, thruout the world, for all future generations.

WASHINGTON, D. C.

The Meaning of the Names of Place

BY RAY HUGHES WHITBECK

EDITOR OF "THE JOURNAL OF GEOGRAPHY."

ONE day, on his third voyage to the New World, Columbus saw, off on the horizon, three points of land rising from the sea. He inserted them on his chart as three islands. A little later the three points proved to be three mountain peaks on one island, and the devout old Catholic called the island "Trinidad" in honor of the Trinity—three in one.

A pioneer woodsman in the Adirondacks noticed a ridge-like mountain capped with three peaks in a row. He called it Saw-tooth. Each man did a perfectly natural thing. He applied a name which the appearance of the object suggested to his particular mind. When the devout Catholic looked into his own mind for a descriptive name, the Trinity seemed eminently appropriate. When the woodsman wanted a name, Saw-tooth, not Trinity, came to his mind.

When the Dutch settlers along the Hudson River needed names for their settlements and for the neighboring streams and islands, they selected Amsterdam, Staaten, Haarlem, Brooklyn, Rheinbeck, Yonkers, Fishkill, Peekskill, Stuyvesant, or Rensselaer. When the French explorer-priests planted their missions and trading posts along the rivers and Great Lakes from Newfoundland to the Mississippi and southward, they called them St. John, St. Lawrence, St. Anthony, St. Thomas, St. Joseph, St. Paul or St. Mary.

There are twelve Lee counties in the United States; ten of them are in the South. There are eleven Adams counties; ten of them are in the North. Of ten Calhoun counties, seven are in the South; but the thirty-two Washington counties and over 300 other Washingtons are quite evenly distributed over the North and South.

These are a few of many examples which illustrate how people, without thinking they are doing it, write a bit of

history into the place names which they bestow. In this way people of a particular period or region or nationality have, unintentionally, registered their nationality, or their likes and dislikes, or their political or religious beliefs, or have preserved the evidence of waves of popular feeling which at times pass over a country. This last point is illustrated by the twenty post offices named Dewey that came upon the map in 1898-1900, or the sixteen Roosevelts that have been added since the Spanish War. An interesting side light is thrown upon the unfortunate Sampson-Schley controversy by the fact that in the years immediately following the battle of Santiago, fourteen places named Schley and only four named Sampson were added to our post office list.

The present generation hardly knows that there ever was a General Pike, yet the many places, including ten counties, that carry his name attest his former popularity. The hold which different Presidents had upon the popular affection or popular imagination is suggested by the relative frequency with which their names have been selected for place names. There are, for example, six post-offices named Hayes and twenty-four named Garfield.

In 1854-55, on nearly opposite sides of the earth, scenes of intense excitement were being enacted. Hordes of gold seekers were pouring into California. Mining camps, improvised post offices, outfitting stations, were coming into existence and required names. At the same time, away off in southern Russia, the Crimean War was in progress. The attention of the world was fixed upon the prolonged siege of Sebastopol. Even the gold seekers of California have recorded their interest in that siege, for you will find to this day on the map of California the name Sebastopol no less than seven times. And yet that was not a day of the telegraph or cable or of abundant newspapers. The passing interest that men

felt in an important historical event is permanently recorded in the names which places, just at that moment springing into existence, chanced to receive.

The frequency with which biblical names appear in certain parts of the United States and their scarcity in other parts is also significant. Just as the French explorer-priests strewed their course with saints' names, so the New Englander and the Quaker may be tracked from East to West by the trails of biblical names that they have left. In these names religious preference and aversion stand out. For example, there are twelve places named Damascus against two named Babylon; sixteen Bethlehems, seventeen Bethanies and twenty-eight Bethels against three Tyres, two Sidons and no Gomorrah.

A peculiar working of the popular mind is revealed in the marked infrequency of certain honored names. The name of Moses appears but twice among the place names of the United States; Shakespeare and Longfellow occur but once. Yet Lafayette and Gladstone each occurs a score of times. It is not altogether clear what this indicates. Seemingly people feel free to use the names of men who figured prominently in a public capacity, either as statesmen or as soldiers, but do not feel the same freedom to invade, as it were, the private life of the poet or prophet. If this is the meaning, it is an interesting revelation of the psychology of the mass.

If you were to arrange in parallel columns the place names of New England, of the mountainous parts of the Southern States, of the Rocky Mountain mining States, and of California, impressive differences would appear. The New England names will reveal their English lineage. You will feel that the names have character, that they are peculiarly appropriate names, that they were given by people whose vocabularies had been enriched by the reading of history, of literature and of the Bible. When you scan the column of names which the Southern mountaineers and some other pioneer settlers in these States adopted, you discover a notable poverty of place names. A large proportion of the names are not suitable: there are scores of personal names, such as Bessie, John or Dick, ap-

plied to places. True, they are usually little places. A large number of abstract nouns, such as Love, Energy or Patience, and even less appropriate names like Bee, Gum and U Bet are common in parts of these States, particularly in Kentucky and Tennessee. A single county in Kentucky furnishes the following collection:

Adeline, Clifford, Charley, Ellen, Goldie, Jean, Louisa, Lunda, Marvin, Mattie, Madge, Mazie, Osie, Patrick, Ulysses, Vessie, Wilbur, Zilda.

The following list is selected from the list of post offices of Tennessee:

A. B. C., Ai, Ark, Aunt, Bee, Bud, Did, Fly, Fry, Ged, Gum, Hix, Ho, Ipe, Ken, Key, Let, Loo, Tut, U Bet, Y. Z. Andy, Bessie, Bob, Burt, Callie, Daisy, Effie, Eli, Ina, Jessie, Kate, Kittie, Lida, Lois, Lucy, Mabel, Mae, Maggie, Nancy, Nellie, Tom. Charity, Choice, Comfort, Compensation, Concord, Economy, Grief, Harmony, Help, Law, Life, Necessity, Profit, Reliance, Rest, Right, Solitude, Surprise, Unity, Vigor, Virtue.

The interesting thing about this collection of names is that they are true to the unschooled, even primitive, tastes of people who see nothing incongruous in such place names. The isolation of the mountaineers, their lack of education, in short, their linguistic poverty is recorded in their place names.

When the miners of the West selected names for their camps or their pioneer towns, or for natural features like mountains and rivers, they, too, drew upon their own peculiar vocabularies. The names which they chose, like the men themselves, are a strange mixture. Among the names may appear Harvard or Yale, Boston or Albany, but with these also appear the truly characteristic names: Big Bug, Big Horse, Humbug, Mule Pass, Uncle Sam, Whiskey Run, Whiskey Camp, Bloody Gulch and Seven Devils.

The column of California names will be still more distinctive. That California was occupied by people of Spanish descent and of religious proclivities is immediately revealed. Nearly all of the large cities and more than 150 smaller places have Spanish names—San Francisco, Sacramento, Los Angeles, San Diego, Santa Barbara, Santa Cruz, and many more. The Spaniards have long since ceased to be a factor in California, but they have left their footprints in the place names just as the English have in

Massachusetts, or the Dutch in New York, or the French along the St. Lawrence and Upper Mississippi.

In all of this there is nothing surprising. The place names which people bestow are simply expressions of themselves, as true to the character and nationality of the people who give them as are their unconscious manners or their daily speech. And this is why the ancient place names of a region are historic fossils, often full of meaning.

Thus far I have said nothing of the Indian. Yet when every Red Man shall have passed away or have been absorbed into a new race, the record of his occupancy of this continent will remain. Half of our States have Indian names. Nor have these been consciously conferred for the purpose of honoring the Indian. Rather have they, in most instances, been transferred from the main river of the territory which was carved into a State.

About the only natural features which, in large numbers, bear Indian names are rivers and lakes. The rivers of the Atlantic slope and the larger rivers of Mississippi Basin commonly have Indian names. For example, twenty-four rivers in Maine, seventeen in Connecticut, forty in Georgia, and most of those in New York and Pennsylvania have Indian names. Four of the five Great Lakes

and many hundreds of smaller lakes tell of the Red Man in their names. It is uncommon, however, for mountains or any of our large cities to have Indian names. The names of sixteen of the eighteen Mississippi Valley States are Indian, but only two of those of the original thirteen States, Maine, Vermont and Louisiana, are French. Florida, California, Nevada and Colorado are Spanish. Excepting Maine and Vermont, all of the original State names are English or Indian. Among our large cities, Boston, New York, Philadelphia and Baltimore are English, Chicago and Milwaukee are Indian, New Orleans is French, San Francisco is Spanish. Minneapolis is a mixture of Greek and Sioux, one of those "odious hybrids barbarously compounded." Our place names reflect the cosmopolitan character of the American people. Every place name is much more than a name; it is a record, a bit of history unwittingly written; it usually represents somebody's or some community's choice among many possible names. When we see a man's choice of dress, or companions, or books, or amusements, we feel that we have at least one sound basis for estimating him. And it is somewhat the same with a people's choice of place names.

MADISON, WIS.

Our Monetary System Compared with Other Systems

BY EX-SENATOR NELSON W. ALDRICH

[We herewith announce a series of three articles on our monetary system by Ex-Senator Aldrich, president of the National Monetary Commission. Subsequent articles will deal with "The Need of Reformation" and "The Proposed Plan of Reorganization."—EDITOR.]

COMPARING our monetary system with the systems of other nations must immediately convince any honest student that the laws under which we now operate are antiquated, and our present methods, which have remained practically unchanged since they were first adopted, not only fail us under stress of unusual demands upon our financial resources, but are inadequate and unresponsive even under ordinary conditions of business.

The result of our law has been to create a great number of isolated units—nearly 25,000 today—each working within a limited circle, governed by its own immediate interests, without any reference to the interests or the good of all. Even where co-operation is desired the laws render the banks powerless to accomplish it, inspiring both our own countrymen and foreign nations with anything but confidence in the ability of our monetary system to sustain the credit of

the United States. This is absolutely fatal, for invulnerable credit is what we must have to insure national development.

Credit is based upon confidence and business confidence rests in a universal belief in the stability, the strength and the efficiency of our financial institutions. It was simply a lack of that confidence which brought about the crisis of 1907, the disastrous results of which were felt all over the world, to our national discredit. The losses which were then sustained can never be measured. They ran into thousands of millions of dollars. The destruction of credit, the losses to business men in no way responsible for the trouble, the loss of employment, the reduction of wages, touched every one. The blow came without warning to most. Our banking institutions were in excellent condition. Business of every kind was prosperous, when suddenly banks all over the country suspended payments. It became impossible, in many cases, to secure the funds or credit to move crops or carry on ordinary business operations. Those who were in no sense responsible for the crisis were the greatest sufferers. And the worst of it is, that this was only one of a series of disasters which have overtaken the country since the present system was inaugurated, retarding our development and incalculably impeding our progress.

We have resorted to various objectionable expedients in times of stress to relieve the situation, but at the best the relief has only been temporary. We have taken no effective steps to improve our financial status either at home or abroad. We have been oblivious to the financial methods of all of the other great nations of the world, in which, by a proper organization of capital and the adoption of wise systems of banking and currency, serious financial crises have been absolutely avoided for the last half century. It is certain that by a reorganization of our methods they can be absolutely prevented here. It lies within the power of legislation to obliterate the danger and ensuing damage, and place our credit, at home and abroad, where it should be—the first in the world.

Until human nature is changed, no legislation can prevent periods of over-

speculation and undue inflation, with over-extension of credit—and the failures which are sure to follow. But other countries have proved able to prevent disastrous panics from ensuing and to confine the evil results to the people directly responsible. Without exception this has been the case in Europe ever since modern monetary methods were adopted, more than fifty years ago. There have been times when great financial institutions and great merchants have failed, entailing heavy losses in the community; but at no time have there been serious results to any except to those immediately concerned. When this has been accomplished in all of the other nations of the world, it is obvious that it can be accomplished here.

The Baring Brothers were one of the most important merchant houses in the world, with affiliations all over the earth; but great as their failure was—one of the greatest failures that ever happened—the disastrous effects were confined to the Baring house and to their immediate associates, by the quick action of the Bank of England. In France, in 1881, the Union Generale, one of the great joint-stock banks of Paris, failed, and in 1889, the collapse of the copper syndicate carried down the Comptoir d'Escompte, another of the oldest and most important joint-stock banks of Paris. But in both cases the Bank of France confined the injurious results to the parties immediately interested. In 1901 the Leipziger Bank, one of the great financial institutions of Germany, went down, carrying with it some of the leading concerns of the city, but the prompt action of the Bank of Germany prevented any extension whatever. Of course, the conditions with us are so different that we could not adopt any of these foreign methods as an exact model, but the principles employed to obtain the results are the same the world over; and it was to the study of these principles and the formulation therefrom of a plan adapted to this country that the National Monetary Commission has devoted its attention since its authorization by Congress.

The results of its arduous work have greatly simplified the task for other students, and rendered it possible for all to take an understanding interest in the

great question and have intelligent convictions which should prove of value to the country; leading to the hope, at least, that our experiences of the past may not be repeated. In 1879 we resumed specie payment—but it took years to accomplish it because a class of self-sufficient demagogues raised all kinds of objections and made sinister appeals to the passions and prejudices of the public, till the people became too bewildered to dare to turn either way. It was not until 1900 that we were finally able to dispose of the proposition for the free coinage of silver. It was almost a generation after the resumption of specie payment before we could persuade Congress to pass an act establishing the gold dollar as the standard of value. It is the patriotic duty of every intelligent American to understand our present situation; and when it is fully understood I believe that inherent common sense will prevent the delays of the past and demand satisfactory action. It is essentially a national question, and must be settled by the nation along national lines. It is a great business question, affecting the material welfare of the entire country and of the world. It is not a question which concerns economists and men of affairs alone. It affects financial institutions, but it even more vitally affects the great mass of the people who are necessarily dependent upon the stability of these institutions. Any reform accomplished must meet the needs of ninety millions of people at home, as well as the requirements of 25,000 banks.

The first essential and the hardest task of all is to overcome the universal inertia which hesitates and demurs at any changes in established methods. We must absolutely lay aside our prejudices, our preconceived notions, our predisposition to oppose all methods, and meet this problem with the fixed determination to agree in the end upon the plan which fairly represents the combined wisdom of the country and makes for the good of all. The real interests of New York, of Omaha, of San Francisco, are one. Whatever depression or adversity today takes place in one part of the country is instantly felt over the entire land; so that when we shall finally agree upon some plan it is the duty of

all to press it to legislative enactment.

We all agree that the nation-wide evils of financial depression should be prevented if possible. We must also agree that relief, if obtained, must come through a scientific adjustment of our monetary methods—the note issues, the organization of credit, the regulation of our banking system. In all the great countries of the world the system of note issue is practically uniform; the right of note issue is exercised by one institution, always either government owned or under strict governmental control, instead of by nearly ten thousand banks, as in the United States. The provisions in regard to the note issue are as nearly uniform as the habits and customs and interests of the various countries permit, and the banks of issue are, without exception, the fiscal agents of the government. It is along these lines that the plan for the monetary reform relating to our note issue must be developed.

Not one of the central banks of Europe is a commercial institution in the ordinary sense of the word. They hold practically the entire specie reserves of the country, to protect the interests of the people and under all conditions to sustain the public and private credit. It is that which gives to the foreign systems their impregnable strength. The reserves in these central banks are protected largely by raising the rate of discount. When America was calling frantically on England for gold, in 1907, the Bank of England simply raised its rate from 4 to 7 per cent., and the governor of the bank told me that gold flowed in from twenty-four countries. This is inevitable; for when one country bids more than another the gold pours in there in obedience to the law of supply and demand. I asked the governor, Mr. Campbell, what he would have done if 7 per cent. had failed. He replied: "We would have advanced the rate to 10 per cent., and that would have brought gold out of the earth."

It is upon this never failing reservoir that all of the banks in the country rely in time of need. With us commercial paper is absolutely unavailable in time of trouble, and many a bank with ample capital and abundant assets has been forced to suspend. But when difficulty

threatens abroad, the bank has simply to take its commercial paper to the central bank, transforming it at once into credit—either notes for immediate use or to extend credit to its customers from four to ten times the amount of the reserve. It is the policy of all these countries to extend credit liberally, in time of trouble, to every one entitled to it. It is precisely the opposite in our system. Our law provides that banks in the central reserve cities shall hold in their vaults, in lawful money, 25 per cent. of their deposit liabilities. The reserve is ostensibly created for the purpose of meeting emergencies, but it is also provided that if a bank reduces that reserve to 24.5 per cent. it has violated the law and is subject to all the pains and penalties. The bank is not only prohibited from ever using this reserve, but is also obliged, by law, to stop any possible extension of credit the moment its reserve has reached the legal limit. So that the banks, supposed to safeguard our interests, become powerless the moment when we need them most; tho they have abundant resources in their vaults, and tho the earnings and business of a century are at stake and the customer's credit unquestionable. The bank can suspend and later resume. But the customer must go down. Thus the strength of the other systems of the world and the weakness of the methods of the United States are so evident that he who runs can read, if he will only have eyes that see.

Another important benefit of the European systems, which is impossible under our laws, is the steadiness of interest rates, the prevention of the tremendous fluctuations so frequent with us. And another even more important benefit lies in the method of domestic

and international exchange. During the last panic one could not possibly have sent a thousand dollars across this continent by ordinary channels. It is very slow work under the best conditions. But if a man in Hamburg, for example, wants to pay money to a man in Leipzig, he simply goes to the branch of the Bank of Germany, which telegraphs to the Leipzig branch to place the amount to the credit of the person named. In fifteen minutes the transaction is completed. In international exchange the results are of vastly greater importance, but to derive the benefits and escape our present losses thru exchange we must have an institution thru which we can deal on equal terms with the other great commercial nations of the world. Otherwise we shall continue to be forced, as we are today, to pay millions of dollars a year in commissions to foreign banks, to transact our business for us.

More than this, the great banking institutions of the world are constantly drawing closer together for mutual aid. The time is not far distant when there will be still further concentration of reserves and the great banks of the world will stand together as one, for invulnerable protection against common dangers. Now, with our vast resources, greater than the resources of all of the rest of the world combined, can we afford to be in a condition of dependent isolation? Can we afford to remain helplessly relying upon foreign financial agencies to pull us together and set us on our feet again every time that a bank failure anywhere in the United States starts a panic thruout the land? If we cannot afford to, if we do not want to, then we absolutely must reform our antiquated banking methods and monetary system.

PROVIDENCE, R. I.

The Influence of Organized Alumni

BY HENRY S. PRITCHETT, LL.D.

PRESIDENT OF THE CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING.

PART from the enormous growth in student attendance during the last ten years, perhaps no feature of college and university development in America has been more significant than the growth of the influence of the alumni of colleges in the management and development of their institutions. This has come about in large measure from the organization of the alumni, which has been carried to a very high point of development in the last decade. Almost every college of standing has organized its alumni into effective groups, with regularly appointed officers, so that the college authorities have a direct current of influence reaching from the college president or the alumni secretary to each graduate or former student of the institution. The larger and older institutions have alumni clubs in the larger cities, which are regularly visited by the presidents or other officers of the colleges, thus creating a system by which the alumni and former students of the older institutions can not only be readily influenced from one center, but by which they can also exert their own influence upon those who are directly responsible for the conduct of the institution itself.

Nothing entirely analogous to this present organization of college alumni exists in other countries. The nearest resemblance to it is to be found in the relations of graduates of Oxford and Cambridge to their colleges, or in the relations of graduates of Scotch universities to the institutions from which they came. This relationship, however, has not resulted in any very close organization of English and Scotch university alumni, nor in any conspicuous effort to use the united influence of alumni in college affairs.

It is clear to one who observes with any care the progress of American college development that this organization

of alumni is the beginning of what is to be an increasingly influential factor in determining the form and character of our colleges. Whether for good or for ill, there can be no question but that the American college must reckon in the future in increasing measure with the graduates whom it has sent out into the world, and that the closeness of the organization which has been effected will give these graduates in their associated capacity a constantly growing influence upon the college.

The good side of this organization of alumni is evident. The sense of comradeship is fostered by such associations. Loyalty to one's college is itself a sentiment to be cultivated. In the college life and the college associations lie many of the things most dear to the educated American. To cherish a loyalty for these things is to cherish a form of patriotism whose roots lie deep in all that is best in our human nature. Finally, by means of such organizations the active help of alumni is enlisted for the support and advancement of the college. It is for this reason mainly that the college authorities have developed the thoroughgoing organization of their alumni, but in creating such an organization they have also developed a power which in the future may not be always amenable to the wishes of the college authorities. It may grow into a Frankenstein.

For no one can view this movement with unprejudiced eyes without recognizing, along with the good results which come from the organization of college alumni, certain definite dangers. First of all, the movement has seldom had any connection with scholarly ideals or the promotion of such ideals in the college. Nothing reflects more completely the unscholarly tendencies of our recent educational history than the development of alumni associations and alumni clubs. Like all organizations, such clubs tend to fall into the hands of a few men, not always the best or most thoughtful of

college graduates. In fact, the alumni clubs are composed to a considerable extent of men who are not graduates, because in the good fellowship which holds in such associations and out of the desire of the college officials to include every man who can be of assistance, the alumni associations almost invariably include all former students in their ranks. Indeed, to the man who for one cause or another failed to graduate, membership in the alumni club, whether it be in an active or in an associate capacity, often means more than it does to the man who has received his degree. These circumstances operate to throw the management of such clubs into the hands of a few men, who are very often those least qualified to represent the sentiment of thoughtful and scholarly alumni. It is partly because such leadership has so often been found in alumni associations that the alumni influence is so generally exerted in a sentimental or partisan sense. Rarely have the alumni of any college, when appealed to on a question of moment, responded to this appeal in as thoughtful and impartial a spirit as educated men might be expected to do. On the contrary, they have in nearly all cases shown themselves ready prey for the sentimental leader or the partisan advocate. It would be difficult in this respect to find any great differences between the proceedings of labor unions and those of organized college graduates. The walking delegate has been prominent in both.

Perhaps in no one respect has the influence of alumni fallen so far short of what the public has a right to expect of educated men as in the relation of alumni groups to the matter of college athletics. In a very large number of cases the alumni of colleges, either thru their organized clubs or individually, have brought pressure to bear upon the college authorities to tolerate athletic conditions that were not only objectionable, but in many cases immoral. One of the most glaring instances of this sort occurred a few years ago in the case of even so great an institution as the University of Michigan. The largest group of alumni of the University of Michigan is to be found in Chicago, the Chicago Club enrolling two thousand members.

Largely thru the influence of the members of this club the university tolerated for some years, against the protests of the faculty, a situation in athletics that was thoroly demoralizing.

Alumni have so often shown themselves so much more interested in securing a winning athletic team than in promoting the real interests of the college that an honest college president has not infrequently found himself seriously hampered educationally by the demands of the alumni that their university should have a winning team. The extraordinarily interesting and illuminating statement that President John W. Abercrombie, of the University of Alabama, issued recently on the occasion of his retirement from the presidency of that institution included the following statement relative to this matter, which has especial significance in view of the fact that President Abercrombie's retirement was in some measure due to the dissatisfaction of the alumni with regard to his action concerning athletics:

"Perhaps that feature of my administration which has occasioned most dissatisfaction and criticism has been the policy pursued relative to intercollegiate athletics. How to encourage this popular form of student activities, and at the same time to hold the participants to a reasonable standard of scholarship and honesty, is a most perplexing problem in all of our colleges

"A certain element demands of us winning teams. In order to secure such teams every conceivable pressure is brought to bear upon the authorities to induce them to condone if not to participate actively in the playing of men who are failing in their studies, or who are known to be ineligible under the rules of the Southern Intercollegiate Athletic Association, with which the university is affiliated, and with the enforcement of whose regulations the president and faculty are charged.

"When I realized a few years ago that the authorities were being imposed upon by outside influences, that ineligible men were being paid money to register as students for the purpose of having them represent the institution on traveling athletic teams, and that at least one such man had been matriculated and graduated under an assumed name, I resolved that no such disgraceful imposition should again occur. I resolved also to hold members of traveling teams of all kinds to a reasonable scholastic standard. The faculty endorsed this course, and has co-operated with me in the endeavor to follow it. Since that time the regulations as to scholarship and general eligibility have been firmly and effectively enforced, and as a result we have absolutely clean athletics at the university."

The whole question of the influence of organized alumni upon the colleges is a new problem. It is plain from the history of the past few years that such organizations are capable both of good and of harm. It is clearly to the interest of a college that alumni should have some participation in the government of the institution and in its development. The problem that therefore faces the colleges today, so far as this question is concerned, is—What form of participation shall alumni have which shall be fruitful and wise, a participation in which the alumni may have a right to voice their wishes and opinions, a relation in which the college may call upon the alumni for help or for advice, but a relation nevertheless in which the college authorities will not be hampered by a merely sentimental effort of alumni to regulate college affairs?

Numerous suggestions have appeared in the past five years in educational publications, and particularly in college journals, as to the form that this participation of alumni should assume; for the demand of the alumni for participation in college management has become general. The variation in these suggestions illustrates the unformed state of college opinion concerning such relations. The more radical conception contemplates an organization under which the president and faculty would be subject to a referendum to the associated alumni. One advanced advocate of alumni government has suggested that the president shall be subject to recall by a two-thirds vote of the alumni.

The more conservative advocates of alumni participation in college government go no further than to suggest the presence of a limited proportion of

alumni on the college board of trustees, these alumni to be chosen, however, by the alumni association, not by the college trustees.

At the present time a wide movement is in progress under which alumni are being introduced to college boards under conditions which lodge much power in the alumni organizations. What is needed is that the colleges should realize that in creating organized groups of alumni and former students, they have set in motion an influence which is powerful and which will grow in power, and that the participation of these influences in the affairs of the college should be conservatively and carefully admitted. The colleges may well go slowly in this matter. An extensive participation of alumni in the actual management of a college should await the time when some plan can be worked out under which alumni may express their ideas in a thoughtful and definite way, while at the same time college authorities will not be subjected to undue pressure from sentimental and temporary movements.

More than all this, we need in this matter a reform in our conception of alumni loyalty. Our alumni associations have been hitherto almost wholly what promoters in the West call "booster clubs." There has been no essential difference between the two. If college alumni influence is to make for a better form of college, then college loyalty must take on somewhat more of real devotion to the cause of education and of the intellectual life, and a relatively smaller devotion to the promotion of successful athletics, or other forms of college aggrandizement.

NEW YORK CITY.

What Does Imprisonment Accomplish?

[The following article is written by a prisoner now serving a sentence of fifteen years in the State's Prison at San Quentin, Cal. He requests that the article be published anonymously "not that I care about myself, for I expect to face the future under my real colors, but because of my family connections."—EDITOR.]

IT is the dead of night, and save the subdued whirr of the lights in the electric tower, all is still as the grave. The drab cell houses, checkered with the apertures of numerous counter-sunk steel doors, resemble four huge tombs. Not even the drone of the waves beating against the rugged coast but a few feet distant penetrates the vast walls that rise on every side and hem in this colony of crime from the world of righteousness out of which it has been wrested by the strong arm of the law.

"Twelve o'clock, and all-l-l-l's well!"

The blatant voice of the guard in post number one suddenly violates the midnight calm. The cry is caught up and repeated by number two, and then, in varying intonations, in voices deep and resonant, in voices harsh and cracked, in squeaky, in shrill, in twanging voices, it is tossed and bandied and passed from post to post until every nook and cranny of the great prison reverberates with the multisonous discord.

"Twelve o'clock, and all-l-l-l's well."

A thousand fitful sleepers turn uneasily on their hard, narrow cots. Resignedly they recognize it as the call of the law, their hourly nocturnal nemesis—reminding that, even in sleep, they are convicts, convicts, convicts—outcasts and pariahs.

And this is midnight of the 31st of December—the call has ushered them into a new year. To some this means nothing, for time has lost its relation to life—they are "doing it all." To others—to that row of cells where the lights burn all night that a suicide in the dark may not gull the gallows—it means the dawn—of eternity, a day nearer "the rope." To a few it signalizes the approach of freedom, the beginning of the year which has been so patiently awaited, perchance for five, ten or fifteen years. To still others it brings hazy

thoughts of boyhood, and the gala times spent in celebrating the dawn of new years long since dead and gone.

"Twelve o'clock, and all-l-l-l's well."

The echoes finally die away and all is again still. Once more the "criminals" in the bare stone cells fall into the fretful oblivion of troubled sleep.

The "criminals."

How many persons stop to think what the term means? It is used freely by lecturers and writers in referring to those who have committed crime—yet these are not all criminals. A criminal is one who has consciously adopted a life of crime, or else one who by reason of squalid birth and lack of moral training in youth has never been anything else, and does not realize the enormity. Of the one hundred thousand or more inmates now confined in the penal institutions of the United States, it is conservative to say that not more than thirty-five thousand are criminals—one in every three. The majority are merely felons, men and women who have, under various stresses of circumstances and conditions, committed felony. Because a child is caught stealing jam, perhaps many times, its parents do not term it a "jamster." Because a bookkeeper embezzles money from his employer it does not necessarily follow that he is a criminal.

Probably the great majority of the criminals in the world today are the product of our prison systems, or lack of systems, and the methods of our police departments—not the victims of "disease," as is so popularly accepted. For fifty years every State in the Union has been negatively but none the less surely and effectively developing criminals from felons, inanely fanning whatever spark of "criminality"—to borrow the coin of a superficial penologist who conceals ignorance of the real subject

under a Niagara of polysyllabic verbiage—might exist in each convict breast. Prisons have been considered as places where the dregs of humanity, the scum of society, the seepage from the human sewers, were sent and kept and beaten into temporary submission in retaliation for crime. Every rule, every regulation, every restriction, every deprivation of the prisons has been as a red flag of condemnation. Men have entered prison determined to profit by the experience, and expecting to regain their places in the world. Few have kept the aspiration alive during the years that followed. Most of them have come forth saturated with shame, overwhelmed with a sense of ostracism, or fired with a craving for revenge—a desire to retaliate in turn, to get even, at whatever cost.

How may this be obviated? What system will tend to reform men—reform them in mind?

It is a pet theory of Axminster-bred penologists that segregation is the first step essential to the reform of criminal delinquents. The fact that the wrongdoers have been segregated from society by the natural process of the law is not enough; they must be separated from each other, there must be prisons within prisons, confines within confines, rings within rings. In other words, the offender must be made a center, a pivotal point, a speck in the universe. He must assume the same relation to the world of men as does a captive cougar in a menagerie. From this center he is supposed to grow, to find himself, to come to an understanding of the meaning of his relation to other human beings and to society. The fact that he will contact thousands of other persons after he is released from this abnormal sequestration is not considered as affecting his "training." His daily life is marked out for him, and he performs every act at the tap of a bell or at the command of a brass-buttoned warder who, perhaps, does not know nearly as much as the convict. He has no right of choice in anything. Yet the virtues and vices made manifest by the exercise of choice are the only reliable guides by which we may gauge the temperament and character of another. Segregation is not conducive to growth, solitude does

not strengthen, repression does not reform.

The theory that young and initial offenders are contaminated and debased by contacting offenders old in crime and prison penalty has a modicum of truth, but not nearly in the degree popularly ascribed. The belief that old-timers make it their special business and take keen delight in coaching the unsophisticated first or accidental offender into the devious labyrinths of professional crookdom is something of a chimera. For every instance where a gray offender encourages a new one to take up a life of crime, a dozen instances to the contrary are true. As a matter of authenticated fact, the old-timer uses every resource of logic and reason to convince the youthful prisoner of the degradation and futility of such a life.

Some of the Eastern prisons of the United States have tried the solitary system—segregation carried to its logical conclusion. Notable among these is the Eastern Penitentiary of Pennsylvania, known in police circles and the under world as "Cherry Hill." What has been the result? The present roster of that prison shows as many recidivists in proportion to its population as does any prison in this country where the congregate system is in vogue, and the "graduates" from "Cherry Hill" are as common as sparrows wherever there is a jail or prison. Most of the professional crooks dread "Cherry Hill"; they don't like the solitude, nor the idea of having to perform so much work each day in order to eat, but after having been there, they are still criminals. The system has no tendency to reform, no inducement to bring out whatever latent good may reside in the individual. Instead it merely festers the flaw until it becomes a criminal cancer, for which there seems to be no cure. Solitary confinement makes moral monsters, maniacs or demons of men. The same results, in degree, follow upon segregation. The more restricted a man's physical freedom and mental manifestation, the more nearly he approaches the brute creation and the more surely will he degenerate. Segregation, as well as solitude, suckles crime.

The congregate system, with gradu-

ating *classification* dependent upon the individual prisoner's daily life, tends to disclose what the subject really is, or may become. Cast into prison among many others and told that his own actions, his own *choices*, will determine how long he must remain, he will, sooner or later, find himself—he will find his level. If this level is a low one, and he makes no effort to rise above it, the authorities may feel certain that he is a bit of flotsam in the criminal current. He has no will or ambition to rise, and his classification becomes self-determined, just as his initial imprisonment was self-determined. This truth is vividly illustrated in those prisons where the congregate system is in practice, but nothing being done to take advantage of the supreme test of character that underlies it. "Dips," "second-story workers," "yeggmen," "check kitters" and other classes always congregate and form cliques in those jails and prisons where they are permitted to do so.

Some one says, "There you are! Doesn't that prove the congregate system vicious? These men hang together and plot and hatch further crimes even while in restraint, even while in prison!"

Very good, and quite true. Congregation without classification, and with no penalty for wrong choosing, is vicious—it nurtures crime. But congregation with the indeterminate sentence, with the absolute certainty of a man's remaining behind prison walls so long as he evinces an interest in criminal matters, would soon break up these cliques. The prisoner would soon realize that his only salvation lay in abandonment of criminal bent, and application to the trade or occupation which he would have to master before being released. Too much emphasis cannot be placed upon the assertion that the surest and only permanent reform depends upon the free will or choice of the subject under treatment. "You can drive a horse to water, but you cannot make him drink."

Segregation merely augments the abnormality of imprisonment, and no person, no board, can form a reasonable opinion of the effect of imprisonment upon a prisoner who has been kept from the only possible channel of normal

manifestation and growth—contact with his fellow men.

What prisons need, if they are to turn out better men than they receive, is facilities for training the inmates for some useful vocation, and at the same time more internal freedom. Prisoners should not only be permitted but should be encouraged to manifest and develop whatever initiative or talent or application may be latent within them. By exercising natural ability and turning it to useful and legitimate purpose, prisoners would learn from themselves, from within, that an honest and law-abiding life is best, and that right is right because it is right, and not because unrighteousness is visited with punishment. The brute creation survive because they fear certain things, but man survives because he fears nothing. Fear has no place in the reform of a criminal. A reform due to fear is a house built upon the sands.

In studying the statistics of the various prisons thruout this country, it is interesting and significant to note the excessive percentage of recidivism as compared to the percentage of parole violators. In one State nearly 30 per cent. of those who have served out their terms have returned to prison for the commission of fresh crimes. This same State has had a parole law in operation for twenty years, and during that period 1,500 prisoners have been paroled, of whom but 11.7 per cent. have violated. Of the violators all but .038 per cent. have been apprehended and returned to prison, and probably 90 per cent. of these violators have been returned for a misdemeanor, failure to report, using intoxicants, etc. Not more than five or ten have been returned for committing another crime. This certainly constitutes an unanswerable argument in favor of parole.

A discharged prisoner is a free lance. He feels that he has paid the penalty, and that he is entitled to a certain amount of license to help even up the score. He leaves prison with a few dollars, transportation by the cheapest route to the place whence he was committed, and no definite prospects. Perhaps he is filled with shame and degradation. He is unable to get employment

and is soon forced to the ragged edge of existence and readily topples off into the criminal gutter again. The paroled man, on the other hand, cannot leave the prison until he has employment provided, to which he must proceed at once. He is required to render a monthly financial report, and the parole officers see that he leads a sober, moral, law-abiding life.

It is just as easy to give a man a push in the right direction as in the wrong direction; besides, it's cheaper—it pays; it is a matter of moral and material economy. The prime point is that no prisoner should ever be permitted to pass outward thru the prison portcullis save on parole. The conditions of parole are his safeguards; he is compelled to start under his true colors; his employer knows he is an ex-prisoner, and he is not obliged to conceal that fact in order to get work, only to lose it when exposure comes, as it does in more cases than are known. Not only this, but the paroled prisoner is protected *from* the police, or nearly always is, while the discharged prisoner is a helpless "mark" for them. Molestation by the police, or exposure to an employer, not only discourages the individual victim, but has a far-reaching effect upon others. The man who meets this experience generally relapses into crime and is returned to prison. Filled with bitterness, he tells others of what has befallen him, how his effort to do right was rewarded, amplifying on the injustice, perhaps, in order to extenuate, as far as he can, his return. As a result, many men who had contemplated making the effort to rehabilitate themselves there and then abandon it as useless.

Parole places a man on his honor, and if the beneficiary happens to be one who

has been a criminal from boyhood, the fact that at last some one has trusted him, that he has been placed on his honor, frequently has the effect of arousing his manhood so that he becomes the antithesis of all he has been. Several concrete cases come to mind, but space forbids recording them here. Men in prison are not without scruples, not without honor. I know of a professional stage robber who was accidentally imprest into service as guard over a shipment of gold that he had planned to steal. He gave up the proposed robbery—which the stage company had unwittingly simplified an hundredfold—simply because he had passed his word to guard the treasure.

Of course, the most desirable thing is to keep men from going to prison at all, but the accomplishment of this is a vision. Pending its realization, is it not logical and sensible and economical to begin with the wrongdoer himself? Is it not within the realms of practicability and possibility that the problem may be worked backward? Can we not begin with effects and work to causes? One thing is certain, every man reclaimed from a life of crime, is not only a distinct gain for the present, but enhances the promise of a higher composite morality for the future.

Persons who commit crimes must be dealt with stringently; it is right and just that they should be, and in the absence of something more effective and beneficial to society, they must be sent to prison. But why should not this same society, bent on self-protection, seek to protect itself permanently and humanely rather than transiently and revengefully?

SAN QUENTIN, CAL.

Your House in Order

BY WILLIAM FREDERICK DIX

AUTHOR OF "THE FACE IN THE GIRANDOLE," "AS A MAN PROSPERS."

IS your house really in order? Outwardly, perhaps, yes, since your wife is a good housekeeper, but how about your own personal affairs? Your lawyer has perhaps drawn your will for you and your personal accounts are business-like, but have you looked that will over recently, and, in the case of your death, is there some one in your household who is sufficiently familiar with your account book to understand your system? In case your house should burn, have you its plans and specifications and detailed statement of cost and an inventory of your furniture, with an itemized appraisal of values, so that you will have as little trouble as possible in adjusting your claims with the fire insurance companies?

Have you tried to imagine just what condition would exist in your family immediately after your death, and have you carefully provided for that condition? These and a number of similar questions must be answered satisfactorily before you can say that your house is really in order.

The following are a few practical suggestions which, if you think them over and act upon them, may be the means of saving you or your family from some seriously inconvenient plight or actual trouble and loss.

First of all, make a point of keeping your wife (or some member of your household) familiar with your system of personal accounts. Let her understand how you enter your investments in your ledger, when your dividends are due, how you collect your interest and deposit your coupons, and how you enter the items in your account book. Let her know where your safety deposit box is, where you keep the key, where your letter file relating to these business matters is kept; and just what your relation to your business is. You know it is quite possible that you *will* die *some* time.

Keep your fire insurance policies in your safety deposit box, where they will not be burned with your house, and keep, in the same package with them, plans and specifications of your house, so that the fire insurance companies can know definitely just how much it would cost to replace it. With your furniture insurance policy keep a detailed inventory of your household effects, with statement of their values. It would be impossible for you to do this from memory after the goods have been destroyed, and much needless trouble would necessarily ensue without such a list. And do not rely wholly upon your agent to renew your policies as they expire. Keep a list of the dates of expiry in your account book, where you will see them frequently.

If you have mortgages among your investments, note the expiry dates of the policies insuring those properties—which policies should, by the way, be in your possession—and see that they are always promptly renewed. And have your mortgagors exhibit their receipted tax bills to you annually.

Most men do not try to realize just what would be the situation in the family immediately after their death. Take your own case, for instance. Suppose you should be run over and killed today. Have you looked into the law of your State to ascertain whether or not your safety deposit box would be sealed, and if it would be sealed, are there any documents in it which your family would need before it were officially opened by your executors in the presence of a State officer? Your executors may take a year to settle up your estate; how about ready money for the use of your family?

When a man draws up his will it is seldom that he appreciates the fact that his cash in bank and the interest accrued on his investments up to the date of his death become principal, and cannot be used by his family to pay their current

expenses following his death. A considerable amount of time is usually necessary for the executors to settle an estate, and if the man's widow has no means of her own, she might be seriously inconvenienced for a time by the lack of ready money, even if her husband left a considerable estate. She could not use his cash in bank nor the income which had accrued on his investments up to the date of his death. In other words, his family, as beneficiaries, start with nothing, so far as ready money is concerned, unless he had made special arrangement for cash to be immediately available.

An excellent way for a man to be sure that his family, upon his death, will have ready money at once, free from all complications, is to take out, in addition to his regular insurance, a policy for say one or two thousand dollars in favor of his wife or some member of his family. This sum will have nothing to do with the legal formalities necessary in connection with the settling up of the estate, and can be immediately collected and put in use. There may be traveling or moving expenses to meet and mourning clothes to purchase, and while the annual premium on a life policy for this "insurance against inconvenience" is small, the ready money will be a vast help at a difficult time.

It would also be a good idea for you to read your will to some trusted friend of good business judgment and have him repeat to you in his own language just what he thinks the will orders done. Stripped of its legal verbiage, which is sometimes puzzling to the lay mind, it may reveal the fact that certain situations will be caused which the maker of it had not intended.

It is also a good thing, when you draw your will, which is necessarily a formal instrument, to relieve it a little of its seemingly cold tone by leaving some personal token to each member of your family. The will will be read to them at a time when their nerves are especially sensitive on account of their sorrow, and your seal ring, your watch or other prized personal possessions will be endued with an added value as keepsakes if they are thus specifically bestowed.

You probably have a great mass of out-of-date business papers, old letters, paid bills long ago outlawed, bank and check books and vouchers and other things which *you* can look over and destroy *now* more easily than any one else can do in the event of your death. A small business filing cabinet is not expensive and will take up little room. Select one to meet your particular needs, go over, as opportunity affords—and meet that opportunity half way—all those dusty packages tucked away in pigeon-holes and desk drawers and trunks, remove all rubber bands, tapes, string and envelopes, straighten out all folded papers, destroy everything out of date, and file the papers which should be kept systematically in your cabinet, and then explain that system to some one at home.

In other words, do not confine modern business methods to office practice. Put your house in order! Let the protection which you have given to your family extend beyond the grave. Let the catastrophe of your death be minimized as much as possible by practical forethought *now* and save your family a vast amount of trouble at a time when they will have trouble enough in any case.

NEW YORK CITY.

Our Foreign Population

BY WILLIAM B. BAILEY, Ph.D.

ASSISTANT PROFESSOR OF POLITICAL ECONOMY IN YALE UNIVERSITY.

IN the accompanying diagram the distance along the base line shows the number of foreign-born in the United States in 1850, 1880 and 1910, while the perpendicular divisions show the distribution of the foreign-born by nationalities. The total number of foreigners in the United States in 1850 was about 2.2 millions; in 1880, 6.7 millions; and in 1910, 13.3 millions. There are more foreign-born in this country at present than was the total population of the United States in 1830 and more than half of the total population in 1850.

In 1850 more than two-thirds of the foreign-born population of the United States had come from Great Britain, Ireland and Canada and had been British subjects. Ireland alone furnished nearly twice as many as any other country. The countries of southeastern Europe had so few representatives that they were not separately returned in the census tables.

In 1880 the Germans for the first time exceeded the Irish, and these two coun-

tries furnished 57 per cent. of our foreign-born population. Those born in Austria-Hungary, Italy, Poland and Russia constituted a smaller proportion than those from Norway alone.

Latterly the change in the character of our immigration is a great increase in the proportion of those who come from Austria-Hungary, Italy and Russia. There are now in this country nearly as many representatives of these three countries as from Germany, Ireland and Great Britain combined. From 1900 to 1910 the number of Germans and Irish in this country declined more than half a million, while the number from Austria-Hungary, Italy and Russia increased three millions during this same decade. In the country as a whole those of the foreign-born who came from north-western Europe barely held their own during the last ten years, while the numbers from southeastern Europe more than doubled.

What Is the Matter with Our Army?

IV. Its Alienation from the People

BY LIEUT.-COL. HUNTER LIGGETT

[We have already printed three articles under the title of "What Is the Matter with Our Army?" Three weeks ago Major-General Wood opened the series, which was followed two weeks ago and last week by articles by Brigadier-General Wotherspoon and Brigadier-General Edwards. The present article is contributed by a member of the general staff. In view of the whole Army question now being before Congress, this series should prove of much value to the country.—EDITOR.]

UNDOUBTEDLY the average citizen of this broad country who stops to inventory his mental equipment in this respect is possessed of a more or less proud and comfortable if altogether hazy belief in the efficiency of his country's army, and he would be correspondingly surprised were anybody to succeed in shaking this belief into suspicion that the military establishment, which he has in mind as representing an army, is not merely without efficiency, collectively speaking, but is not an army at all. The average citizen having little opportunity to observe our military forces must needs base his belief on innate acceptance of America's ability to "lick all creation," inherent understanding that every American citizen (being a sovereign) is a natural soldier if not a military genius as well, and finally and practically, on the few individuals of the military establishment that he may have encountered. These having appeared to him as generally individually efficient, there is prompt if illogical conclusion that collectively they must also be efficient. The army cheerfully, if not altogether modestly, admits general individual efficiency. It can hardly do otherwise: the requirements for both enlisted and commissioned personnel are severe, and to deny efficiency in this respect is to deny efficiency of selected Americans. But collective efficiency is another matter, and the army, or a large part of it, admits now, however sadly, that it does not exist.

The average publicist, writer, lecturer, or editor, when he, in turn, remembers the matter at all, is likely to admit efficiency in the military establishment and would be no less shocked to find it otherwise. But in his general capacity as

guardian of the public welfare he is likely to regard the army, no less than any other governmental institution, as seeking only its own aggrandizement and as encouraging, therefore, the largest possible appropriations from Congress for military purposes, regardless of other public needs. As one editor of no mean standing recently expressed himself: "The army and every department of the army is seeking only closer connection with the treasury. All they want is more money spent upon them, and you will never find them encouraging reductions in appropriations, but always endeavoring to increase them." Now this editor would probably be more surprised to find himself in error in this conclusion than to find that the army is inefficient; yet he is equally wrong in his belief in the army's efficiency as an army and his conclusion that the military establishment and all departments thereof are seeking only larger appropriations for the sake of self-aggrandizement. The army—speaking collectively, let it be remembered, and not individually, militarily, and not personally—is not efficient, and the army in a large part stands ready to attest the truth of this statement today. In testifying to this truth, however, it wants opportunity to explain why the army, with a well qualified personnel individually, is still collectively inefficient. Again, the army is not seeking increased appropriations for military purposes. On the contrary, it is pleading for opportunity to show that the cost of the military establishment is unnecessarily high and to explain whereby if reductions cannot be made at least some true efficiency can be secured for the money now expended.

Where, then, is the trouble? Why is

it that the average citizen believes so implicitly in the efficiency of the military service? Why is it that the average publicist is so assured in his belief that the army is seeking only larger appropriations for its own benefit? The answer to both questions is the same. It is pure ignorance. The average citizen knows nothing of the army; and the average publicist knows little more, and is, moreover, in the possession of an apparently fixed belief that the people, being ignorant of the army, have no interest in it, and he therefore makes little effort to enlighten either the public or himself. The publicist, then, bears the larger part of the blame. But the military establishment itself is not blameless. The military establishment itself has been ignorant of its true condition and has been wont, no less than the citizen and the publicist, to assume that because it was individually efficient it was also collectively efficient. Popular sentiment, when it has been manifested at all, either among the people or in the press or on the platform, has but reflected the army's own views of itself. But the army has discovered its error, and being still generally honest, it is not seeking to hide its discovery but to spread it broadcast before those on whom the responsibility for correction must finally rest—the national legislature, the national press, and the national body politic.

Collective efficiency in any military establishment, as the army now realizes, is dependent upon assurance of prompt collective use of all parts of that establishment combined for the prosecution of its ultimate purpose. Not only does our establishment lack assurance of such collective use, but its prompt and effective use as a fighting machine is not now possible. The reasons for this we need not go far into now. Primarily, they turn on the lack of proper proportions among its different parts and upon the total lack of any organization of these different parts collectively as an army. But there are certain minor but still important troubles clearly not to be got rid of at all without proper organization, but not even to be got altogether rid of with organization unless they are clearly recognized. Some of the troubles of this class are bound up in this general ignorance

of the military service, and it may pay us, therefore, to look into the cause of this ignorance.

It is this. Our army is an alien army—not alien in the sense of foreign born, because its personnel is all American by birth or naturalization, not alien in the sense of education or training, nor in thought, but alien in its practically complete separation from the lives of the people from which it is drawn. There can be nothing really worse than this either for an army or for a people. No one can believe, with our immense population and our comparatively small military force, that this force can ever be used to oppress any part of our people or even to oppose any part in a way not dictated by the overwhelming opinion of the nation at large. Nevertheless, the fear of such oppression was manifest thru all the constitutional struggles of our national beginning, a fear inherited from ancestors who had suffered from armies thus used. And the armies thus used were always alien armies, alien sometimes by birth and always by separation from the people at large and by close dependence upon the ruler whose will they obeyed. That was a day now long past in nearly all the civilized world. The army of Germany today, perhaps the greatest military machine the world has ever known, is the Emperor's army. But the Emperor could no more use it for purposes unsupported by the whole German people than the President of the United States could use our little military establishment for a purpose contrary to the wishes of the American people. Nobody knows this better than the German Emperor himself. The reason is plain. It is the German people's army. It is a part of Germany's life. It lives in the midst of the German people—close to them. Every German family has a heart interest in the army—a father, a husband, a son, or a brother. The German people may deplore the cost of their military establishment, but they have, nevertheless, an understanding of their army and not only a comfortable but a well-founded faith in its efficiency. The lesser degree, elsewhere in the world where armies of any efficiency are maintained.

It is true even in Great Britain,

where conditions in a military sense compare best with conditions here. Tommy Atkins may not always be popular in public when the public does not stand in immediate need of his services, but he is never a thing so far apart from the people as his cousin on this side of the Atlantic. Of course, Great Britain is smaller and her army larger. The British people cannot avoid seeing more of their army than is possible for the American people with theirs. But there is much more than this. The British Government does not deliberately set its army apart from the people. On the contrary, it quarters them with the people and encourages interest in the army in every way possible. The Lincolnshire Regiment is more than a name. It is something that arouses at least local interest in the troops of the regiment thus designated. The State of Utah is far from our coast line, with little natural call for interest in the navy, but the great battleship "Utah" is something more than a name to the people of that State. Reduced to its simplest terms, it is the heart interest of the Utah citizens in the United States navy. The army has nothing of all this. It has nothing in sentiment or in fact to attract attention from people who never see it, much less to arouse any widespread interest in its favor.

But the American people are not naturally without military interest. The fact that the National Guard is a living organization, the very widespread belief innate in most of us that, given the occasion and opportunity, we could successfully lead armies in battle, and the very love of the uniform and the music of bands all establish the contrary. With our vast extent of territory and our numerically small national military force it is not to be expected that we can ever arouse national interest in the military service to the extent that it exists in a compact military country like Germany. It is not necessary, even if desirable, that we should. But certainly we should not seek so to divorce the army from the people that the creation of any heart interest whatsoever is impossible.

It is not sought here to fix the blame for this condition. No blame attaches anywhere in a real sense. It is the result of our national and military develop-

ment and easily traced. In a time now past but not so far gone that its memory does not linger in the minds of men still in the service, our army, pitifully small in numbers, widely scattered in little detachments, had practically no other purpose than to fulfil its duty of advance guard to civilization in its progress across this continent. If we except the war with Mexico and the Civil War, which for reasons unnecessary to enter upon here did not affect our military development, unless it were to retard it, the army for three quarters of a century found little reason for existence except in the Indian struggles that filled that period. For the protection of the settlers moving steadily if slowly into the West, the little force that composed our army then was necessarily divided into small detachments and widely separated. As the Indian vanished or yielded sullenly to the confinement imposed upon him by reservation life, as the warfare with the red man gradually decreased and then ended, these little detachments of the army were left where the last necessity for their use in this way had brought them. Near their little posts settlements sprang up and grew into towns and sometimes into important cities, with no other effect on the distribution of the army than perhaps crowding the detachments farther away from civilization when their reservations became necessary to the development of the cities that had grown where they had cleared the way.

The army was thus mainly left in the most sparsely populated sections of the country, in the neighborhood of the towns that had become accustomed to the presence of troops, and liked them, no doubt, for the life and color they helped to provide, but also for the commercial benefit the troops meant to the community. For this reason these towns sought oftentimes to develop the military posts in their neighborhood to larger proportions. Congress began to build quarters for the troops in these localities, at first only more or less liberally, but later not infrequently with considerable extravagance. The increase of the army during and after the Spanish-American War gave new impetus to the erection of larger and finer posts, but unfortunately, without any new plan of distribution or method of housing the troops themselves.

The sole excuse for the old distribution had long passed away. Free from probability of any further Indian troubles, almost equally free from likelihood of serious disorder or insurrection among the people where the troops were stationed, and with a far wider national life and far more complicated international relations, if the country had any use for an army at all, it was in a national and not a local sense. To meet these new conditions new distribution and new methods of quartering and training should have been sought. Individual efficiency was sufficient for the purpose of the army under the old conditions. Collective efficiency is essential now if the new obligations of the service are to be met. A "professional" army was sufficient then, and a professional army it was. A people's army is essential now, and a people's army it is not.

It has been maintained as an argument in favor of the present system that dividing the military establishment into these widely separated detachments serves to bring the army closer to the people than could be accomplished with larger posts. But the facts establish the contrary. Not only, as already stated, is the greater proportion of the army in the most sparsely settled sections of the country, but the greater proportions of posts are at a considerable distance even from the towns near which they are located. But very few of them are in the hearts of the cities as is the case in nearly all foreign services. The navy is better known and seen by more of our people than is the army, because the navy visits, as a rule, only the larger ports with thickly populated regions surrounding them. The army should be distributed with the same thing in mind. It should be distributed first, of course, in accordance with some defined plan for its use in time of emergencies and for its training at all times; and again with due regard to railway facilities and sources of supply, in order not merely to be readily moved when necessary, but to reduce the tremendous cost in transportation now involved in supplying and equipping and moving the forces. But these matters settled, the army should be distributed so as to bring it closer to the masses of the people from which it is drawn.

But something more is necessary; not merely the whole distribution of our army in its widest sense is bad in almost every way, but the local situation of most of the posts is faulty. Most of these stations are situated either too near or too far from the towns where located. Most of them are from five to twenty miles distant. Unless they can be nearer, it would be much better in a military way to have them at a still greater distance. Shutting our soldiers up by themselves in this manner draws an unnecessary line of demarkation between the soldier and the civilian across which both hesitate to pass. The soldier from long custom becomes reserved and even timid in the presence of the civilian, a state of mind much more likely to be regarded as pride by the civilian, in whose estimation the whole soldier class becomes a kind of caste foreign to American ideals, and unconsciously natural resentment finds a lodging place and influences civilian judgment in military affairs. Quartering our troops generally in the heart of the larger cities would save immensely in the cost of construction for quarters and in the upkeep of our military posts. That would be the economic gain. But the real gain would come from the better acquaintance of the soldier and the civilian. Once acquainted it would be found that there is no difference between them except in their lines of work. The lawyer and the doctor, the machinist and the carpenter, meet on even terms in this world's affairs. There is no reason why the soldier and the doctor and the lawyer, and the soldier and the machinist and the carpenter should not all meet in the same way. There would be profit in many other ways, economic and sentimental, to the service and the State. The soldier after his day's work is done would find some sort of amusement at hand no different than the amusements of his civilian neighbors. He would find relief from the monotony of practical confinement to barracks and the bare area surrounding them, now his lot in the military life. "Single men in barracks don't grow into plaster saints," as Kipling attests. It is unwise to confine young men, physically and mentally strong, by themselves in considerable numbers in this way. With the attractions of a larger

life afforded by the system practically universal elsewhere in the military world, desertion as a means of escape from the monotony and grind of military life, where unrelieved by opportunities for temporary forgetfulness, would be sought less often. The soldier's visit to town now is always in the nature of an excursion and too often in the nature of a spree. This is not because the man is a soldier, but because he is human. Given opportunity to lead the normal life of his fellows and with his fellows, we should find him in the towns no different than they.

Again, why should a regiment be stationed first in New York and a few years later in Arizona? True there is something to be said; especially with a small army like ours, for a national military force wholly free from local or sectional influences. But the gain is probably more fancied than real, and in any event should be sacrificed for the greater gain of a better method. Were a regiment, except when on foreign service, quartered always in the same place, it would come gradually to draw all or nearly all of its personnel from the surrounding section. It would become "localized" and an institution of the community to which it was attached. This again would have influences wholly opposed to desertion, wholly in favor of finer and closer relations between the soldier and the civilian.

Localization and proper quartering of our troops would be a vast economy; it would go far in building *esprit de corps* and establishing local interest; it would make possible and practicable the creation of a reserve of trained men; and it would help to make the service truly representative of the people whose service it is. We have a battleship "New York." Why should we not have a New York regiment?

Undoubtedly there is some sentiment in all this. But war itself is an expression of sentiment. It is difficult to find practical reasons for war. It is easy to offer practical objections to war as a means of deciding international differences. But war still continues, and though we hope for a better state of world affairs, plainly the confused condition observable everywhere now does not encourage expectation of immediate fulfillment of our hope. But whether wholly or partly sentiment, this is all a matter of deep importance. Just so long as we have any army at all it should be not merely efficient, but a recognized part of American life, and it should represent just so far as is possible a popular interest. This result can be assured only by bringing the soldier and the civilian together until they become sufficiently acquainted to realize that they are the same thing and equally interested in the progress of American civilization.

WASHINGTON, D. C.

Song

BY HENRY AUSTIN

WHEN the sun is in the west
And the bird is on her nest
And the zephyr is at rest on the sea,
Right above the harbor bar
Bright as love outshines a star—
And I know my little ship is coming back to
me.

Tho the sky had many a cloud,
When her outward way she plowed,
And the wild wind wept aloud on the sea,
Yet before that day was done,
At the last look of the sun,
Rose a rainbow for a sign, a sign divine to
me.

So I'm sure that up the bay
I shall see my ship some day,
Like a bird-mate, flying gay, to its tree;
And around her prow the spray,
Making rainbows all the way,
Will sing treble to a song of treble joy for
me.

CAMBRIDGE, MASS.

The Quakers in the American Colonies*

THE share of the Quakers in the development of the United States has hitherto never received due acknowledgment, especially as regards the New England colonies. In most American histories of the popular type the story of the bitter persecutions to which the Quakers were subjected in Massachusetts, Connecticut and New Hampshire has been treated somewhat apologetically, but it was long the fashion to excuse these persecutions on the ground that the Quakers had made a nuisance of themselves by their disorderly conduct and their extravagances. The cases of Lydia Wardel, of Hampton, and Deborah Wilson, of Salem, who, mentally unhinged by the terrible punishment to which their friends and families had been subjected, exhibited themselves as "naked signs" to their persecutors, were habitually cited as causes of the persecution. Little regard was paid to the fact that the persecution of the Quakers long antedated the few cases of fanatical extravagance which resulted from the cruel treatment of which the Quakers had been the victims, and that these sporadic instances were totally inadequate as an explanation of the furious persecutions which were visited upon them.

The lists of persecutions inflicted by the colonial authorities of Massachusetts are not pleasant reading for those who desire to idealize the Pilgrim Fathers as a liberty-loving people. As drawn up for presentation to Charles II, in 1661, the list included three put to death; two sold as slaves; twenty-two banished on pain of death; twenty-five banished on pain of whipping or branding; an immense number whipped, some with pitched rope, some with whips of

three knotted cords; and imprisonments, heavy fines and forfeitures for many more. The tender mercies of the men who were determined at all costs to put down a heresy which belittled their ministers and set up individual judgment above the faithful acceptance of dogma, were indeed cruel. They were perhaps as well illustrated by the order of the magistrate of Dover for the punishment of Ann Coleman, Mary Tomkins and Alice Ambrose in 1662, as by any other incident of the persecution. In the middle of winter, with snow in parts more than knee deep, these three women were fastened to the tail of a cart and whipped out of town, with the further order that they be taken thru eleven townships and receive ten strokes of the whip on their bare backs in each town "till they come out of jurisdiction." Fortunately there was some pity left in Massachusetts and in the third of the towns thru which they were to pass a deputy sheriff took matters into his own hands and set the women free.

The story of the Quakers in the various colonies may in each case be divided into three periods. For convenience of narration, Dr. Jones follows out the history in each section—New England, New York, the Southern colonies, New Jersey and Pennsylvania. In each of these areas conditions differed. In Pennsylvania, New Jersey, the Carolinas and Rhode Island, there was no period of persecution thru which the Quakers had to pass; and in none of the colonies outside New England did the Quakers suffer as they did in Massachusetts. In spite of these differences, there were, however, the three periods of Quaker development in all the colonies where they settled in considerable numbers. The first period was one of expansion—of propaganda, of rapid growth in numbers and influence—a growth that was quickened wherever persecution brought out the heroic qualities of the Quaker martyrs. The second

*THE QUAKERS IN THE AMERICAN COLONIES. By Rufus M. Jones, M.A., D.Litt. Assisted by Isaac Sharpless, D.Sc., and Amelia M. Gummere. New York: Macmillan & Co. Pp. xxxii, 693. \$3.50

period was one of large and in some cases of dominant influence in politics. During this period the Quakers developed many of their practical principles, and made clear their testimony against oaths, against war, against the slave trade, against ostentation and insincerity, and in favor of a religion of a new social type, where actions and methods of living were scrutinized, and where a man's religious standing was gauged rather by his life than by the correctness of his theology. The third period was one of withdrawal from public life and sectarian segregation.

Education, care of the poor, avoidance of intoxicating liquor, uprightness in trade even with Indians—these and many other practical Christian duties were the witness of the Quakers to their Christianity; and their fidelity to their religion was measured by their daily life. While the rigidity of conduct required by the society was perhaps a disadvantage in some respects in the difficult days of the Revolution and the Indian wars, the moral uprightness and reliability of the Quakers were the basis of the extraordinary influence wielded by this comparatively small body of people. Dr. Jones makes no effort at special pleading. He exposes the weaknesses of the Quakers and the causes of their failure to win over any large proportion of the nation to their way of thinking. But he shows also that any history of the United States is incomplete that does not take into account the Society of Friends as one of the factors in the formation of American nationality.

Nietzschean Literature

THO the day foretold by Nietzsche has not yet come when "chairs will be founded and endowed for the interpretation of Zarathustra," the books on Nietzsche are accumulating at such a rapid rate that libraries would have to be built to preserve them all. The translation of Nietzsche's works into English is now completed, with the exception of a volume of fragments, by the publication of *Ecce Homo*,¹ his autobiography,

written at the age of forty-four, just before the end of his mental life, tho twelve years before the end of his physical life. The volume will be attractive only to the most devoted and inalienable of his followers, for in it Nietzsche's egotism rises to its zenith, and like the dying scorpion, he lashes about blindly to sting anything within reach, not sparing himself; a last convulsive effort to rid himself of his accumulated venom. Democracy, socialism, imperialism, Darwinism, Wagnerism, morality, Christianity, women, and, above all, Germans, are the objects of his virulent scorn and wit. As a true musician, he ends his life work on its keynote:

"Have you understood me? *Dionysus versus Christ.*"

Yet, by a curious inversion of personality not unknown in pathological states, he sometimes seems to identify himself with his arch-enemy, as he did a few months later, when his postal card, signed "The Crucified One," informed his friend Brandes that his mind had been permanently clouded by insanity.

He begins his autobiography by boasting of his Polish blood and noble ancestry, and heads the successive chapters: "Why I Am So Wise," "Why I Am So Clever," "Why I Write Such Excellent Books" and "Why I Am a Fatality." Their chief interest lies in the light they throw on the psychology of genius in his account of the circumstances under which he produced each of his books. As aids to inspiration he values mostly solitude and altitude, dry air and physical exercise. The fundamental idea of Zarathustra, the Eternal Recurrence, which he regarded as "the highest formula of a yea-saying to life that can ever be attained," came to him in August, when he was in the mountains, "six thousand feet beyond men and time." It was on one of his walks on the hills near Genoa that Zarathustra himself "waylaid" him. "Put no trust," he says, "in any thought that is not born in the open, to the accompaniment of free bodily motion," and he adds, "a sedentary life is the real sin against the Holy Spirit."

Professor Ostwald ascribes Nietzsche's faults, his intolerance, his aristocratic proclivities, his hatred of science, to his training in classical philology, so it is

¹ECCE HOMO. By Friedrich Nietzsche. Translated by Anthony M. Ludovici. Vol. XVII of the complete and authorized English translation edited by Dr. Oscar Levy. New York: The Macmillan Company. \$2.

interesting to see what is said of Nietzsche by one of the foremost exponents of classical culture, Mr. Paul Elmer More, editor of *The Nation*.² Slim as Mr. More's volume is, it is a really valuable contribution to the literature, because he traces the development of sentimental humanitarianism from Rousseau to Tolstoi, and shows how it leads to a simultaneous development of Nietzschean egotism. In fact, the civil warfare which was perpetually waging in Nietzsche's own soul and which gave to his personality its strange fascination, was the evitable conflict between the inconsistent principles of romantic naturalism. As Mr. More says:

"No one who has read the annals of the romantic group of Germany need be told how their Pantheistic philosophy was contradicted by the utterly impractical individualism of their lives. Nor is the same paradox absent from the modern socialistic theories that have sprung from romanticism; it would be possible, I believe, in many cases to establish from statistics a direct ratio between the spread of humanitarian schemes of reform and the increase of crime and suicide."

"Thou goest to women? Forget not thy whip!" said Nietzsche. Some reason for thinking that Nietzsche was justified in boasting of profound knowledge of feminine psychology may be found in the fact that among his devoted disciples there is as large a proportion of women as in any other novel sect. Miss Emily S. Hamblen finds *His New Gospel*³ quite attractive, even an improvement on the old gospel.

Mr. Osage's little volume on *The Dionysian Spirit of the Age*⁴ is not so much an exposition or criticism as a rhapsody of laudation, extravagant enough in its language to satisfy even the egotism of his master.

EDWIN E. SLOSSON.

We and Our Children. By Woods Hutchinson. Garden City, N. Y.: Doubleday, Page & Co. \$1.20.

Dr. Hutchinson has a vivacious, commonsensible way of putting important matters of hygiene that makes his new volume, addressed to parents, an excel-

lent handbook for the nursery. Many ancient superstitions are exploded, and some time-worn rites are discarded, and, on the whole, the book is refreshingly free from fads. The author has a wholesome disregard of tradition in matters both of diet and of discipline; he defends the "sweet tooth" as one of the child's most valuable assets; he finds the "American mother" the best equipped for her task of any woman in any age; he scouts the idea that our teeth or morals are degenerating, and he cites an abundance of facts to substantiate his optimism. There is criticism and to spare of our educational methods, but our teachers are so used to being found fault with that they will even enjoy Dr. Hutchinson's good-humored and suggestive strictures.

Behind Turkish Lattices. The Story of a Turkish Woman's Life. By Hester Donaldson Jenkins. With 24 Illustrations. Pp. 180. Philadelphia: J. B. Lippincott Co. \$1.50.

The author has spent nine years in Constantinople, apparently as a teacher, and learned to love Turkey. She does not, however, pretend to an intimate knowledge of the provincial towns, and is a light-hearted cicerone. Beginning with an account of the Turkish treatment of children, she proceeds to communicate her knowledge of the life of their mothers. She favors the modernization of their conditions, but writes that while the discontent Loti reports is common enough, "the women who read French novels form a very small minority," and the average Turkish woman "is as simple and almost as uncontrolled as a little child." An interesting chapter reproduces an essay by a Turkish schoolgirl on "Women and the Turkish Constitution." Humanly interesting, too, are the chapters dealing with marriage, with their explanation of the tendency away from plurality. Miss Jenkins's book is written in an informal style, and the page is pleasantly broken with conversation. *Behind Turkish Lattices* demands nothing of the reader, and rewards him with information that is nowhere accessible in a form so unalloyed with religious prejudice, moralizing, or didacticism.

¹NIETZSCHE. By Paul Elmer More. Boston: Houghton Mifflin Co. \$1.

²FRIEDRICH NIETZSCHE AND HIS NEW GOSPEL. By Emily S. Hamblen. Boston: Richard E. Baigent. \$1.

³FRIEDRICH NIETZSCHE: THE DIONYSIAN SPIRIT OF THE AGE. By A. R. Osage. Chicago: A. C. McClurg & Co. 75 cents.

Historical Research. By John Martin Vincent. New York: Henry Holt & Co. \$2.

There have long been many excellent manuals on history writing by European scholars—Bernheim, Langlois, Seignbois, Giry; but we now have a systematic treatise from the pen of an American student, Professor Vincent, of Johns Hopkins University. His volume, as he informs us in the prefatory note, does not claim to be an encyclopedic treatment of historical investigation, but rather an outline for the advanced student, who is apt to engage in research, either as a profession or a serious avocation. The themes which he takes up are not new, but he treats them with a clarity and conciseness which will commend the volume to the very readers whom he has in mind. The beginner in historical research is properly warned about the nature and problems of historical criticism, the analysis of texts, the discovery of frauds, the biases of authors, the classes of records and documents available, the utility of the newspapers as sources, and the many pitfalls which beset him who would construct a balanced and truthful account of any historic events or conditions. Every chapter is full of keen and practical suggestions, and there are wise hints on literary style, historical perspective and psychological factors in historic process, which could be read with profit by others than novitiates in history writing. There is, however, a strange neglect of that important theme known as "the economic interpretation of history," for our author glosses it over in two or three vague and unsatisfactory pages. Indeed, it is on the side of analysis, or the examination and criticism of the methods to be employed in searching for documents and evaluating them—rather than on the side of historical construction—that our author has done his best work. At all events, it is to be profoundly wished that every college president or board having occasion to employ history teachers should be compelled to pass an examination in Professor Vincent's little volume, for it would help destroy that vicious tradition that anybody can understand and teach history, while technical training is required in every other branch of learning.

Literary Notes

...*Chronicles of Avonlea*, the new novel by L. M. Montgomery, is announced for spring publication by L. C. Page & Co.

...How American civilization—or rather, New York City—seems to a Syrian immigrant is told in a curious, rhapsodic style by Ameen Rihani in *The Books of Rhadid* (Dodd, Mead; \$1.30).

...A good book to incite young people to thinking along scientific lines is Phin's *Seven Follies of Science* (Van Nostrand; \$1.25) now appearing in a second edition with the addition of a lot of new paradoxes and popular misconceptions.

...Balzac once presented the Duchesse de Dino with an unpublished manuscript—and it is only at this late date that it has appeared in print. The English translation of the story is called "Love in a Mask" and will be published by Rand, McNally & Co.

...An earnest appeal for a rational morality and greater self-control is contained in an address delivered by Dr. Paul Dubois at the University of Berne and translated by E. G. Richards under the title of *Reason and Sentiment* (Funk & Wagnalls; 50 cents).

...*The Chinese at Home*, by H. Dyer Ball (Revell; \$2), ought not to displace such a standard work as Smith's "Chinese Characteristics," but it is nevertheless a useful volume, giving in very readable fashion a comprehensive and trustworthy survey of domestic and public life, illustrated with numerous photographs and seven color prints.

...In *Love and Ethics* (Huebsch; 50 cents) Ellen Key presents in concise form her plea for a higher ideal of parental responsibility and of conjugal affection. We recognize the good intentions of the Swedish reformer but we do not agree with her in thinking that the existing marriage system is the chief obstacle in the way of their realization.

...Owen Wister's short story of *Padre Ignacio*, or "The Song of Temptation," is published all by itself by Harper & Bros. (pp. 68; 50 cents). The tale of the priest in California who remembers too well for his own happiness his secular life, and who teaches grand opera to his little choir of half-breeds, but who knows at last what Renunciation with Contentment is, is well told indeed.

...A new volume of the Home University Library that ought to find its place in many a pocket or traveling bag just now is H. A. Giles's *The Civilization of China* (Holt; 50 cents). The author, Professor of Chinese in

Cambridge, has done wonders in compressing an account of history, manners and customs, art, literature and religion into such small compass and still keeping it readable.

....The Grolier Club's exhibition commemorating the Thackeray centenary, which continues at New York until March 16th, is made the occasion for the issue of a very interesting and most attractively made *Catalogue*, consisting of an introduction, bibliography of "Works," and other personal and bibliographical notes, invaluable to the collector. The volume is issued from the De Vinne Press.

....We commented editorially, some months ago, upon M. Emile Faguet's book, *The Cult of Incompetence*, which now comes to us in an English translation signed by Beatrice Barstow, with an introduction by Thomas MacKay (Dutton; pp. 236; \$1.50). The academician's trenchant criticism of modern democracy and its ideals readily lends itself to translation, and makes stimulating reading, however pessimistic.

....By one of those happy coincidences which are common in the history of the American Academy of Political and Social Science the January number of the *Annals* devoted to *China: Social and Economic Conditions* comes out just as the Chinese republic is proclaimed. It contains fifteen articles on various phases of Chinese life and political conditions by authoritative writers, five of them Chinese, including two Chinese women. (Philadelphia; \$1.)

....The librarian being usually a serious person of a careworn aspect, Mr. E. L. Pearson's joyous book *The Librarian at Play* is a rare surprise. It touches with a lightly feathered pen the humorous side of a librarian's lot and in a series of pleasant chapters tells the story of book-lending from behind the desk. The universe is not exactly card-cataloged and set upon shelves in orderly array, but there is much sensible and gentle philosophy to temper the fun (Small, Maynard; \$1).

....Prof. F. H. King, of the University of Wisconsin, was one of the foremost authorities on the subject of soils, one of the first scientists to recognize that the secret of successful agriculture must be sought in a knowledge of the physical structure and chemical composition of the soil. At the time of his death last August he had practically completed a volume on the *Farmers of Forty Centuries*, explaining how the people of China, Korea, and Japan had been able to maintain their land in a permanent state of fertility. No lesson is more needed by American agriculturists and no one was better qualified to teach it than Professor King. The book is packed full

of information based upon ages of Oriental experience in the art of supporting a large population on a small area, and it is illustrated with numerous photographs. It is published by his widow, Mrs. F. H. King, Madison, Wis., at \$2.50.

....The *American Year Book* for 1911 appears again with admirable promptness, and this time free from the typographical errors and inconsistencies to be found in last year's volume. The classification by countries and by subjects enables the reader to find out in a few minutes what progress has been made in any particular science or industry, what laws have been passed, what events have occurred and what movements are on foot. It is a marvel of compactness, convenience and comprehensiveness (Appleton; \$3.50).

....From L. C. Page & Co. we receive David C. Preyer's *Art of the Berlin Galleries*, of which the following is the subtitle: "A History of the Kaiser Friedrich Museum with a Critical Description of the Paintings Therein Contained, Together with a Brief Account of the National Gallery of Nineteenth Century Art" (pp. 324, \$2). The book is a useful addition to an attractive series and is furnished with numerous illustrations. *The Art of the Berlin Galleries* will prove especially useful to the tourist whose time in the German capital is not too strictly limited.

....Thirteen years ago John Murray published Dr. Knapp's "Life, Writings and Correspondence of George Borrow," but was unable to include material in the possession of the Bible Society. Letters addressed to the society by Borrow during a term of eight years have now been unearthed—one hundred of them—and will be published in this country by the George H. Doran Company. Another Borrow book will be edited by Clement Shorter, editor of the *Sphere*, who claims to have in his possession a mass of manuscripts and all Borrow's letters to his wife.

....To overcome the tendency of students to keep their sciences in separate thought-tight compartments so they will never mix or get into everyday life seems to be the motive of the novel textbook, *Introduction to General Science*, by Percy E. Rowell (Macmillan; 75 cents). It is admirably adapted for use in public schools, especially in the country; not merely for the information it contains, but because it leads the student in every case to seek further information in two directions, in experimentation and in books. We are glad to see that in the references great use is made of the bulletins of the United States Government.

....We have said before that the *Manual of Style*, issued by the University of Chicago Press, was the best book of the kind published and we are confirmed in the opinion by the appearance of the third edition. The directions for capitalization, punctuation, spelling and preparation of manuscripts are well considered and cover the contingencies of composition in all manner of scientific and linguistic literature. There are also appended over a hundred pages of specimens of type in use. In the matter of spelling the University of Chicago Press is not as advanced as the *Educational Review* of Columbia, but is better than most of the commercial presses. This *Manual of Style* would be very useful for reference in high schools and colleges and wherever the art of writing is being taught.

....Mr. Buchanan Blake has presented a new metrical, rimed translation of the book of Job in his volume on *The Problem of Human Suffering* (Hodder & Stoughton; \$1.50). Following the generally accepted conclusion of literary criticism that the book is not a unit, he gives the different sections in the order in which he conceives them to have been written, placing the speech from the storm, those of Elihu, and "sundry poems" after the epilog. The difficulties experienced in trying to translate this great classic into a poetic measure of riming couplets have not been very successfully overcome by Mr. Blake, although his effort is a worthy one. But his discussions of the problem involved as presented in Job, the later prophets, Greek tragedy, and Christian theology are unusually searching and clear.

....Since its acquisition of the Bancroft Library, the University of California has possessed the finest collection of materials for Far-Western history in existence. It has taken its responsibility seriously, and has not only published a long list of papers drawn from these treasures, but has felt the stimulation which extraordinary resources in one field of history must give to historical investigation in all fields. We have now received the first of a new series of "University of California Publications in History," in the form of a monograph by Professor Eugene I. McCormac on *Colonial Opposition to Imperial Authority during the French and Indian War* (Berkeley, California: The University Press). The pamphlet is a simple and direct study of the printed materials bearing upon colonial history, 1755-1763. The author has not explored the extensive manuscript collections in London, but he has found enough material to show the drift of American institutions away from England, and the economic basis of the desire for independence.

Pebbles

ASSISTANT EDITOR—Here's a farmer write to us asking how to treat sick bees.
Editor—Tell him he'd better treat them with respect.—*Boston Transcript*.

"I HEAR you have taken your son out of college and put him in the office."

"Yes."

"Is he attending to business pretty regularly?"

"Fairly so. Only once or twice has he failed to get to the office in time to go to the matinee."—*Washington Herald*.

WHEN Dana ran the New York *Sun* it was different.

On one occasion a young Cornell graduate was set to work reviewing books. One of the first volumes handed him, according to the *Saturday Evening Post*, was a massive "Life of Napoleon."

The Cornell man had specialized on Napoleon at his university under a great authority, and thought poorly of this new biographer—who was a professor in another university, anyway. He glanced over the illustrations, and wrote his review as follows:

"'Life of Napoleon,' by Professor So-and-So. This work weighs nine pounds."

Mr. Dana read the review and sent for the young man.

"Did you write this review?" he growled.

"Yes, sir."

"Did you read the book?" growled Mr. Dana fiercer than before.

"No, sir; I weighed it."

"That'll do!" growled Mr. Dana again.

Then he sent word down to the cashier to raise the reviewer's salary.

IN MANHATTAN.

He stood on the curb with a puzzled frown,
Scanning old Broadway up and down.

Trusting his neck to the god of luck,
He dived in front of an auto truck,

Dodged a taxi, and reached the track,
Where the screech of a siren sent him back

He turned to the right with mute appeal
And missed by an inch a hansom wheel.

He turned to the left with wild afright,
Blinding his eyes with an auto light.

Somewhere up in the winter sky
A "bird man" let his engine "die,"

And out of the blue, like a shooting star,
Dropped to earth in his aerocar.

The only thing that was left to do
Was to pry up a manhole and go on thru.

So, raising the lid in wild despair,
He dropped down with a fervid prayer.

He landed below with a painful jar,
Just in front of a subway car!

—Percy F. Montgomery, in *New York Times*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, \$3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Mr. Shuster's Return

OUT of the jaws of Persia's lion and Russia's bear our American Shuster has returned home; but not yet, we are sorry to say, have his associates escaped. On his way he has had a tussle with the British unicorn, and left it with a crumpled horn. Of this we may be sure, no paladin of war, no Chinese Gordon, ever attempted a more noble and heroic task; and the British martyr of Khar-tûm did not fall before the Mahdi's hosts with more glory than did Shuster fail when pitted alone against the conspiracy of the world's two greatest empires.

Mr. Shuster comes back, after his extraordinary experience, believing intensely in liberty, and intensely hating the violence of tyranny, and bearing with him assured confidence in the regeneration of humanity. He grandly says:

"Kipling has intimated that you cannot hustle the East. I believe that he is wrong. Western men and Western ideas can hustle the East, if the Orientals see that they are being led along lines beneficial to themselves and wholesome in morals. The moral appeal, the race pride appeal, the patriotic appeal, is just as strong in the Orient as in the West. The Orientals are merely not overanxious to

be hustled along lines beneficial purely to the Westerner."

That is the utterance of a man who has a young faith in humanity, who believes that no people have sunk so low under oppression and enforced ignorance, no people is so far hidden away from the rushing railway lines of civilization that it cannot be awakened from its poisoned coma and stir itself like Samson. Did not the lion of Persia thus awaken till he found that, like the Hebrew champion, his strength had been shorn off in his sleep, the British Delilah standing beside the Russian Philistine lords, and he was bound fast with cords? May we hope that with renewed strength he may yet break them and make deadly sport for his betrayers?

Mr. Shuster fears not, at least for a long time to come. He sees Russia absorbing Persia, England afraid to protest, and Russia in ten years planting her foot on the coast of the Indian Ocean. It may be so, if England does not forbid. Does England feel afraid to forbid, while she has her Irish sore not yet healed, and India restless if not rebellious? It is natural that Mr. Shuster, in his great disappointment, should be hopeless of Great Britain, and should believe that India is almost lost, for seventy-two millions of Mohammendans, who were a bulwark against Hindu revolt, are now, he thinks, angered by the betrayal of Persia. But he has yet hope, perhaps even for Persia. Two things, he says, oppose the Russification of all Asia, India and the Chinese Republic. India will never submit to Russia. She would rather be English, if she cannot be independent. And then there bursts forth from long imprisonment the Chinese afrite. Persia was beginning to feel the glad sting of patriotism; and China is suddenly maddened with its fervor. When China gets command of her consciousness, when she knows what are her rights and her powers, she will be able to withstand the aggressions of the world. Russia, which bowed before little Japan, can never impose her arbitrary will on the new China. It may be that even Persia, in the coming era, will have her chance to recover the energy which once made her conqueror of Greece and master of the

world; and which later made her the home of poetry and the arts. The opportunities of civilization can do this; Mr. Shuster and the Mejliss began to do it. Revolutions do not go always backward. Humanity does not become abject beyond recovery. The manhood native in the Persian has force enough to recover itself. We are glad that Mr. Shuster sees a gleam of hope; and his effort, tho a present failure, is an honor to him and to the nation from which he went and to which he sorrowfully but militantly returns.

The Christian Unity Foundation

THE CHRISTIAN Unity Foundation is a corporation composed of members of the Protestant Episcopal Church, approved by its General Convention, but quite unofficial and independent. It is sufficiently financed, and it has for its object to promote Christian unity in this and other countries, to reduce rivalry, induce comity and seek unity, whether by mutual co-operation or corporate union. Its president is Bishop Courtney, now rector of a church in this city, with whom are associated a dozen or fifteen clergymen and laymen.

These gentlemen, in the course of their conference and research, desiring to learn at first hand the attitude of other denominations, have held several informal meetings with members of such other bodies, and lately with representative Presbyterians and Congregationalists. They have presented as a basis for discussion certain resolutions adopted at a conference between committees of the Synod of the Church of England and the Presbyterian General Assembly of Australia somewhat over five years ago. Of these the important ones were the following:

"1. We hold the Holy Scriptures of the Old and New Testament as necessary to salvation to be the rule and ultimate standard of faith.

"2. We accept the Apostles' Creed and the Nicene Creed as expressing the fundamental doctrines of the Christian faith and as an adequate basis for any further formulated statement of Christian truth which may be needed.

"3. We agree that there are two sacraments ordained by Christ himself, baptism and the supper of the Lord, which must be ministered

with unfailing use of Christ's words of institution and of the elements ordained by him."

Then follow paragraphs on ordination by the laying on of hands; the election of superintendents to be called bishops, and defining that ordination of ministers shall be by a bishop and three ministers at least, and that in the consecration of bishops at least three bishops shall take part.

After full discussion at the conference with the Presbyterian representatives the only action that could be taken was "that without committing themselves individually to all the resolutions" they welcomed this definite effort to bring about reunion, and requested religious and other journals to bring the matter before their readers. At the conference with Congregationalists action equally indefinite, but sympathetic, was taken.

It is a matter for much gratification that such a movement has started in the Episcopal Church. It had the honor of inaugurating the movement some years ago which culminated in the Lambeth Quadrilateral, but which broke down as a basis of union with other Protestant Churches because of the fourth plank in it, the "Historic Episcopate." There was then extended correspondence with the Presbyterians, but, of course, it came to nothing. It was an attempt to secure union upon the theory of Episcopal succession, the one distinctive Episcopal doctrine. The only way to bring about union is not by requiring acceptance of the doctrine of one party, but by allowing differences; and this better method is what was adopted in the Federation of Churches, which pretty much all our Protestant denominations have now accepted, except the Episcopalians and the Southern Baptists. These federated Churches, with nearly twenty million members, are no longer in disunion; they have achieved a good measure of union. The proper way now is, not so much to change the ways of our denominations, but to unite, as we are, and as far as we can. It would be the next great step to union if the Protestant Episcopal Church would at its next General Convention vote to join the Federation of Churches. Then the way would be clear for the next step, that of corporate union, by one denomination after another, as the Pres-

byterians have taken the Cumberland Presbyterians. There are many other such unions waiting to be accomplished, if only wise ecclesiastical statesmen will take the lead.

There does not seem at present much hope that this first proposition of the Christian Unity Foundation will succeed in anything more than calling attention to a great need. Of our three forms of church government, the Episcopal, the Presbyterian and the Congregational, the last, we believe, with its Baptist and other divisions, has the largest following; and they will not tie themselves to any written creed, not even the Apostles' or the Nicene. Why can we not unite, as we are, without making a standard of either of these crude creeds? Then as to the two sacraments, or seven, why is it not enough to be glad to unite with those who celebrate them, without imposing on them the "unfailing use" of any uttered language which we do all willingly use? And as to superintendents, why can we not come together as we are and let us call them superintendents or bishops, as we please, and ordain or consecrate them as we choose, without dispensation or compulsion? Give us freedom. Allow us a wide Church.

Mr. Roosevelt's Candidacy and Platform

DEFINITELY, positively, Mr. Roosevelt gives an affirmative answer to the eight Governors. He will be a candidate for nomination to the Presidency, and he will remain in the field till the convention accepts or rejects him. We are sorry he does this, but it was to be expected. He had for months prepared the way for it. We do not believe that any exigency has arisen which demands that a man should be President of the United States longer than was George Washington. The question came up in 1876 when it was proposed to nominate Ulysses S. Grant for a third term. The people were unalterably opposed to a third term a generation ago, and we believe they will be of the same mind today. It would have been better if Mr. Roosevelt had left the field open to Mr. Taft to seek a second term. But he has chosen

to make himself a candidate, and now his announced platform is to be considered.

Mr. Roosevelt's address at Columbus must be regarded as a presentation of a part of the platform on which he desires to stand as a candidate for the Presidential nomination. So far as treatment of the Trust problem is concerned, his policy is nearly in accord with that of Mr. Taft, whom he seeks to displace. It was set forth a few months ago, in connection with his statement relating to the purchase of the Tennessee Coal and Iron Company by the Steel Corporation. The competition of many years ago cannot be restored. Large industrial corporations are needed. But they must not be permitted to be unjust in the conduct of their business; the practices which are prohibited should be clearly defined in the law; and the companies should be subject to supervision and regulation by an executive body like the Interstate Commerce Commission. "In every case," says Mr. Roosevelt, "the individual corporation officer responsible for unfair dealing should be punished." This is sound doctrine, but Mr. Roosevelt has not forgotten, we presume, that he was unwilling to have it applied in the Atchison railroad case, as to which he and Judge Harmon were in sharp disagreement. The national convention's platform concerning Trusts will be one upon which either Mr. Taft or Mr. Roosevelt can stand.

We cannot expect, however, that the representatives of the Republican party in that convention will make a platform demanding the recall of judges or the recall of judicial decisions by popular vote. We are told that if such a platform should be adopted, Mr. Taft would not accept a nomination. But this is the platform which Mr. Roosevelt desires.

We have opposed the recall of judges. Even more objectionable, in our opinion, is the proposed recall and reversal of court decisions by the vote of a majority at the polls. It is to be regretted that the ex-President has given to this proposition the support of his influence. His advocacy of it is a disadvantage in his contest with Mr. Taft for the nomination. His course may serve to convince some wavering Progressives that he de-

serves to inherit the votes which were to have been cast for Mr. La Follette, but it cannot fail to repel others who have been inclined to support his candidacy. Before this address was delivered it could be seen that, if he should be nominated, the party must carry the burden of his hostility toward Mr. Taft, the third-term cry, and its own virtual disapproval of Mr. Taft's four years' work. To these it will not consent to add the recall of court decisions on important constitutional questions, the reversal of the carefully considered opinions of learned and competent jurists by the vote of a majority at the polls. Mr. Roosevelt formerly regarded with much respect the judgment of Elihu Root, of whom he said: "He is the greatest man that has appeared in the public life of any country, in any position, on either side of the ocean, in my time." A few weeks ago Senator Root publicly expressed the following opinion concerning the popular review of court decisions:

"I must believe that proposals, in whatever form, to subordinate the decisions of the courts to the decisions of a popular majority, whether it be by punishing the judges for an unsatisfactory decision thru removing them from office, or by reviewing their decisions at the polls, as distinct from reviewing or revising the law upon which they are to decide, proceed from a failure to realize that this involves an abandonment of the most essential feature of our system of constitutional government."

Our admiration for Mr. Roosevelt is so great that we much regret that we cannot support his candidacy. President Taft may not be a supreme politician, but we turn to him as the logical candidate for the party and as a constructive statesman of a high order.

Breaking the Romantic Tradition

THE unprecedented demand for fiction due to the sudden expansion of periodical literature has had the good effect of liberating the art of the novelist from one of the most persistent and hampering of its conventions, the motive of romantic love. Every story must be a love story has been the rule and probably nine-tenths of the fiction written during the last century conformed to it. Authors of originality struggled against it, but usu-

ally felt themselves obliged to introduce a love affair, however unnecessary and uninteresting it might be. The common run of writers, however, followed docilely and more or less closely the traditional model, beginning the story at the point where the hero and heroine first "take notice" of one another, and ending it with their union. So long as the novelist deferred to this custom he was allowed considerable latitude as to what themes and characters were introduced between the limits imposed.

It is easy to see how the romantic requirement became established as a convention. Love is the most universal and powerful of human passions, and most likely to lead to dramatic incidents. If poets and novelists are to be confined to a single theme they would quite rightly choose this. We must not sneer at the author for devoting five hundred of his pages and some hours of our valuable time to the question of "which is going to marry which." That is the most important question in real life, as in fiction, for on it the whole future of the race depends. If all the couples should happen to be mismated—which fortunately is practically impossible according to the law of averages, even tho Cupid should go completely blind—the world would relapse into barbarism in a single generation.

But notwithstanding the fact that the courtship period has a unique interest in literature and unique importance in life, it is by no means entitled to be regarded as an indispensable element in every novel and short story. The duration of the process of falling in love depends upon the rate of mutual acceleration, but it is ordinarily comprised within a few weeks or a few months, and, even tho the individual may repeat the experience several times, this is but a small part of a lifetime of sixty or seventy years, and is rarely an exclusive preoccupation even at its period of greatest intensity.

Romantic love is not "woman's whole existence," and not a large part of man's. In extent it cannot compare with other forms of the same emotion, such as filial and parental love or the stable marital love, succeeding the period of uncertainty in which the novelist is exclusively interested. Romantic love in real life

often proves weaker than other passions, social or financial ambitions, for example, or mere inertia and attachment to a customary mode of life or place of residence.

It is absurd to impose upon all fiction as an essential and ostensibly the fundamental theme an experience that in real life is always transient and sometimes insignificant. Neither art nor verity demand it. It is a purely conventional stipulation like that requiring five legs on an Assyrian bull or five acts in a drama. Young writers are often inclined to revolt against the convention which prevents them from treating romantic love just as they like. What they should revolt against is the convention which prevents them from dispensing with the theme whenever they like. What we need in fiction is not more free love, but more freedom from love.

This freedom there is now good prospect of gaining. Just as our miners have sought new gold fields and our chemists new processes for extracting it from ores, so our fictionists have discovered new themes and to a considerable extent discarded the old. Looking over fifteen current magazines of the better class we find that out of a hundred stories forty have not used the romantic love motive. This shows decided progress. The cheaper grade of fiction is, as we should expect, more commonly of the conventional type. While the short story has attained a certain degree of freedom, the novel, as a rule, is still bound by the tradition. Of course a novel giving a complete picture of life could not properly omit a love affair, but there is even less excuse than in the short story for making it the dominant theme.

According to Mrs. Gilman the reason why fiction is no longer so exclusively absorbed in the courtship period is because women are writing a larger proportion of it and introducing themes of more interest to their sex, such as children and home life. This theory may derive some support from the fact that in France, where the romantic love convention in fiction is most rigidly imposed, women writers are comparatively few.

Kipling and Stevenson, when they wished to evade the convention, resorted

to the method of the hermit. They eliminated the feminine sex altogether by taking refuge in barracks or unexplored islands. This seems a cowardly way of solving the problem; much better remain in civilized society and try to represent it as it is in all its complexity of interests and influences. We congratulate the young writers of the day who are discovering new themes and forms of fiction and so making our magazines almost as rich and varied as life itself. There must be conformity in fiction, but it should be conformity to reality, not to the artificial standards of the past.

A Twentieth Century Romance

THAT romance has not quite fled away in these days of civilization and science is illustrated in the story of a petite girl of fifteen who came alone to this city about as many years ago. She was born a Turkish subject from Austrian Jewish parents. Desiring an education, she had attended the American Girls' College in Constantinople and had there accepted the Christian faith. It was her desire to become a physician, that she might help her suffering countrywomen, and she came to this city for her medical education, and went to the home of a relative. But his dissatisfaction at her change of faith made it unpleasant to remain with him, and a member of the family of the editor of THE INDEPENDENT took her, claiming a certain authority thru official relation to the college in Constantinople, brought her home, and, with other friends, saw to it that, with what she could earn for herself, she should complete her medical course. On graduating as a physician she went back to her birthplace, but the Turkish Government forbade her to practise.

Thereupon she returned here and soon married a bright young Chinese with whom she had previously been acquainted. He was a lawyer and interpreter in the courts, and had organized a Chinese Young Men's Christian Association. Why should she, an Austrian-Jewish-Turkish-Christian-American, feel any sense of race prejudice. She said

she did not see why she could not do as much good work among Chinese here as in Turkey. Living in the Chinese quarter, she engaged in her profession among the Chinese, and immediately had a more lucrative practice than most doctors can boast in their first half dozen years. The language was no great trouble to one who talked familiarly Turkish, Yiddish, German, French and English. She wished to exchange her Turkish for American citizenship, her husband being refused citizenship by our laws; and the present writer vouched for her when she took out her papers. Few women immigrants take the trouble to be naturalized.

Meanwhile China sent a commission to this country to study our government and education. They met her husband and offered him the position of professor of law in a college to be opened in the capital city of an interior province having a population as great as that of all our Southern States. He took a year for further study of law, while his wife attended lectures in surgery of the eye. Arrived at their new home, she opened an ophthalmic clinic, which had the favor of the highest officials.

In four years the revolution broke out all about them. As he was the only Chinese in the city who wore Western clothes and had cut off his queue, it was naturally assumed that he was one of the reformers, and he was selected to represent the province as one of the fifty members of the Chinese Congress which a few weeks ago chose Dr. Sun Yat-sen as President of the new Chinese republic. In a letter just received, the wife writes us:

Today Sun Yat-sen was elected President. This had to come, and we can all foresee a tremendous revolution for good. The people have suffered a great deal and endured it a long time. In Nanking, before the city was taken, four hundred men who had no queues lost their heads. The majority of them were students of missionary schools and good Christian boys. The Imperialists did everything in the old barbarous Boxer way, while the Revolutionists behaved better than many a Christian nation; and still there is talk as to whether they are able to govern.

But what is she—Hebrew, Turk, American, Chinese? She is a brave little woman who has earned her romance.

A Disease Discovery

RECENTLY the medical profession of this country has been startled by the discovery that pellagra, a strange, degenerative, mutilating disease, which was supposed not to occur in the United States, is rather common, certainly is by no means rare among us. It had been observed for over a century in Italy, particularly, but also in most of the southern countries of Europe, and was supposed to be due to poor food. Osler, however, in the sixth edition of his textbook of medicine, published in 1907, declared that it had never been observed in the United States. In spite of this, during the last three years a number of cases of it have been under investigation. There is now no doubt in the minds of those who have seen a number of cases that the disease has been in existence in this country for a long while. Studies already made seem to show clearly that the affection is probably carried by an insect whose habitat is southern countries.

Of course, in this matter there has been a great change of view among physicians as regards the diffusion of disease in the last twenty years. Malaria used to be considered literally a bad air disease, due to some miasm which floated in the air and was especially potent for the production of disease in the night air. Old epidemics of typhoid fever used to be considered as spreading thru the air. Cholera and plague were looked upon as air-borne diseases, or due to direct contagion from patient to patient. Yellow fever was, of course, in the same category. Now we know that in probably all of these diseases the insects and parasites of man are more diffusively potent for the distribution of the infections in question than any other factor.

Malaria and yellow fever are distinctly due to mosquitoes, plague to fleas, typhoid fever often to flies, cholera probably coming under the same category. Now comes an affection whose existence among us has hitherto been unsuspected and the distribution of which is at the present moment considered to be almost surely due to a special kind of sand fly, which lights on affected patients and then carries infected material to other persons, inoculating it during the process of in-

serting its proboscis in order to draw blood from its new victim.

This is the second lesson of this kind that we have had in recent years. When hookworm disease was discovered in Porto Rico we were rather condescendingly pitiful of the unfortunate conditions which under Spanish domination had allowed an infection of this kind to spread so widely among the islanders. It was five years before we discovered that hookworm disease was almost as common in some of our Southern States as in Porto Rico. We had literally thousands of cases of it with the typical anemic and dysenteric symptoms, and yet they had remained completely unrecognized. Nothing in recent years except the discovery of pellagra has made it clearer than this recognition of the widespread existence of the hookworm disease that even trained scientific men see only what they are looking for. If by any chance they are not looking for a particular phenomenon, then as a rule it escapes their notice unless they belong to that charmed circle of original observers who are able to see things even tho they may not be particularly looking for them.

These two recent experiences in the discovery of disease should be precious lessons to the physicians of the country of the possibilities there are in properly observing conditions that are around them in their daily practice. On the other hand, both incidents make it very clear, since they have occurred within the same five years, that the day when diseases shall any longer escape observation because of impressions, however widely fostered, that they do not exist among us, is definitely passing. The discovery of hookworm disease has been the signal for the organization of definite measures to eradicate it. The discovery of the existence of pellagra will doubtless have the same effect. Instead of presenting any reason for alarm the discovery is rather an evidence of the active influence of modern medicine and its power to discover and take proper measures of prophylaxis against the disease.

The Bombardment of Beirut

The bombardment of such an unprotected mercantile city as Beirut by Italian vessels of war was a wanton act, forbidden by the rules

of war laid down at The Hague, and of absolutely no military advantage. The Italian commander claims that he bombarded it only incidentally while destroying two small and helpless Turkish war vessels; not a sufficient excuse. It would seem that everything would forbid such an act, which is likely to intensify the passions of the Turks and might provoke the massacre of Christians. The large majority of the inhabitants of Beirut are Christians, and damage to the city would fall chiefly on them. There are very large French, German and American interests in the city, which will call for protests from these governments. Thus, apart from business houses, scattered all thru the city, the Germans have schools and orphanages; the French have a very important Jesuit college, with printing press; and the Americans have the very strong and influential Syrian Protestant College, presided over by Dr. Howard M. Bliss, son of the founder of the college, whose students of all religions are scattered over Turkey and Egypt to the Sudan. When we look for the reason for this attack, which will be universally condemned, we can think of none unless it be that the authorities at Rome imagine that it may frighten the Turkish Government into suing for peace. But that seems hardly likely. It is possible that Italy intends to seize the customs of Beirut, but that would lay the moderate investing force open to what might be a very unwelcome attack. If the Italians should, however, invest and take Beirut, that would, if successful, give Italy a fine foothold for negotiations for indemnity when peace is arranged. Italy would then have, as well as France and Germany, a certain claim and interest in Syria and Palestine should the Turkish Empire be broken up. But that is not yet in sight.

An Example from Ashville

Here is an example for cities Southern and Northern, in many of which such evil conditions exist. In Ashville, N. C., a city that has a pride in attractive surroundings, and which draws many visitors in the winter, houses of ill repute, excluded from the neighborhood of the white residents, were allowed to flourish in the negro

section of the city. The custom prevailed, as here, of raiding them at stated times, imposing moderate fines on the women as a sort of license, and letting the men go under assumed names. The negro clergy made complaint in a formal document that these houses were allowed close to their churches and schools; and they were backed by the white clergy and by the decent public opinion. The police methods were changed; the houses were raided at unexpected times, the women fined more heavily and put under bonds, and the men taken to court personally and compelled to plead under their own names, and the proceedings published. This proved effective, and every house was thus closed but one, and that will be soon. Where there is a will there is a way. That has been proved by late investigation at Chicago, and several of our cities have absolutely stopt this disgrace of civilization within their limits. The method is a simple and easy one, if only the rings that rule do not prefer to live on the wages of shame.

The Metropolitan Museum

There can be no doubt that so long as private benefactions supply all the objects exhibited in the Metropolitan Museum, paintings and all ancient and modern objects of art handiwork, the city can well afford to provide the necessary building and care. The collections are worth many millions of dollars, all donated. In Europe the governments not only provide the buildings and meet the payrolls, but also make large annual appropriations for the purchase of objects of art. In no other country are the men of wealth so glad to enrich the museums as with us. While there have been two or three bequests reaching into the millions for the Metropolitan Museum, the largest single gift by a living donor is that just received from Francis S. Leland of a million dollars. It is without restriction and its income can be used as the trustees choose. Mr. Leland is president of the New York County National Bank, and he makes this splendid gift because he wishes to help make the Museum as good as the best in the world. This also appears to be the ambition of Mr. J. Pierpont Morgan, President of

the Museum, whose wonderful collections, long stored in Europe, are being now brought to this country, and will, in good part, be stored here on public view. So many are they that a new wing for the Museum is desired for their display.

Expurgating Swedenborg

It is really a matter for surprise that a movement for the formal expurgating of Swedenborg's revelations has been so long delayed. Teachers of the New Jerusalem Church now insist upon it. Nearly two thousand years ago the Christian Church annulled teachings of the Old Testament about polygamy as well as about the whole ceremonial law; and the allowance of slavery and the subjection of woman in the New Testament have been frankly dropt in our present faith as representing the spirit of the age in which its writers lived. Similarly certain of Swedenborg's revelations about conjugal and scortatory love did not come down from heaven, but filtered in from the court life of Sweden, to the infection of the visions of heaven and the "correspondences" which so please the mystical soul and are so past understanding by critical science. To drop out certain sections of Swedenborg's writings is certainly no worse than the same treatment of parts of the Bible. The writers saw

"according to their sight,
For every fiery prophet of old times,
And all the ancient madness of the bard,
When God made music thru them, could but speak

His music by the framework and the cord;
And as they saw it they have spoken truth";
some clearer truth, some truth confused
with the unavoidable error of the times.
We supposed that the objectionable sections in Swedenborg's works had already been practically expurgated by being left in their Latin limbo without translation into the popular tongue.

The Princeton Professor's Whale

We felt it a duty to print Professor McCloskie's letter defending his explanation how the whale could have swallowed Jonah and kept him alive with comfort in his "air-chamber as large as an ordinary bedroom."

But we admit that the existence and size of that "air-chamber," with other statements about whales swallowing their young for their temporary safety, was such a surprise to us that we made inquiries thru Dr. Hornaday, Director of the Zoological Park, of the man who knows nearly all about whales, Dr. Frederick A. Lucas, of the American Museum of Natural History. We submit his decision, which is conclusive and final:

No whale has any air chamber in its stomach and any statement to that effect is based upon a misinterpretation of the facts. The finback whale has been taken in the Mediterranean and it has a slightly complicated stomach, which may have led to the belief that it served as an air-sac.

Like the seals, the whales have a vast enlargement of the arteries and blood vessels overlying the lungs which are supposed to serve in oxygenizing the blood.

There is not the slightest reason to believe that whales ever do swallow their young. In the first place, the throat is too small in anything but a sperm whale to swallow a porpoise, much less a young whale, which would be from twelve to twenty feet long. The whole thing is absurd.

The squid that the Prince of Monaco caught very naturally were dead when they were disgorged by the dying sperm whale.

A man once propounded the theory to me that Jonah sat upon the whale's tongue and breathed thru the whale's blow-holes. Evidently he did not understand the geography of the whale.

We fear we must conclude that Professor McCloskie is a theologian slightly tinctured with science.

*"Non tali auxilio nec defensoribus istis
Biblia eget."*

The Constantine Centennial

Last year and the one before was celebrated the diamond jubilee of united Italy. The whole nation rejoiced in the event, conscious that only in the Leonine City were the discordant notes. These Vatican protests failed. But the Curia has found an offset. October 28, 1912, will be the sixteen hundredth anniversary of the defeat of Maxentius at the Milvian Bridge. It was announced that in the autumn the victory of Christianity over paganism would be celebrated. But this fell on a deaf world, and the program was changed to celebrate the event when, in May, 313, Constantine officially recog-

nized the Church. Hence the new date rather honors the feudalizing of the Church than the defeat of paganism. Church and State have gone hand in hand since that fateful day in 313. They still go on hand in hand thruout Europe, except in France and Portugal. The Reformation and the French Revolution gave a gigantic move upward to humanity, but both maintained the union of Church and State. It remains to be seen how far the relations of Church and State—a free Church in a sovereign State—in America have influenced the peoples of Europe. American influence is visible in every direction, as every traveler and our commercial and financial worlds well appreciate. Next year then, 1913, will serve to show if the one original idea in the American Constitution has taken root in Europe. Pilgrimages will abound.

Porto Rican Citizenship

So wise and experienced a man as Senator Root can be wrong, and we believe he is wrong in telling the people of Porto Rico that the Republican platform of the last convention blundered in offering them American citizenship. He said they live too far off, a thousand miles, for us to govern them well, and that they should be a republic under American protection, such as Cuba is. He says that Hawaii ought to be such an independent republic. We do not see that such a republic could fairly be called independent, and it might as well be American as under American protection and direction, as Cuba is under the Platt Act. Senator Root thinks that to give Porto Rico American citizenship would raise complications with the Latin republics. He has knowledge which most others cannot have, but we cannot see why such a favor to Porto Ricans would stir suspicion or jealousy any more than we can see what difference the thousand mile distance makes. He tells the Porto Ricans that if they were granted citizenship they would next be wanting self-government as a Territory and then as a State. Of course they would. He has told us that as independent they would govern better than we govern them; and if so there can be no objection to their

governing themselves as a State after a short tutelage as a Territory. We are of those that believe in trusting the people, trusting democracy, which is better than holding a lighted bomb off at arm's length.

That lynching in Georgia a few days ago of two negro men and two negro women for an asserted crime of which three of them certainly were innocent, ought to condemn the infamous practice everywhere. A white man was shot while attempting to get admission in the house of a negro woman who did not wish to admit him. She was one of those lynched; and her crime was in trying to preserve her character. The one who shot the invader was very likely her natural protector. A multitude of decent white men will applaud the words of Dr. Cranfill in the Dallas, Tex., *Baptist Standard*:

"Now any negro, man woman or child, who is charged with any offense is presumed by the murderous element to be guilty and is summarily dealt with without going thru the slightest form of investigation. This is the foulest blot upon our American civilization. . . . I do not believe that 25 per cent. of the negroes who have been murdered by mobs have been guilty of the crimes of which they have been accused."

Congressman Slayden has called attention on the floor of Congress to a real evil. We may have to stand it when yellow journalism spreads reports that might stir up war, but there ought to be ways to prevent this being done by officers of the army or navy. There have been a number of cases lately in which, in articles or interviews, generals, colonels and even captains have exprest themselves in the most indiscreet and mischievous way about dangers in Mexico, Cuba or Japan. The President, as commander in chief of the army and navy, might with perfect propriety issue an order admonishing his subordinates against expression of their views on international questions. It is a sort of "pernicious activity" such as is forbidden in the case of civil servants.

When the Pan-Presbyterian Alliance met the other day the report of the Committee on Education was very properly

refused approval. It criticised the Carnegie Foundation for the Advancement of Teaching because it refuses to make gifts for sectarian colleges. It spoke of "the hostility of the secularizing forces to anything that definitely concerns itself with Christian education"; and the complaint was made that some colleges heretofore openly Christian have denied their connection in order to profit by money gifts. It is only denominational connection that they have dropt out of their charters, not to the loss of their Christian character. There are plenty of other men to give to denominational colleges, and Mr. Carnegie has given over a million dollars to Presbyterian institutions.

A further illustration of the co-operation in theological instruction of which we lately spoke appears in California. We have the catalog of the Pacific Theological Seminary in Berkeley, that remarkable educational center. The students of the theological seminary are also registered students in the University of California and have the right to all its instruction. Besides its own special faculty the catalog includes the associate faculties of three other theological seminaries—the Baptist, the Disciples and the Unitarian, as well as those of the university. Concentrated here at the seat of the great university, these four theological seminaries, within reach of each other's class rooms, have entered warmly into mutual confidence and co-operation, without sacrificing any principles or faith, and it is much to be desired that they may be consolidated into one.

This is the way the Dean of St. Paul's talked of the federation of churches the other day:

"If the sects were ever to be federated was there any other possible nucleus than the wisely comprehensive Church of England? The federation of the Dissenters was painfully like the alliance between Russia, Prussia and Austria for the partition of Poland. The whole object of their fraternization was the dismemberment of their dear brother."

There is absolutely no comparison between the partition of Poland and the disestablishment of the Established Church in Wales. In the former case the three nations united to divide Poland.

between them. The federation of Dissenters in Great Britain is not trying to accomplish any division or absorption. They are simply trying to give to the Anglican Church privileges and benefits which are not given to other churches.

We quoted from *America* one verse of a poem in honor of Cardinal Farley beginning:

"Then laud him, ye angelic choirs,
Laud him in paradisaal lyres,
O earth, O sky!"

which shaved the edge of idolatry so close that we did not need to give a word of comment. But *The Catholic Fortnightly Review* makes its comment:

"It would be a distinct gain not only to the cause of Catholicity, but to that of good taste and editorial honesty, if our 'leading Catholic weekly,' instead of vying with stupid 'official organs' of the *Pilot* stripe, exercised some of that fine discrimination for which the *Civiltà Cattolica*, the *Month*, the *Stimmen aus Maria-Laach*, and the *Etudes* are deservedly famous." The *Catholic Citizen* of Milwaukee makes similar comment.

We commented last week on the condemnation of Duchesne's "History of the Ancient Church," and the author's account of the approval it had received from the present Pope and his predecessor. We now have the pleasure to report what the London *Tablet* calls his "loyal and dutiful letter" of submission, address to the Cardinal Prefect of the Sacred Congregation of the Index. We translate from the French:

"Your Eminence—A faithful child of the Church, I must submit to its decisions. I therefore declare to Your Eminence that I bow respectfully to the decree of the Sacred Congregation of the Index relative to my book."

A respectful bow is formal and meaningless enough.

We feel it a duty to call the attention of the Congregation of the Index, which has just banned Mgr. Duchesne's "Ancient History of the Church," to another Modernistic and heretical teaching by a scholar of high standing in the Church. Father Dhorme has published in the *Revue Biblique* a paper discussing questions in the history of Ancient Persia.

The Bible tells us of the madness of Nebuchadnezzar, but Father Dhorme transfers the story to Nabonidus, the last king of Babylon, and thinks this explains why his son Belshazzar was in command of the city when Gobryas (not "Darius the Mede") captured it. The Biblical Commission ought to suppress such vagaries, if the Index does not.

We are glad to see that the effort to raise an endowment of \$500,000 for Mount Holyoke College for its seventy-fifth anniversary is hopeful. There has been pledged \$318,043, which includes the conditional gifts of \$100,000 each from the General Education Board and Mrs. John Stewart Kennedy. But the total amount must be secured before next October. No institution in the past has done more for women or has a worthier record. But its alumnæ, to whom it must appeal, are not of the wealthy class.

For the encouragement of socialism give us a monarchy like Germany, with its Premier and Cabinet not responsible to its Parliament. The German Reichsrath is almost captured by the Socialists, and the Cabinet is proposing to take over all gas, electricity and oil industries as government monopolies. With such a terrible coal strike as is threatened in England and Wales, they cannot help raising the question of government ownership of the collieries.

President Taft says he did not say that "some people are not fit for self-government," but that "some peoples" are not fit for it. He might have safely said just as well that some *people* are not fit to govern themselves—they are not. For that reason some of them are put in jail.

Because an English missionary in the Solomon Islands was killed by the savage natives a British vessel has burnt one of the villages of the islanders and killed ten men. That is what is called protection, but we do not believe the missionaries approve.

The Money Trust Inquiry

By a vote of 270 to 8, on the 24th, the House passed the amended Pujo resolution for an inquiry as to a Money Trust by the Banking and Currency Committee. It authorizes the committee to make an investigation concerning banking and currency conditions with a view to the preparation of remedial legislation. This was the scope of it in its original form, but a short time before its passage there was added an amendment authorizing an inquiry as to the charges set forth in Representative Henry's resolution relating to a Money Trust. This satisfied Mr. Henry and may be acceptable to Mr. Bryan, both of whom desired a special committee. Mr. Bryan had no confidence in the Committee on Banking and Currency. Mr. Henry remarked in the House on the 24th that the Money Trust was composed of not more than ten or twelve men, and that industrial concerns, railroads and banks were "in the clutches of their terrifying power." Their methods, he added, were "little better than those of men who use the bomb and dynamite." It is fortunate that the inquiry is not to be made by a committee controlled by men like Mr. Henry, who believes that a Money Trust of "ten or twelve men" rules the country, makes rates of interest, dominates the markets for securities and commodities, and occasionally manufactures a panic for its own profit. Such an investigation as the Banking and Currency Committee is inclined to make will probably dispel some illusions and emphasize the demand for banking and currency reform.

Higher Cost of Living

THE New York Association for Improving the Condition of the Poor published, last week, a statement showing that the cost of many essential family table foods had increased by about 25 per cent. in the past year. This increase was indicated in sample grocery bills paid by the association and covering about twenty articles of food. The ad-

vance from February, 1911, to February, 1912, was shown in the following table:

Coffee.....	.6c a pound
Potatoes.....	\$1.75 a barrel
Eggs.....	.10c a dozen
Sugar.....	.1c a pound
Tomatoes.....	.2c and 3c a can
Corn.....	.2c a can
Cheese.....	.3c a pound
Onions.....	.2c a pound
Flour.....	.50c to .75c a barrel
Milk.....	.1c a quart

It was pointed out, also, that a large addition had been made during the last month.

An authoritative official explanation of the increased cost of living is greatly needed, and the party in power at Washington could have served its political interests by providing for one some time ago. This higher and rising cost of living is the cause of much unrest. By many it is ascribed to the Republican revision of the tariff in 1909, to Trusts in manufacturing industries, to a Money Trust, and to the greed of railroad companies. The party in power suffers at the polls when the pocket nerves of a majority of the people are so disturbed and irritated. The leaders of the Republican party have blundered in failing to show, by means of an official investigation and a report, what have been the causes of the increased cost of living. They have not even undertaken to answer effectively the assertion of the Governor of the State of New York that when they revised the tariff they increased the duties on all the necessities of life.

....The Harriman National Bank has been authorized by the Comptroller of the Currency to do business under its new capitalization of \$500,000. The capital was recently increased from \$200,000.

....Individual deposits in the national banks of the Southern States have risen from \$73,124,523 in 1880 to \$957,428,510 at the present time. In the same period those in State, savings and private banks and loan and trust companies have been increased from \$117,440,491 to \$1,184,045,949.

The Independent

VOL. LXXII NEW YORK, THURSDAY, MARCH 7, 1912

No. 3301

Survey of the World

Roosevelt vs. Taft Senator Dixon, of Montana, will head the executive committee of the National Roosevelt Committee, and, with Truman H. Newberry, Secretary of the Navy during a part of Mr. Roosevelt's Presidency, will direct the campaign. Alexander H. Revell, a furniture manufacturer of Chicago, and chairman of the National Roosevelt Committee, states that the desire of the "overwhelming majority of the American people" that Mr. Roosevelt shall serve another term as President "has been abundantly proved," while Senator Dixon points to Mr. Roosevelt's election on many straw votes the country over. New York headquarters have been opened in the Metropolitan Building, and ex-Judge Charles H. Duell is at the head of the local organization, whose treasurer is E. H. Hooker. Oliver C. Carpenter is secretary, and Roscoe Conklin Mitchell, who achieved notoriety as Dr. Cook's press agent when the make-believe explorer returned from Denmark, is in charge of publicity. Ex-Senator Beveridge is one of Mr. Roosevelt's newest allies. Mr. Roosevelt's Attorney-General, Charles J. Bonaparte, has declared himself in favor of the nomination of his former chief, but brands the suggested recall of decisions as "a detestable device." Senator Lodge, an old friend of Mr. Roosevelt, who is altogether opposed to his present program, announces that he will remain neutral. His fellow Senator from Massachusetts, Mr. Crane, is working for Mr. Taft's renomination. A poll of the Republican members of the Massachusetts Legislature is said to have shown

137 votes for Taft, against 6 for Roosevelt, and the President is reported to be strong thruout the State, in spite of Mr. Roosevelt's recent visit to Boston. Representative McCall says he knows of no district in the State where the outcome is in doubt. Mr. Roosevelt told an interviewer at Boston that he will in any case support the Republican candidate for President.—While in Boston Mr. Roosevelt addressed the State Legislature, speaking on the same lines as at Columbus. Reiterating his views on the recall of judges and decisions, he paraphrases Patrick Henry in exclaiming: If that be revolution, make the most of it!" Earlier he told a reporter:

"I am entirely happy, because I am fighting for a principle, and the issue is in no sense a personal one."

Addressing the Ohio constitutional convention on February 29, Governor Hiram W. Johnson, of California, who has been suggested as a running mate for Mr. Roosevelt, declared in favor of direct primaries, the initiative, the referendum and the recall. "If the people are fit to elect judges, and to reelect them, they are fit to recall them," he argued.—Messages from nine Republican Governors endorsing the Administration and assuring the President of their support and confidence were issued some days ago by the Taft headquarters at Washington. The Governors are Eberhart of Minnesota, Hay of Washington, Carroll of Iowa, Pennewill of Delaware, Tener of Pennsylvania, Hooper of Tennessee, Goldsborough of Maryland, Spry of Utah, and Pothier of Rhode Island. Mr. Taft already had the support of Governors Deneen of Illinois,

Oddie of Nevada and Mead of Vermont. Mr. Roosevelt has the backing of eight Republican Governors.—Senator Rayner, of Maryland, declared on February 27 that ex-President Roosevelt's declaration at Columbus in favor of the reversal of judicial decisions by popular vote was:

"the most dangerous doctrine ever brought forward by any one who has the slightest regard for the stability of our institutions, and whose opinion is entitled to any weight or respect."

—On Monday, Senator Culberson's resolution to investigate the expenses of the Presidential campaigns of 1904 and 1908 was reported to the Senate and referred back to the Committee on Privileges and Elections.

✕

Democratic Policies A surprise was sprung upon the Democratic Caucus of March 1, when Chairman Underwood disclosed the unanimous agreement of his fellow members of the Ways and Means Committee as to the revision of sugar duties and upon a new form of income tax. This tax is to be levied thru the extension of the present corporation tax law to individuals and co-partnerships, the rate being one per cent. upon the net income of the individual or partnership from business sources. The tax would apply only to net incomes over \$5,000. It is estimated that the product of the tax would be about \$60,000,000. This would recoup the loss of \$53,000,000 in customs revenues on sugar, which it is proposed to enter duty free. The caucus voted to support these measures, which are sure to pass the House of Representatives by a vote not strictly partisan. Many Democratic Senators praise the proposed legislation, and progressive Senators are counted upon to furnish the four necessary votes, which would be all the bills would require if the Democratic Senators voted unanimously. But there will be opposition from the sugar States. The question of the constitutionality of the income tax provision, cleverly devised tho it is, remains somewhat doubtful.—Senators Penrose and Smoot, Republican "stand patters," have asked Senator Cummins to name a fellow "progressive"

to confer with them on tariff legislation. The plan is to resist Democratic revision of the tariff.

✕

News from Lawrence It was hoped that the textile strike at Lawrence, Mass., which began on January 12, would be brought to a conclusion this week, but the Industrial Workers of the World have rejected the advances of the millowners. Employees affiliated with the Central Labor Union have voted to return to work, and many workmen favor the acceptance of the concessions announced by nearly all the mills. These concessions yield a 5 per cent. increase in wages, but this is an increase based upon the actual fifty-four-hour a week schedule, not on the former fifty-six-hour schedule.—A party of thirteen children who have worked in the Lawrence mills left the town on March 1 to appear before a Congressional committee in Washington. On Saturday and again on Monday adult strikers and children appeared before the Committee on Rules of the House of Representatives, and there was an attendance of six or seven hundred spectators. The children were sent away to be cared for, "away from the dangers of the strike," one witness testified. The police, said the strikers, were "worse than Cossacks" in their treatment of the women and children. In regard to the children who were to have gone to Philadelphia a week ago last Saturday, and who were prevented from going by the police, it is said that they were all tagged with identification cards and the written consent of their parents, and they were all consigned to the families of sympathizers. Their guardians were provided with money, and great indignation is expressed at the action of the authorities. The exploitation of children in strikes is a novelty here, but a familiar device in France and Belgium. The Lawrence courts have held that the police have the right only to inquire into conditions in the homes to which children are to be sent, and as to whether the children are sent away with their parents' consent. Relief stations established at Lawrence report an increased

number of applications for food, which they are distributing free of charge.—On February 26 President Taft ordered the United States District Attorney at Lawrence to investigate conditions there, particularly the charge that citizens were deprived of their constitutional rights thru conspiracy. The District Attorney reported to the Department of Justice that there was no immediate occasion for Federal interference, but the President refused to allow the matter to rest there. Mr. Berger, the Socialist member of Congress from Wisconsin, said, after a conference at the White House, that he found the President sympathetic and that he looked for a thoro investigation, and Attorney-General Wickersham said he believed the Lawrence situation to demand such an investigation. Resolutions for Congressional inquiries have been introduced in both Houses, and Senator Lodge, of Massachusetts, expressed the opinion that the local authorities had exceeded their authority, but added that the State now had the situation in hand.—Shots were exchanged by strikers and policemen, and about thirty arrests made, on February 26. Two days earlier, nineteen sticks of dynamite were found in the Philadelphia yards of the Philadelphia & Reading Railroad, attached to the trucks of a freight car which had passed thru Lawrence. It is believed that the plan was to blow up the train, in which there were thirty cars of woolen goods, consigned to the American Woolen Company.

✱

Various Items New York headquarters for the Underwood boom were opened on March 2. John A. Henneberry is in charge.—Senator La Follette is said to be using the power of his machine in Wisconsin to force members of Congress from his State, and others, out of the Roosevelt camp, into which some of them strayed after Mr. La Follette's Philadelphia speech, the collapse of his candidacy, and the raising of the Roosevelt standard.—Steps to unseat Senator du Pont, of Delaware (Republican), on allegations that his election was secured thru corruption, were taken on February 26, when Senator Reed, of Missouri (Democrat) offered a resolution for an

investigation. Senator du Pont uttered a flat denial of the charges next day.—The action of the Democratic caucus of January 29 in declaring against the construction of two new battleships annually was, it is now said, hasty; and prominent Democrats oppose the decision. It is recalled that a Democratic House, under the first Cleveland Administration, began the building of the new navy. President Taft, in a recent message, urged the construction of two battleships this year in continuance of the policy of adding that number annually until the Panama Canal is completed, and the ease of transferring ships from one ocean to the other simplifies the problem of coast defense. Secretary Meyer, of the Navy Department, has issued a protest against the Democratic policy as announced, calling the caucus vote "a step backward" and a "snap judgment":

"The dreadnought type is the warship of the day. One dreadnought is easily the superior of half a dozen Oregons, and one dreadnought built by a foreign power in excess of the number built by ourselves is equivalent to wiping off our list at one stroke the Indiana, Massachusetts, Oregon, Iowa, Kearsarge, and Kentucky.

"All the nations that are building ships are building dreadnoughts. No nation can exist commercially and exert its proper political influence without a navy strong in proportion to its wealth and commercial interests. . . . We have guaranteed the neutrality of the canal and must be prepared to maintain it. The Monroe Doctrine is as big as the navy, and no bigger. England has authorized for 1911-12 five dreadnoughts. Germany has authorized three dreadnoughts and one armored cruiser. Japan has authorized five capital ships of the latest dreadnought type in the last year.

"The Democrats, on the other hand, might have brought about real economy, lasting and far-reaching, if they had had the courage to abolish needless navy yards which are costing the Government several million dollars a year for maintenance alone. To abolish unnecessary navy yards would reduce the expenditure of money in certain districts, but it would save an outlay, not merely for one year, as in the case of the refusal to appropriate for the battleships, but for years to come, and without decreasing the efficiency of our navy."

✱

Alarming Condition of Mexico Juarez surrendered to General Campa on the 27th ult., without a fight, owing to the garrison's fear of complications with the United States if shots should cross the river.

There was a mere show of defense. Several volleys were fired by Campa's troops, and bullets struck two houses in El Paso. The rebels thus got possession of a port of entry. Arms and ammunition were brought in, our Government deciding (as it did when Madero, a rebel, held the town) that it could not prevent what was apparently legitimate trade. Campa was soon reinforced by 1,000 men under Salazar and Rojas, and plans were made for an attack upon the city of Chihuahua. Orozco, Madero's general, was in command there. Last week his term of service expired, and he went over to the rebels, taking troops with him. But when, on the 3d, he attempted, with the aid of a rebel commander, to take the city, they were attacked by Pancho Villa, a bandit Maderist general who was loyal to Madero's Government and who had been jealous of Orozco. In the battle 35 were killed and Orozco, beaten, sent to Juarez for help. There had been talk of making Chihuahua an independent State or republic, with Orozco as its President. In the South there was much fighting. The Zapatists were losing, altho they had been reinforced by a peace envoy sent by Madero. This envoy went over to the enemy, taking 600 with him. In several battles the Zapatists were beaten, and many of them, having been captured, were promptly shot. There was an uprising in Vera Cruz, where 70 were killed in battle. Bloody conflicts with rebels in Tabasco were reported. In the North, the rebels attacked Ojinaga (across from Presidio, Tex.), which was defended by Sanchez, the Maderist who besieged it for six weeks last year. They also attacked Agua Prieta, which adjoins Douglas, Ariz.—On the 27th, Juan Azcona, Madero's private secretary, in the course of a published interview said that intervention by the United States would be followed by union of all factions and the slaughter of all Americans in Mexico. For some time Americans had been leaving the country. On the 2d, President Taft issued a proclamation, warning all persons in the United States to obey the neutrality laws and refrain from action that would disturb the peace in Mexico;

also warning all Americans in Mexico to take no part in hostilities, except for self-defense. At the same time he instructed Ambassador Wilson and our consuls in Mexico to advise Americans there to withdraw from places of danger. This advice was at once given formally by Mr. Wilson, who named several Provinces or States as places of danger. There was much excitement and the exodus of Americans became very noticeable. Outgoing trains were full of them. Some thought the warning preceded intervention, but it was said at Washington that it was designed to prevent any warrant for such action. In a letter from his home near Toulon, in France, ex-President Diaz said he was willing to come back if there should be a strong call for him from the Mexican people.

Central America and West Indies Secretary Knox arrived at Colon on the 27th ult. He was warmly welcomed and generously entertained in Panama. On the 1st he landed in Costa Rica, where his reception was most cordial. The day of his visit to Nicaragua will be a public holiday there. But in Honduras there will be no banquets or balls, owing to the hostile attitude of many of the people. He awaits a second and more urgent invitation from Colombia. If one is sent, he may visit that country. At Panama he delivered a long address. President Taft, he said, believed that the opening of the canal ought to mark the beginning of closer relations between the United States and all the Latin-American countries, and had sent him to bear a message of good will. The United States desired for these countries more peace, prosperity, happiness and security. Our policy with respect to them had been without a trace of sinister motive. The United States craved neither sovereignty nor territory. The opening of the canal would create an entirely new situation, fraught with vast possibilities. The United States and the countries south of it would be drawn more closely together "by sympathy and mutual esteem, and would work together in harmony toward beneficent ends." The Monroe Doctrine would be accentuated.

ated and the wisdom of it would be confirmed. It would be a common heritage, binding together the nations of this hemisphere with a force no power could break. It had never been invoked to the injury of the people of the South:

"It will reach the acme of its beneficence when it is regarded by the people of the United States as a reason why we should constantly respond to the needs of those of our Latin-American neighbors who may find necessity for our assistance in their progress toward better government, or who may seek our aid to meet their just obligations and thereby to maintain honorable relations to the family of nations."

Culebra was the clot in the artery of intercourse whose removal would give full and free circulation thruout the whole organism to the vivifying currents of friendship, peace, commerce and prosperity.—In the Senate, last week, Mr. Hitchcock, of Nebraska, made a bitter attack upon the Roosevelt Administration because of its course with respect to Panama's secession, and on his motion the Senate, without a division, adopted a resolution calling for all the diplomatic correspondence with Colombia on this subject.—In a battle with revolutionists near Monte Christi, in Santo Domingo, on the 27th ult., about 40 soldiers were killed. Santo Domingo asserts that Hayti's Government has assisted the rebels. The republic's customs receipts last year, \$3,501,770, were the largest on record. The fund deposited in New York to pay the foreign debt is \$5,033,300.—Jamaica will not send a delegate to the reciprocity conference in Canada. She feels that the United States is her natural market, and that reciprocity with Canada might work to her disadvantage in this country.—There have been bloody riots in Kingston (Jamaica), owing to an increase of fare charges on the street railway, which is owned by a Canadian company. The cars were stopped, a dozen of them were burned, and the Governor was wounded. In conflicts between the police and the mob two men were killed. The rioters attacked Captain Duquesne and his wife, of New York, who were in an automobile. Mrs. Duquesne was seriously injured.—Earthquakes in Costa Rica, last week, wrecked Tres Rios, a town

of 3,000 people, and several villages.—In Paraguay, President Rojas has been imprisoned by revolutionists and compelled to resign. Congress accepted his resignation and appointed Pedro Pena in his place.

✱

British Coal Strike In spite of all the efforts of the Government to bring the miners and employers to an agreement the great strike went into effect at midnight on February 29, when a million colliers stopped work. Three or four times that number will be thrown out of employment in a few weeks if the strike keeps on thru the cessation of other industries for lack of fuel. The Government, in announcing its failure to secure a settlement, issued a frank statement of the proposals submitted by the Prime Minister to the representatives of the owners and miners. The statement begins by declaring that the Government is satisfied that there are cases in which underground workers are not able to earn a reasonable minimum wage. The Government is further satisfied that the power to earn such a wage should be secured by arrangements suitable to the special circumstances in each district, adequate safeguards being provided to protect employers against abuse. The Government is prepared to confer with the parties concerned as to the best method of giving practical effect to these conclusions by means of district conferences, a representative appointed by the Government being present in the event of failure to arrive at a settlement within a reasonable time, and representatives appointed by the Government to decide jointly any outstanding points. Mr. Asquith announced that since the Government had recognized the principle of minimum wage for all underground workers this provision if not secured by agreement would be put into effect "by whatever appropriate means the Government can command." Almost all the mine owners of England and the north of Wales, about 65 per cent. of the total number in Great Britain, agreed to accept in principle the minimum wage, but the mine owners of south Wales and

Scotland declined the Government proposal. The National Miners' Federation passed the following resolution:

"There can be no settlement of the present dispute unless the principle of an individual minimum wage for all underground workers is agreed to by the coal owners."

The Federation refuses to enter conference unless the mine owners agree in advance to the minimum rates of the different districts adopted by the Federation, which vary from about \$1.40 to \$1.80 and stipulate that no underground

feared, however, that if the strike is prolonged there will be trouble in South Wales as there was a few months ago. The Government has all its military resources well in hand and will be prepared to send troops to any disturbed district at short notice. Such action, however, would be apt to precipitate a wider conflict, for the railroad men have expressed the determination not to handle troop trains. It might be necessary, therefore, to run the railroads by army engineers. The telephone system of

Copyright, Underwood & Underwood, N. Y.

PERSIANS RESISTING THE RUSSIANS IN THE HILLS

The Cossacks, advancing on Tabriz, which they ultimately captured, were opposed by Persian Constitutionalists, champions of the Shuster treasury régime and of Persian independence.

worker receive less than \$1.25 a shift. It is expected that the Government will not wait long before passing a bill providing for a minimum wage thruout the country, and if the necessity should arise the mines and perhaps the railroads will be seized by the Government in order to prevent the stoppage of all industries and the starvation of the people. The miners went out on the strike in a holiday spirit, and so far there have been no disorders of any kind. It is

Great Britain, which has recently been taken over by the Government, will be used as the medium of communication and the telephone centrals will be promptly protected by guards wherever necessary. The dockers refuse to handle any imported coal, so little help can be expected from foreign sources. The first effect of the coal strike was a curtailment of traffic on the railroads. Freight trains, except for the conveyance of food supplies, have mostly been

taken off. The non-union miners in almost all districts went out with the union men and insist upon the same terms. The tin plate workers of Wales have closed down for lack of fuel, and the iron works in various districts have announced suspension during the strike. The price of food has gone up, particularly of meats. Importers have stopped Australian and Argentine cargoes of refrigerated meat because it is not possible to preserve the meat after it is landed for lack of coal to run the refrigerators. On account of the high price of coal many of the fishing boats have stopped going out.—In contrast to the peaceable attitude of the striking miners, the suffragets have carried their violence to unprecedented lengths. A sudden raid was made upon the fashionable shopping and theater district of London at 6 o'clock, March 1, when ladies in the shops and on the sidewalks at a given moment produced stones and hammers from their muffs and handbags and proceeded to smash all of the shop windows within reach. Around Trafalgar Square, along the Strand and up Regent street, Piccadilly and Oxford street the devastation raged. Many of the suffragets reached their appointed posts in taxicabs and began to throw stones as soon as they stepped to the sidewalk. The total damage to the stained glass is estimated at \$25,000. Mrs. Emmeline Pankhurst with two other women drove to No. 10 Downing street in a motor car, and having delivered to the servant a letter addressed to Premier Asquith they broke two small panes of the windows with stones. The police arrested 150 of the women, and they were sentenced to prison for periods ranging from two weeks to a month. Mrs. Pankhurst and her aides, Mrs. Tukes and Mrs. Marshall were sentenced to two months' imprisonment. In the Holloway Gaol the women were as disorderly as in the streets, smashing the windows of their cells and singing the "Marseillaise." A detail of 6,000 policemen was placed in Parliament Square on the evening of March 3, in order to prevent a further suffraget demonstration. An immense anti-suffrage meeting was held in Albert Hall on the evening of February 28, at which

Lord Cromer, Lord Curzon, Lord Chancellor Loreburn and Lewis Harcourt, secretary for the Colonies, made speeches in opposition to the extension of the franchise.

The Turco-Italian War

The Italian War Department states that the total casualties on the Italian side from the beginning of the war in Tripoli to the present comprise 37 officers and 499 men killed and 1 officer and 323 men missing.—Beirut has been under martial law since the bombardment and there have been no disorders, altho there is still danger of a massacre of the Christians by the Moslem population. On that account the foreign residents are asking for the protection of a battleship. During the attack by the Italian vessels 41 officers and men lost their lives on the two Turkish gunboats sunk in the harbor and in the city 56 civilians were killed and 20 soldiers and 57 civilians were wounded.—The Turkish Government is said to have decided to confine all Italians in the empire to concentration camps instead of expelling them. The Italian papers protest against this on the ground that the Italians so concentrated would be in danger, not only from disease, but also from massacre.—The British steamship "Rescuer" was seized by the Italian warships at Trapani, Sicily, on the charge of engaging in contraband traffic. The vessel was found loaded with arms and ammunition destined for the Turks in Tripoli, and this, it appears, has been the chief means by which they had been obtaining their supplies for the conduct of the war.—It is again rumored that the European Powers are about to intervene for the reestablishment of peace. The increasing disorder in Crete is likely to lead at any time to a conflict between Turkey and Greece. The murder of three Mohammedans at Kirtomalos, near Canea, in Crete, aroused an outbreak of the Mohammedans, in which a thousand took part and one was killed. The consuls of the four protecting Powers have warned the Cretan Government that the consequence of its failure to maintain order would be that the Powers would take action not in conformity to the wishes of

the Cretans. All of these Powers have sent warships to Crete.

Conditions in China have taken a somewhat surprising and very alarming turn. Last week everything looked favorable to the peaceful establishment of the new regime. A delegation of republicans from Nanking had offered the Presidency to Yuan Shi-kai and he had accepted. The United States was ready to recognize the republic at the earliest opportunity and the financiers of the four Powers were arranging for a loan of about \$12,000,000, of which several millions would be immediately available for the payment of the troops at Peking and Nanking. But on the evening of February 29 the troops at Peking mutinied and began looting and burning in several parts of the city. The causes of the outbreak are not definitely known, tho many are surmised. The troops had long been discontented because they were not paid, and they feared that the establishment of a republic would mean a reduction in pay or numbers. They are also said to have objected to the order for cutting off their queues. Foreigners were not harmed and the attack does not seem to have been directed at either the republican or imperialist leaders. The soldiers robbed and murdered Chinese and Manchus quite impartially, being chiefly concerned with the getting of booty and the getting away with it. The School of Nobles, where the Nanking delegates were staying, was one of the first buildings attacked. The delegates escaped by climbing over the compound wall with a ladder, but they lost everything they had, including clothing and official documents. At 9 o'clock in the morning a detachment of artillery, headed by a band, marched to the palace of the father of the Empress Dowager and shelled down the gates, after which the palace was looted and in part burned. About \$1,300,000 was obtained in this one raid. The jewelry and art stores were systematically pillaged, and what could not be carried off was wantonly destroyed. The loss of property by fire and robbery and destruction is estimated at \$25,000,000. The mutineers shot down any

shopkeepers offering resistance and the loyal troops executed many looters, both military and civilian, but the total loss of life was not very great. The main body of the mutineers took their plunder out of the city on carts, loaded it on freight trains bound for Pao-ting-fu, 75 miles southeast of Peking. Here a similar outbreak took place in which the French missionaries were murdered. The American and British missionaries were not attacked. At Tientsin and at Feng-tai, on the railroad to Peking, the troops also mutinied and took to looting and burning. There are, however, enough foreign troops to keep open the line from the capital to the sea, and the legation compounds, in which all of the foreign residents of Peking have been gathered, are well protected. The wireless antennæ at the Italian legation is in communication with a Japanese battleship at Taku, so there is no danger that the legations will be isolated by a siege, as they were before. A German physician was killed in Peking by a Chinese policeman while trying to rescue some friends. The mint of Tientsin was cleaned out by the revolting soldiery. Yuan Shi-kai has maintained his composure and remained at his post, altho he was in serious danger and quite powerless to check the rioting, since his own foreign-drilled soldiers took the leading part in it. The Manchus and old-fashioned troops remained loyal. President Yuan has appealed to General Li Yuan-hung, Vice-President-elect, to come north from Wu-chang with his republican army and put down the disorder. Dr. Sun may also join President Yuan at Peking. The foreign troops from the legations have exerted a good influence on the populace by parading the streets of Peking, but all intervention is avoided so long as the foreigners are not attacked. The offer of the Japanese to send troops enough to occupy the capital was rejected by the diplomatic corps, but 1,000 Japanese are on their way to the capital, while arrangements were made at Washington on March 4 whereby Minister Calhoun may get a reinforcement of 700 men by telegraphing directly to Manila—should they be needed at Peking, Tien-tsin, or along the railway from Peking to the sea.

The Industrial Revolt at Lawrence

BY JOHN MARTIN

[Mr. Martin is particularly well qualified to give an impartial opinion of the distressing situation at Lawrence, because he has been all his life a sympathetic student of the labor movement in England and America and has just visited the scene of the strike for the purpose of obtaining the material for this article. Mr. Martin is a member of the Board of Education of New York City.—EDITOR.]

“I HAD often read about mobs and mob rule; but I tell you when I saw that big crowd of yelling Italians rushing down on me thru the factory I didn't like it. The American mule spinners stood stiff, like a lot of nine-pins expecting to be bowled over every second. I don't mind the foreigners striking. They ought to get higher wages. But that was no way to go about it.” Those were the words to me of a middle-aged skilled workman who was waiting in the relief station, established by the Central Labor Union at Lawrence during the strike, for a dole of firewood to supplement the slender allowance which he, a member of the one union which could pay strike benefits, was receiving. The same sympathy with the strikers and abhorrence of their initial methods were exprest by other workmen, notably by members of the militia on duty, fully armed, at the street corners and mill doors.

“I said to a bunch of Italians that I was moving up the street at the point of the bayonet: ‘You fellers are all right to strike; but this rough-house business won't do you any good.’” That was the testimony of an electrical worker, a typical, bright, enterprising young American who could not only handle a bayoneted gun, but, under military orders, had worked the telephone switchboard in a mill, as well as the glaring searchlight, which nightly peered down the river and behind the mills for any lurking dynamiter. Similar sentiments were plainly held by the other private soldiers, who had quickly brought the mob to terms and made Lawrence as safe as any New England village. Most of the soldiers were wage-earners themselves, some of them textile workers, used to hard work and moderate pay, but ready to answer the summons to the disagreeable duty of keeping fellow workmen in orderly

ways. That sentiment alone, pervading as it does the great mass of steady work-people, makes the policy of the Industrial Workers of the World as futile as it is fatuous, and, in outcome, criminal.

This organization came first into prominence in the East in the Lawrence affair, tho it has been conspicuous for some years in the West. Before the outbreak it had a small local among the textile workers. Its leaders, like stormy petrels, presaging a tempest, hurried to the scene of conflict immediately trouble broke out, and seized the standard of revolt. Here was a beautiful opportunity to display their principles.

The Industrial Workers of the World repudiate the milk-and-water policy of old-line trade unionism. Mere collective bargaining, peaceful adjustment of difficulties, a slow and steady improvement of labor conditions—these are too tame for their fiery spirits. They fight only in an irreconcilable conflict between employer and workman. Their constitution says:

“Between the two classes (the employers and the employed), a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production and abolish the wage system.”

Leaders of the Industrial Workers of the World hate the American Federation of Labor as bitterly as they hate the capitalist. At meetings of strikers in Lawrence I heard speakers denounce orthodox trade unionism on the following grounds. They shouted:

(1) “The unions have taught the engineer to look down on the section hand, the mule spinner on the sweeper, the machinist on the teamster. They organize the workers in groups and destroy the solidarity of labor. But you strikers in Lawrence are showing the brotherhood of the workers. Whatever job you do, whatever tongue you speak, you stand united in the class war, a unit against the capitalist masters.”

(2) "The unions will make agreements that bind you not to strike. They will tie the slave to his loom with legal red tape. They will sign long-time contracts that prevent you from getting higher wages until the contracts expire. We make no contracts. Ours is a ceaseless warfare."

(3) "The masters and the unionists talk of a fair day's pay for a fair day's work. There is no such thing. We demand for the laborer the full product of his labor. If the trust president wants any wages let him learn a craft and go to work the same as you. Now he lives in luxury because he controls your means of livelihood. If a man can control your means of livelihood you are his slaves."

One striker protested that he did want to give a fair day's work for a fair day's pay, and that in doing it he was nobody's slave. But his courageous voice was drowned in the rushing eloquence of the speaker and the tumultuous applause of the audience.

No hint was given of the method by which the workers in the mills were to get possession of the full product of their labor, except that Mr. Haywood blatantly recommended that the strikers, if they went back, win the strike inside

the mills, by adopting the policy of ca' canny, go easy, of malingering on the job. In Colorado, where gold miners were fed by Mr. Haywood on the same windy doctrines, I found, in 1905, that they put a ready interpretation upon them. Since to the laborer belongs by right the full product of his toil, since the mine should be the property of the miner, they shamelessly carried from the mine as much high-grade ore as they could secrete. In Lawrence, where it is not practicable to steal the rolls of cloth, such teaching filled many hearers merely with the spirit of blind revolt.

The difference between this fermenting poison and orthodox trade union doctrine was evident at the respective headquarters of the two factions. The inquirer at the International Workers of the World was suspected as a possible spy and an almost certain enemy. "This is a class war," answered one workman to a question about his wages. "I can't talk to you, because I don't know to what purpose you may put the informa-

TROOPS AND STRIKERS FACE TO FACE AT THE LAWRENCE MILLS

tion. You may be an ally of the capitalist." At the Central Labor Union, on the other hand, there was an air of confidence and frankness. They were not fighting a "war" with spies in hostile camps. They were trying to make a collective bargain with the employers and had nothing to hide, nothing to dread.

It is a disquieting portent that over 15,000 workers in a New England city of moderate size have accepted at a critical time the wild-eyed leadership of William Haywood. Tho more than three-fifths of these ragged industrial regiments are recent immigrants from southern and eastern Europe and from Asia, speaking a Babel of almost fifty tongues and dialects, about one-eighth are native Americans and others are north Europeans, skilled, intelligent, earnest, the same stuff as elsewhere make our best citizens. How came it that this motley band was marshaled behind the flag of revolution?

The chief mills in Lawrence, several of them the property of the American Woolen Company, "the Woolen Trust," are heavily capitalized. To pay dividends on the heavy stock issues, the president of some mills thought it advisable to get the lowest-priced labor possible. He therefore made wide the channels thru which Syrians, Lithuanians, Armenians and Italians could flow to man his mills. The first comers, delighted with a wage and a standard of life that appals the native born, sent home letters and messages which brought relatives and neighbors, and the first trickle of immigration fast grew to a big stream. Full grown men and women eagerly took the jobs at a dollar a day which young women could competently fill. "Pay for position," the slogan of extreme feminists, was in effect at Lawrence, and a Greek or a Syrian adult who would underbid a girl worker for her job was taken on without inquiry as to whether he could maintain a family on the wage. After a few years of this transforming process, which swiftly affected all the mills, the mill owners were not entirely comfortable over the situation. In the last year or two there have been yeasty stirrings among the mixed crowd whose miserable earnings left no margin to meet the rising cost of living. The masters, aware of their dependence

upon a high protective tariff wall which a wrathful people might tear down, have been nervously apprehensive and have sympathetically discussed the conciliating power of "welfare work." The American Woolen Company has built fairly good houses for its employees. But such efforts, admirable in their way, were too small and belated to make up for low wages or to render assimilable this heavy mass of population. They remain aliens, ignorant, credulous, stolid, unused to American ways. Only three out of every ten males eligible for citizenship have taken out naturalization papers.

It would be cruel and unjust to hold the workers themselves mainly responsible for their condition. Overdriven and underpaid toilers cannot liberate themselves from oppressive circumstances any more than negro slaves could win their own freedom. Massachusetts, the cradle of negro emancipation, startled by the volcanic outburst, now sees that she has been too indifferent to the lot of her immigrant workers. Early in the strike a dramatic conference was held between the strike leaders and a committee of the Massachusetts Legislature. The committee proposed investigation. This the warring generals spurned. "Suppose you investigate," they asked, "and find that the employers are in the wrong, what can you do about it? How will that help the workers? Do you investigate because conditions are bad or because the people broke loose and struck? Why did you not come before the strike? How does Massachusetts propose to make wrong right for its toilers?" The legislators, men of high intellectual equipment, were nonplussed. I put the problem of what could be done to a prominent candidate for the Presidency of the United States. He replied: "Repeal Schedule K, deprive the woolen manufacturers of the high tariff which enables them to defy economic law by employing low-priced, inefficient labor. Make them compete with the world and they will soon be taught that high wages for competent workers are cheaper than low wages for incompetent workers." Already some of the mill agents are learning that lesson. One of them said that he is replacing, as fast as he can, the people who can't understand English nor comprehend an

PARADE OF MILL STRIKERS HEADED BY THE AMERICAN FLAG

order with better paid people who know what they are about. The better paid are the cheapest.

Truly, anybody who has seen the underfed, ill-clad, stunted masses in Lawrence must laugh aloud at the argument that a high tariff protects labor in America against the pauper labor of Europe. The paupers have been imported, and at pauper rates are driving Americans out of the mills. Only about one-eighth of the woolen and worsted operatives today are native Americans.

Massachusetts cannot, however, repeal nor reduce the woolen tariff, tho her voice in favor of such a change would be potent in national councils. But other measures for protecting her citizenship from debasement are within her power and within the power of other New England and Northern States where the short-sighted exploitation of newly arrived immigrants is just as flagrant and just as dangerous to American manhood as it was in Lawrence. First, an impartial investigation of all the facts about wages, hours and conditions of labor, about the housing, schools and mode of life of the mill operatives, made

earlier and widely published, would, despite the skepticism of the belligerent leaders, have brought to bear on the managers and owners that public opinion which, operating in clubs and offices as well as thru press and platform, on their wives and daughters as much as on the masters, has sometimes turned a recalcitrant toward righteousness when a physical assault on his mill would only have hardened his heart. It is a pity and a disgrace that the smashing of windows, the cutting of cloth and the forcible expulsion of workpeople from the mills by a screaming mob were needed to direct the nation's eyes to conditions which, attention being drawn to them, have been almost universally condemned. The same workman who told me of his dislike of the crowd that drove him from his mule also told, without seeing its significance, the contrasting story of a prolonged and perfectly orderly strike at Lowell which had run its long course thru starvation to failure, without winning much attention from the outside world. Had the Lawrence operatives quietly withdrawn from work as a protest against the reduction of their scanty

wages it is doubtful whether today the citizens elsewhere would have been caring aught for their sufferings.

Next, if regard for law is to be exacted, as it must, from enraged work-people, it should be even more rigorously required from employers, and the well-to-do. A listener at Lawrence could frequently hear angry demands for lawless suppression of the strikers made by high-salaried gentlemen, gentlemen who were little regardful of the high command of Lincoln: "Let every American, every lover of liberty, every well-wisher to his posterity swear . . . never to violate in the least particular the laws of the country." When an emissary of the strikers went to Manchester, N. H., he was promptly seized and imprisoned, without legal warrant, merely on the suspicion that he might possibly contemplate unlawful acts. Ettor, the Italian organizer at Lawrence, was imprisoned and held for weeks without bail, quite as much to deprive the strikers of his services as in the expectation of proving him guilty of criminal acts. Colonel Sweetser, the commander of the militia, assumed to exercise civil powers by publicly declaring he would not permit children of strikers to be sent to distant homes for care unless he was shown that their parents had consented to the trip. Imagine how Americans would deride a befeathered general in Central America who should usurp the authority to order parents to get permits from him to send their youngsters on an excursion! And, of course, the courts had not abdicated in Massachusetts; nor had martial law been declared.

Even the reduction of wages which started the revolt was a defiance of the spirit of the law. When Massachusetts reduced the hours from fifty-six to fifty-four a week, she took for granted that the wages would be maintained as they had been after similar curtailments in the past. By speeding up the machinery some mills in Lawrence had already ensured a greater product per hour; yet, without warning, the pay of the operatives was cut the equivalent of the two hours. Workers and legislators were, in effect, brazenly asked: "What are you going to do about it?" Small wonder if lawlessness in spirit among the

owners led to lawlessness in act among the operatives!

"Suppose you find one side or the other wrong, what can you do?" cynically demanded the strike leaders of the Massachusetts legislators. So long as any State has no effective answer to such a challenge, law and justice do not coincide. Canada arranges for the impartial examination and the publication of the facts about a threatened dispute before hostilities are commenced in any industry possessing a public franchise. Had such semi-compulsory conciliation been in effect for the textile industry the owners, in all probability, would have been led to observe the spirit of the fifty-four hour law and an open rupture would have been avoided. In England, by conciliation and arbitration, not legally compulsory, but enforced by public opinion and the prestige of the Government, two great disputes have been determined within a few months. Last August the railway strike was soon ended, the men returning to work pending an investigation which has since been proceeding, through which the Ministry had tacitly pledged itself to see justice done. In December 160,000 cotton mill workers, after three weeks' idleness, went back to work under a six months' truce, during which the points in dispute are to be reconciled by arbitration. Welsh and Scotch coal miners to the number of 600,000 voted to strike on the first of March, but the Conciliation Board of the Imperial Board of Trade intervened and the full power of the Imperial Government is exercised to procure a peaceful solution. Such examples show that governments need not be dumb before the challenge of the strike leaders: "If you find one side in the wrong, what are you going to do about it?"

Further. England and Australia, determined to check the debasement of their citizenship and the growth of parasitic industries, have established a legal minimum of wages in sweated trades like clothing and paper box making. If the protective tariff fails, as at Lawrence, in its avowed purpose, to secure a living wage for the workpeople, it will be possible to gain the same end more directly by establishing a legal minimum wage to protect the American standard of life.

Reminiscences of Louisa M. Alcott

BY F. B. SANBORN

[Of the circle—or shall we say phalanstery—of philosophers, dreamers and authors who for fifty years made the little town of Concord, Mass., famous, one, the author of this article, survives at more than four score. He was, as journalist, the most concerned of them all in practical current events, as is illustrated by his aid to John Brown and his biography of that martyr of freedom. Of them all, Louisa M. Alcott was the most human, and the most popular, even beyond Emerson, tho not beyond him in fame, and she continues to be read, while her father, A. Bronson Alcott, and William Ellery Channing, are neglected, and even Thoreau is becoming only a name.—EDITOR.]

THE representation of Miss Alcott's "Little Women" as a drama, in theaters from Buffalo westward, amid applause and appreciation, is a long-deferred tribute to the dramatic element in her gifted nature. This tendency to the melodramatic, which she began to manifest as a child, and which almost placed her on the stage as an actress in the mimic scenes that had attracted her so forcibly in the plain country landscape amid which she grew up, is worth dwelling on for a moment, altho it never took effect so as to make of her a prima donna of the exalted and attractive class. For that

role she was qualified by nature, had the circumstances been a little more propitious.

The actual qualification by nature for an effective actress is varied and diverse. Beauty is an element, but a superficial one; except for light comedy, mere beauty is insufficient in an actress; tragedy, and even melodrama, demand a serious and profound vein of feeling. This Louisa Alcott, as I first saw her at her father's Boston house in Pinckney street, in the autumn of 1852, seemed to have in her well-endowed nature; and it was expressed in her energetic but repressed manner. I made a half hour's call while I

THE WAYSIDE—DRAWN FROM MEMORY BY MAY ALCOTT

At the left stands the barn, "the theater of 1848"

Courtesy of Little, Brown & Co.

LOUISA M. ALCOTT

was in Harvard College, for the purpose of being introduced to her father, Bronson Alcott, whose attached friend and final biographer I became. Mrs. Ednah Littlehale Cheney was my introducer, while she still bore her maiden name, tho affianced to Seth Cheney, the graceful artist, whom she married the

next year. All thru that ceremonious call Louisa sat silent in the background of the family circle, her expressive face and earnest, almost melancholy eyes were fixt on the visitors; but slight appeal was made to her interest in the conversation, which turned on the philosophic themes that Alcott had made his

own long before 1852. He had been one of the leaders in the spiritual movement that began twenty years before, about the time of Louisa's birth—November 29, 1832—the very day of the month and year with her father, who was thirty-three years old the day this daughter was born. She saw the light in Germantown, not then a component part of Philadelphia, in a house which Mr. Reuben Haines, a wealthy friend of education, had bought for the school that Mr. Alcott had been invited to conduct at Germantown for children up to the age of nine. Mrs. Alcott, a daughter of Col. Joseph May, of Boston, writing to her father in May, 1831, said of it:

"It is a fine house on the main street, the grounds and garden standing back, including an acre or more, all beautifully laid out. Our garden is planted, our house neatly furnished. The garden is lined with raspberries, currants and gooseberry bushes, in a large ground, with a beautiful serpentine walk, shaded with pines, firs, cedars, apple, pear, peach and plum trees; and a long cedar hedge extends from the back to the front. Mr. Haines presented us with busts of Newton and Locke, and our rooms are tastefully fitted up."

In such surroundings was the future dramatist and storyteller born, altho she was brought back to her mother's Boston of 1834 too early to have received many pictures of that charming scenery on her childish retina of a very appreciative eye. The city life did not agree with her early constitution, and in the summer of 1835 her father wrote in his diary:

"Both my children (Anna and Louisa) are suffering for the want of purer air, renovating imagery and spiritual inspiration. They are morbid in sensibility, dimmed in intellectual vision, and require the benefits of natural and spiritual sympathy to raise them from their depression. The city does not give their young natures room; they are fettered, and fall back to prey on sentiments, instinct, ideas, that have not been allowed to flow forth."

Concerning girls of three and five years old this may sound like strange comment from a father. But Alcott had been, from the first, doing what the Italian educator, Maria Montessori, has been doing for a few years in Rome—watching carefully all the indications of mental and spiritual development in children. He kept elaborate journals of his observations thus made, which, at the invitation of his friend, Mrs. Edith Tal-

bot, of Boston, he submitted to the American Social Science Association at Saratoga in 1880.

I suppose Louisa's first dramatic appearance was on her third birthday (November 28, 1835), when Mr. Alcott's pupils in his Boston school, at the Temple, on Tremont street, celebrated the joint advent of father and daughter the day before, because it was Saturday, and it would not have been decorous to have the ceremony on Sunday, the actual anniversary. In his diary Alcott gave this account of the festival:

"This morning my pupils celebrated my birthday at the schoolroom. They assembled at the usual hour, nine. At ten o'clock they crowned me with laurel, and also Louisa, my little girl being three years old. An address was then given in the name of the school by one of the pupils, and they presented me with a fine edition of 'Paradise Lost.' I then gave them a short account of my life, and an ode was pronounced by one of the little girls. We then partook of some refreshment."

The beginning of the ode was this:

This hour in love we come
With hearts of happy mirth,—
We've sallied forth from home
To celebrate a birth.

Chorus.

A time for joy,—for joy!
Let joy then swell around!
From every girl and boy
Let joy's full tones resound.

The laurel was prophetic on Louisa's head, and the tones of joy were those which naturally she used. But the gift of "Paradise Lost" to the father was no less prophetic, since from that day forward he was exiled from one Eden after another, till this laurel-crowned daughter restored him to the "Paradise Regained" of Concord, as he reached the age of three score and ten. The town was no paradise to Louisa; she had experienced many disappointments and mortifications there; but to Bronson Alcott and to his artist daughter, May, it was a delightful abode. Alcott, but a few months before Emerson's death and his own paralysis in the same year (1882), wrote and published this sonnet of praise and description:

Concord in Massachusetts.

Calm vale of comfort, peace and industry,
Well doth thy name thy home-bred traits express!

EAST PORCH OF THE ORCHARD HOUSE (1860)

Drawn by May Alcott. The window above lighted her first studio. The porch no longer stands.

Considerate people, neighborly and free,
Proud of their monuments, their ancestry,
Their circling river's quiet loveliness,
Their noble townsmen's fame and history.
Nor less I glory in each goodly trait,
Child of another creed, a stricter State:

I chose thee for my haunt in troublous time,
My home in days of late prosperity,
And laud thee now in this familiar rhyme:
Here on thy bosom the last summons wait;
To scenes, if lovelier, still reflecting thee,
Resplendent both in hope and memory.

GATEWAY LEADING INTO THE ALCOTT AND HAWTHORNE WOODLANDS

Louisa Alcott is hanging on the gate, looking toward May Alcott's studio and porch, shown in another illustration

It was the loss of his Boston Eden of infant education that finally drove the Alcott pair, with their "Little Women," to Concord in 1840. At first supported

by a section of the old families of Boston, the Quincys, Savages, Mays, Channings, etc., his school, in excellent rooms at the Masonic Temple, flourished and

grew. But presently his views of theologic truth began to be suspected, and it was found that he was also friendly with the despised Abolitionists. When he went so far as to admit a colored girl named Robinson to the same classes with his own three girls, his wealthy patrons withdrew their children, and left him with only five pupils in all—three Alcotts, a child of the Scotch scholar and elocutionist, William Russell, and the Robinson child. This was in 1839, and his income was so reduced that he could no longer live in Boston. Emerson made the way easy for the Alcotts to rent the Hosmer Cottage, a mile or so from his own house and garden; a small house on the lands of the Hosmer farm, near the river, and with outbuildings and an acre or two of land for an Alcott garden, and an opportunity to work as a hireling on the neighboring farms, which he did.

The cottage and its surroundings were picturesque when, late in March, 1840, the five fugitives from Boston took up their residence there, and began a life of poverty and neglect, most of the friends who had hoped much from this reformer of education being ready to give him up after his hope had so completely failed. He then took to manual labor and to parlor conversations, by which he gained a small revenue, but could not keep his children from pinching poverty, really more severe than that in which the opening of the story of "Little Women" finds the four girls of the March household in the early months of our Civil War. The name *March* is a substitute for May, their mother's maiden name, and there are many changes of time and place; but the substance of the drama is the family romance of plain living, high thinking and generous giving and receiving. Meg is Anna, sixteen; Jo is Louisa, fifteen; Beth is Elizabeth, thirteen, and Amy is Abby May, really but seven, yet actually represented as nearly twelve. She was, in fact, born July 28, 1840, in the Hosmer Cottage, and the assumed date, governed by these ages, would be 1847-48, but is in truth that period of the war when Louisa, at the age of twenty-nine, was going to Washington as a hospital nurse. The scene of the action is not exactly Concord, on the Lexington road,

a quarter mile east of Emerson's corner, but an imaginary place, now here, now there, yet never far from Boston, from which the Orchard House is eighteen miles distant.

I had known the family (chiefly Mr. Alcott, Louisa and May) for some five years before they occupied the old Orchard House in April, 1858, and fifteen years after they had left the Hosmer Cottage for their next planted Eden, at Fruitlands in Harvard, on the Nashua River, thirteen miles to the southwest, in constant view of the New Hampshire mountains. In that brief residence the four little women first appeared dramatically together, in a family festival, repeating, on a larger field, the laurel crowning of father and second daughter. The day was June 24, 1843 (birthday of Beth, then eight, and within four days of the birthday of May, then three). The narrator is Meg (Anna), in her journal of a twelve-year-old diarist; and into it is copied her father's ode and Charles Lane's brief and pleasing verse:

A Fruitlands Idyll.

"This was Lizzie's Birthday. I rose before 5 o'clock, and went with Louisa and Willy Lane to the Grove, where we fixed a little pine tree in the ground, and hung all our presents on it. Mother gave her a silk thread case, Louisa a pincushion, I a fan, Willy a book, and Abby a little pitcher. I made for each of us an oak-leaf wreath. After breakfast, we all, except Wood Abraham, marched to the wood. Mr. Lane carried his violin and played, and we all sung first. Then father read a parable and an ode which he wrote himself. Here are some verses of it:

Here in the Grove, with those we love,
In the cool shade, near mead and glade,
The trees among, with leaves o'erhung,
On sylvan plat, on forest mat,
Hither we all repair,
Our hope and love to bear;
In rustic state to celebrate
Mid this refulgent Whole,
The joyful advent of an angel Soul
That twice four years ago, our mundane life
to know,
A presence to our eyes
Descended from the upper skies;
Before us stands, arrayed
In garments of a maid.

(To the Child.)

And close that treasure keep
That in thy heart doth sleep!
Mind what the Spirit saith,
And plight thereto thy faith,
My very dear Elizabeth!

"Mr. Lane wrote some poetry too:

To Elizabeth.

Of all the year the sunniest day
 Appointed for thy birth,
 Is emblem of thy longest stay
 With us upon the earth;
 Now drest in flowers
 The merry hours
 Fill up the day and night;
 May thy whole life,
 Exempt from strife,
 Shine forth as calm and bright.

"Father then asked us what flowers we would give Lizzie? I said, 'A rose, the emblem of love.' Father chose the rose also. Louisa said 'A lily of the valley for innocence.' Mother said she should give a forget-me-not, for remembrance. Christy Greene said 'An arbutus, for perseverance; and Mr. Lane gave her a piece of moss, meaning humility. Lizzie looked at her presents and seemed much pleased."

These festivals were common and natural in this family, where in many simple ways imagination and generosity were cultivated or quickened. When in 1845, after the departure from the Fruitlands paradise, and the return to house and garden, garret and barn, under the long range of hills in the East Quarter of Concord, facilities for the dramas of children were afforded without leaving their own grounds (which then covered thirty acres, with a woodland behind and a rippling trout brook in front), the imaginative instinct had full play. Its product (in part) were those amazing "Comic Tragedies" which Meg (then Mrs. John Pratt) published in 1893. They show imitation, invention, impossibility and an unaptness of language that indicated, as did the "Flower Fables" of about the same period (which were published in a small volume in December, 1854, with poorly drawn illustrations by "Amy"—the artist May), that many trials must be made and much mortifica-

tion endured, before Louisa could find her true field in literature.

The attempt of Louisa to go on the stage as actress was made after the Wayside House was given over to the Hawthornes, or at least was abandoned, about 1849, by the Alcotts, who removed to Boston in the hope of finding occupations and incomes for so much talent that was yet unrecognized. Louisa studied and rehearsed for the stage, and even made a contract for appearing in minor parts, and had the dream of writing plays in which she should act her own creations. But the time had not arrived, and when in 1857 the whole family came down from New Hampshire and presently bought the Orchard House, with its old apple trees in front and its pine wood on the hill top, she was still in her long apprenticeship to the weekly newspapers, wherein her stories found many readers and but few dollars for the family purse. So she tried kindergartening, lady's companioning and other respectable arts, and still kept on writing. The war came on; she volunteered as a nurse, tended the wounded faithfully, but nearly died of the fever thus caught; and thru that gateway of pain and sorrow came at last into the golden harvest-field of pathetic fiction for which all her multiplied experiences had fitted her to touch the heart of youth, as none of her sex in America has done, before or since.

The houses in which serious stages in her life were passed—the Hosmer Cottage, the Hillside (now Wayside) House, and the Orchard House—are here represented. In the last, her best work was done and her most serious experiences endured. It has now become a memorial of her genius, and is to contain the souvenirs of her family, who were joint authors with her of those ever-pleasing books.

CONCORD, MASS.

Our Un-American Stage

By Warren Barton Blake

OTHER-WORLDLINESS distinguishes the season's theatrical successes. The other-worldliness of "The Return of Peter Grimm" consists, to be sure, only in the fact that the characters are up-State New Yorkers of German descent and that the old horticulturist who dies at the end of Act I "comes back" to correct, as a spirit, the worst of his mistakes as a stubborn old man. Tho the play was produced in Boston, Chicago and "on the road" all last season and thus far during the present season at New York, it merits a note here as being consummately staged and interpreted, even when one compares it with Mr. Belasco's other productions. No detail is insignificant, from the Belasco point of view. When it rains, in this play, drops drip from the eaves after the storm has passed; and the breeze blows curtains and rattles chandelier fixtures when a window is thrown up. For some, the illusion of a Belasco play is destroyed by just such tricks of stagecraft, but in the present case stagecraft was indeed essential if the drama was to deliver its "message"; or, to speak more plainly, if Peter was to return from the spirit world and to get his message "across"—not only across the dead-line, but also across the inevitable footlights. The strongest scene of this remarkable play shows us neither more nor less than a spiritualistic séance, yet the situation is so skilfully controlled, the interest so masterfully sustained, that scarcely any one in the cynical audience that turns out for plays given in Manhattan fails to be impressed, or to accept, for an evening the

conception, not only of life after death, but of a life capable of communicating with the living: for the audience doesn't even realize that it is a spiritualistic séance that "gets" it.

With the other plays, the other-worldliness is distinctly personal and topographical. Madame Simone—daughter-in-law of a former President of the French Republic, and ex-wife of Le Bargy, of the Français (mirror of Paris form)—has come to us to act in English, but to act French plays. Paul Orleneff has come from Russia, with a good company, to present repertory at a dirty, draughty little East Side theater, a pickpockets' paradise, but just now the scene of acting remarkable in power and realism. Scottish players are acting their quiet little comedy, "Buntie Pulls the Strings," to audiences that are delighted in spite of the comedy's staginess and inconsequence. George Arliss impersonates Disraeli in what is rather more than a costume play and rather less than an historical drama. Half-a-dozen companies are acting in plays whose action lies east of Suez, or south of Tunis, or west of San Francisco. It is, indeed, a very riot of Orientalism that the New York stage presents.

The most American of these spectacles is, I suppose, the entertainment called by its author, Mr. Richard Walton Tully, "The Bird of Paradise." Most American, that is, because the author is a Californian, and the scene of the play's action Hawaii. Hawaii of the early nineties, however, with the missionaries clearing the way for trade, and

the sugar men engineering annexation. But this is not a political play; its core is romance. The "Bird" is a young and beautiful Hawaiian princess, literally young and beautiful because acted by Miss Laurette Taylor—a new favorite, destined to storm barns no longer. The despicable "hero" (capitally acted by Mr. Lewis Stone) is a young American doctor come to the Puna coast in the interests of his science. He discovers love of the Bird of Paradise, instead, and the charm, insidious for the Northerner, of life under tropical skies. A beach-comber of American origin manages to turn over a new leaf and make a man of himself; before the curtain falls for the last time this ne'er-do-well has isolated the bacillus of leprosy, while the young doctor who came out for that purpose has only wrecked his body, mind, and happiness, and brought to sacrificial death in the fires of Pelée his brown-skinned "Bird of Paradise." This play of Mr. Tully's, crude, rhetorical, and badly constructed as it is, is thruout alternately diverting and moving, and is unspoiled even by the anticlimactic, ineffective epilog. It is also the only one of the exotic plays now to be seen in New York which possesses something like a morality of its own. While its "local color" is what saves "The Bird of Paradise," and the all-round excellence of the company, yet it would be worth while to attend it if no other attractions than those of the lithe and comely Miss Taylor, and the native music of Hawaii, were disclosed. Incidentally, the production of this play in New York, first at Daly's Theater, then at Maxine Elliott's, marks the invasion of an enterprising Los Angeles manager to whom I have already referred in THE INDEPENDENT, Mr. Oliver Morosco.

Altho "Kismet" was a London success long before it came to New York, with Mr. Otis Skinner acting the picturesque old beggar, whose marvellous adventures resemble those of the "Arabian Nights' Entertainments" as closely as anything in the Reinhardt production of "Sumurun," the author of "Kismet," Mr. Edward Knoblauch, is an American—a Harvard graduate of sixteen years' standing. Far superior in dramatic value to "The Garden of Allah," this play of the beggar

Hajj, and the wicked Caliph whom he slays, and the Caliph's daughter, is a less striking spectacle (albeit more elaborate), and a less moving drama, than wordless "Sumurun." The very comparison is praise, however; and all these plays are mentioned, not for the sake of criticism, but to suggest to the reader in distant Seattle and expectant Philadelphia how complete is the orgy of Orientalism which New York is just now enjoying. And not New York exclusively; for Oscar Asche, who first produced "Kismet" in London, will not only revive the play next year, but will follow it up with Mr. Knoblauch's sequel, which he plans to call "Mecca." The new play will carry on the adventures of the beggar Hajj and his daughter Marsina (safely married to the Caliph), and of other characters whom New Yorkers have come to know at the Knickerbocker Theater.

The present season has not been conspicuously successful, and there are too many theaters in competition to bring much profit to any manager who has risked many productions. Indeed, a more interesting article than the present one might well be written on "The American Manager" and his neglect of all fundamental economic law (supply and demand), to say nothing of moral law, and artistic. The failures of the season are not, however to be found among the plays of Orientalism. Mr. Edgar Selwyn's "Arab," staged early in the season, was, to be sure, a prompt failure. So was Mr. Edward Sheldon's play of mock-Orientalism: the Coney Island drama entitled "Princess Zim-Zim," with its side-show princess and Manhattan millionaire. This example of Mr. Sheldon's always melodramatic work will, perhaps, make a reappearance another season, with the necessary improvements. Mr. Sheldon has too much talent for the pictorial and the theatric to waste it all on inferior plays—as he has thus far. He has an instinct for characterization: but his characters are never real, because they are never permitted to behave as they would greatly prefer.

The American plays of the season that have survived a few days' or a few weeks' acting reproduce the usual faults of American plays: crudity, sentimental-

ity, and then some more crudity. They show, not the defects of youthful, careless genius; on the contrary, we hear the stage machinery creaking even above the noise of the women in the audience who laugh in the wrong places, and the men who clap where they might better jeer. Still, when a melodrama draws thousands and thousands of theatergoers to an out-of-the-way playhouse, week after week, there must be "something in it": and that is the case with Mr. George

Broadhurst's "Bought and Paid For." A telephone girl marries a self-made millionaire, acted by Mr. Charles Richman; they very nearly love one another before marriage, and really do love one another after it. The generous millionaire (he is legion in American drama!) "takes care," not only of his wife, but of her sister and her sister's fiancé. The latter, worth fourteen dollars a week as a shipping clerk in the grocery trade, he employs at a large salary; thus the sister-in-law, too, is provided with a home and a husband. Every one is happy—every one but the ex-telephone girl, whose doting husband has the vice of drunkenness. Rebelling at treatment which she finds intolerable, this heroine issues an ultimatum. Her millionaire will give up either liquor or herself. He declines, however, to be bullied into reformation.

But that is not all. The play must, of course, be ended well, so the millionaire, whose one human trait was drunkenness, reforms; and makes every one except the discriminating theatergoer supremely happy. One enjoys the play in spite of this stage millionaire; and the brightest

spot in the entertainment is the innate and never-failing selfishness of one "Jimmy"—the subsidized brother-in-law—supremely well acted by Frank Craven. Jimmy Gilley represents a type not unknown in "the City of Big Things." The incarnation of self-confidence and mediocrity, he seems not an evil figure—rather one infinitely comic. The "big scene" of the piece, when an intoxicated husband smashes in his wife's door, and the scene in which husband and wife

part, are weak as water. They order these matters better in France—and have managed, oh, so often! But the piece pleases New York as few plays have, during the season. "Bought and Paid For" deals not unkindly with types familiar to the public either thru experience or thru an earlier acquaintance with what Mr. Eaton calls the comedy of bad manners.

So, for that matter, does another play in which a telephone operator is the heroine: William C. De Mille's "The Woman." What

OTIS SKINNER IN "KISMET"

did playwrights do before the invention of the telephone?—so delightfully satirized in Mr. Barrie's one-act "Slice of Life." If modern inventions make for naturalism on the stage, the present play is certainly no less stagey than any of its predecessors. Never was the long arm of coincidence stretched further to meet the long-distance telephone half-way. Never was Charles Klein at his worst—where he is quite at home—cruder or duller. All the characters of "The Woman" are bosses, reformers or somehow allied with politicians. Stupider exposition, more commonplace dialog, than that of the first

act I defy the playgoer to unearth, while the Pathé films show more subtlety and sense of style than this play of "The Woman." Mr. Belasco stages the play, and doubtless an important factor in its metropolitan success is the consummate elevator-and-telephone-switchboard realism of the Washington hotel that is the scene of action. Isn't it a commentary upon some persons' taste that they exclaim over the perfection of a stage-hotel and all its mechanism, when they can see

erties." If playwrights follow Mr. Shaw's mistaken theory that a drama is only a series of conversations conducted upon a stage, let them be sure of writing good conversation; if, like Messrs. Klein and De Mille, they would be journalists, let them look to the quality of their journalism.

After a play like "The Woman" even such a theatricality as the latest failure of Henry Arthur Jones—"Lydia Gilmore"—offers measurable relief. Acted

HATTIE WILLIAMS AND ETHEL BARRYMORE

In Barrie's one-act novelty, "A Slice of Life," the satire is double, hitting both at the ultra-modern dramatists who affect a realism that is at bottom more artificial than frankly imaginative work, and at certain kinds of actors, Miss Barrymore parodying Nazimova and Jack Barrymore irreverently improving upon the work of his uncle, John Drew. "A Slice of Life," acted in connection with a revival of Mr. Davies's comedy, "Cousin Kate," is a very little trifle after all, but it is literally "carrying" the longer comedy and delighting the sophisticated playgoers for whom it is intended.

the real hotel for the trouble of walking half a block, and when there are things so much better worth seeing than hotels? By all means let our dramatists and managers concern themselves with modern life—and therefore with its machinery. But let them be more interested in the truth of the life they project than in the verisimilitude of their "prop-

erty by Miss Margaret Anglin and a reasonably good company, in which a daughter of Mr. Jones plays a part (just as a daughter of Louis Napoleon Parker plays in this second playwright's "Pomander Walk"). "Lydia Gilmore" was soon withdrawn for repairs. Why should one tell the rest of so unpleasant a play, less unpleasant than Bisson's "La

Femme X" only because less thoro in the development of its melodramatic possibilities? Founded as it is upon the tribulations of a loyal wife who perjures herself in the desire to save her husband from hanging, and her son from the consequent disgrace, it leaves its audience cold. The same must be said of "The Return from Jerusalem"—a play by Maurice Donnay specially translated to be acted here by Madame Simone. The problem of "mixed marriage," this time between Hebrew and gentile, has a perennial appeal; but here the question of the races is involved with political considerations too exclusively French, while one may also doubt whether Mr. Donnay's characterization of his brilliant Jewish heroine is so true as his crayon portraits in comedies of the lighter sort. Madame Simone has not yet captured the New York public, tho her industry and intelligence are admirable, and the handicap under which she labors in using the English language is less than one might suppose. Unfortunately the Frenchwoman gives us, at times, the impression of overacting and of leaning heavily upon gesture and meaningless movement as adjuncts to speech. Having earned somewhat cold applause with her renderings of Donnay and Bernstein women, she shows us now the *Princesse lointaine* of Rostand's play, translated by Mr. Parker as "The Lady of Dreams." Madame Simone is not a Princess Far-Away in beauty, voice or school of acting (she is a modern of moderns), yet at moments she makes us forget all that. Her acting, and that of Mr. A. E. Anson as the dying troubadour-prince, are the bright spots in the performance of a play singularly dependent upon beauty of word and of speech—in which word and speech both suffered.

No wonder many of the plays which, in Paris, prove all-season successes, fail miserably here. In other plays it is partly a question of acting, partly one of "adaptation." Often it is impossible to stage a literal translation of a French success; sometimes because the original is almost as naughty as all French plays have the reputation of being, more often because the drama presupposes social habits and institutions, a knowledge of French history, or an intellectual curiosity, not to be taken for

granted on Broadway. A farce like Berr and Guillemaud's "The Million," the tale of a lost lottery ticket and its diverting adventures, was undoubtedly far funnier in Paris than it is in Herald Square. Even so, "The Million" has had a long run. The actor-author of the adaptation (who, for his own part, is still acting the amorous musician of the delightful "Concert") is said to have written into his contract the provision that his name should not appear on the program. If this be true, we congratulate Mr. Dietrichstein upon his good taste—altho it has not spared us two acts of unmerciful padding. It is, in any case, time to protest against these denaturalized importations. "Adapters" of foreign plays try our patience as gravely as do "novelizers" of popular plays.

Montaigne said that abridgments of good books were superfluous. To say that adaptations of good plays are superfluous would be too much; to say that only discriminating and tactful adaptations are to be tolerated is to put it with perfect justice. Take the case of the "Gamine" of MM. Veber and de Gorsse. Renaming it "The Runaway" for Miss

MADAME SIMONE

Like Madame Bernhardt, this French actress who is now visiting America is of Jewish descent and she has lately acted in a play in which the heroine's race is the moving force of the drama.

Billie Burke, the adapter has not hesitated to marry the heroine to a different man than the authors gave her. The authors themselves may assent to such rearrangements, cynically feeling that it matters very little how their inconsequent little play is given so far away from their own Paris. But the American public has a right to good-natured objection.

In the case of "The Return from Jerusalem," noted above, we have a more or less happy ending patched upon the unhappy original; and the same treatment was accorded to another serious French play produced in New York—Lavedan's "Sire," acted last season by Mr. Skinner—where the author made the climax the death of his hero. As performed in Paris,

one hears at the close of the last act the roaring of a revolutionary mob. The singing of "The Marseillaise" sounds above the noise of destruction. Then one hears the firing of the royalist soldiery. "Go out and fight for your lost honor," says the countess; and the play-acting hero does so—losing his life. In the American version the hero was brought upon the stage again, only wounded, and presumably not too badly wounded for an early wedding. Later on this passage was rewritten; he was not brought back—his fate was left in doubt. The audience was at liberty to end the play as it pleased.

This is not giving a fair chance to our imported drama.

NEW YORK CITY.

A Child's Prayer

BY J. T. TROWBRIDGE

[Mr. Trowbridge, now in his ninth decade, is the senior survivor of all the constellation of the American poets and novelists of the past century. His first volume was published in 1853. So much of his work has been for boys that this little paper and prayer is happily characteristic.—EDITOR.]

THESE lines were composed at the request of a young mother who, having looked in vain for a prayer adapted to the age and understanding of her child, a bright boy in his fourth year, appealed to me for assistance. My memory at once went back to the popular "Now I lay me down to sleep" of my own childhood (for a long time I supposed the opening phrase to be one word, "Nowilamy"), which was always associated in my mind with the dread of death before morning. I hated to say it, I never liked to think of it, and in later life the depressing recollection of it prejudiced me against using this or any other form of prayer with my own children. I was deeply touched, therefore, when one of them—the young mother in question, to be explicit—requested for her infant son what I had neglected to provide for her own childhood. If I knew of nothing appropriate would I not write something?

This "Child's Prayer" is the result. I have endeavored to make it as simple as possible, free from any thought of external reward, and having its answer in the heart and life of the supplicant,

which constitutes the true value of prayer. To any mother using it must be left the manner of bringing the infant mind to some understanding of what is meant by "Heavenly Father," the Power that ever enfolds us, the Life that is in all life, in stars and trees and flowers, and most intimately in the part of us that thinks and feels. The mother for whom it was written says her boy has quickly learned it, that he loves to repeat it, and eagerly asks for it if she waits to see if he will go to bed without remembering to say it. The effect on him is tenderly tranquillizing, and it makes so sweet a "good night" parting for both, that she wishes it might be printed for the benefit of the many mothers who, she is sure, would be glad to teach it to their children. In acting upon her suggestion I can think of no fitter vehicle for it than

THE INDEPENDENT.

* * * * *

Heavenly Father, hear my prayer!
Keep me always in your care!
Trying always to be good,
And to do the things I should;
Loving them that love me so,
And kind to every one I know.

NICE, FRANCE.

King Cotton

BY L. J. ABBOTT

A CONSERVATIVE estimate of the 1911 cotton crop is 14,000,000 bales. Each 500-pound bale of cotton represents on an average 1,600 pounds of seed cotton as it comes from the field. So in the eleven States of the South¹ that produce any considerable amount of cotton, there has been no less than 9,800,000,000 pounds of lint to pick in harvesting this crop.

We often hear of cotton pickers who "get their 600 ever' day." These are the kind of men one always hears about, but seldom sees. The fact is that one is doing extremely well if he "gets his 200" day in and day out. No farm labor can possibly be more tedious. Upland cotton is always short, frequently not much over a foot high. The average is possibly three feet. The cotton picker is compelled either to bend over all day long or crawl on his knees. That the picker may have both hands free he drags a long duck sack behind him. It is held by a strap that passes over his left shoulder and under his right arm. Into this he puts the cotton.

IF A BABY VENTURES INTO THE COTTON FIELD, IT IS "GET BUSY"

With quick, dextrous thrust both hands are plunged at the open bolls at the same time. There can be no lost motion if one is to succeed at such an endless task; both hands must return laden with all the lint in those two particular bolls. If one is compelled to make

a return thrust for the "fifth lock," his pick for the day will be just about divided by two. It's a back-breaking task at best, and when the cold, damp days of fall arrive, or the bleak weather of early winter, this crawling up and down the rows of a cotton field is work that makes feeding a steam thresher in August a summer day's diversion. One can wear no husking gloves to pick cotton. Men as a rule take it straight bare-handed; women often cut off the foot of an old stocking, and with benumbed fingers protruding, get what scant protection the stocking leg affords.

This very year there were no less than 49,000,000 days of just such stooping and crawling by the vassals of King Cotton. Nor is there any union to call a strike if the eight-hour day is infringed upon. The pickers must be in the field as soon as they can distinguish the bolls, and stay there while there is the least vestige of fading twilight.

¹North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Tennessee, Arkansas, Louisiana, Texas, Oklahoma. Florida's crop of about 60,000 bales is much the smallest, while that of Texas, almost 4,000,000 bales, is nearly double that of any other State.

EVERY ONE IN THE FAMILY DOES HIS PART

When the bale is finally "picked out," the father, perched high on the load, drives off to the gin

Pictures almost invariably show you broadly smiling darkies in a cotton field. The negroes are there, it is true, literally millions of them; so, too, are white folks. I have no accurate data on which to base a conclusion, yet there can be no doubt that in not one of the eleven cotton States does the amount of the fleecy staple produced by negroes approach that of white labor. Certainly this is the case in Texas, the greatest of the cotton-producing commonwealths.

The adult male labor of the South, black and white combined, engaged in cotton culture, could not harvest a single crop in a half dozen years. Thus it is that cotton growing, probably more than any other agricultural industry, is dependent upon women and children. Besides, the nimble fingers of a woman or a child are better adapted to cotton picking than the calloused digits of a man, and the lord and master of a cotton farm more than willingly surrenders to the good wife and the children this task for which they seem peculiarly fitted. I have seen a mother leave a two months' old baby at

the "camp" next the wagon, with a boy of five as guard, and bend what energy she had, along with that of the father and the two boys next older than the child nurse, in this endless reaching out for the open bolls.

The cotton will continue to bloom and mature until frost. Often this is well into November. Fortunately the weather, especially rain, damages the lint but little, and with numb fingers the seizing of boll on boll continues sometimes all thru the winter. I visited a friend one March who was still stooping in the cotton row.

When a bale is finally "picked out" the father, perched high on the load, drives off to the gin. He gets a chance to stretch his back; but the mother, having quieted the baby at the end of the row, will insist on the children getting busy again, and the automatic reaching out for bolls is resumed.

In almost any school district in the cotton belt the fact that cotton production is dependent upon child labor is frankly acknowledged, and the school term is adjusted to meet the needs of the

MEN, WOMEN AND CHILDREN—ALL CAN PICK COTTON

There is probably no other agricultural industry more dependent upon the labor of women and children

crop. A term of three months is begun the 1st of July. This is after the "chopping" is done. For you must know that a girl or boy of six or seven is given a hoe and expected to chop the cotton to a stand, it having been planted much too thick, in order to insure a crop. All the spring and well into the summer the children, with such assistance as the mother can lend, hoe the cotton. The first time thru they thin it out; after that crab grass and other weeds are attacked that get too close to the plants for the shovels of the cultivators.

The school is timed to begin after chopping is over. July in the South is not the best month for study, and August is no improvement, but these are the months that least interfere with the raising of cotton, and so they are given over to school. With September picking begins, and while the term has not yet run its allotted course, yet many of the children stop to assist in "getting out" the early cotton, for it is expected to bring the best price.

As soon as the three months' school is out, every child is in the field: I know

a pettifogging lawyer in a little town who farms out his five boys as cotton pickers. At a cent a pound they can make him the neat sum of ten to fifteen dollars a day. "When boys can earn money like that," he explained to me, "they don't need to go to school."

But in most districts there is no school to go to. It is put off till the cotton is out. I once attended an annual school meeting in June where, by a decided majority, the right was expressly reserved to meet again in the fall and determine when the winter term should begin. The year before a Yankee on the board had succeeded in having school begin in September. "Just when we need the children most!" exclaimed an irate taxpayer who sat next me at the meeting.

Thus the year wears around. A cotton farmer will tell you that "it takes thirteen months of any year to raise a cotton crop." And he could well have added, "and every drop of blood and every ounce of energy that the wife and children can put into it." For, probably, from 60 to 80 per cent. of the cotton of

"COTTON-YARD" AT A SMALL OKLAHOMA COUNTY SEAT

Each bale represents the labor of some child for eight or ten days in picking, to say nothing of the days spent in "chopping." In the background can be seen thousands of bushels of corn, cribbed in circular pens

the South is raised by tenant farmers. One-fourth of every bale, in some sections one-third, goes to the landlord.

The tenant farmer of this region, with a curious improvidence, seldom raises any other crop than cotton. My neighbors at the grocery lay in a stock of canned goods, and even horse feed, which could have been produced on the farm at almost no cost at all.

Probably the fact that it takes but few implements to farm cotton, that it is almost certain "to make" rain or shine, has built up a dependence upon it that to one accustomed to diversified farming seems the height of folly. Again, in the cotton belt, a numerous progeny—as in the case of the lawyer above mentioned—is an asset not to be despised.

More than once I have heard a careful landlord, in bargaining with a prospective tenant, inquire, "How much force you got?" And the landless one would then begin a catalog of his children, and end by expanding upon his wife's prowess as a "chopper and picker." Chained by poverty, custom and ignorance, these

vassals of King Cotton raise up generations after them as improvident and incapable as themselves.

A few weeks ago I stood by a machine which, on exhibition, actually went up and down the rows of a cotton field and did the work that now requires the twice four million hands of four million women and children of the South. It was cumbersome and heavy, but it actually picked the cotton cleaner and better than can be done by hand, and this without injury either to the fiber or the blossoms, squares and bolls.

The economic revolution this cotton picker can work in the production of the chief staple of the South is almost beyond comprehension. The grinding toil from which it can, and doubtless will, free the youth and motherhood of the cotton belt is little known in other portions of the nation. We hear much of child labor in factory and mine, but outside the South itself it is hardly known that if the women and children were not summoned to the field King Cotton's dominion would shrink all of two-thirds.

It's a curious and apparently impossible machine, this cotton picker. By an ingenious arrangement of upright cylinders thousands of steel fingers about the size of lead pencils are made to plunge into the cotton plant and turn rapidly. The fluffy lint is wound upon these fingers, and the cylinders move around where the steel pins by means of brushes are cleaned of their cotton, and another series of revolving fingers probe the plants for other open bolls.

The most ingenious part of the machine is the lateral motion. These picking fingers go straight into the plant, whirl rapidly for a brief moment, and come straight out again without injuring blossom or maturing boll. Cotton does not all ripen at the same time, and any device that injured the prospects of the later pickings could never win its way.

It is devoutly to be hoped that this all

but impossible problem has been solved. What the reaper did toward cheapening the food supply of the world, and thus increasing the scale of living, this cotton picker, if it meets expectations, will do toward clothing the world. It cost just about one hundred million dollars to pick this year's cotton crop. This can easily be divided by twelve.

But the chief benefit will come in the way of freeing the cotton farmer and his family from the months of monotonous picking. The wife can attend to the home; the children answer "here" in school; and the father, with the assistance of a single boy, can harvest as much cotton in one day as now requires twenty-five days of irksome labor. But better still, the cotton farmer can turn his attention to fall plowing and other farming that will free him from the thralldom of a single crop.

EDMOND, OKLA.

European Armaments and War

BY GEN. EDWARD F. WINSLOW

[General Winslow, who was formerly president of the St. Louis & San Francisco Railroad Company and the Erie Railroad Company, is now a resident of Paris, where he has exceptional opportunities to study European politics.—EDITOR.]

IN case of a great European war, such as may break out when least expected, we may assume that Germany is always ready and will have the powerful support of Austria-Hungary. We may assume that France is well prepared upon land and England upon the water, but at this moment France is perhaps less strong at sea than Germany, while England is in no condition to supply troops for use on the Continent. It is, however, probably true that the French navy if concentrated can hold the Mediterranean and the Adriatic and blockade the Austrian and Hungarian ports. Thus France can aid England, but can England effectively aid France? There is an impression in France that, if there was an alliance with England, the benefit and use of that compact in a war with Germany would be mainly for England, and that possibly England, with its extensive world interests, might sooner be

forced to fight than France would be if left alone. Should England be beaten by Germany all of Western Europe might be at the mercy of the conqueror, and this probability would influence France to take part with England; but it is doubtful if the two countries could safely enter upon an offensive and defensive war without the full co-operation of Russia, as it would precipitate an attack upon France, in which England could be of little assistance, altho its fleets could sweep or keep the German ships from the seas.

At this moment Italy is the third partner in the Triple Alliance, but there are perhaps good reasons why that country would not engage in war with a more powerful immediate neighbor, for the result might too greatly benefit Austria-Hungary. This last possibility would have considerable influence, while commercial and other interests, as well as a

sympathetic feeling now existing with the Governments and people of France and England, would have great weight, and Italy is not inclined to engage in war against England. With the neutrality of Italy assured, the whole military power of France could be concentrated upon the Belgo-German frontier.

In a war between France and Germany it is probable that Germany would attack and France defend, at least at the outset. The 250 miles along the German frontier in France are strongly protected by a series of fortifications, a valuable support for its armies. It is perhaps likely that the German army would advance thru or over some parts of Belgium, whose neutrality is guaranteed by England, Russia, France and Prussia, and which has an army of 180,000 men when placed upon a war footing. It will be noted that three of the guarantors may be in arms against the fourth, and it is very doubtful if Germany would hesitate to march its troops thru any part of Belgium, and it is almost certain that Belgium would not oppose such action by force of arms. Under these circumstances the deciding battles of the war might be fought near its western boundary, as Germany may prefer a field of action more free from fortified lines.

Switzerland is also a neutral country lying between Austria and Germany in part and the territory of France. Owing to the character of the people and the nature of the country, it is improbable that any foreign army will attempt to traverse Switzerland. Its army of 250,000 men can be mobilized with great celerity and is very efficient in a mountainous region. It is confidently asserted that not less than 200,000 men trained for active work can be put on the frontiers within five days ready for battle. The Swiss are patriotic, brave and willing soldiers. The Government and people are determined that no violation of their neutrality shall be made, and they will contest vigorously every foot of ground. During the Franco-Prussian war General Bourbaki with a large French army was forced to enter Switzerland, when the Swiss Government demanded and received the surrender of the entire force.

In 1870 the loss of life in the German armies was not a serious matter, but in the next war there will surely be a

greater equality in skill, force and strength, and even a "mailed fist" will wish to avoid the strongest positions and will hope to prevent too great exposure of his soldiers. During the Franco-Prussian war the total German losses were 40,050 killed and 83,403 wounded, less than 11 per cent. of the armies in the campaign. The 65,000 cavalry lost but 5 per cent. in killed and wounded during that war. The French had about 80,000 men killed. The science of war and means of destruction have greatly changed since that time, while in future there will be desperate battles upon a much larger scale, tho perhaps the struggle will not continue for so long a period because wars are becoming more and more costly and destructive. It is believed by military experts that the severe fighting in case of another conflict between Germany and France will begin within ten or twenty days from the first movement of troops, and that 2,000,000 men will be gathered for a decisive conflict. There are no officers in Europe who have commanded armies as large as will be concentrated in a general European war. History records none who has managed such large numbers of disciplined men. At this time there are no officers in Western Europe who have had valuable experience in actual warfare waged upon such a scale.

Will the French army or armies in front of the Germans be under the command of one or more than one general officer? Republics (even our own) are frequently jealous of success, and sometimes afraid of it, and of men capable of commanding and controlling great bodies of soldiers. On the other hand, solidarity in the German army is certain, and the Emperor, being at the head of the army, will probably be on the field in person and assure co-operation among the army and corps commanders. Whatever happens he will claim or assume the responsibility. It is possible that the movements at the outset will be so active and forcible that there will be little time for the development of jealousy on the part of the French officers after the commencement of the war. Concentration on both sides of the frontier will probably be more rapid and result in placing larger forces than has ever been known. It is evident that if England were in a

position to put in the field at once, in the vicinity of Belgium, an army of 250,000 men well commanded, and could maintain and support such a body of good troops during the continuance of the war, it would be a great incentive to the French Government to enter into an offensive and defensive alliance, but, as it is generally known the English army is not now and could not readily be composed of seasoned troops or of army corps sufficiently well exercised as such to constitute a large oversea army. It is likely that in the event of such a war as may come the forces in England would be held in reserve to reinforce and support those stationed at various places within the limits of the Empire, and to assist in defending it against insidious or other efforts and attacks likely to come from a vigorous enemy such as Germany would be.

In the judgment of persons qualified to form an opinion the British navy, at this time large and powerful as it is, would not be more than sufficiently strong to blockade the German fleets and harbors, and at the same time fully protect the commerce of Great Britain and assure the free transportation to and from England of the necessary food provision and other supplies.

The Germans have a large number of torpedo boats and submarines carrying very enterprising crews, and any English admiral who would undertake to blockade the coast of Germany in the North Sea would have a difficult and dangerous task. While the German fleet could not come out and meet him on equal terms, it would seize occasions for attempting to destroy as many units as possible. The Kiel Canal connects the North Sea with the Baltic.

The coasts of Belgium, Holland, Germany and Denmark are generally low; there are frequently many days of fog and the tidal currents are strong, while at times the water is muddy and there are considerable masses of floating seaweed; the weather is frequently foggy in a dead calm, and when it is clear there are likely to be severe gales. In either case the management of a fleet blockading on these coasts, or any of them, would place the admiral in command under serious disadvantages in the presence of a large and active navy hidden some

of the time behind fortifications and entirely out of range of the guns of his ships, and at other times covered by the weather conditions. In fact, while war vessels are intended for attack, the British navy would find it much less difficult to defend the coasts of Great Britain than to make successful attacks on German ships, harbors and coasts.

In this connection it may not be out of place to consider that the German Government is now constructing a canal between the Rhine and Ems rivers which is intended for the use of vessels and barges carrying, it is said, 1,000 tons of freight. The ostensible object of the canal is to divert from the lower Rhine a large portion of the traffic which now passes thru Holland, perhaps with a view to forcing Holland to enter the German Zollverein. The depth of water will be sufficient to allow the passage of fleets of torpedo boats and other small war vessels.

The German army is the most complete human machine ever created for fighting. The army appliances and equipments and the transportation arrangements are almost perfect, therefore the whole constitutes an organization and condition unknown in the preparation for or history of national contests. The Kaiser is the head and commander of the twenty-three army corps (which include 70,000 cavalry) instantly ready to move and comprising in times of peace 700,000 soldiers supported by several millions in reserve. He can order the forward march of this immense body of scientifically trained men without consulting the representatives of a constitutional government. War once begun must be continued and sustained by the Empire. The Sixty-third Article of the Constitution of 1871 enacts that the whole of the land forces of the Empire shall form a united army under the Kaiser and all troops must obey his orders.

The Government of the Austrian-Hungarian Empire will probably be the principal partner of Germany in any future war game of Europe. The Emperor-King can dispose of a thoroly disciplined, excellently organized and fully equipped modern army in aid of the policy or plans of his younger, more active and more ambitious associate. There are fifteen army corps which on a peace footing

muster about 400,000 officers and men, including about 56,000 cavalry. Of course, when war is commenced this force can be largely increased, as the national reserve includes 2,000,000 trained soldiers. More than 500,000 men can within twenty days be prepared to engage in battle. This great force cannot, however, be wholly used at once against outside armies, for the conglomerate nature of the Empire and the uncertain character of the people within and of some of those confronting the extended limits of its territory will probably compel the use of a part of the "Common Army" and its reserves.

In connection with hostilities between Germany and France it is necessary to consider the relations of both Russia and England to such an important contest. Some years since a secret understanding with Russia was had. The Government and people of that great empire needed money for development and for many purposes, and France, rich and growing in wealth notwithstanding its great national debt and increasing expenses, was in a position to supply it. An immense sum, more than \$2,500,000,000, has been lent to or invested in Russia.

In return France and its Government secured a powerful and much-needed ally and friend in the Emperor, autocrat of an empire occupying a quarter of the earth's surface and nearly a quarter of all the white people of the world. Just how valuable this empire will be when the test of war is applied to friendship and the alliance, cannot be fully known outside of Russia. It will be conceded that as fighting material the Russian soldiery cannot be surpassed when led by intelligent, educated and scientific officers. As Von Bülow once said of the officers and soldiers of Great Britain: "They know how to die." The Russians are the full equals of the best soldiers in the world in the matter of courage and staying capacity. The population of Russia is now at least 150,000,000, and there are several millions of trained fighting men equipped with the best means of attack and defense.

In western Russia, facing Germany, Austria-Hungary and Rumania, there are twenty-seven army corps, all of which could be moved and concentrated in fighting array at the boundary lines in

the space of ten or, at most, twenty days. The forces which come into contact with these disciplined and well organized, equipt and supplied armies and their reserves would find it no easy task to successfully prevent their forward movement. There is a difference in race and religion, and the Slavic people have no love for their German neighbors.

For the defense of France and its extensive colonies, the Republic has created "the Metropolitan Army" and "the Colonial Army." The former is localized in France, Algiers and Tunis, and numbers in time of peace about 610,000 officers and soldiers. The field army includes nineteen army corps, the Lyons brigade of fourteen battalions, also ten cavalry divisions comprising about 65,000 men. There are in addition thirty-six complete divisions of reserve troops and some reserve cavalry, amounting in all to nearly 500,000. Probably two other corps could be provided from the 27,500 of the "Colonial Army" in France and the troops which, including those of the Nineteenth Corps (40,000 men), number about 72,000 and are in Algiers and Tunis. The "Colonial Army" in the distant colonies is made up of 45,000 Europeans and 35,000 natives. The soldiers of this army, together with those constituting the entire force in Algiers and Tunis, are volunteers, and number all told about 150,000.

The depots of the field army, when augmented by the very large number of surplus men (all of whom are trained soldiers), are said to contain more than 600,000, while the organized territorial troops who would be last called to the colors can muster almost an equal number for duty. The artillery is believed to be fully equal in efficiency to the best in Europe. It appears that for the protection of France, its Colonies and interests, the Republic can command the services of nearly two and one-half million soldiers, all of whom have served two or more years. No such citizen military force exists elsewhere. It is asserted that in no other country where conscription is the basis of service can there be found the same degree of *camaraderie* as in this immense body of Republican soldiers. No army of France ever equaled in preparation, readiness and efficiency that of today.

The fortified places in France are administered by a special service for fortifications. Paris is defended by thirty-eight new forts or batteries, the whole forming entrenched camps at St. Denis and Versailles. The strongest places near the German frontier, each of them having numerous forts, are Verdun, Toul, Epinal and Belfort on the advanced line, and there are six others on the second line of defense.

The military budget of France, covering all expenditures for 1911, amounts to about \$195,000,000. France can assemble upon its frontiers in readiness for immediate action within ten days an army or armies of 600,000 men, and during the following ten days can support these forces with an equal number of trained soldiers. The administration consists of a general staff and several departments, all under the orders of the Minister of War.

To the critical expert, as well as to the ordinary observer, it appears that the Republic of France has graduated in preparation for and in the study of the science of the war game as it will be played in Europe some day unless signs fail, and that the experience of 1870 will not be repeated. This immense well organized and thoroly prepared military force should be quite able to defend the soil of France and to detain any German army brought to its borders at least until the Russian legions are making their bloody track towards Berlin or compelling the division of the German armies and the payment of a price for victory or defeat which will add a new chapter to the horrors of war and which might record a double invasion.

Great Britain during several centuries has tried to secure or maintain in Europe what is termed a balance of power, and has aided one nation or another to that end. At this time an offset against the Triple Alliance is not only important but absolutely necessary in order to maintain a condition of peace on the Continent. Central Europe is organized, co-operative, militant and aggressive, and it appears that the German Emperor is the active partner. It is said that Austria-Hungary may not fully support Germany in all its plans, even should these lead to an international conflict,

because it does not wish to throw down the gauntlet to Russia. Of course, it has been the aim of Germany to separate Russia and France—that is, to isolate France and England, as well as to try and also separate those two countries.

A treaty or an understanding between Russia and France has been in existence for a long time, but the terms have been kept from public knowledge. It may be assumed, however, that should France be attacked by Germany, Russia would actively take the side of France.

England and Russia have also arrived at an amicable understanding quite recently, by which the irritations and jealousies of long standing applying to India and Persia have been quieted if not wholly removed. Naturally, this condition is unfavorably regarded in Germany. The "entente" following the Anglo-French treaty of 1904 has brought France and England into harmonious relations, in some ways tantamount to an alliance.

It seems, therefore, that the time has come for a genuine, practical and effective alliance to be formally entered into between Russia, France and England as against the Triple Alliance formed by Bismarck. Notwithstanding the efforts in favor of peace by means of arbitration or otherwise, there are solid grounds for believing that a European war may break out within a few years. It may come suddenly. There are also good reasons for believing that the success of Germany in forcing France to pay so largely for its Morocco indiscretions and interests will be followed by similar demands for territory now controlled by other nations.

Financial and industrial conditions do not always prevent wars or control ambitious designs. The diplomatic and military affairs of Germany are directed by the Kaiser, who can maintain peace or bring on a general conflict. It would be an awe-inspiring and terrific war, in which two King-Emperors on one side contend for the mastery of Europe, and perhaps of a large part of the world, against the Autocrat of All the Russias, another King-Emperor and the President and people of the Republic of France.

The Negro in Cleveland, Ohio

BY FRANK U. QUILLIN, Ph.D.

[Mr. Quillin, as our readers will remember, has been making an extensive study of race prejudice in a Northern State. He has already published in our columns the results of his observations in Cincinnati, President Taft's native city. That article and this will be included in his forthcoming volume, entitled "Race Prejudice in Ohio," which will be issued under the auspices of the University of Michigan. Mr. Quillin is now principal of the Central High School of Ypsilanti, Mich.—EDITOR.]

I HAVE thought of heading this article, "The Negro's Paradise," owing to the fact that it pictures a condition in such contrast to the situation in so many cities of Ohio, which in the main resemble Cincinnati in treatment of the negro, as was described in THE INDEPENDENT of February 24, 1910. The same thought was with me when I investigated conditions in the two cities in the summer of 1908.

In the city of Cleveland, the largest city of Ohio, according to the census of 1900, the negro has almost complete economic equality with the white man. By this I mean that he is permitted to earn his bread by the sweat of his brow, working in that calling for which he is equipt and for which he has a liking, just the same as is permitted to the white man. In the other cities of the State the same privilege is not granted him so fully, for various reasons. Not the least of these reasons is that the white people cannot bring themselves to think that the negro can do anything else than carry their suitcase or serve them at table. To some of these people the following facts will be startling.

A colored man by the name of George D. Jones has recently invented a trolley-wheel that is said to be one of the best on the market. He has patented it, interested a few of his colored friends in it, and is now engaged in its manufacture on a considerable scale. Several white capitalists have tried to purchase an interest in the business and conduct it on a larger scale, but they have not been successful. He has faith in himself to carry on what he has so well begun.

A colored man is the manager of a large manufactory, employing about one hundred white men and one hundred black men. The Leonard Sofa Bed

Company is a good-sized factory, owned exclusively by colored people, and colored people only are employed by it.

The superintendent of construction of the immense Hippodrome Building, in which the National Educational Association held its meetings in 1908, was a colored man and of most unusual ability.

A colored citizen of Cleveland is the private secretary of the president of the Nickel Plate Railroad, and has filled the same position for three of the latter's predecessors.

Cleveland has honored several colored men with high political offices. A few years back she sent a colored man by the name of Green to the State Senate as her representative—something that has not been done elsewhere in the North, to my knowledge. Mr. Green now occupies a Government position in the postal service and is a lawyer by profession. Two other colored men have been sent as Cleveland's representatives in the lower house of the State Legislature, and these were sent at the same time. One negro has been a city justice of the peace for many years.

Besides those engaged in manufacturing pursuits and political work, we find many in the professions, and many of these doing well. There are several lawyers, one of whom is an author of considerable note, having written several novels and some more serious works. He has a large practice, and it is not confined by any means to his own race. He is honored and esteemed by many of the leading white men of the city.

There are some colored physicians. Their practice is confined almost exclusively to the colored population. There are also some dentists. There are several colored teachers, and these teach, not in colored schools, for there has not been a colored school in Cleveland since it was founded. (This statement can

be made of no other city in Ohio.) These colored teachers are engaged in instructing white and colored children alike in the regular public schools. One colored girl, a graduate of Smith College, teaches Latin and algebra in the Central High School, and is very satisfactory in her work. Eleven other colored girls, graduates mostly of Western Reserve University, located in Cleveland, teach in the grades. The Superintendent of Schools and others informed me that their work was wholly satisfactory, and that there had been scarcely a complaint from a white parent against his child being taught by a colored person. The head librarian of Western Reserve University is a colored man. He has held the position fourteen years.

The colored men are admitted to trades unions on the same equality as the white men, receive the same wages and work on the same jobs with the white men without any friction.

As many white men and many colored men told the writer, the negro is given a clear field in which to work out his own welfare, and, if he "makes good," he is respected for it by the white people. The colored men feel that they are fairly treated and have no complaint to make. Feeling also that it is "up to them to make good," they are steadied in life and get down to business more than they otherwise would. To illustrate how this feeling permeates the average man of the race in this city of Cleveland, consider the following fact: The proprietor of the barber shop in the leading hotel, the Hollenden, a colored man himself, and the leading colored henchman of the late Senator Marcus Hanna in the city of Cleveland, employs fifteen colored men in his shop, each one of whom owns his own home and besides has a comfortable bank account.

The negro in this city of Cleveland is given the opportunity of making his living as he sees fit; he improves the opportunity and is happy. He does not complain because the white man does not take him to his bosom and treat him as his boon companion. There is no social equality between the two races, and at the same time there is no bitterness over it. Both races seem too wise to let that enter into the relations between them. They are two distinct races. Each race

seems to say to the other: Here we are, thrown together upon this one spot of Mother Earth. Let us make the best of it. We all must fight the battle of life; we must work in order to live. You have as much right to live as we. So you work at what your hands find to do and we will do the same. You enjoy the fruits of your labors as you see fit, we will do the same.

And, working out this declaration of interdependence and independence, the people of Cleveland have come near to furnishing to the world at large an ideal condition of affairs between the white and colored races. In making their living from the same piece of ground, they have found it profitable to combine, following natural law. The two races, in enjoying the fruits of their labors, have seen fit to enjoy them separately, following natural law. And some other natural law must have been working on these strange people when I was in their midst investigating conditions. They could not bring themselves to realize that there was any "negro problem," or anything of the kind. Everything was taken as a matter of course, but, when I made specific inquiries as to how they enjoyed the fruits of their labors, or, in other words, to what extent the two races mixt socially, I found out the following things:

The negroes live by themselves in Central avenue, Cedar avenue and Doan street. According to the census of 1900, there were 6,000 of them. The two races prefer to live by themselves in their home life. As the negro population increases and new land is needed to accommodate it, adjacent property is always ready for sale at a cheap price.

Men of the two races may meet as friends on the streets or in business, but it is never carried to the home life. The white man will not think of such a thing as introducing a colored person to his wife and have them meet on the same social plane. This is illustrated by the following case:

There is a club of leading literary men in the city, who have met for years. In this club there is an author of large gifts, but who happens to have almost an imperceptible amount of colored blood in his veins. Some time ago it was proposed that the club have a banquet, to which they would invite their wives. The idea

was entered into with enthusiasm, until one of the members happened to think that it would be necessary to have the wife of the colored member present. The whole thing was then quietly dropped, the members of the club taking the following view of the matter, as expressed by one of them: "Altho I am a Southerner, I am broadminded enough to admire Mr. A. for his work. I like to talk with him and to shake his hand, but for my wife to meet his wife in social equality is a very different thing. She would not agree to it, and I could not blame her."

A few years back some of the young negroes tried to attend the public dance along with the whites, but it was made so uncomfortable for them that they do not attempt it any more.

Ordinarily, the colored people of Cleveland are very thoughtful about intruding themselves upon the white people in any way that would be disagreeable for either race. This is shown in their attitude toward frequenting the white man's eating place or restaurant. When I asked many of the white people about this, the usual reply was, "Well, since I come to think about it, I never see a colored man in any restaurant where I eat. I suppose they would feed him if he should come in, but as he knows that there is generally some feeling about that question, I suppose he has

the good sense to stay away or patronize his own restaurant." And that he does, for his own self-respect.

Each race shows regard for the rights and desires of the other, and the result is a most happy one for all concerned, and Cleveland stands out today in a class by itself so far as the cities of Ohio are concerned, and possibly there are few like it in this regard thruout the country.

The question now naturally comes up, Why is Cleveland's attitude toward the negro as it is? The following facts will help to answer this question: According to the census of 1900, her population of 381,768 was made up of 124,631 foreign-born people, 163,570 native whites of foreign parents, and 87,740 native whites of native parents. The last mentioned class was composed of those born of American parents, most of whom came from Connecticut and the New England States, where little prejudice was felt against the negro. The other two classes came from countries not so recently afflicted with the curse of African slavery and hence felt less antipathy toward its victims. The only other thing that I might mention is that this city has been unusually wise in solving a most distressful question and gives to the colored man full economic equality and lets social status rest upon natural law and ordinary good sense.

YPSILANTI, MICH.

Greetings to Arizona

BY H. T. SUDDUTH

WHAT thrills the air, this morn, o'er sunlit lands?

What makes the Painted Desert's silent sands
Seem all aglow, where gorgeous colors run
O'er wastes and ranges basking in the sun?

Across the mesas, to Grand Canyon vast,
To cliff homes built in unknown ages past—
Across weird lands of silence, deep, sublime,
Where strange stone forests dream of eldest
Time,

And o'er green valleys where alfalfa bloom
With orange and with lemon blends perfume,
This morn a gladdening, longed-for message
comes!

And listen! 'tis the stirring roll of drums!
Bright banners wave and bugles joyous play,
For Freedom's youngest-born is crowned to-
day.

O land, rich in dim, ancient mysteries,
Thy star this morning dawned in Freedom's
skies!

A star for thee, O glowing, fair Southwest,
To hold its station high with all the rest
That shine in steady, matchless splendor
there!

A glad new star that kindles hope where'er
Thruout the world there is an eye that
turns

To where that clustered constellation burns!
O, Arizona, Freedom's daughter fair,
We bid thee hail! Go forth and greatly
dare!

The Future calls thee! Fare thou on, elate
On thy high mission, Freedom's youngest
State!

BROOKLYN, N. Y., February 14, 1912.

Literature

The Centenary Thackeray

THE twenty volumes of the *Centenary Edition of Thackeray** form the first complete collection of Thackeray's work both as illustrator and author. With the invaluable bibliographical notes by Mr. Melville it should be the authority for all students of Thackeray, while the delightful illustrations by Mr. Furniss added to those by Thackeray and his contemporary illustrators make the volumes more than satisfactory to the general reader.

Punch, *Frazer's* and the *Times* have given from their forgotten columns many articles that have never been reprinted or have hitherto been known only in some special collection. The wit that befits the weekly sheet or the political incident is seldom of enduring quality. Thackeray's humor was of the sort that mellowed and ripened with years, and that of his youth has often a harshness that robs it of charm when divorced from the moment that called it forth. There are some amusing tales among this newly gathered matter, as the legend of "Jambrahim Heraudée," the earliest known of the *Punch* contributions. Especially interesting are the four epitaphs written for the proposed statues of the four Georges and published in *Punch* ten years before the lectures for which they serve as excellent synopses were written. Not infrequently among these writings are caustic comments on American affairs of the Mexican War period. A conversation between "Dizzy" and "a gentleman from Philadelphia" contains a comment most fitting to the present year. The gentleman from Philadelphia remarks on the expenses of a monarchy, and the relative cheapness of Presidents, to which "Dizzy" replies:

"If in this country we were to have an election every year, and a struggle for the President's chair every three years, . . . we

should lose in money ten times as much as the Sovereign costs us."

It is good to see the "Critical Papers in Literature" and also the little essays on English landscape painters which Thackeray wrote out of the kindness of his heart, to go with the sketches by Louis Marvy, here reproduced. But Thackeray himself, having a modest notion as to the historical value of his early potboilers, could he see these volumes, would doubtless repeat with feeling the words in his preface to a volume of miscellanies published by Appleton, "Why were some of these little brats brought out of their obscurity?" The most valuable matter is not entirely new, but that which has been published in odd volumes during recent years, or portions of early works discarded in their later editions, like the preface and illustrations of "Comic Tales and Sketches." These were known only to the collector of the rare little volume of 1841 until the biographical edition in 1898 republished the incomparable frontispiece and the Melville biography set it again beside the preface. It is not clear to the reader why these were not placed in the volume with the book to which they belong, and that brings us to a question in regard to the arrangement of this bewilderingly complete edition. They are not numbered, tho Mr. Furniss seems sometimes to know of which volume in the series he is writing; at least he knows when he reaches the twentieth. They are not chronologically arranged, for these odd papers and drawings, belonging mostly to the period before the publication of "Vanity Fair," fill the later pages of several volumes, and "Barry Lyndon" shares binding with "Catherine." Both for convenience and for coherence of effect it would have seemed better to arrange the work on some evident scheme. Mr. Melville's bibliographical notes are complete and authoritative, and if they could but have run in the order of the publications they would have formed a full and excellent account of

*THE HARRY FURNISS CENTENARY EDITION OF WILLIAM MAKEPEACE THACKERAY. New York: The Macmillan Co. 20 vols. \$2.50 each.

Thackeray's whole career. As it is, an index to the entire set is badly needed.

Mr. Furniss is eager in his contention that practically all the illustrations actually by Thackeray are those in "Vanity Fair," "Pendennis," "The Virginians" and *Punch*, and that the words appearing on most of the title pages, "Illustrated by the author," mean only that Thackeray sketched more or less fully suggestions to be carried out by others. We wish that the Gahagan pictures could have been left to us. Their humor is so Thackerayan that it is hard to divorce them from his pencil. But we frankly rebel at the intimation that the grotesque and wholly delightful designs from "The Rose and the Ring" were by Thwaites or any other person, save possibly as to some slight finishing touches. Giglio and Rosealba and Bulbo are all in

the wonderful manuscript of "The Rose and the Ring," set in the midst of the fine, upright handwriting, and they are as absolutely his as are the ludicrous adventures of those delightful inhabitants of Paphlagonia.

We lose in these pages none of the pictures we have loved in the Smith & Elder edition. Thackeray's own illustrations are all here, and Richard Doyle's for the "Newcomes" and Walker's for "Philip" and "Duval." Even the objectionable Cruikshank cuts to which Mr. Furniss takes exception, and Leech's pictures from *Punch* are included. Far be it from the layman, after reading Mr. Furniss's opinions, not only of Thackeray's art criticism, but of the notions of any one not of the guild, to speak in either praise or blame of the technical quality of these scores of new illustrations,

but of their literary quality one may write, I take it, fearlessly—and most happily. They are wrought out with a wonderful understanding of Thackeray's spirit, and an exact following of the text. The illustrations for "Barry Lyndon," for instance, are all single figures of that worthy, for, as the artist explains, it is a single figure novel; to illustrate it by scenes would be to miss the whole idea. The pictures for "Vanity Fair" carry always in their setting some suggestion of a scene on a stage, following the notion of the original cover and tail piece designs of the puppets and the box. The writer himself is, after all, the central figure of the "Roundabout Papers," and this idea is delightfully carried out in the ten pictures of the volume, the writer's own bulky figure and genial face presiding over whatever scene his fancy may have called forth. The same idea meets us somewhere in nearly every volume, and often the prefaces contain attractive sketches

THACKERAY TO THE GENTLE READER

"No doubt, dear young lady, I am calumniating Mr. Warrington according to my heartless custom,"

of Thackeray, as in that for "Henry Esmond," where the initial letter is a charming drawing of Thackeray gazing up at a statue of Beatrix. Much as Mr. Furniss enjoys these single figures, his groups are quite as successful. One of the most spirited is the scene in "Esmond" where the crowd attacks Lady Esmond's coach, with cries of "No popery, No popery." The artist's struggles to remain faithful to the text from time to time involve him in difficulty, and draw forth the exceeding bitter cry, "Why did Thackeray not shave Clive Newcome?" Truly, a fashion in hair, as exhibited by Clive and Esmond, is a sadder matter than any style of women's gear. Look only at that portrait of Mr. Binnie asleep in his arm-chair to see what may be done with a bald, round-headed, clean-shaven man!

The artist has wisely preserved that Colonel whom we have learned to see thru Richard Doyle's eyes, and in Mr. Furniss's picture of the New Don Quixote, mounted upon Rosinante, with windmills to right and to left, he has portrayed that beautiful spirit with an exquisite humor. It is good to have the "Chronicle of the Drum" at last fittingly treated. "Charlotte cutting bread and butter" is all that can be desired, and the illustration for "Little Billee" should never be separated from that lugubrious ditty.

But every volume contains pictures as worthy notice, and it were idle to catalog what must be seen to be enjoyed. Mr. Furniss has conceived boldly and with great originality. He has known, too, when to follow the types set by his predecessors. He has caught the spirit of the author often better than did the contemporary artists, and often, it must be admitted, translated it better than did Thackeray himself. Between them, Mr. Melville and Mr. Furniss have made an edition for which all lovers of Thackeray should be grateful.

EVELINE W. BRAINERD.

Travelers Four

"To the artist in travel, the artist in life, traveling mankind itself remains the paramount study. The commerce of men and women, one with another; the comedy that each world-wanderer takes with him as his luggage; these are the unfailing interests."

FROM BLANCHE McMANUS'S "AMERICAN WOMAN ABROAD"

THE passage we have quoted is the confession of faith of the first of our four travelers—the late Percival Pollard, who died on the eve of his book's publication.¹ As Montaigne, Sterne and Stevenson did (less directly), Mr. Pollard invites the reader to explore—the explorer. He invites us—but remains thruout more "literary" than personal. His essays on ocean voyages, Egypt, Vandalism in Florence, Munich, the "Cure," Paris, Berlin, London, are almost all of them humorous, whimsical, diverting.
